- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceExtendedFlagsFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_extended_flags
typedef struct VkPhysicalDeviceExtendedFlagsFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           extendedFlags;
} VkPhysicalDeviceExtendedFlagsFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **extendedFlags** indicates that the implementation supports the following:
  - [VkFormatProperties4KHR](#), extending [VkFormatProperties2](#), and corresponding [VkFormatFeatureFlagBits4KHR](#) and [VkFormatFeatureFlags4KHR](#) types providing up to 64 new format feature flags.
  - [VkImageCreateFlags2CreateInfoKHR](#), extending structures passed to image create and query functions, and corresponding [VkImageCreateFlagBits2KHR](#) and [VkImageCreateFlags2KHR](#) types providing up to 32 new image create flags.
  - [VkImageUsageFlags2CreateInfoKHR](#), extending structures passed to image create and query functions, and corresponding [VkImageUsageFlagBits2KHR](#) and [VkImageUsageFlags2KHR](#) types providing up to 32 new image usage flags.
  - The [VkPipelineCreateFlags2CreateInfoKHR](#), [VkPipelineCreateFlags2KHR](#), [VkPipelineCreateFlagBits2KHR](#), [VkBufferUsageFlags2CreateInfoKHR](#), [VkBufferUsageFlags2KHR](#), and [VkBufferUsageFlagBits2KHR](#) types originally introduced by [VK\\_KHR\\_maintenance5](#).

If the [VkPhysicalDeviceExtendedFlagsFeaturesKHR](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceExtendedFlagsFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedFlagsFeaturesKHR-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTENDED\\_FLAGS\\_FEATURES\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceGeneratedCommands;
    VkBool32           dynamicGeneratedPipelineLayout;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceGeneratedCommands` indicates whether the implementation supports functionality to generate commands on the device.
- `dynamicGeneratedPipelineLayout` indicates the implementation allows the `pipelineLayout` member of `VkIndirectCommandsLayoutCreateInfoEXT` to be `VK_NULL_HANDLE` and `VkPipelineLayoutCreateInfo` can be chained off those structures' `pNext` instead.

If the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_EXT`

### Structure Chaining

The `VkPhysicalDeviceDeviceMemoryReportFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_memory_report
typedef struct VkPhysicalDeviceDeviceMemoryReportFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceMemoryReport;
} VkPhysicalDeviceDeviceMemoryReportFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **deviceMemoryReport** indicates whether the implementation supports the ability to register device memory report callbacks.

If the [VkPhysicalDeviceDeviceMemoryReportFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDeviceMemoryReportFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceMemoryReportFeaturesEXT-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_DEVICE\\_MEMORY\\_REPORT\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceGlobalPriorityQueryFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceGlobalPriorityQueryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           globalPriorityQuery;
} VkPhysicalDeviceGlobalPriorityQueryFeatures;
```

```
// Provided by VK_KHR_global_priority
// Equivalent to VkPhysicalDeviceGlobalPriorityQueryFeatures
typedef VkPhysicalDeviceGlobalPriorityQueryFeatures
VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **globalPriorityQuery** indicates whether the implementation supports the ability to query global queue priorities.

If the [VkPhysicalDeviceGlobalPriorityQueryFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceGlobalPriorityQueryFeatures](#), it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGlobalPriorityQueryFeatures-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_GLOBAL\\_PRIORITY\\_QUERY\\_FEATURES](#)

### Structure Chaining

#### Extends the structures

The [VkPhysicalDevicePipelineCreationCacheControlFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePipelineCreationCacheControlFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineCreationCacheControl;
} VkPhysicalDevicePipelineCreationCacheControlFeatures;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineCreationCacheControl` indicates that the implementation supports:
  - The following **can** be used in `Vk*PipelineCreateInfo::flags`:
    - `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT`
    - `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
  - The following **can** be used in `VkPipelineCacheCreateInfo::flags`:
    - `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`

If the `VkPhysicalDevicePipelineCreationCacheControlFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePipelineCreationCacheControlFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDevicePipelineCreationCacheControlFeatures-sType-sType` `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_CREATION_CACHE_CONTROL_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderZeroInitializeWorkgroupMemory;
} VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures;
```

```
// Provided by VK_KHR_zero_initialize_workgroup_memory
// Equivalent to VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures
typedef VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures
VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderZeroInitializeWorkgroupMemory** specifies whether the implementation supports initializing a variable in Workgroup storage class.

If the **VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a **VkDevice** with any features described by **VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures**, it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of **VkDeviceCreateInfo** when creating the **VkDevice**.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures-sType-sType **must** be **VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_ZERO\_INITIALIZE\_WORKGROUP\_MEMORY\_FEATURES**

### Structure Chaining

#### Extends the structures

The **VkPhysicalDevicePrivateDataFeatures** structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePrivateDataFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           privateData;
} VkPhysicalDevicePrivateDataFeatures;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `privateData` indicates whether the implementation supports private data. See [Private Data](#).

If the `VkPhysicalDevicePrivateDataFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePrivateDataFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrivateDataFeatures-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIVATE_DATA_FEATURES`

### Structure Chaining

#### Extends the structures

The `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_subgroup_uniform_control_flow
typedef struct VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupUniformControlFlow;
} VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupUniformControlFlow` specifies whether the implementation supports the shader execution mode `SubgroupUniformControlFlowKHR`

If the `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR`, it **must** add an instance of the

structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_UNIFORM_CONTROL_FLOW_FEATURES_KHR`

### Structure Chaining

The `VkPhysicalDeviceRobustness2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_robustness2
typedef struct VkPhysicalDeviceRobustness2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustBufferAccess2;
    VkBool32           robustImageAccess2;
    VkBool32           nullDescriptor;
} VkPhysicalDeviceRobustness2FeaturesKHR;
```

```
// Provided by VK_EXT_robustness2
// Equivalent to VkPhysicalDeviceRobustness2FeaturesKHR
typedef VkPhysicalDeviceRobustness2FeaturesKHR VkPhysicalDeviceRobustness2FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustBufferAccess2` enables `Robust Buffer Access 2` guarantees for shader buffer accesses.
- `robustImageAccess2` enables `Robust Image Access 2` guarantees for shader image accesses.
- `nullDescriptor` indicates whether descriptors **can** be written with a `VK_NULL_HANDLE` resource or view, which are considered valid to access and act as if the descriptor were bound to nothing.

If the `VkPhysicalDeviceRobustness2FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceRobustness2FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage

- VUID-VkPhysicalDeviceRobustness2FeaturesKHR-robustBufferAccess2-04000  
If [robustBufferAccess2](#) is enabled then [robustBufferAccess](#) **must** also be enabled

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRobustness2FeaturesKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_ROBUSTNESS\\_2\\_FEATURES\\_KHR](#)

### Structure Chaining

#### Extends the structures

The [VkPhysicalDeviceImageRobustnessFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceImageRobustnessFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustImageAccess;
} VkPhysicalDeviceImageRobustnessFeatures;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [robustImageAccess](#) enables [Robust Image Access](#) guarantees for shader image accesses.

If the [VkPhysicalDeviceImageRobustnessFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceImageRobustnessFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageRobustnessFeatures-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_IMAGE\\_ROBUSTNESS\\_FEATURES](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderTerminateInvocationFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderTerminateInvocationFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderTerminateInvocation;
} VkPhysicalDeviceShaderTerminateInvocationFeatures;
```

```
// Provided by VK_KHR_shader_terminate_invocation
// Equivalent to VkPhysicalDeviceShaderTerminateInvocationFeatures
typedef VkPhysicalDeviceShaderTerminateInvocationFeatures
VkPhysicalDeviceShaderTerminateInvocationFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderTerminateInvocation** specifies whether the implementation supports SPIR-V modules that use the [SPV\\_KHR\\_terminate\\_invocation](#) extension.

If the [VkPhysicalDeviceShaderTerminateInvocationFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderTerminateInvocationFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderTerminateInvocationFeatures-sType-sType

`sType` **must** be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TERMINATE_INVOCATION_FEATURES`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceCustomBorderColorFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_custom_border_color
typedef struct VkPhysicalDeviceCustomBorderColorFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           customBorderColors;
    VkBool32           customBorderColorWithoutFormat;
} VkPhysicalDeviceCustomBorderColorFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `customBorderColors` indicates that the implementation supports providing a `borderColor` value with one of the following values at sampler creation time:
  - `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`
  - `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- `customBorderColorWithoutFormat` indicates that explicit formats are not required for custom border colors and the value of the `format` member of the `VkSamplerCustomBorderColorCreateInfoEXT` structure **may** be `VK_FORMAT_UNDEFINED`. If this feature bit is not set, applications **must** provide the `VkFormat` of the image view(s) being sampled by this sampler in the `format` member of the `VkSamplerCustomBorderColorCreateInfoEXT` structure.

If the `VkPhysicalDeviceCustomBorderColorFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCustomBorderColorFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomBorderColorFeaturesEXT-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_CUSTOM\_BORDER\_COLOR\_FEATURES\_EXT

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceBorderColorSwizzleFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_border_color_swizzle
typedef struct VkPhysicalDeviceBorderColorSwizzleFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           borderColorSwizzle;
    VkBool32           borderColorSwizzleFromImage;
} VkPhysicalDeviceBorderColorSwizzleFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [borderColorSwizzle](#) indicates that defined values are returned by sampled image operations when used with a sampler that uses a [VK\\_BORDER\\_COLOR\\_FLOAT\\_OPAQUE\\_BLACK](#), [VK\\_BORDER\\_COLOR\\_INT\\_OPAQUE\\_BLACK](#), [VK\\_BORDER\\_COLOR\\_FLOAT\\_CUSTOM\\_EXT](#), or [VK\\_BORDER\\_COLOR\\_INT\\_CUSTOM\\_EXT](#) [borderColor](#) and an image view that uses a non-identity component mapping, when either [borderColorSwizzleFromImage](#) is enabled or the [VkSamplerBorderColorComponentMappingCreateInfoEXT](#) is specified.
- [borderColorSwizzleFromImage](#) indicates that the implementation will return the correct border color values from sampled image operations under the conditions expressed above, without the application having to specify the border color component mapping when creating the sampler object. If this feature bit is not set, applications **can** chain a [VkSamplerBorderColorComponentMappingCreateInfoEXT](#) structure when creating samplers for use with image views that do not have an identity swizzle and, when those samplers are combined with image views using the same component mapping, sampled image operations that use opaque black or custom border colors will return the correct border color values.

If the [VkPhysicalDeviceBorderColorSwizzleFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDeviceBorderColorSwizzleFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_BORDER\\_COLOR\\_SWIZZLE\\_FEATURES\\_EXT](#) [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_BORDER\\_COLOR\\_SWIZZLE\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

The [VkPhysicalDevicePortabilitySubsetFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           constantAlphaColorBlendFactors;
    VkBool32           events;
    VkBool32           imageViewFormatReinterpretation;
    VkBool32           imageViewFormatSwizzle;
    VkBool32           imageView2DOn3DImage;
    VkBool32           multisampleArrayImage;
    VkBool32           mutableComparisonSamplers;
    VkBool32           pointPolygons;
    VkBool32           samplerMipLodBias;
    VkBool32           separateStencilMaskRef;
    VkBool32           shaderSampleRateInterpolationFunctions;
    VkBool32           tessellationIsolines;
    VkBool32           tessellationPointMode;
    VkBool32           triangleFans;
    VkBool32           vertexAttributeAccessBeyondStride;
} VkPhysicalDevicePortabilitySubsetFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [constantAlphaColorBlendFactors](#) indicates whether this implementation supports constant *alpha Blend Factors* used as source or destination *color Blending*.

- `events` indicates whether this implementation supports synchronization using `Events`.
- `imageViewFormatReinterpretation` indicates whether this implementation supports a `VkImageView` being created with a texel format containing a different number of components, or a different number of bits in each component, than the texel format of the underlying `VkImage`.
- `imageViewFormatSwizzle` indicates whether this implementation supports remapping format components using `VkImageViewCreateInfo::components`.
- `imageView2DOn3DImage` indicates whether this implementation supports a `VkImage` being created with the `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` flag set, permitting a 2D or 2D array image view to be created on a 3D `VkImage`.
- `multisampleArrayImage` indicates whether this implementation supports a `VkImage` being created as a 2D array with multiple samples per texel.
- `mutableComparisonSamplers` indicates whether this implementation allows descriptors with comparison samplers to be `updated`.
- `pointPolygons` indicates whether this implementation supports `Rasterization` using a `point Polygon Mode`.
- `samplerMipLodBias` indicates whether this implementation supports setting a `mipmap LOD bias value` when `creating a sampler`.
- `separateStencilMaskRef` indicates whether this implementation supports separate front and back `Stencil Test` reference values.
- `shaderSampleRateInterpolationFunctions` indicates whether this implementation supports fragment shaders which use the `InterpolationFunction` capability and the extended instructions `InterpolateAtCentroid`, `InterpolateAtOffset`, and `InterpolateAtSample` from the `GLSL.std.450` extended instruction set. This member is only meaningful if the `sampleRateShading` feature is supported.
- `tessellationIsolines` indicates whether this implementation supports `isoline output` from the `Tessellation` stage of a graphics pipeline. This member is only meaningful if the `tessellationShader` feature is supported.
- `tessellationPointMode` indicates whether this implementation supports `point output` from the `Tessellation` stage of a graphics pipeline. This member is only meaningful if the `tessellationShader` feature is supported.
- `triangleFans` indicates whether this implementation supports `Triangle Fans` primitive topology.
- `vertexAttributeAccessBeyondStride` indicates whether this implementation supports accessing a vertex input attribute beyond the stride of the corresponding vertex input binding.

If the `VkPhysicalDevicePortabilitySubsetFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePortabilitySubsetFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

    VkBool32           performanceCounterMultipleQueryPools;
} VkPhysicalDevicePerformanceQueryFeaturesKHR;
```

This structure describes the following features:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `performanceCounterQueryPools` indicates whether the implementation supports performance counter query pools.
- `performanceCounterMultipleQueryPools` indicates whether the implementation supports using multiple performance query pools in a primary command buffer and secondary command buffers executed within it.

If the `VkPhysicalDevicePerformanceQueryFeaturesKHR` structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by `VkPhysicalDevicePerformanceQueryFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT](#) structure is defined as:

**WARNING** This functionality is superseded by [VK\\_EXT\\_descriptor\\_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           mutableDescriptorType;
} VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **mutableDescriptorType** indicates that the implementation **must** support using the [VkDescriptorType](#) of [VK\\_DESCRIPTOR\\_TYPE\\_MUTABLE\\_EXT](#) with at least the following descriptor types, where any combination of the types **must** be supported:
  - [VK\\_DESCRIPTOR\\_TYPE\\_SAMPLED\\_IMAGE](#)
  - [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_IMAGE](#)
  - [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_TEXEL\\_BUFFER](#)
  - [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_TEXEL\\_BUFFER](#)
  - [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_BUFFER](#)
  - [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_BUFFER](#)
- Additionally, **mutableDescriptorType** indicates that:
  - Non-uniform descriptor indexing **must** be supported if all descriptor types in a [VkMutableDescriptorTypeListEXT](#) for [VK\\_DESCRIPTOR\\_TYPE\\_MUTABLE\\_EXT](#) have the corresponding non-uniform indexing features enabled in [VkPhysicalDeviceDescriptorIndexingFeatures](#).
  - [VK\\_DESCRIPTOR\\_BINDING\\_UPDATE\\_AFTER\\_BIND\\_BIT](#) with **descriptorType** of [VK\\_DESCRIPTOR\\_TYPE\\_MUTABLE\\_EXT](#) relaxes the list of required descriptor types to the descriptor types which have the corresponding update-after-bind feature enabled in

[VkPhysicalDeviceDescriptorIndexingFeatures](#).

- Dynamically uniform descriptor indexing **must** be supported if all descriptor types in a [VkMutableDescriptorTypeListEXT](#) for [VK\\_DESCRIPTOR\\_TYPE\\_MUTABLE\\_EXT](#) have the corresponding dynamic indexing features enabled.
- [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_HOST\\_ONLY\\_POOL\\_BIT\\_EXT](#) **must** be supported.
- [VK\\_DESCRIPTOR\\_POOL\\_CREATE\\_HOST\\_ONLY\\_BIT\\_EXT](#) **must** be supported.

If the [VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDepthClipControlFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_depth_clip_control
typedef struct VkPhysicalDeviceDepthClipControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClipControl;
} VkPhysicalDeviceDepthClipControlFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [depthClipControl](#) indicates that the implementation supports setting [VkPipelineViewportDepthClipControlCreateInfoEXT::negativeOneToOne](#) to [VK\\_TRUE](#).

If the [VkPhysicalDeviceDepthClipControlFeaturesEXT](#) structure is included in the [pNext](#) chain of the

`VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDepthClipControlFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceDepthClipControlFeaturesEXT-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLIP_CONTROL_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceDepthClampControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clamp_control
typedef struct VkPhysicalDeviceDepthClampControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClampControl;
} VkPhysicalDeviceDepthClampControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthClampControl` indicates that the implementation supports setting `VkPipelineViewportDepthClampControlCreateInfoEXT::depthClampMode` to `VK_DEPTH_CLAMP_MODE_USER_DEFINED_RANGE_EXT`.

If the `VkPhysicalDeviceDepthClampControlFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDepthClampControlFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_workgroup_memory_explicit_layout
typedef struct VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           workgroupMemoryExplicitLayout;
    VkBool32           workgroupMemoryExplicitLayoutScalarBlockLayout;
    VkBool32           workgroupMemoryExplicitLayout8BitAccess;
    VkBool32           workgroupMemoryExplicitLayout16BitAccess;
} VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `workgroupMemoryExplicitLayout` indicates whether the implementation supports the SPIR-V `WorkgroupMemoryExplicitLayoutKHR` capability.
- `workgroupMemoryExplicitLayoutScalarBlockLayout` indicates whether the implementation supports scalar alignment for laying out Workgroup Blocks.
- `workgroupMemoryExplicitLayout8BitAccess` indicates whether objects in the `Workgroup` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `WorkgroupMemoryExplicitLayout8BitAccessKHR` capability.
- `workgroupMemoryExplicitLayout16BitAccess` indicates whether objects in the `Workgroup` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `WorkgroupMemoryExplicitLayout16BitAccessKHR` capability.

If the `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is included in the `pNext`

chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The [VkPhysicalDeviceSynchronization2Features](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSynchronization2Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           synchronization2;
} VkPhysicalDeviceSynchronization2Features;
```

```
// Provided by VK_KHR_synchronization2
// Equivalent to VkPhysicalDeviceSynchronization2Features
typedef VkPhysicalDeviceSynchronization2Features
VkPhysicalDeviceSynchronization2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `synchronization2` indicates whether the implementation supports the new set of synchronization commands introduced in [VK\\_KHR\\_synchronization2](#).

If the [VkPhysicalDeviceSynchronization2Features](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceSynchronization2Features](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The [VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_vertex_input_dynamic_state
typedef struct VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           vertexInputDynamicState;
} VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [vertexInputDynamicState](#) indicates that the implementation supports the following dynamic states:
  - [VK\\_DYNAMIC\\_STATE\\_VERTEX\\_INPUT\\_EXT](#)

If the [VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_primitives_generated_query
typedef struct VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitivesGeneratedQuery;
    VkBool32           primitivesGeneratedQueryWithRasterizerDiscard;
    VkBool32           primitivesGeneratedQueryWithNonZeroStreams;
} VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitivesGeneratedQuery` indicates whether the implementation supports the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query type.
- `primitivesGeneratedQueryWithRasterizerDiscard` indicates whether the implementation supports this query when `rasterization discard` is enabled.
- `primitivesGeneratedQueryWithNonZeroStreams` indicates whether the implementation supports this query with a non-zero index in `vkCmdBeginQueryIndexedEXT`.

If the `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

The [VkPhysicalDeviceFragmentShadingRateFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPhysicalDeviceFragmentShadingRateFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineFragmentShadingRate;
    VkBool32           primitiveFragmentShadingRate;
    VkBool32           attachmentFragmentShadingRate;
} VkPhysicalDeviceFragmentShadingRateFeaturesKHR;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [pipelineFragmentShadingRate](#) indicates that the implementation supports the [pipeline fragment shading rate](#).
- [primitiveFragmentShadingRate](#) indicates that the implementation supports the [primitive fragment shading rate](#).
- [attachmentFragmentShadingRate](#) indicates that the implementation supports the [attachment fragment shading rate](#).

If the [VkPhysicalDeviceFragmentShadingRateFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFragmentShadingRateFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

    VkBool32           transformFeedbackPreservesProvokingVertex;
} VkPhysicalDeviceProvokingVertexFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [provokingVertexLast](#) indicates whether the implementation supports the [VK\\_PROVOKING\\_VERTEX\\_MODE\\_LAST\\_VERTEX\\_EXT](#) [provoking vertex mode](#) for flat shading.
- [transformFeedbackPreservesProvokingVertex](#) indicates that the order of vertices within each primitive written by transform feedback will preserve the provoking vertex. This does not apply to triangle fan primitives when [transformFeedbackPreservesTriangleFanProvokingVertex](#) is [VK\\_FALSE](#). [transformFeedbackPreservesProvokingVertex](#) **must** be [VK\\_FALSE](#) when the [VK\\_EXT\\_transform\\_feedback](#) extension is not supported.

If the [VkPhysicalDeviceProvokingVertexFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceProvokingVertexFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

When [VkPhysicalDeviceProvokingVertexFeaturesEXT](#) is in the [pNext](#) chain of [VkDeviceCreateInfo](#) but the [transformFeedback](#) feature is not enabled, the value of [transformFeedbackPreservesProvokingVertex](#) is ignored.

## Valid Usage (Implicit)

The `VkPhysicalDeviceDescriptorBufferFeaturesEXT` structure is defined as:

#### WARNING

This functionality is superseded by [VK\\_EXT\\_descriptor\\_heap](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorBuffer;
    VkBool32           descriptorBufferCaptureReplay;
    VkBool32           descriptorBufferImageLayoutIgnored;
    VkBool32           descriptorBufferPushDescriptors;
} VkPhysicalDeviceDescriptorBufferFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `descriptorBuffer` indicates that the implementation supports putting shader-accessible descriptors directly in memory.
- `descriptorBufferCaptureReplay` indicates that the implementation supports capture and replay when using descriptor buffers. If this is [VK\\_TRUE](#), all resources created with [VK\\_BUFFER\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_CAPTURE\\_REPLAY\\_BIT\\_EXT](#), [VK\\_IMAGE\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_CAPTURE\\_REPLAY\\_BIT\\_EXT](#), [VK\\_IMAGE\\_VIEW\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_CAPTURE\\_REPLAY\\_BIT\\_EXT](#), [VK\\_SAMPLER\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_CAPTURE\\_REPLAY\\_BIT\\_EXT](#), or [VK\\_ACCELERATION\\_STRUCTURE\\_CREATE\\_DESCRIPTOR\\_BUFFER\\_CAPTURE\\_REPLAY\\_BIT\\_EXT](#) **must** be created before resources of the same types without those flags.
- `descriptorBufferImageLayoutIgnored` indicates that the implementation will ignore `imageLayout` in [VkDescriptorImageInfo](#) when calling [vkGetDescriptorEXT](#).
- `descriptorBufferPushDescriptors` indicates that the implementation supports using push descriptors with descriptor buffers.

If the `VkPhysicalDeviceDescriptorBufferFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDescriptorBufferFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceDescriptorBufferFeaturesEXT-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_pageable_device_local_memory
typedef struct VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pageableDeviceLocalMemory;
} VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pageableDeviceLocalMemory` indicates that the implementation supports pageable device-local memory and **may** transparently move device-local memory allocations to host-local memory to better share device-local memory with other applications.

If the `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PAGEABLE_DEVICE_LOCAL_MEMORY_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceMultiDrawFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multiDraw;
} VkPhysicalDeviceMultiDrawFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `multiDraw` indicates that the implementation supports `vkCmdDrawMultiEXT` and `vkCmdDrawMultiIndexedEXT`.

If the `VkPhysicalDeviceMultiDrawFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMultiDrawFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiDrawFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceOpacityMicromapFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           micromap;
} VkPhysicalDeviceOpacityMicromapFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [micromap](#) indicates whether the implementation supports the micromap array feature.

If the [VkPhysicalDeviceOpacityMicromapFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceOpacityMicromapFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpacityMicromapFeaturesKHR-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_OPACITY\\_MICROMAP\\_FEATURES\\_KHR](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceOpacityMicromapFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           micromap;
    VkBool32           micromapCaptureReplay;
    // micromapHostCommands is legacy, but no reason was given in the API XML
    VkBool32           micromapHostCommands;
} VkPhysicalDeviceOpacityMicromapFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `micromap` indicates whether the implementation supports the micromap array feature.
- `micromapCaptureReplay` indicates whether the implementation supports capture and replay of addresses for micromap arrays.
- `micromapHostCommands` indicates whether the implementation supports host side micromap array commands.

If the `VkPhysicalDeviceOpacityMicromapFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceOpacityMicromapFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpacityMicromapFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPACITY_MICROMAP_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_zero_initialize_device_memory
typedef struct VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           zeroInitializeDeviceMemory;
} VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT;
```

This structure describes the following features:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **zeroInitializeDeviceMemory** indicates that the implementation supports zeroing memory allocations using a user-specified flag.

If the [VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceZeroInitializeDeviceMemoryFeaturesEXT-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_ZERO\\_INITIALIZE\\_DEVICE\\_MEMORY\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevicePresentIdFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_present_id
typedef struct VkPhysicalDevicePresentIdFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId;
} VkPhysicalDevicePresentIdFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId` indicates that the implementation supports specifying present ID values in the `VkPresentIdKHR` extension to the `VkPresentInfoKHR` struct.

If the `VkPhysicalDevicePresentIdFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentIdFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentIdFeaturesKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_ID_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDevicePresentId2FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_present_id2
typedef struct VkPhysicalDevicePresentId2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentId2;
} VkPhysicalDevicePresentId2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId2` indicates that the implementation supports specifying present ID values in the `VkPresentId2KHR` extension to the `VkPresentInfoKHR` struct.

If the `VkPhysicalDevicePresentId2FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDevicePresentId2FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentId2FeaturesKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PRESENT\\_ID\\_2\\_FEATURES\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevicePresentWaitFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_present_wait
typedef struct VkPhysicalDevicePresentWaitFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait;
} VkPhysicalDevicePresentWaitFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [presentWait](#) indicates that the implementation supports [vkWaitForPresentKHR](#).

If the [VkPhysicalDevicePresentWaitFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePresentWaitFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentWaitFeaturesKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PRESENT\\_WAIT\\_FEATURES\\_KHR](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevicePresentWait2FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_present_wait2
typedef struct VkPhysicalDevicePresentWait2FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentWait2;
} VkPhysicalDevicePresentWait2FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [presentWait2](#) indicates that the implementation supports [vkWaitForPresent2KHR](#).

If the [VkPhysicalDevicePresentWait2FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePresentWait2FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentWait2FeaturesKHR-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PRESENT\\_WAIT\\_2\\_FEATURES\\_KHR](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_unified_image_layouts
typedef struct VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           unifiedImageLayouts;
    VkBool32           unifiedImageLayoutsVideo;
} VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **unifiedImageLayouts** specifies whether usage of [VK\\_IMAGE\\_LAYOUT\\_GENERAL](#), where valid, incurs no loss in efficiency. Additionally, it indicates whether it **can** be used in place of [VK\\_IMAGE\\_LAYOUT\\_ATTACHMENT\\_FEEDBACK\\_LOOP\\_OPTIMAL\\_EXT](#).
- **unifiedImageLayoutsVideo** specifies whether [VK\\_IMAGE\\_LAYOUT\\_GENERAL](#) can be used in place of any of the following image layouts with no loss in efficiency.
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_DECODE\\_DST\\_KHR](#)
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_DECODE\\_SRC\\_KHR](#)
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_DECODE\\_DPB\\_KHR](#)
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_ENCODE\\_DST\\_KHR](#)
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_ENCODE\\_SRC\\_KHR](#)
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_ENCODE\\_DPB\\_KHR](#)
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_ENCODE\\_QUANTIZATION\\_MAP\\_KHR](#)

If the [VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_UNIFIED\\_IMAGE\\_LAYOUTS\\_FEATURES\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)

- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceHostImageCopyFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceHostImageCopyFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hostImageCopy;
} VkPhysicalDeviceHostImageCopyFeatures;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkPhysicalDeviceHostImageCopyFeatures
typedef VkPhysicalDeviceHostImageCopyFeatures
VkPhysicalDeviceHostImageCopyFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hostImageCopy` indicates that the implementation supports copying from host memory to images using the [vkCopyMemoryToImage](#) command, copying from images to host memory using the [vkCopyImageToMemory](#) command, and copying between images using the [vkCopyImageToImage](#) command.

If the `VkPhysicalDeviceHostImageCopyFeatures` structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by `VkPhysicalDeviceHostImageCopyFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The `VkPhysicalDevicePresentTimingFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_present_timing
typedef struct VkPhysicalDevicePresentTimingFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentTiming;
    VkBool32           presentAtAbsoluteTime;
    VkBool32           presentAtRelativeTime;
} VkPhysicalDevicePresentTimingFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentTiming` indicates that the implementation supports `vkGetPastPresentationTimingEXT`.
- `presentAtAbsoluteTime` indicates that the implementation supports specifying absolute target present times.
- `presentAtRelativeTime` indicates that the implementation supports specifying relative target present times.

If the `VkPhysicalDevicePresentTimingFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePresentTimingFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentTimingFeaturesEXT-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_TIMING_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderFmaFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_fma
typedef struct VkPhysicalDeviceShaderFmaFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            shaderFmaFloat16;
    VkBool32            shaderFmaFloat32;
    VkBool32            shaderFmaFloat64;
} VkPhysicalDeviceShaderFmaFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFmaFloat16` indicates whether the implementation supports `OpFmaKHR` for Float16 types in shaders.
- `shaderFmaFloat32` indicates whether the implementation supports `OpFmaKHR` for Float32 types in shaders.
- `shaderFmaFloat64` indicates whether the implementation supports `OpFmaKHR` for Float64 types in shaders.

If the `VkPhysicalDeviceShaderFmaFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderFmaFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderFmaFeaturesKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FMA_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderIntegerDotProductFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderIntegerDotProductFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderIntegerDotProduct;
} VkPhysicalDeviceShaderIntegerDotProductFeatures;
```

```
// Provided by VK_KHR_shader_integer_dot_product
// Equivalent to VkPhysicalDeviceShaderIntegerDotProductFeatures
typedef VkPhysicalDeviceShaderIntegerDotProductFeatures
VkPhysicalDeviceShaderIntegerDotProductFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderIntegerDotProduct` specifies whether shader modules **can** declare the `DotProductInputAllKHR`, `DotProductInput4x8BitKHR`, `DotProductInput4x8BitPackedKHR` and `DotProductKHR` capabilities.

If the `VkPhysicalDeviceShaderIntegerDotProductFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderIntegerDotProductFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceMaintenance4Features` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance4;
} VkPhysicalDeviceMaintenance4Features;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkPhysicalDeviceMaintenance4Features
typedef VkPhysicalDeviceMaintenance4Features VkPhysicalDeviceMaintenance4FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maintenance4** indicates that the implementation supports the following:
  - The application **may** destroy a [VkPipelineLayout](#) object immediately after using it to create another object.
  - **LocalSizeId** **can** be used as an alternative to **LocalSize** to specify the local workgroup size with specialization constants.
  - Images created with identical creation parameters will always have the same alignment requirements.
  - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
  - Push constants do not have to be initialized before they are dynamically accessed.
  - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the [VkPhysicalDeviceMaintenance4Features](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance4Features](#), it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The [VkPhysicalDeviceMaintenance5Features](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance5Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance5;
} VkPhysicalDeviceMaintenance5Features;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkPhysicalDeviceMaintenance5Features
typedef VkPhysicalDeviceMaintenance5Features VkPhysicalDeviceMaintenance5FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maintenance5** indicates that the implementation supports the following:
  - The ability to expose support for the optional format [VK\\_FORMAT\\_A1B5G5R5\\_UNORM\\_PACK16](#).
  - The ability to expose support for the optional format [VK\\_FORMAT\\_A8\\_UNORM](#).
  - A property to indicate that multisample coverage operations are performed after sample counting in EarlyFragmentTests mode.
  - Creating a [VkBufferView](#) with a subset of the associated [VkBuffer](#) usage using [VkBufferUsageFlags2CreateInfo](#).
  - A new function [vkCmdBindIndexBuffer2](#), allowing a range of memory to be bound as an index buffer.
  - [vkGetDeviceProcAddr](#) will return **NULL** for function pointers of core functions for versions higher than the version requested by the application.
  - [vkCmdBindVertexBuffers2](#) supports using [VK\\_WHOLE\\_SIZE](#) in the **pSizes** parameter.
  - If **PointSize** is not written, a default value of **1.0** is used for the size of points.
  - [VkShaderModuleCreateInfo](#) **can** be added as a chained structure to pipeline creation via [VkPipelineShaderStageCreateInfo](#), rather than having to create a shader module.
  - A function [vkGetRenderingAreaGranularity](#) to query the optimal render area for a dynamic

rendering instance.

- A property to indicate that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior.
- `vkGetDeviceImageSubresourceLayout` allows an application to perform a `vkGetImageSubresourceLayout` query without having to create an image.
- `VK_REMAINING_ARRAY_LAYERS` as the `layerCount` member of `VkImageSubresourceLayers`.
- A property to indicate whether `PointSize` controls the final rasterization of polygons if `polygon mode` is `VK_POLYGON_MODE_POINT`.
- Two properties to indicate the non-strict line rasterization algorithm used.
- Two new flags words `VkPipelineCreateFlagBits2` and `VkBufferUsageFlagBits2`.
- Physical-device-level functions **can** now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.
- Copies between images of any type are allowed, with 1D images treated as 2D images with a height of 1.

If the `VkPhysicalDeviceMaintenance5Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMaintenance5Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance5Features-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceMaintenance6Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance6Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance6;
} VkPhysicalDeviceMaintenance6Features;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkPhysicalDeviceMaintenance6Features
typedef VkPhysicalDeviceMaintenance6Features VkPhysicalDeviceMaintenance6FeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maintenance6** indicates that the implementation supports the following:
  - **VK\_NULL\_HANDLE** can be used when binding an index buffer
  - **VkBindMemoryStatus** can be included in the **pNext** chain of the [VkBindBufferMemoryInfo](#) and [VkBindImageMemoryInfo](#) structures, enabling applications to retrieve [VkResult](#) values for individual memory binding operations.
  - [VkPhysicalDeviceMaintenance6Properties::blockTexelViewCompatibleMultipleLayers](#) property to indicate that the implementation supports creating image views with **VK\_IMAGE\_CREATE\_BLOCK\_TEXEL\_VIEW\_COMPATIBLE\_BIT** where the **layerCount** member of **subresourceRange** is greater than 1.
  - [VkPhysicalDeviceMaintenance6Properties::maxCombinedImageSamplerDescriptorCount](#) property which indicates the maximum number of descriptors required for sampled images with **Y'C<sub>B</sub>C<sub>R</sub>** conversion.
  - A [VkPhysicalDeviceMaintenance6Properties::fragmentShadingRateClampCombinerInputs](#) property which indicates whether the implementation clamps the inputs to fragment shading rate combiner operations.

If the [VkPhysicalDeviceMaintenance6Features](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance6Features](#), it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance6Features-sType-sType  
**sType** must be **VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_MAINTENANCE\_6\_FEATURES**

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMaintenance7FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceMaintenance7FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance7;
} VkPhysicalDeviceMaintenance7FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maintenance7](#) indicates that the implementation supports the following:
  - The [VK\\_RENDERING\\_CONTENTS\\_INLINE\\_BIT\\_KHR](#) and [VK\\_SUBPASS\\_CONTENTS\\_INLINE\\_AND\\_SECONDARY\\_COMMAND\\_BUFFERS\\_KHR](#) flags **can** be used to record commands in render pass instances both inline and in secondary command buffers executed with [vkCmdExecuteCommands](#) for dynamic rendering and legacy render passes respectively.
  - Querying information regarding the underlying devices in environments where the Vulkan implementation is provided through layered implementations. This is done by chaining [VkPhysicalDeviceLayeredApiPropertiesListKHR](#) to [VkPhysicalDeviceProperties2](#).
  - New limits which indicate the maximum total count of dynamic uniform buffers and dynamic storage buffers that **can** be included in a pipeline layout.
  - 32-bit timestamp queries **must** wrap on overflow
  - A property that indicates whether a fragment shading rate attachment can have a size that is too small to cover a specified render area.
  - A property that indicates support for writing to one aspect of a depth/stencil attachment without performing a read-modify-write operation on the other aspect

If the [VkPhysicalDeviceMaintenance7FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance7FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMaintenance8FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance8
typedef struct VkPhysicalDeviceMaintenance8FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance8;
} VkPhysicalDeviceMaintenance8FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maintenance8](#) indicates that the implementation supports the following:
  - Allow copies between depth/stencil and “matching” color attachments
  - Allow [dstCache](#) in [vkMergePipelineCaches](#) to be implicitly synchronized.
  - Require src/dst sync scopes to work when doing queue family ownership transfers
  - Support [Offset](#) (as an alternative to [ConstOffset](#)) image operand in texture sampling and fetch operations
  - Use the SPIR-V definition of [OpSRem](#) and [OpSMod](#), making these operations produce well-defined results for negative operands
  - Loosen layer restrictions when blitting from 3D images to other image types
  - Add space for an additional 64 access flags for use with [VkMemoryBarrier2](#), [VkBufferMemoryBarrier2](#), and [VkImageMemoryBarrier2](#)

If the [VkPhysicalDeviceMaintenance8FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance8FeaturesKHR](#), it **must** add an

instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceMaintenance8FeaturesKHR-sType-sType](#)  
[sType](#) must be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MAINTENANCE\\_8\\_FEATURES\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMaintenance9FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance9
typedef struct VkPhysicalDeviceMaintenance9FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance9;
} VkPhysicalDeviceMaintenance9FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maintenance9](#) indicates that the implementation supports the following:
  - The restriction that certain bitfield SPIR-V instructions only operate on 32-bit integers is relaxed.
  - The value returned when a vertex shader reads an unbound vertex attribute is defined by way of the [defaultVertexAttributeValue](#) property.
  - A new [VkQueryPoolCreateFlagBits::VK\\_QUERY\\_POOL\\_CREATE\\_RESET\\_BIT\\_KHR](#) flag **can** be used to initialize all queries in query pool to the reset state on creation.
  - [vkCmdSetEvent2](#) **may** not provide a dependency other than the event src stage mask.
  - The effects of image memory barriers and image layout transitions on 3D images created with [VK\\_IMAGE\\_CREATE\\_2D\\_ARRAY\\_COMPATIBLE\\_BIT](#) are limited to only those slices specified in [VkImageSubresourceRange](#)
  - A device **can** be created with no queues. This can be used for compiling pipelines or shaders for the purpose of filling pipeline caches.

- Queue family ownership transfers are no longer required for buffers and linear images. For optimally tiled images, a new physical device query is added to check if resources created with `VK_SHARING_MODE_EXCLUSIVE` can automatically transfer ownership between two queue families.
- `image2DViewOf3DSparse` enables 2D views of 3D sparse images.

If the `VkPhysicalDeviceMaintenance9FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMaintenance9FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceMaintenance9FeaturesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_9_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceMaintenance10FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance10
typedef struct VkPhysicalDeviceMaintenance10FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance10;
} VkPhysicalDeviceMaintenance10FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maintenance10` indicates that the implementation supports the following:
  - New image format feature bits that indicate support for copying depth or stencil aspects using non-graphics queue families
  - If `vkCmdSetSampleMaskEXT` is called with `pSampleMask` set to `NULL`, it is treated as if the mask has all bits set to 1.

- Add [vkCmdEndRendering2KHR](#) as an extensible version of [vkCmdEndRendering](#)
- Add input attachment information to dynamic rendering
- Require that vertex inputs follow sRGB encoding when those formats are used, instead of being underspecified.
- Add a query to determine if sRGB images are resolved in nonlinear or linear space by default
- Add an optional feature to allow applications to override the default sRGB resolve behavior
- Add resolve mode and depth-stencil resolve support to [vkCmdResolveImage2](#) to bring it in-line with render pass attachment resolves

If the [VkPhysicalDeviceMaintenance10FeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMaintenance10FeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMaintenance11FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance11
typedef struct VkPhysicalDeviceMaintenance11FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           maintenance11;
} VkPhysicalDeviceMaintenance11FeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.

- `maintenance11` indicates that the implementation supports the following:
  - `VK_IMAGE_CREATE_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR`
  - The depth clipping state of the pipeline is well defined when the pipeline is created without `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` being set and the `VkPipelineRasterizationDepthClipStateCreateInfoEXT` structure is not present
  - `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR`
  - Allow `queueFamilyIndexCount` of 1 in `VkBufferCreateInfo`, `VkImageCreateInfo`, `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`, when `sharingMode` is `VK_SHARING_MODE_CONCURRENT`
  - Require `minImageTransferGranularity` to be (1,1,1) even on transfer-only queues and add `optimalImageTransferGranularity` queue family property to communicate the performance bump for copies not aligned to the optimal granularity
  - When copying between a buffer and an image on a transfer-only queue, do not require `bufferOffset` to be a multiple of 4

If the `VkPhysicalDeviceMaintenance11FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMaintenance11FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceDynamicRenderingFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceDynamicRenderingFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRendering;
} VkPhysicalDeviceDynamicRenderingFeatures;
```

```
// Provided by VK_KHR_dynamic_rendering
// Equivalent to VkPhysicalDeviceDynamicRenderingFeatures
typedef VkPhysicalDeviceDynamicRenderingFeatures
VkPhysicalDeviceDynamicRenderingFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **dynamicRendering** specifies that the implementation supports dynamic render pass instances using the [vkCmdBeginRendering](#) command.

If the [VkPhysicalDeviceDynamicRenderingFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDynamicRenderingFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The [VkPhysicalDeviceCustomResolveFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_custom_resolve
typedef struct VkPhysicalDeviceCustomResolveFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           customResolve;
} VkPhysicalDeviceCustomResolveFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `customResolve` specifies that the implementation supports render pass resolves using shaders.

If the `VkPhysicalDeviceCustomResolveFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceCustomResolveFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomResolveFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_RESOLVE_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

The `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_rgba10x6_formats
typedef struct VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           formatRgba10x6WithoutYCbCrSampler;
} VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatRgba10x6WithoutYCbCrSampler` indicates that `VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16` can be used with a `VkImageView` with `subresourceRange.aspectMask` equal to `VK_IMAGE_ASPECT_COLOR_BIT` without a `sampler Y'CBCR` conversion enabled.

If the `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT`, it **must** add

an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- [VUID-VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT-sType-sType](#) [sType](#) must be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_RGBA10X6\\_FORMATS\\_FEATURES\\_EXT](#)

### Structure Chaining

The [VkPhysicalDevicePipelineRobustnessFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePipelineRobustnessFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineRobustness;
} VkPhysicalDevicePipelineRobustnessFeatures;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPhysicalDevicePipelineRobustnessFeatures
typedef VkPhysicalDevicePipelineRobustnessFeatures
VkPhysicalDevicePipelineRobustnessFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pipelineRobustness](#) indicates that robustness **can** be requested on a per-pipeline-stage granularity.

#### NOTE

Enabling the [pipelineRobustness](#) feature may, on some platforms, incur a minor performance cost when the [robustBufferAccess](#) feature is not enabled, even for pipelines which do not make use of any robustness features. If robustness is not needed, the [pipelineRobustness](#) feature should not be enabled by an application.

If the [VkPhysicalDevicePipelineRobustnessFeatures](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePipelineRobustnessFeatures](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

The [VkPhysicalDeviceImageViewMinLodFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_image_view_min_lod
typedef struct VkPhysicalDeviceImageViewMinLodFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           minLod;
} VkPhysicalDeviceImageViewMinLodFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [minLod](#) indicates whether the implementation supports clamping the minimum LOD value during [Image Level\(s\) Selection](#), [Texel Gathering](#) and [Integer Texel Coordinate Operations](#) with a given [VkImageView](#) by [VkImageViewMinLodCreateInfoEXT::minLod](#).

If the [VkPhysicalDeviceImageViewMinLodFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceImageViewMinLodFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_rasterization_order_attachment_access
typedef struct VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rasterizationOrderColorAttachmentAccess;
    VkBool32           rasterizationOrderDepthAttachmentAccess;
    VkBool32           rasterizationOrderStencilAttachmentAccess;
} VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rasterizationOrderColorAttachmentAccess` indicates that rasterization order access to color and input attachments is supported by the implementation.
- `rasterizationOrderDepthAttachmentAccess` indicates that rasterization order access to the depth aspect of depth/stencil and input attachments is supported by the implementation.
- `rasterizationOrderStencilAttachmentAccess` indicates that rasterization order access to the stencil aspect of depth/stencil and input attachments is supported by the implementation.

If the `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT`, it must add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

    VkStructureType    sType;
    void*              pNext;
    VkBool32           attachmentFeedbackLoopLayout;
} VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `attachmentFeedbackLoopLayout` indicates whether the implementation supports using `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` image layout for images created with the `VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` usage flag set.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ATTACHMENT_FEEDBACK_LOOP_LAYOUT_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_nested_command_buffer
typedef struct VkPhysicalDeviceNestedCommandBufferFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nestedCommandBuffer;
    VkBool32           nestedCommandBufferRendering;
    VkBool32           nestedCommandBufferSimultaneousUse;
} VkPhysicalDeviceNestedCommandBufferFeaturesEXT;
```

This structure describes the following features:

- `nestedCommandBuffer` indicates the implementation supports nested command buffers, which

allows [Secondary Command Buffers](#) to execute other [Secondary Command Buffers](#).

- [nestedCommandBufferRendering](#) indicates that it is valid to call [vkCmdExecuteCommands](#) inside a [Secondary Command Buffer](#) recorded with [VK\\_COMMAND\\_BUFFER\\_USAGE\\_RENDER\\_PASS\\_CONTINUE\\_BIT](#).
- [nestedCommandBufferSimultaneousUse](#) indicates that the implementation supports nested command buffers with command buffers that are recorded with [VK\\_COMMAND\\_BUFFER\\_USAGE\\_SIMULTANEOUS\\_USE\\_BIT](#).

If the [VkPhysicalDeviceNestedCommandBufferFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceNestedCommandBufferFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNestedCommandBufferFeaturesEXT-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_NESTED\\_COMMAND\\_BUFFER\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           graphicsPipelineLibrary;
} VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [graphicsPipelineLibrary](#) indicates that the implementation supports [graphics pipeline libraries](#).

If the [VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_GRAPHICS\\_PIPELINE\\_LIBRARY\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevicePipelineBinaryFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPhysicalDevicePipelineBinaryFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineBinaries;
} VkPhysicalDevicePipelineBinaryFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [pipelineBinaries](#) indicates that the implementation supports [Pipeline Binaries](#).

If the [VkPhysicalDevicePipelineBinaryFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePipelineBinaryFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineBinaryFeaturesKHR-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PIPELINE\\_BINARY\\_FEATURES\\_KHR](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_multisampled_render_to_single_sampled
typedef struct VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multisampledRenderToSingleSampled;
} VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [multisampledRenderToSingleSampled](#) indicates that the implementation supports multisampled rendering to single-sampled render pass attachments.

If the [VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MULTISAMPLED\\_RENDER\\_TO\\_SINGLE\\_SAMPLED\\_FEATURES\\_EXT](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_multisampled_render_to_swapchain
typedef struct VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           multisampledRenderToSwapchain;
} VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `multisampledRenderToSwapchain` indicates that the implementation supports multisampled rendering to single-sampled render pass attachments referencing swapchain images.

If the `VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultisampledRenderToSwapchainFeaturesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTISAMPLED_RENDER_TO_SWAPCHAIN_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_2d_view_of_3d
typedef struct VkPhysicalDeviceImage2DViewOf3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           image2DViewOf3D;
    VkBool32           sampler2DViewOf3D;
} VkPhysicalDeviceImage2DViewOf3DFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image2DViewOf3D` indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` if the image is created using `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`.
- `sampler2DViewOf3D` indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` if the image is created using `VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT`.

If the `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImage2DViewOf3DFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_2D_VIEW_OF_3D_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageSlicedViewOf3D;
} VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT;
```

The members of the `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure describe the following features:

- `imageSlicedViewOf3D` indicates that the implementation supports using a sliced view of a 3D image in a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` by using a `VkImageViewSlicedCreateInfoEXT` structure when creating the view.

If the `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_SLICED_VIEW_OF_3D_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceImageCompressionControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_compression_control
typedef struct VkPhysicalDeviceImageCompressionControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageCompressionControl;
} VkPhysicalDeviceImageCompressionControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageCompressionControl` indicates that the implementation supports providing controls for image compression at image creation time.

If the `VkPhysicalDeviceImageCompressionControlFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceImageCompressionControlFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageCompressionControlFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_image_compression_control_swapchain
typedef struct VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           imageCompressionControlSwapchain;
} VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageCompressionControlSwapchain` indicates that the implementation supports controlling image controls per swapchain and querying image compression properties per surface.

If the `VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to

use a [VkDevice](#) with any features described by [VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_IMAGE\\_COMPRESSION\\_CONTROL\\_SWAPCHAIN\\_FEATURES\\_EXT](#)

The [VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_ray_tracing_position_fetch
typedef struct VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingPositionFetch;
} VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [rayTracingPositionFetch](#) indicates that the implementation supports fetching the object space vertex positions of a hit triangle.

If the [VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR-sType-sType

`sType` must be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_POSITION_FETCH_FEATURES_KHR`

## Structure Chaining

### Extends the structures

The `VkPhysicalDeviceShaderFloatControls2Features` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceShaderFloatControls2Features {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloatControls2;
} VkPhysicalDeviceShaderFloatControls2Features;
```

```
// Provided by VK_KHR_shader_float_controls2
// Equivalent to VkPhysicalDeviceShaderFloatControls2Features
typedef VkPhysicalDeviceShaderFloatControls2Features
VkPhysicalDeviceShaderFloatControls2FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloatControls2` specifies whether shader modules **can** declare the `FloatControls2` capability.

If the `VkPhysicalDeviceShaderFloatControls2Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderFloatControls2Features`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

The [VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_non_seamless_cube_map
typedef struct VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nonSeamlessCubeMap;
} VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [nonSeamlessCubeMap](#) indicates that the implementation supports [VK\\_SAMPLER\\_CREATE\\_NON\\_SEAMLESS\\_CUBE\\_MAP\\_BIT\\_EXT](#).

If the [VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_NON\\_SEAMLESS\\_CUBE\\_MAP\\_FEATURES\\_EXT](#)

The [VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderModuleIdentifier;
} VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderModuleIdentifier` indicates whether the implementation supports querying an identifier of a `VkShaderModule` or `VkShaderModuleCreateInfo` structure, and creating pipelines from identifiers only.

If the `VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceDepthClampZeroOneFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_depth_clamp_zero_one
typedef struct VkPhysicalDeviceDepthClampZeroOneFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthClampZeroOne;
} VkPhysicalDeviceDepthClampZeroOneFeaturesKHR;
```

```
// Provided by VK_EXT_depth_clamp_zero_one
// Equivalent to VkPhysicalDeviceDepthClampZeroOneFeaturesKHR
typedef VkPhysicalDeviceDepthClampZeroOneFeaturesKHR
VkPhysicalDeviceDepthClampZeroOneFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **depthClampZeroOne** indicates that the implementation supports clamping the depth to a range of 0 to 1.

If the **VkPhysicalDeviceDepthClampZeroOneFeaturesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a **VkDevice** with any features described by **VkPhysicalDeviceDepthClampZeroOneFeaturesKHR**, it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of **VkDeviceCreateInfo** when creating the **VkDevice**.

### Valid Usage (Implicit)

The **VkPhysicalDeviceShaderTileImageFeaturesEXT** structure is defined as:

```
// Provided by VK_EXT_shader_tile_image
typedef struct VkPhysicalDeviceShaderTileImageFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderTileImageColorReadAccess;
    VkBool32           shaderTileImageDepthReadAccess;
    VkBool32           shaderTileImageStencilReadAccess;
} VkPhysicalDeviceShaderTileImageFeaturesEXT;
```

The members of the **VkPhysicalDeviceShaderTileImageFeaturesEXT** structure describe the following

features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderTileImageColorReadAccess` indicates that the implementation supports the `TileImageColorReadAccessEXT` SPIR-V capability.
- `shaderTileImageDepthReadAccess` indicates that the implementation supports the `TileImageDepthReadAccessEXT` SPIR-V capability.
- `shaderTileImageStencilReadAccess` indicates that the implementation supports the `TileImageStencilReadAccessEXT` SPIR-V capability.

If the `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderTileImageFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceDepthBiasControlFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_bias_control
typedef struct VkPhysicalDeviceDepthBiasControlFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           depthBiasControl;
    VkBool32           leastRepresentableValueForceUnormRepresentation;
    VkBool32           floatRepresentation;
    VkBool32           depthBiasExact;
} VkPhysicalDeviceDepthBiasControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthBiasControl` indicates whether the implementation supports the `vkCmdSetDepthBias2EXT` command and the `VkDepthBiasRepresentationInfoEXT` structure.
- `leastRepresentableValueForceUnormRepresentation` indicates whether the implementation supports using the `VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT` depth bias representation.
- `floatRepresentation` indicates whether the implementation supports using the `VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT` depth bias representation.
- `depthBiasExact` indicates whether the implementation supports forcing depth bias to not be scaled to ensure a minimum resolvable difference using `VkDepthBiasRepresentationInfoEXT::depthBiasExact`.

### Valid Usage (Implicit)

```
// Provided by VK_EXT_device_address_binding_report
typedef struct VkPhysicalDeviceAddressBindingReportFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           reportAddressBinding;
} VkPhysicalDeviceAddressBindingReportFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `reportAddressBinding` indicates whether this implementation supports reporting the binding of GPU virtual address ranges to Vulkan objects.

If the `VkPhysicalDeviceAddressBindingReportFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceAddressBindingReportFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceFaultFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_device_fault
typedef struct VkPhysicalDeviceFaultFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceFault;
    VkBool32           deviceFaultVendorBinary;
} VkPhysicalDeviceFaultFeaturesEXT;
```

This structure describes the following features:

- `deviceFault` indicates that the implementation supports the reporting of device fault information.
- `deviceFaultVendorBinary` indicates that the implementation supports the generation of vendor-specific binary crash dumps. These may provide additional information when imported into vendor-specific external tools.

If the `VkPhysicalDeviceFaultFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceFaultFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceFaultFeaturesEXT-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FAULT_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceFaultFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_device_fault
typedef struct VkPhysicalDeviceFaultFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceFault;
    VkBool32           deviceFaultVendorBinary;
    VkBool32           deviceFaultReportMasked;
    VkBool32           deviceFaultDeviceLostOnMasked;
} VkPhysicalDeviceFaultFeaturesKHR;
```

This structure describes the following features:

- `deviceFault` indicates that the implementation supports the reporting of device fault information.
- `deviceFaultVendorBinary` indicates that the implementation supports the generation of vendor-specific binary crash dumps. These **may** provide additional information when imported into vendor-specific external tools.
- `deviceFaultReportMasked` indicates that the implementation supports masked faults in normal operation (ie. automatically recovered by the driver internally without the application receiving a `VK_ERROR_DEVICE_LOST` error) which **may** be reported via this extension even if they did not result in a `VK_ERROR_DEVICE_LOST` condition being returned to the application.
- `deviceFaultDeviceLostOnMasked` indicates that the implementation supports returning `VK_ERROR_DEVICE_LOST` for faults that would be normally be masked.

In exceptional circumstances, some implementations **may** mask faults and attempt to recover from an error. In such circumstances, the device is not lost and further work can be submitted to the device. When such faults occur, the contents of all resources being written to at the time of the fault are undefined.

If the `VkPhysicalDeviceFaultFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to

indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFaultFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFaultFeaturesKHR-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_FAULT\\_FEATURES\\_KHR](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_pipeline_library_group_handles
typedef struct VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineLibraryGroupHandles;
} VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR;
```

```
// Provided by VK_EXT_pipeline_library_group_handles
// Equivalent to VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR
typedef VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR
VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT;
```

This structure describes the following features:

- [pipelineLibraryGroupHandles](#) indicates whether the implementation supports querying group handles directly from a ray tracing pipeline library, and guarantees bitwise identical group handles for such libraries when linked into other pipelines.

If the [VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_LIBRARY_GROUP_HANDLES_FEATURES_KHR`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderObjectFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderObject;
} VkPhysicalDeviceShaderObjectFeaturesEXT;
```

This structure describes the following feature:

- [shaderObject](#) indicates whether the implementation supports [shader objects](#).

If the [VkPhysicalDeviceShaderObjectFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderObjectFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderObjectFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)

- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceFrameBoundaryFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_frame_boundary
typedef struct VkPhysicalDeviceFrameBoundaryFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           frameBoundary;
} VkPhysicalDeviceFrameBoundaryFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [frameBoundary](#) indicates whether the implementation supports frame boundary information.

If the [VkPhysicalDeviceFrameBoundaryFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceFrameBoundaryFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFrameBoundaryFeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_FRAME\\_BOUNDARY\\_FEATURES\\_EXT](#)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_swapchain_maintenance1
typedef struct VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           swapchainMaintenance1;
} VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR;
```

```
// Provided by VK_EXT_swapchain_maintenance1
// Equivalent to VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR
typedef VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR
VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchainMaintenance1` indicates that the implementation supports the following:
  - `VkSwapchainPresentFenceInfoKHR`, specifying a fence that is signaled when the resources associated with a present operation **can** be safely destroyed.
  - `VkSwapchainPresentModesCreateInfoKHR` and `VkSwapchainPresentModeInfoKHR`, allowing the swapchain to switch present modes without a need for recreation.
  - `VkSwapchainPresentScalingCreateInfoKHR`, specifying the scaling behavior of the swapchain in presence of window resizing.
  - The `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_KHR` flag, allowing the implementation to defer the allocation of swapchain image memory until first acquisition.
  - `vkReleaseSwapchainImagesKHR`, allowing acquired swapchain images to be released without presenting them.

If the `VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSwapchainMaintenance1FeaturesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SWAPCHAIN_MAINTENANCE_1_FEATURES_KHR`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_present_mode_fifo_latest_ready
typedef struct VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           presentModeFifoLatestReady;
} VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR;
```

```
// Provided by VK_EXT_present_mode_fifo_latest_ready
// Equivalent to VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR
typedef VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR
VkPhysicalDevicePresentModeFifoLatestReadyFeaturesEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentModeFifoLatestReady` specifies whether the implementation supports the [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#) present mode.

If the [VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR](#) structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentModeFifoLatestReadyFeaturesKHR-sType-sType `sType` **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_FEATURES\\_KHR](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_dynamic_rendering_unused_attachments
typedef struct VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRenderingUnusedAttachments;
} VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRenderingUnusedAttachments` indicates that the implementation supports binding graphics pipelines within a render pass instance where any pipeline [VkPipelineRenderingCreateInfo::pColorAttachmentFormats](#) element with a format other than `VK_FORMAT_UNDEFINED` is allowed with a corresponding [VkRenderingInfo::pColorAttachments](#) element with an `imageView` equal to `VK_NULL_HANDLE`, or any pipeline [VkPipelineRenderingCreateInfo::pColorAttachmentFormats](#) element with a `VK_FORMAT_UNDEFINED` format is allowed with a corresponding [VkRenderingInfo::pColorAttachments](#) element with a non-`VK_NULL_HANDLE` `imageView`. Also a [VkPipelineRenderingCreateInfo::depthAttachmentFormat](#) other than `VK_FORMAT_UNDEFINED` is allowed with a `VK_NULL_HANDLE` [VkRenderingInfo::pDepthAttachment](#), or a [VkPipelineRenderingCreateInfo::depthAttachmentFormat](#) of `VK_FORMAT_UNDEFINED` is allowed with a non-`VK_NULL_HANDLE` [VkRenderingInfo::pDepthAttachment](#). Also a [VkPipelineRenderingCreateInfo::stencilAttachmentFormat](#) other than `VK_FORMAT_UNDEFINED` is allowed with a `VK_NULL_HANDLE` [VkRenderingInfo::pStencilAttachment](#), or a [VkPipelineRenderingCreateInfo::stencilAttachmentFormat](#) of `VK_FORMAT_UNDEFINED` is allowed with a non-`VK_NULL_HANDLE` [VkRenderingInfo::pStencilAttachment](#). Any writes to a [VkRenderingInfo::pColorAttachments](#), [VkRenderingInfo::pDepthAttachment](#), or [VkRenderingInfo::pStencilAttachment](#) with `VK_NULL_HANDLE` are discarded.

If the [VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT](#) structure is included in the `pNext` chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_UNUSED_ATTACHMENTS_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rayTracingInvocationReorder;
} VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingInvocationReorder` indicates that the implementation supports `SPV_EXT_shader_invocation_reorder`.

If the `VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingInvocationReorderFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_shader_maximal_reconvergence
typedef struct VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderMaximalReconvergence;
} VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shaderMaximalReconvergence](#) specifies whether the implementation supports the shader execution mode [MaximallyReconvergesKHR](#)

If the [VkPhysicalDevicePrivateDataFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDevicePrivateDataFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceShaderMaximalReconvergenceFeaturesKHR-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MAXIMAL_RECONVERGENCE_FEATURES_KHR`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderSubgroupRotateFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceShaderSubgroupRotateFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupRotate;
    VkBool32           shaderSubgroupRotateClustered;
} VkPhysicalDeviceShaderSubgroupRotateFeatures;
```

```
// Provided by VK_KHR_shader_subgroup_rotate
// Equivalent to VkPhysicalDeviceShaderSubgroupRotateFeatures
typedef VkPhysicalDeviceShaderSubgroupRotateFeatures
VkPhysicalDeviceShaderSubgroupRotateFeaturesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupRotate` specifies whether shader modules **can** declare the `GroupNonUniformRotateKHR` capability.
- `shaderSubgroupRotateClustered` specifies whether shader modules **can** use the `ClusterSize` operand to `OpGroupNonUniformRotateKHR`.

If the `VkPhysicalDeviceShaderSubgroupRotateFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderSubgroupRotateFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupRotateFeatures-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_ROTATE_FEATURES`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceShaderExpectAssumeFeatures` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceShaderExpectAssumeFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderExpectAssume;
} VkPhysicalDeviceShaderExpectAssumeFeatures;
```

```
// Provided by VK_KHR_shader_expect_assume
// Equivalent to VkPhysicalDeviceShaderExpectAssumeFeatures
typedef VkPhysicalDeviceShaderExpectAssumeFeatures
VkPhysicalDeviceShaderExpectAssumeFeaturesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderExpectAssume** specifies whether shader modules **can** declare the **ExpectAssumeKHR** capability.

If the [VkPhysicalDeviceShaderExpectAssumeFeatures](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderExpectAssumeFeatures](#), it **must** add an instance of the structure, with the desired feature members set to **VK\_TRUE**, to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

### Structure Chaining

#### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDynamicRenderingLocalReadFeatures](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceDynamicRenderingLocalReadFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           dynamicRenderingLocalRead;
} VkPhysicalDeviceDynamicRenderingLocalReadFeatures;
```

```
// Provided by VK_KHR_dynamic_rendering_local_read
// Equivalent to VkPhysicalDeviceDynamicRenderingLocalReadFeatures
typedef VkPhysicalDeviceDynamicRenderingLocalReadFeatures
VkPhysicalDeviceDynamicRenderingLocalReadFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `dynamicRenderingLocalRead` specifies that the implementation supports local reads inside dynamic render pass instances using the `vkCmdBeginRendering` command.

If the `VkPhysicalDeviceDynamicRenderingLocalReadFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDynamicRenderingLocalReadFeatures`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceShaderQuadControlFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_quad_control
typedef struct VkPhysicalDeviceShaderQuadControlFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            shaderQuadControl;
} VkPhysicalDeviceShaderQuadControlFeaturesKHR;
```

This structure describes the following features:

- `shaderQuadControl` indicates whether the implementation supports shaders with the `QuadControlKHR` capability.

If the `VkPhysicalDeviceShaderQuadControlFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderQuadControlFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderQuadControlFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_QUAD_CONTROL_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

The `VkPhysicalDeviceShaderBfloat16FeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_bfloat16
typedef struct VkPhysicalDeviceShaderBfloat16FeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32            shaderBFloat16Type;
    VkBool32            shaderBFloat16DotProduct;
    VkBool32            shaderBFloat16CooperativeMatrix;
} VkPhysicalDeviceShaderBfloat16FeaturesKHR;
```

This structure describes the following features:

- `shaderBFloat16Type` indicates whether the implementation supports shaders with the

BFloat16TypeKHR capability.

- `shaderBFloat16DotProduct` indicates whether the implementation supports shaders with the `BFloat16DotProductKHR` capability.
- `shaderBFloat16CooperativeMatrix` indicates whether the implementation supports shaders with the `BFloat16CooperativeMatrixKHR` capability.

If the `VkPhysicalDeviceShaderBfloat16FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderBfloat16FeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

The `VkPhysicalDeviceMapMemoryPlacedFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_map_memory_placed
typedef struct VkPhysicalDeviceMapMemoryPlacedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           memoryMapPlaced;
    VkBool32           memoryMapRangePlaced;
    VkBool32           memoryUnmapReserve;
} VkPhysicalDeviceMapMemoryPlacedFeaturesEXT;
```

This structure describes the following features:

- `memoryMapPlaced` indicates that the implementation supports placing memory maps at application-specified virtual addresses.
- `memoryMapRangePlaced` indicates that the implementation supports placing memory maps of a subrange of a memory object at application-specified virtual addresses.
- `memoryUnmapReserve` indicates that the implementation supports leaving the memory range reserved when unmapping a memory object.

If the `VkPhysicalDeviceMapMemoryPlacedFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceMapMemoryPlacedFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMapMemoryPlacedFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAP_MEMORY_PLACED_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_replicated_composites
typedef struct VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderReplicatedComposites;
} VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderReplicatedComposites` specifies whether shader modules **can** declare the `ReplicatedCompositesEXT` capability.

If the `VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderReplicatedCompositesFeaturesEXT-sType-sType

`sType` must be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_REPLICATED_COMPOSITES_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_relaxed_extended_instruction
typedef struct VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderRelaxedExtendedInstruction;
} VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderRelaxedExtendedInstruction` specifies whether the implementation supports SPIR-V modules that use the `SPV_KHR_relaxed_extended_instruction` extension.

If the `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR-sType-sType `sType` must be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_RELAXED_EXTENDED_INSTRUCTION_FEATURES_KHR`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_uniform_buffer_unsigned_array
typedef struct VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderUniformBufferUnsignedArray;
} VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT;
```

This structure describes the following feature:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [shaderUniformBufferUnsignedArray](#) indicates that the implementation supports declaring the last member of a uniform buffer block as an unsigned array.

If the [VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderUniformBufferUnsignedArrayFeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_SHADER\\_UNIFORM\\_BUFFER\\_UNSIGNED\\_ARRAY\\_FEATURES\\_EXT](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The `VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_primitive_restart_index
typedef struct VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           primitiveRestartIndex;
} VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveRestartIndex` specifies whether the index for primitive restart can be set

If the `VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePrimitiveRestartIndexFeaturesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVE_RESTART_INDEX_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`

The `VkPhysicalDeviceShaderFloat8FeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_float8
typedef struct VkPhysicalDeviceShaderFloat8FeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat8;
    VkBool32           shaderFloat8CooperativeMatrix;
} VkPhysicalDeviceShaderFloat8FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderFloat8` indicates whether the implementation supports shaders with the `Float8EXT` capability.
- `shaderFloat8CooperativeMatrix` indicates whether the implementation supports shaders with the `Float8CooperativeMatrixEXT` capability.

If the `VkPhysicalDeviceShaderFloat8FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderFloat8FeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderFloat8FeaturesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FLOAT8_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShader64BitIndexingFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_64bit_indexing
typedef struct VkPhysicalDeviceShader64BitIndexingFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shader64BitIndexing;
} VkPhysicalDeviceShader64BitIndexingFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shader64BitIndexing` indicates that the implementation supports using 64-bit address calculations for indexing cooperative matrices, storage buffers, and physical storage buffers.

If the `VkPhysicalDeviceShader64BitIndexingFeaturesEXT` structure is included in the `pNext` chain of

the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShader64BitIndexingFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShader64BitIndexingFeaturesEXT-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_64_BIT_INDEXING_FEATURES_EXT`

### Structure Chaining

#### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_subgroup_partitioned
typedef struct VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSubgroupPartitioned;
} VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupPartitioned` indicates that the implementation supports `VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT`.

If the `VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSubgroupPartitionedFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_PARTITIONED_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- `VkDeviceCreateInfo`
- `VkPhysicalDeviceFeatures2`

The `VkPhysicalDeviceShaderSplitBarrierFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_split_barrier
typedef struct VkPhysicalDeviceShaderSplitBarrierFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderSplitBarrier;
} VkPhysicalDeviceShaderSplitBarrierFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSplitBarrier` indicates that the implementation supports the `SplitBarrierEXT` SPIR-V capability.

If the `VkPhysicalDeviceShaderSplitBarrierFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceShaderSplitBarrierFeaturesEXT`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderSplitBarrierFeaturesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SPLIT_BARRIER_FEATURES_EXT`

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)
- [VkPhysicalDeviceFeatures2](#)

The [VkPhysicalDeviceDescriptorHeapFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkPhysicalDeviceDescriptorHeapFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           descriptorHeap;
    VkBool32           descriptorHeapCaptureReplay;
} VkPhysicalDeviceDescriptorHeapFeaturesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [descriptorHeap](#) specifies whether [descriptor heaps](#) **can** be used.
- [descriptorHeapCaptureReplay](#) specifies whether [heap descriptors](#) **can** be captured and replayed.

If the [VkPhysicalDeviceDescriptorHeapFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceDescriptorHeapFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorHeapFeaturesEXT-sType-sType [sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_DESCRIPTOR\\_HEAP\\_FEATURES\\_EXT](#)

## Structure Chaining

### Extends the structures

- [VkDeviceCreateInfo](#)

The [VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_device_address_commands
typedef struct VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           deviceAddressCommands;
} VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceAddressCommands` specifies whether the implementation supports commands taking a `VkDeviceAddress` that would otherwise take a `VkBuffer` object.

If the `VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a `VkDevice` with any features described by `VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR`, it **must** add an instance of the structure, with the desired feature members set to `VK_TRUE`, to the `pNext` chain of `VkDeviceCreateInfo` when creating the `VkDevice`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_ADDRESS_COMMANDS_FEATURES_KHR`

### Structure Chaining

#### Extends the structures

The `VkPhysicalDeviceShaderConstantDataFeaturesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_constant_data
typedef struct VkPhysicalDeviceShaderConstantDataFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderConstantData;
} VkPhysicalDeviceShaderConstantDataFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderConstantData** specifies whether the implementation supports SPIR-V modules that use the [VK\\_KHR\\_shader\\_constant\\_data](#) extension.

If the [VkPhysicalDeviceShaderConstantDataFeaturesKHR](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderConstantDataFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the **pNext** chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The [VkPhysicalDeviceShaderAbortFeaturesKHR](#) structure is defined as:

```
// Provided by VK_KHR_shader_abort
typedef struct VkPhysicalDeviceShaderAbortFeaturesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderAbort;
} VkPhysicalDeviceShaderAbortFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderAbort** specifies whether shaders **can** declare the [AbortKHR](#) capability.

If the [VkPhysicalDeviceShaderAbortFeaturesKHR](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a

[VkDevice](#) with any features described by [VkPhysicalDeviceShaderAbortFeaturesKHR](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

The [VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT](#) structure is defined as:

```
// Provided by VK_EXT_shader_ocp_microscaling_types
typedef struct VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           shaderFloat4;
    VkBool32           shaderFloat6;
    VkBool32           shaderFloat8UnsignedE8M0;
    VkBool32           shaderMXInt8;
} VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT;
```

This structure describes the following features:

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [shaderFloat4](#) indicates whether the implementation supports shaders with the [Float4EXT](#) or [BitcastExtractEXT](#) capabilities.
- [shaderFloat6](#) indicates whether the implementation supports shaders with the [Float6EXT](#) or [BitcastExtractEXT](#) capabilities.
- [shaderFloat8UnsignedE8M0](#) indicates whether the implementation supports shaders with the [Float8UnsignedE8M0EXT](#) capability.
- [shaderMXInt8](#) indicates whether the implementation supports shaders with the [MXInt8EXT](#) capability.

If the [VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is

filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

## 47.1. Feature Requirements

All Vulkan graphics implementations **must** support the following features:

- If Vulkan 1.0 is supported, [robustBufferAccess](#) **must** be supported if [VK\\_KHR\\_portability\\_subset](#) is not advertised
- If Vulkan 1.1 is supported, the following features **must** be supported:
  - [multiview](#)
  - [storageBuffer16BitAccess](#) if [uniformAndStorageBuffer16BitAccess](#) is supported
  - [shaderDrawParameters](#) if [VK\\_KHR\\_shader\\_draw\\_parameters](#) is supported
- If Vulkan 1.2 is supported, the following features **must** be supported:
  - [subgroupBroadcastDynamicId](#)
  - [imagelessFramebuffer](#)
  - [uniformBufferStandardLayout](#)
  - [shaderSubgroupExtendedTypes](#)
  - [separateDepthStencilLayouts](#)
  - [hostQueryReset](#)
  - [timelineSemaphore](#)
  - [samplerMirrorClampToEdge](#) if [VK\\_KHR\\_sampler\\_mirror\\_clamp\\_to\\_edge](#) is supported
  - [drawIndirectCount](#) if [VK\\_KHR\\_draw\\_indirect\\_count](#) is supported

- `storageBuffer8BitAccess` if `uniformAndStorageBuffer8BitAccess` is supported
- `shaderInt64` if `shaderSharedInt64Atomics` or `shaderBufferInt64Atomics` are supported
- `descriptorIndexing` if `VK_EXT_descriptor_indexing` is supported
- `shaderSampledImageArrayDynamicIndexing` if `descriptorIndexing` is supported
- `shaderStorageBufferArrayDynamicIndexing` if `descriptorIndexing` is supported
- `shaderUniformTexelBufferArrayDynamicIndexing` if `descriptorIndexing` is supported
- `shaderStorageTexelBufferArrayDynamicIndexing` if `descriptorIndexing` is supported
- `shaderSampledImageArrayNonUniformIndexing` if `descriptorIndexing` is supported
- `shaderStorageBufferArrayNonUniformIndexing` if `descriptorIndexing` is supported
- `shaderUniformTexelBufferArrayNonUniformIndexing` if `descriptorIndexing` is supported
- `descriptorBindingSampledImageUpdateAfterBind` if `descriptorIndexing` is supported
- `descriptorBindingStorageImageUpdateAfterBind` if `descriptorIndexing` is supported
- `descriptorBindingStorageBufferUpdateAfterBind` if `descriptorIndexing` is supported
- `descriptorBindingUniformTexelBufferUpdateAfterBind` if `descriptorIndexing` is supported
- `descriptorBindingStorageTexelBufferUpdateAfterBind` if `descriptorIndexing` is supported
- `descriptorBindingUpdateUnusedWhilePending` if `descriptorIndexing` is supported
- `descriptorBindingPartiallyBound` if `descriptorIndexing` is supported
- `runtimeDescriptorArray` if `descriptorIndexing` is supported
- `shaderOutputViewportIndex` if `VK_EXT_shader_viewport_index_layer` is supported
- `shaderOutputLayer` if `VK_EXT_shader_viewport_index_layer` is supported
- `samplerFilterMinmax` if `VK_EXT_sampler_filter_minmax` is supported
- If Vulkan 1.3 is supported, the following features **must** be supported:
  - `shaderTerminateInvocation`
  - `shaderDemoteToHelperInvocation`
  - `privateData`
  - `pipelineCreationCacheControl`
  - `synchronization2`
  - `shaderZeroInitializeWorkgroupMemory`
  - `robustImageAccess`
  - `subgroupSizeControl`
  - `computeFullSubgroups`
  - `dynamicRendering`
  - `shaderIntegerDotProduct`
  - `maintenance4`
  - `vulkanMemoryModel`

- `vulkanMemoryModelDeviceScope`
- `inlineUniformBlock`
- `bufferDeviceAddress`
- `descriptorBindingInlineUniformBlockUpdateAfterBind` if `VK_EXT_descriptor_indexing` or `descriptorIndexing` are supported
- If Vulkan 1.4 is supported, the following features **must** be supported:
  - `fullDrawIndexUint32`
  - `imageCubeArray`
  - `independentBlend`
  - `sampleRateShading`
  - `drawIndirectFirstInstance`
  - `depthClamp`
  - `depthBiasClamp`
  - `samplerAnisotropy`
  - `fragmentStoresAndAtomics`
  - `shaderStorageImageExtendedFormats`
  - `shaderUniformBufferArrayDynamicIndexing`
  - `shaderSampledImageArrayDynamicIndexing`
  - `shaderStorageBufferArrayDynamicIndexing`
  - `shaderStorageImageArrayDynamicIndexing`
  - `shaderImageGatherExtended`
  - `shaderInt16`
  - `largePoints`
  - `samplerYcbcrConversion`
  - `storageBuffer16BitAccess`
  - `variablePointers`
  - `variablePointersStorageBuffer`
  - `samplerMirrorClampToEdge`
  - `scalarBlockLayout`
  - `shaderUniformTexelBufferArrayDynamicIndexing`
  - `shaderStorageTexelBufferArrayDynamicIndexing`
  - `shaderInt8`
  - `storageBuffer8BitAccess`
  - `globalPriorityQuery`
  - `shaderSubgroupRotate`

- `shaderSubgroupRotateClustered`
- `shaderFloatControls2`
- `shaderExpectAssume`
- `bresenhamLines`
- `vertexAttributeInstanceRateDivisor`
- `indexTypeUint8`
- `maintenance5`
- `pushDescriptor`
- `dynamicRenderingLocalRead`
- `maintenance6`
- `pipelineRobustness`
- `pipelineProtectedAccess` if `protectedMemory` is supported
- If `VK_KHR_dynamic_rendering` is supported, `dynamicRendering` **must** be supported
- If `VK_KHR_multiview` is supported, `multiview` **must** be supported
- If `VK_KHR_shader_float16_int8` is supported, at least one of `shaderFloat16` or `shaderInt8` **must** be supported
- If `VK_KHR_16bit_storage` is supported, `storageBuffer16BitAccess` **must** be supported
- If `VK_KHR_imageless_framebuffer` is supported, `imagelessFramebuffer` **must** be supported
- If `VK_KHR_performance_query` is supported, `performanceCounterQueryPools` **must** be supported
- If `VK_KHR_variable_pointers` is supported, `variablePointersStorageBuffer` **must** be supported
- If `VK_KHR_shader_bfloat16` is supported, the following features **must** be supported:
  - `shaderBFloat16Type`
  - at least one of `shaderBFloat16CooperativeMatrix` or `shaderBFloat16DotProduct`
- If `VK_KHR_sampler_ycbcr_conversion` is supported, `samplerYcbcrConversion` **must** be supported
- If `VK_KHR_shader_subgroup_extended_types` is supported, `shaderSubgroupExtendedTypes` **must** be supported
- If `VK_KHR_8bit_storage` is supported, `storageBuffer8BitAccess` **must** be supported
- If `VK_KHR_shader_atomic_int64` is supported, `shaderBufferInt64Atomics` **must** be supported
- If `VK_KHR_shader_clock` is supported, `shaderSubgroupClock` **must** be supported
- If `VK_KHR_global_priority` is supported, `globalPriorityQuery` **must** be supported
- If `VK_KHR_timeline_semaphore` is supported, `timelineSemaphore` **must** be supported
- If `VK_KHR_vulkan_memory_model` is supported, `vulkanMemoryModel` **must** be supported
- If `VK_KHR_shader_terminate_invocation` is supported, `shaderTerminateInvocation` **must** be supported
- If `VK_KHR_fragment_shading_rate` is supported, `pipelineFragmentShadingRate` **must** be supported

- If `VK_KHR_shader_constant_data` is supported, `shaderConstantData` **must** be supported
- If `VK_KHR_dynamic_rendering_local_read` is supported, `dynamicRenderingLocalRead` **must** be supported
- If `VK_KHR_shader_abort` is supported, `shaderAbort` **must** be supported
- If `VK_KHR_shader_quad_control` is supported, `shaderQuadControl` **must** be supported
- If `VK_KHR_separate_depth_stencil_layouts` is supported, `separateDepthStencilLayouts` **must** be supported
- If `VK_KHR_present_wait` is supported, `presentWait` **must** be supported
- If `VK_KHR_uniform_buffer_standard_layout` is supported, `uniformBufferStandardLayout` **must** be supported
- If `VK_KHR_buffer_device_address` is supported, `bufferDeviceAddress` **must** be supported
- If `VK_KHR_pipeline_executable_properties` is supported, `pipelineExecutableInfo` **must** be supported
- If `VK_KHR_shader_integer_dot_product` is supported, `shaderIntegerDotProduct` **must** be supported
- If `VK_KHR_present_id` is supported, `presentId` **must** be supported
- If `VK_KHR_synchronization2` is supported, `synchronization2` **must** be supported
- If `VK_KHR_device_address_commands` is supported, `deviceAddressCommands` **must** be supported
- If `VK_KHR_fragment_shader_barycentric` is supported, `fragmentShaderBarycentric` **must** be supported
- If `VK_KHR_shader_subgroup_uniform_control_flow` is supported, `shaderSubgroupUniformControlFlow` **must** be supported
- If `VK_KHR_zero_initialize_workgroup_memory` is supported, `shaderZeroInitializeWorkgroupMemory` **must** be supported
- If `VK_KHR_workgroup_memory_explicit_layout` is supported, `workgroupMemoryExplicitLayout` **must** be supported
- If `VK_KHR_ray_tracing_maintenance1` is supported, `rayTracingMaintenance1` **must** be supported
- If `VK_KHR_shader_untyped_pointers` is supported, `shaderUntypedPointers` **must** be supported
- If `VK_KHR_maintenance4` is supported, `maintenance4` **must** be supported
- If `VK_KHR_shader_subgroup_rotate` is supported, `shaderSubgroupRotate` **must** be supported
- If `VK_KHR_shader_maximal_reconvergence` is supported, `shaderMaximalReconvergence` **must** be supported
- If `VK_KHR_maintenance5` is supported, `maintenance5` **must** be supported
- If `VK_KHR_present_id2` is supported, `presentId2` **must** be supported
- If `VK_KHR_present_wait2` is supported, `presentWait2` **must** be supported
- If `VK_KHR_ray_tracing_position_fetch` is supported, `rayTracingPositionFetch` **must** be supported
- If `VK_KHR_pipeline_binary` is supported, `pipelineBinaries` **must** be supported
- If `VK_KHR_swapchain_maintenance1` is supported, `swapchainMaintenance1` **must** be supported

- If `VK_KHR_internally_synchronized_queues` is supported, `internallySynchronizedQueues` **must** be supported
- If `VK_KHR_cooperative_matrix` is supported, `cooperativeMatrix` **must** be supported
- If `VK_KHR_compute_shader_derivatives` is supported, `computeDerivativeGroupLinear` **must** be supported
- If `VK_KHR_video_encode_av1` is supported, `videoEncodeAV1` **must** be supported
- If `VK_KHR_video_decode_vp9` is supported, `videoDecodeVP9` **must** be supported
- If `VK_KHR_video_maintenance1` is supported, `videoMaintenance1` **must** be supported
- If `VK_KHR_vertex_attribute_divisor` is supported, `vertexAttributeInstanceRateDivisor` **must** be supported
- If `VK_KHR_unified_image_layouts` is supported, `unifiedImageLayouts` **must** be supported
- If `VK_KHR_shader_float_controls2` is supported, `shaderFloatControls2` **must** be supported
- If `VK_KHR_index_type_uint8` is supported, `indexTypeUint8` **must** be supported
- If `VK_KHR_line_rasterization` is supported, at least one of `rectangularLines`, `bresenhamLines`, `smoothLines`, `stippledRectangularLines`, `stippledBresenhamLines`, or `stippledSmoothLines` **must** be supported
- If `VK_KHR_shader_expect_assume` is supported, `shaderExpectAssume` **must** be supported
- If `VK_KHR_maintenance6` is supported, `maintenance6` **must** be supported
- If `VK_KHR_copy_memory_indirect` is supported, `indirectMemoryCopy` **must** be supported
- If `VK_KHR_video_encode_intra_refresh` is supported, `videoEncodeIntraRefresh` **must** be supported
- If `VK_KHR_video_encode_quantization_map` is supported, `videoEncodeQuantizationMap` **must** be supported
- If `VK_KHR_shader_relaxed_extended_instruction` is supported, `shaderRelaxedExtendedInstruction` **must** be supported
- If `VK_KHR_maintenance7` is supported, `maintenance7` **must** be supported
- If `VK_KHR_device_fault` is supported, `deviceFault` **must** be supported
- If `VK_KHR_maintenance8` is supported, `maintenance8` **must** be supported
- If `VK_KHR_shader_fma` is supported, `shaderFmaFloat32` **must** be supported
- If `VK_KHR_maintenance9` is supported, `maintenance9` **must** be supported
- If `VK_KHR_video_maintenance2` is supported, `videoMaintenance2` **must** be supported
- If `VK_KHR_video_encode_feedback2` is supported, `videoEncodeFeedback2` **must** be supported
- If `VK_KHR_depth_clamp_zero_one` is supported, `depthClampZeroOne` **must** be supported
- If `VK_KHR_robustness2` is supported, at least one of `robustBufferAccess2`, `robustImageAccess2`, or `nullDescriptor` **must** be supported
- If `VK_KHR_present_mode_fifo_latest_ready` is supported, `presentModeFifoLatestReady` **must** be supported
- If `VK_KHR_opacity_micromap` is supported, `micromap` **must** be supported

- If `VK_KHR_maintenance10` is supported, `maintenance10` **must** be supported
- If `VK_KHR_pipeline_library_group_handles` is supported, `pipelineLibraryGroupHandles` **must** be supported
- If `VK_KHR_maintenance11` is supported, `maintenance11` **must** be supported
- If `VK_KHR_extended_flags` is supported, `extendedFlags` **must** be supported
- If `VK_EXT_transform_feedback` is supported, `transformFeedback` **must** be supported
- If `VK_EXT_pipeline_robustness` is supported, `pipelineRobustness` **must** be supported
- If `VK_EXT_conditional_rendering` is supported, `conditionalRendering` **must** be supported
- If `VK_EXT_depth_clip_enable` is supported, `depthClipEnable` **must** be supported
- If `VK_EXT_descriptor_heap` is supported, `descriptorHeap` **must** be supported
- If `VK_EXT_descriptor_indexing` is supported, the following features **must** be supported:
  - `shaderSampledImageArrayDynamicIndexing`
  - `shaderStorageBufferArrayDynamicIndexing`
  - `shaderUniformTexelBufferArrayDynamicIndexing`
  - `shaderStorageTexelBufferArrayDynamicIndexing`
  - `shaderSampledImageArrayNonUniformIndexing`
  - `shaderStorageBufferArrayNonUniformIndexing`
  - `shaderUniformTexelBufferArrayNonUniformIndexing`
  - `descriptorBindingSampledImageUpdateAfterBind`
  - `descriptorBindingStorageImageUpdateAfterBind`
  - `descriptorBindingStorageBufferUpdateAfterBind`
  - `descriptorBindingUniformTexelBufferUpdateAfterBind`
  - `descriptorBindingStorageTexelBufferUpdateAfterBind`
  - `descriptorBindingUpdateUnusedWhilePending`
  - `descriptorBindingPartiallyBound`
  - `runtimeDescriptorArray`
- If `VK_EXT_present_timing` is supported, `presentTiming` **must** be supported
- If `VK_EXT_fragment_density_map` is supported, `fragmentDensityMap` **must** be supported
- If `VK_EXT_shader_image_atomic_int64` is supported, the following features **must** be supported:
  - `shaderInt64`
  - `shaderImageInt64Atomics`
- If `VK_EXT_memory_priority` is supported, `memoryPriority` **must** be supported
- If `VK_EXT_fragment_shader_interlock` is supported, at least one of `fragmentShaderSampleInterlock`, `fragmentShaderPixelInterlock`, or `fragmentShaderShadingRateInterlock` **must** be supported
- If `VK_EXT_ycbcr_image_arrays` is supported, `ycbcrImageArrays` **must** be supported

- If `VK_EXT_provoking_vertex` is supported, `provokingVertexLast` **must** be supported
- If `VK_EXT_shader_atomic_float` is supported, the following features **must** be supported:
  - at least one of `shaderBufferFloat32Atomics`, `shaderBufferFloat32AtomicAdd`, `shaderBufferFloat64Atomics`, `shaderBufferFloat64AtomicAdd`, `shaderSharedFloat32Atomics`, `shaderSharedFloat32AtomicAdd`, `shaderSharedFloat64Atomics`, `shaderSharedFloat64AtomicAdd`, `shaderImageFloat32Atomics`, or `shaderImageFloat32AtomicAdd`
  - `shaderImageFloat32Atomics` if `sparseImageFloat32Atomics` is supported
  - `shaderImageFloat32AtomicAdd` if `sparseImageFloat32AtomicAdd` is supported
- If `VK_EXT_extended_dynamic_state` is supported, `extendedDynamicState` **must** be supported
- If `VK_EXT_host_image_copy` is supported, `hostImageCopy` **must** be supported
- If `VK_EXT_map_memory_placed` is supported, `memoryMapPlaced` **must** be supported
- If `VK_EXT_shader_atomic_float2` is supported, the following features **must** be supported:
  - at least one of `shaderBufferFloat16Atomics`, `shaderBufferFloat16AtomicAdd`, `shaderBufferFloat16AtomicMinMax`, `shaderBufferFloat32AtomicMinMax`, `shaderBufferFloat64AtomicMinMax`, `shaderSharedFloat16Atomics`, `shaderSharedFloat16AtomicAdd`, `shaderSharedFloat16AtomicMinMax`, `shaderSharedFloat32AtomicMinMax`, `shaderSharedFloat64AtomicMinMax`, or `shaderImageFloat32AtomicMinMax`
  - `shaderImageFloat32AtomicMinMax` if `sparseImageFloat32AtomicMinMax` is supported
- If `VK_EXT_swapchain_maintenance1` is supported, `swapchainMaintenance1` **must** be supported
- If `VK_EXT_depth_bias_control` is supported, `depthBiasControl` **must** be supported
- If `VK_EXT_device_memory_report` is supported, `deviceMemoryReport` **must** be supported
- If `VK_EXT_robustness2` is supported, at least one of `robustBufferAccess2`, `robustImageAccess2`, or `nullDescriptor` **must** be supported
- If `VK_EXT_custom_border_color` is supported, `customBorderColors` **must** be supported
- If `VK_EXT_texture_compression_astc_3d` is supported, `textureCompressionASTC_3D` **must** be supported
- If `VK_EXT_shader_split_barrier` is supported, `shaderSplitBarrier` **must** be supported
- If `VK_EXT_descriptor_buffer` is supported, `descriptorBuffer` **must** be supported
- If `VK_EXT_graphics_pipeline_library` is supported, `graphicsPipelineLibrary` **must** be supported
- If `VK_EXT_fragment_density_map2` is supported, `fragmentDensityMapDeferred` **must** be supported
- If `VK_EXT_image_compression_control` is supported, `imageCompressionControl` **must** be supported
- If `VK_EXT_attachment_feedback_loop_layout` is supported, `attachmentFeedbackLoopLayout` **must** be supported
- If `VK_EXT_device_fault` is supported, `deviceFault` **must** be supported
- If `VK_EXT_rgba10x6_formats` is supported, `formatRgba10x6WithoutYCbCrSampler` **must** be supported
- If `VK_EXT_vertex_input_dynamic_state` is supported, `vertexInputDynamicState` **must** be supported
- If `VK_EXT_device_address_binding_report` is supported, `reportAddressBinding` **must** be supported

- If `VK_EXT_depth_clip_control` is supported, `depthClipControl` **must** be supported
- If `VK_EXT_primitive_topology_list_restart` is supported, `primitiveTopologyListRestart` **must** be supported
- If `VK_EXT_present_mode_fifo_latest_ready` is supported, `presentModeFifoLatestReady` **must** be supported
- If `VK_EXT_pipeline_properties` is supported, `pipelinePropertiesIdentifier` **must** be supported
- If `VK_EXT_frame_boundary` is supported, `frameBoundary` **must** be supported
- If `VK_EXT_multisampled_render_to_single_sampled` is supported, `multisampledRenderToSingleSampled` **must** be supported
- If `VK_EXT_extended_dynamic_state2` is supported, `extendedDynamicState2` **must** be supported
- If `VK_EXT_color_write_enable` is supported, `colorWriteEnable` **must** be supported
- If `VK_EXT_primitives_generated_query` is supported, `primitivesGeneratedQuery` **must** be supported
- If `VK_EXT_image_view_min_lod` is supported, `minLod` **must** be supported
- If `VK_EXT_multi_draw` is supported, `multiDraw` **must** be supported
- If `VK_EXT_image_2d_view_of_3d` is supported, `image2DViewOf3D` **must** be supported
- If `VK_EXT_shader_tile_image` is supported, `shaderTileImageColorReadAccess` **must** be supported
- If `VK_EXT_opacity_micromap` is supported, `micromap` **must** be supported
- If `VK_EXT_border_color_swizzle` is supported, `borderColorSwizzle` **must** be supported
- If `VK_EXT_pageable_device_local_memory` is supported, `pageableDeviceLocalMemory` **must** be supported
- If `VK_EXT_image_sliced_view_of_3d` is supported, `imageSlicedViewOf3D` **must** be supported
- If `VK_EXT_depth_clamp_zero_one` is supported, `depthClampZeroOne` **must** be supported
- If `VK_EXT_non_seamless_cube_map` is supported, `nonSeamlessCubeMap` **must** be supported
- If `VK_EXT_image_compression_control_swapchain` is supported, `imageCompressionControlSwapchain` **must** be supported
- If `VK_EXT_nested_command_buffer` is supported, `nestedCommandBuffer` **must** be supported
- If `VK_EXT_extended_dynamic_state3` is supported, the following features **must** be supported:
  - `tessellationShader` if `extendedDynamicState3TessellationDomainOrigin` is supported
  - `depthClamp` if `extendedDynamicState3DepthClampEnable` is supported
  - `fillModeNonSolid` if `extendedDynamicState3PolygonMode` is supported
  - `alphaToOne` if `extendedDynamicState3AlphaToOneEnable` is supported
  - `logicOp` if `extendedDynamicState3LogicOpEnable` is supported
  - `geometryStreams` if `VK_EXT_transform_feedback` and `extendedDynamicState3RasterizationStream` are supported
- If `VK_EXT_subpass_merge_feedback` is supported, `subpassMergeFeedback` **must** be supported
- If `VK_EXT_shader_module_identifier` is supported, `shaderModuleIdentifier` **must** be supported

- If `VK_EXT_legacy_dithering` is supported, `legacyDithering` **must** be supported
- If `VK_EXT_pipeline_protected_access` is supported, `pipelineProtectedAccess` **must** be supported
- If `VK_EXT_shader_object` is supported, `shaderObject` **must** be supported
- If `VK_EXT_mutable_descriptor_type` is supported, `mutableDescriptorType` **must** be supported
- If `VK_EXT_legacy_vertex_attributes` is supported, `legacyVertexAttributes` **must** be supported
- If `VK_EXT_pipeline_library_group_handles` is supported, `pipelineLibraryGroupHandles` **must** be supported
- If `VK_EXT_dynamic_rendering_unused_attachments` is supported, `dynamicRenderingUnusedAttachments` **must** be supported
- If `VK_EXT_attachment_feedback_loop_dynamic_state` is supported, `attachmentFeedbackLoopDynamicState` **must** be supported
- If `VK_EXT_memory_decompression` is supported, `memoryDecompression` **must** be supported
- If `VK_EXT_shader_replicated_composites` is supported, `shaderReplicatedComposites` **must** be supported
- If `VK_EXT_shader_float8` is supported, `shaderFloat8` **must** be supported
- If `VK_EXT_device_generated_commands` is supported, `deviceGeneratedCommands` **must** be supported
- If `VK_EXT_ray_tracing_invocation_reorder` is supported, `rayTracingInvocationReorder` **must** be supported
- If `VK_EXT_depth_clamp_control` is supported, `depthClampControl` **must** be supported
- If `VK_EXT_multisampled_render_to_swapchain` is supported, `multisampledRenderToSwapchain` **must** be supported
- If `VK_EXT_fragment_density_map_offset` is supported, `fragmentDensityMapOffset` **must** be supported
- If `VK_EXT_zero_initialize_device_memory` is supported, `zeroInitializeDeviceMemory` **must** be supported
- If `VK_EXT_shader_64bit_indexing` is supported, `shader64BitIndexing` **must** be supported
- If `VK_EXT_custom_resolve` is supported, `customResolve` **must** be supported
- If `VK_EXT_shader_long_vector` is supported, the following features **must** be supported:
  - `longVector`
  - `scalarBlockLayout`
  - `workgroupMemoryExplicitLayoutScalarBlockLayout` if `VK_KHR_workgroup_memory_explicit_layout` is supported
- If `VK_EXT_shader_uniform_buffer_unsized_array` is supported, `shaderUniformBufferUnsizedArray` **must** be supported
- If `VK_EXT_cooperative_matrix_maintenance1` is supported, `VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT::cooperativeMatrixProperties2` **must** be supported
- If `VK_EXT_shader_subgroup_partitioned` is supported, `shaderSubgroupPartitioned` **must** be supported

supported

- If `VK_EXT_shader_oep_microscaling_types` is supported, at least one of `shaderFloat4`, `shaderFloat6`, `shaderFloat8UnsignedE8M0`, or `shaderMXInt8` **must** be supported
- If `VK_EXT_primitive_restart_index` is supported, `primitiveRestartIndex` **must** be supported
- If `VK_KHR_acceleration_structure` is supported, the following features **must** be supported:
  - `accelerationStructure`
  - `bufferDeviceAddress`
  - `descriptorBindingAccelerationStructureUpdateAfterBind`
  - `descriptorIndexing` if Vulkan 1.2 is supported
- If `VK_KHR_ray_tracing_pipeline` is supported, the following features **must** be supported:
  - `rayTracingPipeline`
  - `rayTracingPipelineTraceRaysIndirect`
  - `rayTraversalPrimitiveCulling` if `VK_KHR_ray_query` is supported
- If `VK_KHR_ray_query` is supported, `rayQuery` **must** be supported
- If `VK_EXT_mesh_shader` is supported, the following features **must** be supported:
  - `taskShader`
  - `meshShader`
  - `primitiveFragmentShadingRate` if `VK_KHR_fragment_shading_rate` and `primitiveFragmentShadingRateMeshShader` are supported
- `VK_KHR_fragment_shading_rate` if the `primitiveFragmentShadingRateMeshShader` feature is supported.
- `VK_EXT_transform_feedback`, if the `extendedDynamicState3RasterizationStream` feature is supported.
- `VK_EXT_conservative_rasterization` extension, if the `extendedDynamicState3ConservativeRasterizationMode` feature is supported.
- `VK_EXT_conservative_rasterization` extension, if the `extendedDynamicState3ExtraPrimitiveOverestimationSize` feature is supported.
- `VK_EXT_sample_locations` extension, if the `extendedDynamicState3SampleLocationsEnable` feature is supported.
- `VK_EXT_blend_operation_advanced` extension, if the `extendedDynamicState3ColorBlendAdvanced` feature is supported.
- `VK_EXT_provoking_vertex`, if the `extendedDynamicState3ProvokingVertexMode` feature is supported.
- Vulkan 1.4 or the `VK_KHR_line_rasterization` extension or the `VK_EXT_line_rasterization` extension, if the `extendedDynamicState3LineRasterizationMode` feature is supported.
- `VK_KHR_line_rasterization` or `VK_EXT_line_rasterization` extension, if the `extendedDynamicState3LineStippleEnable` feature is supported.
- `VK_EXT_depth_clip_control`, if the `extendedDynamicState3DepthClipNegativeOneToOne` feature is supported.

- If Vulkan 1.4 is supported, at least one queue family is reported by `vkGetPhysicalDeviceQueueFamilyProperties` that includes the `VK_QUEUE_GRAPHICS_BIT` flag, and no additional queue families are reported that support the `VK_QUEUE_TRANSFER_BIT` flag, the `hostImageCopy` feature **must** be supported.

All other features defined in the Specification are **optional**.

**NOTE**

Applications running on Vulkan implementations advertising a `VkPhysicalDeviceDriverProperties::conformanceVersion` less than 1.4.4.0 should be aware that the `formatRgba10x6WithoutYCbCrSampler` feature may not be supported despite `VK_EXT_rgba10x6_formats` being advertised.

# Chapter 48. Limits

*Limits* are implementation-dependent minimums, maximums, and other device characteristics that an application **may** need to be aware of.

## NOTE

Limits are reported via the basic [VkPhysicalDeviceLimits](#) structure as well as the extensible structure [VkPhysicalDeviceProperties2](#), which was added in [VK\\_KHR\\_get\\_physical\\_device\\_properties2](#) and included in Vulkan 1.1. When limits are added in future Vulkan versions or extensions, each extension **should** introduce one new limit structure, if needed. This structure **can** be added to the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure.

The [VkPhysicalDeviceLimits](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceLimits {
    uint32_t      maxImageDimension1D;
    uint32_t      maxImageDimension2D;
    uint32_t      maxImageDimension3D;
    uint32_t      maxImageDimensionCube;
    uint32_t      maxImageArrayLayers;
    uint32_t      maxTexelBufferElements;
    uint32_t      maxUniformBufferRange;
    uint32_t      maxStorageBufferRange;
    uint32_t      maxPushConstantsSize;
    uint32_t      maxMemoryAllocationCount;
    uint32_t      maxSamplerAllocationCount;
    VkDeviceSize  bufferImageGranularity;
    VkDeviceSize  sparseAddressSpaceSize;
    uint32_t      maxBoundDescriptorSets;
    uint32_t      maxPerStageDescriptorSamplers;
    uint32_t      maxPerStageDescriptorUniformBuffers;
    uint32_t      maxPerStageDescriptorStorageBuffers;
    uint32_t      maxPerStageDescriptorSampledImages;
    uint32_t      maxPerStageDescriptorStorageImages;
    uint32_t      maxPerStageDescriptorInputAttachments;
    uint32_t      maxPerStageResources;
    uint32_t      maxDescriptorSetSamplers;
    uint32_t      maxDescriptorSetUniformBuffers;
    uint32_t      maxDescriptorSetUniformBuffersDynamic;
    uint32_t      maxDescriptorSetStorageBuffers;
    uint32_t      maxDescriptorSetStorageBuffersDynamic;
    uint32_t      maxDescriptorSetSampledImages;
    uint32_t      maxDescriptorSetStorageImages;
    uint32_t      maxDescriptorSetInputAttachments;
    uint32_t      maxVertexInputAttributes;
    uint32_t      maxVertexInputBindings;
    uint32_t      maxVertexInputAttributeOffset;
    uint32_t      maxVertexInputBindingStride;
```

```

The `VkPhysicalDeviceLimits` are properties of the physical device. These are available in the `limits` member of the `VkPhysicalDeviceProperties` structure which is returned from `vkGetPhysicalDeviceProperties`.

- `maxImageDimension1D` is the largest dimension (`width`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_1D`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimension2D` is the largest dimension (`width` or `height`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_2D` and without `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` set in `flags`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimension3D` is the largest dimension (`width`, `height`, or `depth`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_3D`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageDimensionCube` is the largest dimension (`width` or `height`) that is guaranteed to be supported for all images created with an `imageType` of `VK_IMAGE_TYPE_2D` and with `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` set in `flags`. Some combinations of image parameters (format, usage, etc.) **may** allow support for larger dimensions, which **can** be queried using `vkGetPhysicalDeviceImageFormatProperties`.
- `maxImageArrayLayers` is the maximum number of layers (`arrayLayers`) for an image.

- `maxTexelBufferElements` is the maximum number of addressable texels for a buffer view created on a buffer which was created with the `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` or `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT` usage flag set.
- `maxUniformBufferRange` is the maximum value that **can** be specified in the `range` member of a `VkDescriptorBufferInfo` structure passed to `vkUpdateDescriptorSets` for descriptors of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`.
- `maxStorageBufferRange` is the maximum value that **can** be specified in the `range` member of a `VkDescriptorBufferInfo` structure passed to `vkUpdateDescriptorSets` for descriptors of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`. If the `shader64BitIndexing` feature is enabled, this limit does not apply.
- `maxPushConstantsSize` is the maximum size, in bytes, of the pool of push constant memory. For each of the push constant ranges indicated by the `pPushConstantRanges` member of the `VkPipelineLayoutCreateInfo` structure, `(offset + size)` **must** be less than or equal to this limit.
- `maxMemoryAllocationCount` is the maximum number of device memory allocations, as created by `vkAllocateMemory`, which **can** simultaneously exist.
- `maxSamplerAllocationCount` is the maximum number of sampler objects, as created by `vkCreateSampler`, which **can** simultaneously exist on a device. If the `descriptorHeap` feature is enabled and the application intends to use embedded samplers, the number advertised here is effectively reduced by the quotient of `minSamplerHeapReservedRangeWithEmbedded` divided by `samplerDescriptorSize`, to provide storage for embedded samplers when switching to heaps. If embedded samplers are not used, this can be ignored.
- `bufferImageGranularity` is the granularity, in bytes, at which buffer or linear image resources, and optimal image resources **can** be bound to adjacent offsets in the same `VkDeviceMemory` object without aliasing. See [Buffer-Image Granularity](#) for more details.
- `sparseAddressSpaceSize` is the total amount of address space available, in bytes, for sparse memory resources. This is an upper bound on the sum of the sizes of all sparse resources, regardless of whether any memory is bound to them.
- `maxBoundDescriptorSets` is the maximum number of descriptor sets that **can** be simultaneously used by a pipeline. See [Descriptor Sets](#).
- `maxPerStageDescriptorSamplers` is the maximum number of samplers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Sampler](#) and [Combined Image Sampler](#).
- `maxPerStageDescriptorUniformBuffers` is the maximum number of uniform buffers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the

`VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Uniform Buffer](#) and [Dynamic Uniform Buffer](#).

- `maxPerStageDescriptorStorageBuffers` is the maximum number of storage buffers that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Storage Buffer](#) and [Dynamic Storage Buffer](#).
- `maxPerStageDescriptorSampledImages` is the maximum number of sampled images that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Combined Image Sampler](#), [Sampled Image](#), and [Uniform Texel Buffer](#).
- `maxPerStageDescriptorStorageImages` is the maximum number of storage images that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See [Storage Image](#), and [Storage Texel Buffer](#).
- `maxPerStageDescriptorInputAttachments` is the maximum number of input attachments that **can** be accessible to a single shader stage in a pipeline layout, as well as the maximum usable input attachment index. Descriptors with a type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. These are only supported for the fragment stage. See [Input Attachment](#).

#### NOTE

`maxPerStageDescriptorInputAttachments` was originally only intended to limit the number of attachments per stage, not the number of available input indices across all shaders in a render pass. The input indices were allowed to be semi arbitrary for render pass objects, or fully arbitrary for dynamic rendering, however some implementations have fixed limits for them. Applications already exist that exceed this limit, and they will continue to work where they already did, but will fail to render on some platforms. For forward looking applications,

this can be worked around by either making careful use of index remapping with [VkRenderingInputAttachmentIndexInfo](#) for dynamic rendering, or splitting a subpass with too many input attachments into multiple subpasses.

- **maxPerStageResources** is the maximum number of resources that **can** be accessible to a single shader stage in a pipeline layout. Descriptors with a type of [VK\\_DESCRIPTOR\\_TYPE\\_COMBINED\\_IMAGE\\_SAMPLER](#), [VK\\_DESCRIPTOR\\_TYPE\\_SAMPLED\\_IMAGE](#), [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_IMAGE](#), [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_TEXEL\\_BUFFER](#), [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_TEXEL\\_BUFFER](#), [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_BUFFER](#), [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_BUFFER](#), [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_BUFFER\\_DYNAMIC](#), [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_BUFFER\\_DYNAMIC](#), or [VK\\_DESCRIPTOR\\_TYPE\\_INPUT\\_ATTACHMENT](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) bit set count against this limit. For the fragment shader stage the framebuffer color attachments also count against this limit.
- **maxDescriptorSetSamplers** is the maximum number of samplers that **can** be included in a pipeline layout. Descriptors with a type of [VK\\_DESCRIPTOR\\_TYPE\\_SAMPLER](#) or [VK\\_DESCRIPTOR\\_TYPE\\_COMBINED\\_IMAGE\\_SAMPLER](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) bit set count against this limit. See [Sampler](#) and [Combined Image Sampler](#).
- **maxDescriptorSetUniformBuffers** is the maximum number of uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_BUFFER](#) or [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_BUFFER\\_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) bit set count against this limit. See [Uniform Buffer](#) and [Dynamic Uniform Buffer](#).
- **maxDescriptorSetUniformBuffersDynamic** is the maximum number of dynamic uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_BUFFER\\_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) bit set count against this limit. See [Dynamic Uniform Buffer](#).
- **maxDescriptorSetStorageBuffers** is the maximum number of storage buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_BUFFER](#) or [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_BUFFER\\_DYNAMIC](#) count against this limit. Only descriptors in descriptor set layouts created without the [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) bit set count against this limit. See [Storage Buffer](#) and [Dynamic Storage Buffer](#).
- **maxDescriptorSetStorageBuffersDynamic** is the maximum number of dynamic storage buffers that **can** be included in a pipeline layout. Descriptors with a type of [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_BUFFER\\_DYNAMIC](#) count against this limit. Only descriptors

in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Dynamic Storage Buffer](#).

- `maxDescriptorSetSampledImages` is the maximum number of sampled images that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Combined Image Sampler](#), [Sampled Image](#), and [Uniform Texel Buffer](#).
- `maxDescriptorSetStorageImages` is the maximum number of storage images that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Storage Image](#), and [Storage Texel Buffer](#).
- `maxDescriptorSetInputAttachments` is the maximum number of input attachments that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Input Attachment](#).
- `maxVertexInputAttributes` is the maximum number of vertex input attributes that **can** be specified for a graphics pipeline. These are described in the array of `VkVertexInputAttributeDescription` structures that are provided at graphics pipeline creation time via the `pVertexAttributeDescriptions` member of the `VkPipelineVertexInputStateCreateInfo` structure. See [Vertex Attributes](#) and [Vertex Input Description](#).
- `maxVertexInputBindings` is the maximum number of vertex buffers that **can** be specified for providing vertex attributes to a graphics pipeline. These are described in the array of `VkVertexInputBindingDescription` structures that are provided at graphics pipeline creation time via the `pVertexBindingDescriptions` member of the `VkPipelineVertexInputStateCreateInfo` structure. The `binding` member of `VkVertexInputBindingDescription` **must** be less than this limit. See [Vertex Input Description](#).
- `maxVertexInputAttributeOffset` is the maximum vertex input attribute offset that **can** be added to the vertex input binding stride. The `offset` member of the `VkVertexInputAttributeDescription` structure **must** be less than or equal to this limit. See [Vertex Input Description](#).
- `maxVertexInputBindingStride` is the maximum vertex input binding stride that **can** be specified in a vertex input binding. The `stride` member of the `VkVertexInputBindingDescription` structure **must** be less than or equal to this limit. See [Vertex Input Description](#).
- `maxVertexOutputComponents` is the maximum number of components of output variables which **can** be output by a vertex shader. See [Vertex Shaders](#).
- `maxTessellationGenerationLevel` is the maximum tessellation generation level supported by the fixed-function tessellation primitive generator. See [Tessellation](#).
- `maxTessellationPatchSize` is the maximum patch size, in vertices, of patches that **can** be

processed by the tessellation control shader and tessellation primitive generator. The `patchControlPoints` member of the `VkPipelineTessellationStateCreateInfo` structure specified at pipeline creation time and the value provided in the `OutputVertices` execution mode of shader modules **must** be less than or equal to this limit. See [Tessellation](#).

- `maxTessellationControlPerVertexInputComponents` is the maximum number of components of input variables which **can** be provided as per-vertex inputs to the tessellation control shader stage.
- `maxTessellationControlPerVertexOutputComponents` is the maximum number of components of per-vertex output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationControlPerPatchOutputComponents` is the maximum number of components of per-patch output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationControlTotalOutputComponents` is the maximum total number of components of per-vertex and per-patch output variables which **can** be output from the tessellation control shader stage.
- `maxTessellationEvaluationInputComponents` is the maximum number of components of input variables which **can** be provided as per-vertex inputs to the tessellation evaluation shader stage.
- `maxTessellationEvaluationOutputComponents` is the maximum number of components of per-vertex output variables which **can** be output from the tessellation evaluation shader stage.
- `maxGeometryShaderInvocations` is the maximum invocation count supported for instanced geometry shaders. The value provided in the `Invocations` execution mode of shader modules **must** be less than or equal to this limit. See [Geometry Shading](#).
- `maxGeometryInputComponents` is the maximum number of components of input variables which **can** be provided as inputs to the geometry shader stage.
- `maxGeometryOutputComponents` is the maximum number of components of output variables which **can** be output from the geometry shader stage.
- `maxGeometryOutputVertices` is the maximum number of vertices which **can** be emitted by any geometry shader.
- `maxGeometryTotalOutputComponents` is the maximum total number of components of output variables, across all emitted vertices, which **can** be output from the geometry shader stage.
- `maxFragmentInputComponents` is the maximum number of components of input variables which **can** be provided as inputs to the fragment shader stage.
- `maxFragmentOutputAttachments` is the maximum number of output attachments which **can** be written to by the fragment shader stage.
- `maxFragmentDualSrcAttachments` is the maximum number of output attachments which **can** be written to by the fragment shader stage when blending is enabled and one of the dual source blend modes is in use. See [Dual-Source Blending](#) and `dualSrcBlend`.
- `maxFragmentCombinedOutputResources` is the total number of storage buffers, storage images, and output `Location` decorated color attachments (described in [Fragment Output Interface](#)) which **can** be used in the fragment shader stage.
- `maxComputeSharedMemorySize` is the maximum total storage size, in bytes, available for variables

declared with the `Workgroup` storage class in shader modules (or with the `shared` storage qualifier in GLSL) in the compute shader stage.

- `maxComputeWorkGroupCount`[3] is the maximum number of local workgroups that **can** be dispatched by a single dispatching command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the dispatching commands **must** be less than or equal to the corresponding limit. See [Dispatching Commands](#).
- `maxComputeWorkGroupInvocations` is the maximum total number of compute shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxComputeWorkGroupSize`[3] is the maximum size of a local compute workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `subPixelPrecisionBits` is the number of bits of subpixel precision in framebuffer coordinates  $x_f$  and  $y_f$ . See [Rasterization](#).
- `subTexelPrecisionBits` is the number of bits of precision in the division along an axis of an image used for minification and magnification filters.  $2^{\text{subTexelPrecisionBits}}$  is the actual number of divisions along each axis of the image represented. Sub-texel values calculated during image sampling will snap to these locations when generating the filtered results.
- `mipmapPrecisionBits` is the number of bits of division that the LOD calculation for mipmap fetching get snapped to when determining the contribution from each mip level to the mip filtered results.  $2^{\text{mipmapPrecisionBits}}$  is the actual number of divisions.
- `maxDrawIndexedIndexValue` is the maximum index value that **can** be used for indexed draw calls when using 32-bit indices. This excludes the primitive restart index value of 0xFFFFFFFF. See [fullDrawIndexUint32](#).
- `maxDrawIndirectCount` is the maximum draw count that is supported for indirect drawing calls. See [multiDrawIndirect](#).
- `maxSamplerLodBias` is the maximum absolute sampler LOD bias. The sum of the `mipLodBias` member of the `VkSamplerCreateInfo` structure and the `Bias` operand of image sampling operations in shader modules (or 0 if no `Bias` operand is provided to an image sampling operation) are clamped to the range  $[-\text{maxSamplerLodBias}, +\text{maxSamplerLodBias}]$ . See [\[samplers-mipLodBias\]](#).
- `maxSamplerAnisotropy` is the maximum degree of sampler anisotropy. The maximum degree of anisotropic filtering used for an image sampling operation is the minimum of the `maxAnisotropy` member of the `VkSamplerCreateInfo` structure and this limit. See [\[samplers-maxAnisotropy\]](#).
- `maxViewports` is the maximum number of active viewports. The `viewportCount` member of the `VkPipelineViewportStateCreateInfo` structure that is provided at pipeline creation **must** be less than or equal to this limit.
- `maxViewportDimensions`[2] are the maximum viewport dimensions in the X (width) and Y (height) dimensions, respectively. The maximum viewport dimensions **must** be greater than or equal to

the largest image which **can** be created and used as a framebuffer attachment. See [Controlling the Viewport](#).

- `viewportBoundsRange[2]` is the [minimum, maximum] range that the corners of a viewport **must** be contained in. This range **must** be at least  $[-2 \times \text{size}, 2 \times \text{size} - 1]$ , where  $\text{size} = \max(\text{maxViewportDimensions}[0], \text{maxViewportDimensions}[1])$ . See [Controlling the Viewport](#).

**NOTE**

The wide range of values required for `viewportBoundsRange` allows the viewport to be arbitrarily shifted relative to the output render target while still partially overlapping. However, the minimum range required to achieve this would actually be  $[-\text{size} + 1, 2 \times \text{size} - 1]$ . As these limits in implementations are typically simple power-of-two values, the specification reflects this convention, rounding the lower bound accordingly.

- `viewportSubPixelBits` is the number of bits of subpixel precision for viewport bounds. The subpixel precision that floating-point viewport bounds are interpreted at is given by this limit.
- `minMemoryMapAlignment` is the minimum **required** alignment, in bytes, of host visible memory allocations within the host address space. When mapping a memory allocation with [vkMapMemory](#), subtracting `offset` bytes from the returned pointer will always produce an integer multiple of this limit. See [Host Access to Device Memory Objects](#). The value **must** be a power of two.
- `minTexelBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the [VkBufferViewCreateInfo](#) structure for texel buffers. The value **must** be a power of two. This limit is equivalent to the maximum of the `uniformTexelBufferOffsetAlignmentBytes` and `storageTexelBufferOffsetAlignmentBytes` members of [VkPhysicalDeviceTexelBufferAlignmentProperties](#), but smaller alignment is **optionally** allowed by `storageTexelBufferOffsetSingleTexelAlignment` and `uniformTexelBufferOffsetSingleTexelAlignment`. For single texel alignment, a format has an alignment requirement which is the size of a single component if the size of the format is a multiple of three bytes, otherwise, it is the size of the format itself. The effective alignment requirement is the minimum of the per-format alignment and `uniformTexelBufferOffsetAlignmentBytes` or `storageTexelBufferOffsetAlignmentBytes` depending on the descriptor type. If the `texelBufferAlignment` feature is not enabled, the effective alignment requirement for any format is `minTexelBufferOffsetAlignment`. [VkBufferViewCreateInfo::offset](#) **must** be a multiple of this value.
- `minUniformBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the [VkDescriptorBufferInfo](#) structure for uniform buffers. When a descriptor of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` is updated, the `offset` **must** be an integer multiple of this limit. Similarly, dynamic offsets for uniform buffers **must** be multiples of this limit. The value **must** be a power of two.
- `minStorageBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the [VkDescriptorBufferInfo](#) structure for storage buffers. When a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` is updated, the `offset` **must** be an integer multiple of this limit. Similarly, dynamic offsets for storage buffers **must** be multiples of this limit. The value **must** be a power of two.

- `minTexelOffset` is the minimum offset value for the `Offset` or `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.
- `maxTexelOffset` is the maximum offset value for the `Offset` or `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.
- `minTexelGatherOffset` is the minimum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` image instructions.
- `maxTexelGatherOffset` is the maximum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` image instructions.
- `minInterpolationOffset` is the base minimum (inclusive) negative offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.
- `maxInterpolationOffset` is the base maximum (inclusive) positive offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.
- `subPixelInterpolationOffsetBits` is the number of fractional bits that the `x` and `y` offsets to the `InterpolateAtOffset` extended instruction **may** be rounded to as fixed-point values.
- `maxFramebufferWidth` is the maximum width for a framebuffer. The `width` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `maxFramebufferHeight` is the maximum height for a framebuffer. The `height` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `maxFramebufferLayers` is the maximum layer count for a layered framebuffer. The `layers` member of the `VkFramebufferCreateInfo` structure **must** be less than or equal to this limit.
- `framebufferColorSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the color sample counts that are supported for all framebuffer color attachments with floating- or fixed-point formats. For color attachments with integer formats, see `framebufferIntegerColorSampleCounts`.
- `framebufferDepthSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the supported depth sample counts for all framebuffer depth/stencil attachments, when the format includes a depth component.
- `framebufferStencilSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the supported stencil sample counts for all framebuffer depth/stencil attachments, when the format includes a stencil component.
- `framebufferNoAttachmentsSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the supported sample counts for a `subpass which uses no attachments`.
- `maxColorAttachments` is the maximum number of color attachments that **can** be used by a subpass in a render pass. The `colorAttachmentCount` member of the `VkSubpassDescription` or `VkSubpassDescription2` structure **must** be less than or equal to this limit.
- `sampledImageColorSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, and a non-integer color format.
- `sampledImageIntegerSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, and an integer color format.

- `sampledImageDepthSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, and a depth format.
- `sampledImageStencilSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, the `VK_IMAGE_USAGE_SAMPLED_BIT` usage flag set, and a stencil format.
- `storageImageSampleCounts` is a bitmask<sup>1</sup> of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, and the `VK_IMAGE_USAGE_STORAGE_BIT` usage flag set.
- `maxSampleMaskWords` is the maximum number of array elements of a variable decorated with the `SampleMask` built-in decoration.
- `timestampComputeAndGraphics` specifies support for timestamps on all graphics and compute queues. If this limit is `VK_TRUE`, all queues that advertise the `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT` in the `VkQueueFamilyProperties::queueFlags` support `VkQueueFamilyProperties::timestampValidBits` of at least 36. See [Timestamp Queries](#).
- `timestampPeriod` is the number of nanoseconds **required** for a timestamp query to be incremented by 1. See [Timestamp Queries](#).
- `maxClipDistances` is the maximum number of clip distances that **can** be used in a single shader stage. The size of any array declared with the `ClipDistance` built-in decoration in a shader module **must** be less than or equal to this limit.
- `maxCullDistances` is the maximum number of cull distances that **can** be used in a single shader stage. The size of any array declared with the `CullDistance` built-in decoration in a shader module **must** be less than or equal to this limit.
- `maxCombinedClipAndCullDistances` is the maximum combined number of clip and cull distances that **can** be used in a single shader stage. The sum of the sizes of all arrays declared with the `ClipDistance` and `CullDistance` built-in decoration used by a single shader stage in a shader module **must** be less than or equal to this limit.
- `discreteQueuePriorities` is the number of discrete priorities that **can** be assigned to a queue based on the value of each member of `VkDeviceQueueCreateInfo::pQueuePriorities`. This **must** be at least 2, and levels **must** be spread evenly over the range, with at least one level at 1.0, and another at 0.0. See [Queue Priority](#).
- `pointSizeRange[2]` is the range `[minimum,maximum]` of supported sizes for points. Values written to variables decorated with the `PointSize` built-in decoration are clamped to this range.
- `lineWidthRange[2]` is the range `[minimum,maximum]` of supported widths for lines. Values specified by the `lineWidth` member of the `VkPipelineRasterizationStateCreateInfo` or the `lineWidth` parameter to `vkCmdSetLineWidth` are clamped to this range.
- `pointSizeGranularity` is the granularity of supported point sizes. Not all point sizes in the range defined by `pointSizeRange` are supported. This limit specifies the granularity (or increment) between successive supported point sizes.
- `lineWidthGranularity` is the granularity of supported line widths. Not all line widths in the range defined by `lineWidthRange` are supported. This limit specifies the granularity (or increment) between successive supported line widths.

- **strictLines** specifies whether lines are rasterized according to the preferred method of rasterization. If set to [VK\\_FALSE](#), lines **may** be rasterized under a relaxed set of rules. If set to [VK\\_TRUE](#), lines are rasterized as per the strict definition. See [Basic Line Segment Rasterization](#).
- **standardSampleLocations** specifies whether rasterization uses the standard sample locations as documented in [Multisampling](#). If set to [VK\\_TRUE](#), the implementation uses the documented sample locations. If set to [VK\\_FALSE](#), the implementation **may** use different sample locations.
- **optimalBufferCopyOffsetAlignment** is the optimal buffer offset alignment in bytes for [vkCmdCopyBufferToImage2](#), [vkCmdCopyBufferToImage](#), [vkCmdCopyImageToBuffer2](#), and [vkCmdCopyImageToBuffer](#). This value is also the optimal host memory offset alignment in bytes for [vkCopyMemoryToImage](#) and [vkCopyImageToMemory](#). The per texel alignment requirements are enforced, but applications **should** use the optimal alignment for optimal performance and power use. The value **must** be a power of two.
- **optimalBufferCopyRowPitchAlignment** is the optimal buffer row pitch alignment in bytes for [vkCmdCopyBufferToImage2](#), [vkCmdCopyBufferToImage](#), [vkCmdCopyImageToBuffer2](#), and [vkCmdCopyImageToBuffer](#). This value is also the optimal host memory row pitch alignment in bytes for [vkCopyMemoryToImage](#) and [vkCopyImageToMemory](#). Row pitch is the number of bytes between texels with the same X coordinate in adjacent rows (Y coordinates differ by one). The per texel alignment requirements are enforced, but applications **should** use the optimal alignment for optimal performance and power use. The value **must** be a power of two.
- **nonCoherentAtomSize** is the size and alignment in bytes that bounds concurrent access to [host-mapped device memory](#). The value **must** be a power of two.

## 1

For all bitmasks of [VkSampleCountFlagBits](#), the sample count limits defined above represent the minimum supported sample counts for each image type. Individual images **may** support additional sample counts, which are queried using [vkGetPhysicalDeviceImageFormatProperties](#) as described in [Supported Sample Counts](#).

Bits which **may** be set in the sample count limits returned by [VkPhysicalDeviceLimits](#), as well as in other queries and structures representing image sample counts, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSampleCountFlagBits {
    VK_SAMPLE_COUNT_1_BIT = 0x00000001,
    VK_SAMPLE_COUNT_2_BIT = 0x00000002,
    VK_SAMPLE_COUNT_4_BIT = 0x00000004,
    VK_SAMPLE_COUNT_8_BIT = 0x00000008,
    VK_SAMPLE_COUNT_16_BIT = 0x00000010,
    VK_SAMPLE_COUNT_32_BIT = 0x00000020,
    VK_SAMPLE_COUNT_64_BIT = 0x00000040,
} VkSampleCountFlagBits;
```

- [VK\\_SAMPLE\\_COUNT\\_1\\_BIT](#) specifies an image with one sample per pixel.
- [VK\\_SAMPLE\\_COUNT\\_2\\_BIT](#) specifies an image with 2 samples per pixel.
- [VK\\_SAMPLE\\_COUNT\\_4\\_BIT](#) specifies an image with 4 samples per pixel.

- [VK\\_SAMPLE\\_COUNT\\_8\\_BIT](#) specifies an image with 8 samples per pixel.
- [VK\\_SAMPLE\\_COUNT\\_16\\_BIT](#) specifies an image with 16 samples per pixel.
- [VK\\_SAMPLE\\_COUNT\\_32\\_BIT](#) specifies an image with 32 samples per pixel.
- [VK\\_SAMPLE\\_COUNT\\_64\\_BIT](#) specifies an image with 64 samples per pixel.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkSampleCountFlags;
```

[VkSampleCountFlags](#) is a bitmask type for setting a mask of zero or more [VkSampleCountFlagBits](#).

The [VkPhysicalDevicePushDescriptorProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePushDescriptorProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPushDescriptors;
} VkPhysicalDevicePushDescriptorProperties;
```

```
// Provided by VK_KHR_push_descriptor
// Equivalent to VkPhysicalDevicePushDescriptorProperties
typedef VkPhysicalDevicePushDescriptorProperties
VkPhysicalDevicePushDescriptorPropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxPushDescriptors](#) is the maximum number of descriptors that **can** be used in a descriptor set layout created with [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_PUSH\\_DESCRIPTOR\\_BIT](#) set.

If the [VkPhysicalDevicePushDescriptorProperties](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePushDescriptorProperties-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PUSH\\_DESCRIPTOR\\_PROPERTIES](#)

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceMultiviewProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxMultiviewViewCount;
    uint32_t           maxMultiviewInstanceIndex;
} VkPhysicalDeviceMultiviewProperties;
```

```
// Provided by VK_KHR_multiview
// Equivalent to VkPhysicalDeviceMultiviewProperties
typedef VkPhysicalDeviceMultiviewProperties VkPhysicalDeviceMultiviewPropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxMultiviewViewCount` is one greater than the maximum view index that **can** be used in a subpass.
- `maxMultiviewInstanceIndex` is the maximum valid value of instance index allowed to be generated by a drawing command recorded within a subpass of a multiview render pass instance.

If the `VkPhysicalDeviceMultiviewProperties` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewProperties-sType-sType  
`sType` must be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MULTIVIEW\\_PROPERTIES](#)

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceFloatControlsProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceFloatControlsProperties {
    VkStructureType           sType;
    void*                     pNext;
    VkShaderFloatControlsIndependence denormBehaviorIndependence;
    VkShaderFloatControlsIndependence roundingModeIndependence;
    VkBool32                  shaderSignedZeroInfNanPreserveFloat16;
    VkBool32                  shaderSignedZeroInfNanPreserveFloat32;
    VkBool32                  shaderSignedZeroInfNanPreserveFloat64;
    VkBool32                  shaderDenormPreserveFloat16;
    VkBool32                  shaderDenormPreserveFloat32;
    VkBool32                  shaderDenormPreserveFloat64;
    VkBool32                  shaderDenormFlushToZeroFloat16;
    VkBool32                  shaderDenormFlushToZeroFloat32;
    VkBool32                  shaderDenormFlushToZeroFloat64;
    VkBool32                  shaderRoundingModeRTEFloat16;
    VkBool32                  shaderRoundingModeRTEFloat32;
    VkBool32                  shaderRoundingModeRTEFloat64;
    VkBool32                  shaderRoundingModeRTZFloat16;
    VkBool32                  shaderRoundingModeRTZFloat32;
    VkBool32                  shaderRoundingModeRTZFloat64;
} VkPhysicalDeviceFloatControlsProperties;
```

```
// Provided by VK_KHR_shader_float_controls
// Equivalent to VkPhysicalDeviceFloatControlsProperties
typedef VkPhysicalDeviceFloatControlsProperties
VkPhysicalDeviceFloatControlsPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `denormBehaviorIndependence` is a `VkShaderFloatControlsIndependence` value indicating whether, and how, denorm behavior can be set independently for different bit widths.
- `roundingModeIndependence` is a `VkShaderFloatControlsIndependence` value indicating whether, and how, rounding modes can be set independently for different bit widths.
- `shaderSignedZeroInfNanPreserveFloat16` is a boolean value indicating whether sign of a zero, Nans and  $\pm\infty$  **can** be preserved in 16-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 16-bit floating-point types.
- `shaderSignedZeroInfNanPreserveFloat32` is a boolean value indicating whether sign of a zero, Nans and  $\pm\infty$  **can** be preserved in 32-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 32-bit floating-point types.
- `shaderSignedZeroInfNanPreserveFloat64` is a boolean value indicating whether sign of a zero, Nans and  $\pm\infty$  **can** be preserved in 64-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode **can** be used for 64-bit floating-point types.

- `shaderDenormPreserveFloat16` is a boolean value indicating whether denormals **can** be preserved in 16-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 16-bit floating-point types.
- `shaderDenormPreserveFloat32` is a boolean value indicating whether denormals **can** be preserved in 32-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 32-bit floating-point types.
- `shaderDenormPreserveFloat64` is a boolean value indicating whether denormals **can** be preserved in 64-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode **can** be used for 64-bit floating-point types.
- `shaderDenormFlushToZeroFloat16` is a boolean value indicating whether denormals **can** be flushed to zero in 16-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 16-bit floating-point types.
- `shaderDenormFlushToZeroFloat32` is a boolean value indicating whether denormals **can** be flushed to zero in 32-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 32-bit floating-point types.
- `shaderDenormFlushToZeroFloat64` is a boolean value indicating whether denormals **can** be flushed to zero in 64-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode **can** be used for 64-bit floating-point types.
- `shaderRoundingModeRTEFloat16` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 16-bit floating-point types.
- `shaderRoundingModeRTEFloat32` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 32-bit floating-point types.
- `shaderRoundingModeRTEFloat64` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode **can** be used for 64-bit floating-point types.
- `shaderRoundingModeRTZFloat16` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 16-bit floating-point types.
- `shaderRoundingModeRTZFloat32` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 32-bit floating-point types.
- `shaderRoundingModeRTZFloat64` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode **can** be used for 64-bit floating-point types.

If the `VkPhysicalDeviceFloatControlsProperties` structure is included in the `pNext` chain of the

[VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFloatControlsProperties-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_FLOAT\\_CONTROLS\\_PROPERTIES](#)

### Structure Chaining

#### Extends the structure

- [VkPhysicalDeviceProperties2](#)

Values which **may** be returned in the [denormBehaviorIndependence](#) and [roundingModeIndependence](#) fields of [VkPhysicalDeviceFloatControlsProperties](#) are:

```
// Provided by VK_VERSION_1_2
typedef enum VkShaderFloatControlsIndependence {
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY = 0,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL = 1,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE = 2,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE_KHR =
VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE,
} VkShaderFloatControlsIndependence;
```

```
// Provided by VK_KHR_shader_float_controls
// Equivalent to VkShaderFloatControlsIndependence
typedef VkShaderFloatControlsIndependence VkShaderFloatControlsIndependenceKHR;
```

- [VK\\_SHADER\\_FLOAT\\_CONTROLS\\_INDEPENDENCE\\_32\\_BIT\\_ONLY](#) specifies that shader float controls for 32-bit floating-point **can** be set independently; other bit widths **must** be set identically to each other.
- [VK\\_SHADER\\_FLOAT\\_CONTROLS\\_INDEPENDENCE\\_ALL](#) specifies that shader float controls for all bit widths **can** be set independently.
- [VK\\_SHADER\\_FLOAT\\_CONTROLS\\_INDEPENDENCE\\_NONE](#) specifies that shader float controls for all bit widths **must** be set identically.

The `VkPhysicalDeviceDiscardRectanglePropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_discard_rectangles
typedef struct VkPhysicalDeviceDiscardRectanglePropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxDiscardRectangles;
} VkPhysicalDeviceDiscardRectanglePropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxDiscardRectangles` is the maximum number of active discard rectangles that **can** be specified.

If the `VkPhysicalDeviceDiscardRectanglePropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDiscardRectanglePropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISCARD_RECTANGLE_PROPERTIES_EXT`

### Structure Chaining

The `VkPhysicalDeviceSampleLocationsPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_sample_locations
typedef struct VkPhysicalDeviceSampleLocationsPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkSampleCountFlags sampleLocationSampleCounts;
    VkExtent2D         maxSampleLocationGridSize;
    float              sampleLocationCoordinateRange[2];
    uint32_t           sampleLocationSubPixelBits;
    VkBool32           variableSampleLocations;
} VkPhysicalDeviceSampleLocationsPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `sampleLocationSampleCounts` is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supporting custom sample locations.
- `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations **can** vary that is supported for all sample counts in `sampleLocationSampleCounts`.
- `sampleLocationCoordinateRange[2]` is the range of supported sample location coordinates.
- `sampleLocationSubPixelBits` is the number of bits of subpixel precision for sample locations.
- `variableSampleLocations` specifies whether the sample locations used by all pipelines that will be bound to a command buffer during a subpass **must** match. If set to `VK_TRUE`, the implementation supports variable sample locations in a subpass. If set to `VK_FALSE`, then the sample locations **must** stay constant in each subpass.

If the `VkPhysicalDeviceSampleLocationsPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSampleLocationsPropertiesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLE_LOCATIONS_PROPERTIES_EXT`

### Structure Chaining

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_legacy_vertex_attributes
typedef struct VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           nativeUnalignedPerformance;
} VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `nativeUnalignedPerformance` specifies whether unaligned vertex fetches do not incur significant performance penalties as compared to aligned fetches.

If the `VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT` structure is included in the `pNext` chain

of the [VkPhysicalDeviceFeatures2](#) structure passed to [vkGetPhysicalDeviceFeatures2](#), it is filled in to indicate whether each corresponding feature is supported. If the application wishes to use a [VkDevice](#) with any features described by [VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT](#), it **must** add an instance of the structure, with the desired feature members set to [VK\\_TRUE](#), to the [pNext](#) chain of [VkDeviceCreateInfo](#) when creating the [VkDevice](#).

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_LEGACY\\_VERTEX\\_ATTRIBUTES\\_PROPERTIES\\_EXT](#)

### Structure Chaining

The [VkPhysicalDeviceExternalMemoryHostPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_external_memory_host
typedef struct VkPhysicalDeviceExternalMemoryHostPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        minImportedHostPointerAlignment;
} VkPhysicalDeviceExternalMemoryHostPropertiesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [minImportedHostPointerAlignment](#) is the minimum **required** alignment, in bytes, for the base address and size of host pointers that **can** be imported to a Vulkan memory object. The value **must** be a power of two.

If the [VkPhysicalDeviceExternalMemoryHostPropertiesEXT](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryHostPropertiesEXT-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTERNAL\\_MEMORY\\_HOST\\_PROPERTIES\\_EXT](#)

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDevicePointClippingProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevicePointClippingProperties {
    VkStructureType      sType;
    void*                pNext;
    VkPointClippingBehavior pointClippingBehavior;
} VkPhysicalDevicePointClippingProperties;
```

```
// Provided by VK_KHR_maintenance2
// Equivalent to VkPhysicalDevicePointClippingProperties
typedef VkPhysicalDevicePointClippingProperties
VkPhysicalDevicePointClippingPropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pointClippingBehavior` is a [VkPointClippingBehavior](#) value specifying the point clipping behavior supported by the implementation.

If the `VkPhysicalDevicePointClippingProperties` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDevicePointClippingProperties-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_POINT_CLIPPING_PROPERTIES`

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceSubgroupProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSubgroupProperties {
    VkStructureType      sType;
    void*                pNext;
    uint32_t             subgroupSize;
    VkShaderStageFlags   supportedStages;
    VkSubgroupFeatureFlags supportedOperations;
    VkBool32             quadOperationsInAllStages;
} VkPhysicalDeviceSubgroupProperties;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subgroupSize` is the default number of invocations in each subgroup. `subgroupSize` is at least 1 if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `subgroupSize` is a power-of-two.
- `supportedStages` is a bitfield of `VkShaderStageFlagBits` describing the shader stages that `group operations` with `subgroup scope` are supported in. `supportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.
- `supportedOperations` is a bitmask of `VkSubgroupFeatureFlagBits` specifying the sets of `group operations` with `subgroup scope` supported on this device. `supportedOperations` will have the `VK_SUBGROUP_FEATURE_BASIC_BIT` bit set if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`.
- `quadOperationsInAllStages` is a boolean specifying whether `quad group operations` are available in all stages, or are restricted to fragment and compute stages.

If the `VkPhysicalDeviceSubgroupProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `supportedOperations` includes `VK_SUBGROUP_FEATURE_QUAD_BIT`, or the `shaderSubgroupUniformControlFlow` feature is enabled, `subgroupSize` **must** be greater than or equal to 4.

If the `shaderQuadControl` feature is supported, `supportedOperations` **must** include `VK_SUBGROUP_FEATURE_QUAD_BIT`.

If `VK_KHR_shader_subgroup_rotate` is supported, and the implementation advertises support with a `VkExtensionProperties::specVersion` greater than or equal to 2, and the `shaderSubgroupRotate` feature is supported, `VK_SUBGROUP_FEATURE_ROTATE_BIT` **must** be returned in `VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations` and `VkPhysicalDeviceSubgroupProperties::supportedOperations`. If `VK_KHR_shader_subgroup_rotate` is supported, and the implementation advertises support with a `VkExtensionProperties::specVersion` greater than or equal to 2, and the `shaderSubgroupRotateClustered` feature is supported, `VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT` **must** be returned in `VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations` and

VkPhysicalDeviceSubgroupProperties::supportedOperations.

If Vulkan 1.4 is supported, VK\_SUBGROUP\_FEATURE\_ROTATE\_BIT and VK\_SUBGROUP\_FEATURE\_ROTATE\_CLUSTERED\_BIT **must** be returned in VkPhysicalDeviceSubgroupProperties::supportedOperations and VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations

**NOTE**

VK\_SUBGROUP\_FEATURE\_ROTATE\_BIT and VK\_SUBGROUP\_FEATURE\_ROTATE\_CLUSTERED\_BIT were added in version 2 of the VK\_KHR\_shader\_subgroup\_rotate extension, after the initial release, so there are implementations that do not advertise these bits. Applications should use the shaderSubgroupRotate and shaderSubgroupRotateClustered features to determine and enable support. These bits are advertised here for consistency and for future dependencies.

If the shaderSubgroupPartitioned feature is supported, supportedOperations **must** include VK\_SUBGROUP\_FEATURE\_PARTITIONED\_BIT\_EXT.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupProperties-sType-sType **sType must** be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_SUBGROUP\_PROPERTIES

### Structure Chaining

**Extends the structure**

- VkPhysicalDeviceProperties2

Bits which **can** be set in VkPhysicalDeviceSubgroupProperties::supportedOperations and VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations to specify supported group operations with subgroup scope are:

```

// Provided by VK_VERSION_1_1
typedef enum VkSubgroupFeatureFlagBits {
    VK_SUBGROUP_FEATURE_BASIC_BIT = 0x00000001,
    VK_SUBGROUP_FEATURE_VOTE_BIT = 0x00000002,
    VK_SUBGROUP_FEATURE_ARITHMETIC_BIT = 0x00000004,
    VK_SUBGROUP_FEATURE_BALLOT_BIT = 0x00000008,
    VK_SUBGROUP_FEATURE_SHUFFLE_BIT = 0x00000010,
    VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT = 0x00000020,
    VK_SUBGROUP_FEATURE_CLUSTERED_BIT = 0x00000040,
    VK_SUBGROUP_FEATURE_QUAD_BIT = 0x00000080,
    // Provided by VK_VERSION_1_4
    VK_SUBGROUP_FEATURE_ROTATE_BIT = 0x00000200,
    // Provided by VK_VERSION_1_4
    VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT = 0x00000400,
    // Provided by VK_EXT_shader_subgroup_partitioned
    VK_SUBGROUP_FEATURE_PARTITIONED_BIT_EXT = 0x00000100,
    // Provided by VK_KHR_shader_subgroup_rotate
    VK_SUBGROUP_FEATURE_ROTATE_BIT_KHR = VK_SUBGROUP_FEATURE_ROTATE_BIT,
    // Provided by VK_KHR_shader_subgroup_rotate
    VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT_KHR =
VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT,
} VkSubgroupFeatureFlagBits;

```

- [VK\\_SUBGROUP\\_FEATURE\\_BASIC\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniform](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_VOTE\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformVote](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_ARITHMETIC\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformArithmetic](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_BALLOT\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformBallot](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_SHUFFLE\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformShuffle](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_SHUFFLE\\_RELATIVE\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformShuffleRelative](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_CLUSTERED\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformClustered](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_QUAD\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformQuad](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_PARTITIONED\\_BIT\\_EXT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformPartitionedEXT](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_ROTATE\\_BIT](#) specifies the device will accept SPIR-V shader modules containing the [GroupNonUniformRotateKHR](#) capability.
- [VK\\_SUBGROUP\\_FEATURE\\_ROTATE\\_CLUSTERED\\_BIT](#) specifies the device will accept SPIR-V

shader modules that use the `ClusterSize` operand to `OpGroupNonUniformRotateKHR`.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkSubgroupFeatureFlags;
```

`VkSubgroupFeatureFlags` is a bitmask type for setting a mask of zero or more `VkSubgroupFeatureFlagBits`.

The `VkPhysicalDeviceSubgroupSizeControlProperties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           minSubgroupSize;
    uint32_t           maxSubgroupSize;
    uint32_t           maxComputeWorkgroupSubgroups;
    VkShaderStageFlags requiredSubgroupSizeStages;
} VkPhysicalDeviceSubgroupSizeControlProperties;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minSubgroupSize` is the minimum subgroup size supported by this device. `minSubgroupSize` is at least one if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `minSubgroupSize` is a power-of-two. `minSubgroupSize` is less than or equal to `maxSubgroupSize`. `minSubgroupSize` is less than or equal to `subgroupSize`.
- `maxSubgroupSize` is the maximum subgroup size supported by this device. `maxSubgroupSize` is at least one if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `maxSubgroupSize` is a power-of-two. `maxSubgroupSize` is greater than or equal to `minSubgroupSize`. `maxSubgroupSize` is greater than or equal to `subgroupSize`.
- `maxComputeWorkgroupSubgroups` is the maximum number of subgroups supported by the implementation within a workgroup.
- `requiredSubgroupSizeStages` is a bitfield of what shader stages support having a required subgroup size specified.

If the `VkPhysicalDeviceSubgroupSizeControlProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `VkPhysicalDeviceSubgroupProperties::supportedOperations` includes `VK_SUBGROUP_FEATURE_QUAD_BIT`, `minSubgroupSize` **must** be greater than or equal to 4.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlProperties-sType-sType

`sType` must be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_PROPERTIES`

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           advancedBlendMaxColorAttachments;
    VkBool32           advancedBlendIndependentBlend;
    VkBool32           advancedBlendNonPremultipliedSrcColor;
    VkBool32           advancedBlendNonPremultipliedDstColor;
    VkBool32           advancedBlendCorrelatedOverlap;
    VkBool32           advancedBlendAllOperations;
} VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `advancedBlendMaxColorAttachments` is one greater than the highest color attachment index that **can** be used in a render pass instance, for a pipeline that uses an [advanced blend operation](#).
- `advancedBlendIndependentBlend` specifies whether advanced blend operations **can** vary per-attachment.
- `advancedBlendNonPremultipliedSrcColor` specifies whether the source color **can** be treated as non-premultiplied. If this is `VK_FALSE`, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::srcPremultiplied` **must** be `VK_TRUE`.
- `advancedBlendNonPremultipliedDstColor` specifies whether the destination color **can** be treated as non-premultiplied. If this is `VK_FALSE`, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::dstPremultiplied` **must** be `VK_TRUE`.
- `advancedBlendCorrelatedOverlap` specifies whether the overlap mode **can** be treated as correlated. If this is `VK_FALSE`, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::blendOverlap` **must** be `VK_BLEND_OVERLAP_UNCORRELATED_EXT`.
- `advancedBlendAllOperations` specifies whether all advanced blend operation enums are supported. See the valid usage of [VkPipelineColorBlendAttachmentState](#).

If the `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_BLEND\_OPERATION\_ADVANCED\_PROPERTIES\_EXT

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceVertexAttributeDivisorProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceVertexAttributeDivisorProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVertexAttribDivisor;
    VkBool32           supportsNonZeroFirstInstance;
} VkPhysicalDeviceVertexAttributeDivisorProperties;
```

```
// Provided by VK_KHR_vertex_attribute_divisor
// Equivalent to VkPhysicalDeviceVertexAttributeDivisorProperties
typedef VkPhysicalDeviceVertexAttributeDivisorProperties
VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [maxVertexAttribDivisor](#) is the maximum value of the number of instances that will repeat the value of vertex attribute data when instanced rendering is enabled.
- [supportsNonZeroFirstInstance](#) specifies whether a non-zero value for the [firstInstance](#) parameter of [drawing commands](#) is supported when [VkVertexInputBindingDivisorDescription::divisor](#) is not 1.

If the [VkPhysicalDeviceVertexAttributeDivisorProperties](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorProperties-sType-sType

`sType` **must** be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES`

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSamplerFilterMinmaxProperties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           filterMinmaxSingleComponentFormats;
    VkBool32           filterMinmaxImageComponentMapping;
} VkPhysicalDeviceSamplerFilterMinmaxProperties;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `filterMinmaxSingleComponentFormats` is a boolean value indicating whether a minimum set of required formats support min/max filtering.
- `filterMinmaxImageComponentMapping` is a boolean value indicating whether the implementation supports non-identity component mapping of the image when doing min/max filtering.

If the `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

If `filterMinmaxSingleComponentFormats` is `VK_TRUE`, the following formats **must** support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT` feature with `VK_IMAGE_TILING_OPTIMAL`, if they support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`:

- [VK\\_FORMAT\\_R8\\_UNORM](#)
- [VK\\_FORMAT\\_R8\\_SNORM](#)
- [VK\\_FORMAT\\_R16\\_UNORM](#)
- [VK\\_FORMAT\\_R16\\_SNORM](#)
- [VK\\_FORMAT\\_R16\\_SFLOAT](#)
- [VK\\_FORMAT\\_R32\\_SFLOAT](#)
- [VK\\_FORMAT\\_D16\\_UNORM](#)
- [VK\\_FORMAT\\_X8\\_D24\\_UNORM\\_PACK32](#)

- [VK\\_FORMAT\\_D32\\_SFLOAT](#)
- [VK\\_FORMAT\\_D16\\_UNORM\\_S8\\_UINT](#)
- [VK\\_FORMAT\\_D24\\_UNORM\\_S8\\_UINT](#)
- [VK\\_FORMAT\\_D32\\_SFLOAT\\_S8\\_UINT](#)

If the format is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports min/max filtering, and that min/max filtering of the depth aspect is supported when depth compare is disabled in the sampler.

If `filterMinmaxImageComponentMapping` is [VK\\_FALSE](#) the component mapping of the image view used with min/max filtering **must** have been created with the `r` component set to the [identity swizzle](#). Only the `r` component of the sampled image value is defined; reading other component values results in poison. If `filterMinmaxImageComponentMapping` is [VK\\_TRUE](#) this restriction does not apply and image component mapping works as normal.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSamplerFilterMinmaxProperties-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_SAMPLER\\_FILTER\\_MINMAX\\_PROPERTIES](#)

The `VkPhysicalDeviceProtectedMemoryProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryProperties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           protectedNoFault;
} VkPhysicalDeviceProtectedMemoryProperties;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `protectedNoFault` specifies how an implementation behaves when an application attempts to write to unprotected memory in a protected queue operation, read from protected memory in an unprotected queue operation, or perform a query in a protected queue operation. If this limit is [VK\\_TRUE](#), such writes will be discarded or have undefined values written; reads and queries will return poison. If this limit is [VK\\_FALSE](#), applications **must** not perform these operations. See [Protected Memory Access Rules](#) for more information.

If the `VkPhysicalDeviceProtectedMemoryProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceProtectedMemoryProperties-sType-sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_PROPERTIES`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceMaintenance3Properties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMaintenance3Properties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxPerSetDescriptors;
    VkDeviceSize       maxMemoryAllocationSize;
} VkPhysicalDeviceMaintenance3Properties;
```

```
// Provided by VK_KHR_maintenance3
// Equivalent to VkPhysicalDeviceMaintenance3Properties
typedef VkPhysicalDeviceMaintenance3Properties
VkPhysicalDeviceMaintenance3PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxPerSetDescriptors` is a maximum number of descriptors (summed over all descriptor types) in a single descriptor set that is guaranteed to satisfy any implementation-dependent constraints on the size of a descriptor set itself. Applications **can** query whether a descriptor set that goes beyond this limit is supported using `vkGetDescriptorSetLayoutSupport`.
- `maxMemoryAllocationSize` is the maximum size of a memory allocation that **can** be created, even if there is more space available in the heap. If `VkMemoryAllocateInfo::allocationSize` is larger the error `VK_ERROR_OUT_OF_DEVICE_MEMORY` **may** be returned.

If the `VkPhysicalDeviceMaintenance3Properties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance3Properties-sType-sType  
**sType must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MAINTENANCE\\_3\\_PROPERTIES](#)

The [VkPhysicalDeviceMaintenance4Properties](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Properties {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        maxBufferSize;
} VkPhysicalDeviceMaintenance4Properties;
```

```
// Provided by VK_KHR_maintenance4
// Equivalent to VkPhysicalDeviceMaintenance4Properties
typedef VkPhysicalDeviceMaintenance4Properties
VkPhysicalDeviceMaintenance4PropertiesKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxBufferSize** is the maximum size [VkBuffer](#) that **can** be created.

If the [VkPhysicalDeviceMaintenance4Properties](#) structure is included in the **pNext** chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance4Properties-sType-sType  
**sType must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MAINTENANCE\\_4\\_PROPERTIES](#)

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceMaintenance5Properties` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance5Properties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           earlyFragmentMultisampleCoverageAfterSampleCounting;
    VkBool32           earlyFragmentSampleMaskTestBeforeSampleCounting;
    VkBool32           depthStencilSwizzleOneSupport;
    VkBool32           polygonModePointSize;
    VkBool32           nonStrictSinglePixelWideLinesUseParallelogram;
    VkBool32           nonStrictWideLinesUseParallelogram;
} VkPhysicalDeviceMaintenance5Properties;
```

```
// Provided by VK_KHR_maintenance5
// Equivalent to VkPhysicalDeviceMaintenance5Properties
typedef VkPhysicalDeviceMaintenance5Properties
VkPhysicalDeviceMaintenance5PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `earlyFragmentMultisampleCoverageAfterSampleCounting` is a boolean value indicating whether the `fragment shading` and `multisample coverage` operations are performed after `sample counting` for `fragment shaders` with `EarlyFragmentTests` execution mode.
- `earlyFragmentSampleMaskTestBeforeSampleCounting` is a boolean value indicating whether the `sample mask test` operation is performed before `sample counting` for `fragment shaders` using the `EarlyFragmentTests` execution mode.
- `depthStencilSwizzleOneSupport` is a boolean indicating that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior.
- `polygonModePointSize` is a boolean value indicating whether the point size of the final rasterization of polygons with `VK_POLYGON_MODE_POINT` is controlled by `PointSize`.
- `nonStrictSinglePixelWideLinesUseParallelogram` is a boolean value indicating whether non-strict lines with a width of 1.0 are rasterized as parallelograms or using Bresenham's algorithm.
- `nonStrictWideLinesUseParallelogram` is a boolean value indicating whether non-strict lines with a width greater than 1.0 are rasterized as parallelograms or using Bresenham's algorithm.

If the `VkPhysicalDeviceMaintenance5Properties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance5Properties-sType-sType

**sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_PROPERTIES`

## Structure Chaining

### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceMaintenance6Properties` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceMaintenance6Properties {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           blockTexelViewCompatibleMultipleLayers;
    uint32_t           maxCombinedImageSamplerDescriptorCount;
    VkBool32           fragmentShadingRateClampCombinerInputs;
} VkPhysicalDeviceMaintenance6Properties;
```

```
// Provided by VK_KHR_maintenance6
// Equivalent to VkPhysicalDeviceMaintenance6Properties
typedef VkPhysicalDeviceMaintenance6Properties
VkPhysicalDeviceMaintenance6PropertiesKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **blockTexelViewCompatibleMultipleLayers** is a boolean value indicating that an implementation supports creating image views with `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` where the **layerCount** member of **subresourceRange** is greater than 1.
- **maxCombinedImageSamplerDescriptorCount** is the maximum number of descriptors that the implementation uses for sampled images with `Y'CBCR` conversion.
- **fragmentShadingRateClampCombinerInputs** is a boolean value indicating that an implementation clamps the inputs to `combiner operations`.

If the `VkPhysicalDeviceMaintenance6Properties` structure is included in the **pNext** chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance6Properties-sType-sType  
**sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_6_PROPERTIES`

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceMaintenance7PropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceMaintenance7PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           robustFragmentShadingRateAttachmentAccess;
    VkBool32           separateDepthStencilAttachmentAccess;
    uint32_t           maxDescriptorSetTotalUniformBuffersDynamic;
    uint32_t           maxDescriptorSetTotalStorageBuffersDynamic;
    uint32_t           maxDescriptorSetTotalBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindTotalBuffersDynamic;
} VkPhysicalDeviceMaintenance7PropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustFragmentShadingRateAttachmentAccess` indicates whether the scaled size of a fragment shading rate attachment **can** be less than the size of the render area. If `robustFragmentShadingRateAttachmentAccess` is `VK_FALSE`, the size of the attachment multiplied by the texel size **must** be greater than or equal to the size of the render area. If it is `VK_TRUE` and the fragment shading rate attachment was created with [VkImageSubresourceRange::baseMipLevel](#) equal to 0, the scaled size **can** be smaller than the render area, with missing shading rates defined by [out of bounds behavior](#).
- `separateDepthStencilAttachmentAccess` indicates support for writing to one aspect of a depth/stencil attachment without performing read-modify-write operations on the other aspect. If this property is `VK_TRUE`, writes to one aspect **must** not result in read-modify-write operations on the other aspect. If `VK_FALSE`, writes to one aspect **may** result in writes to the other aspect as defined by [render pass load operations](#), [render pass store operations](#) and [render pass resolve operations](#).
- `maxDescriptorSetTotalUniformBuffersDynamic` is the maximum total count of dynamic uniform buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Dynamic Uniform Buffer](#).
- `maxDescriptorSetTotalStorageBuffersDynamic` is the maximum total count of dynamic storage buffers that **can** be included in a pipeline layout. Descriptors with a type of

`VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See [Dynamic Storage Buffer](#).

- `maxDescriptorSetTotalBuffersDynamic` is the maximum total count of dynamic uniform buffers and storage buffers that **can** be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxDescriptorSetUpdateAfterBindTotalUniformBuffersDynamic` is similar to `maxDescriptorSetTotalUniformBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic uniform buffer descriptors from a pool created with `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT`, and **can** include dynamic uniform buffer descriptors in descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`. Therefore this limit has no practical effect and **may** be zero.
- `maxDescriptorSetUpdateAfterBindTotalStorageBuffersDynamic` is similar to `maxDescriptorSetTotalStorageBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic storage buffer descriptors from a pool created with `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT`, and **can** include dynamic storage buffer descriptors in descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`. Therefore this limit has no practical effect and **may** be zero.
- `maxDescriptorSetUpdateAfterBindTotalBuffersDynamic` is similar to `maxDescriptorSetTotalBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic uniform/storage buffer descriptors from a pool created with the descriptors from a pool created with `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT`, and **can** include dynamic uniform/storage buffer descriptors in descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`. Therefore this limit has no practical effect and **may** be zero.

If the `VkPhysicalDeviceMaintenance7PropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance7PropertiesKHR-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_MAINTENANCE\_7\_PROPERTIES\_KHR

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceLayeredApiPropertiesListKHR](#) structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiPropertiesListKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           layeredApiCount;
    VkPhysicalDeviceLayeredApiPropertiesKHR* pLayeredApis;
} VkPhysicalDeviceLayeredApiPropertiesListKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [layeredApiCount](#) is an integer related to the number of layered implementations underneath the Vulkan physical device, as described below.
- [pLayeredApis](#) is a pointer to an array of [VkPhysicalDeviceLayeredApiPropertiesKHR](#) in which information regarding the layered implementations underneath the Vulkan physical device are returned.

If [pLayeredApis](#) is `NULL`, then the number of layered implementations that are underneath the top-most Vulkan physical device (i.e. the one returned by [vkGetPhysicalDeviceProperties2](#)) is returned in [layeredApiCount](#). Otherwise, [layeredApiCount](#) must be set by the application to the number of elements in the [pLayeredApis](#) array, and on return is overwritten with the number of values actually written to [pLayeredApis](#). If the value of [layeredApiCount](#) is less than the number of layered implementations underneath the Vulkan physical device, at most [layeredApiCount](#) values will be written to [pLayeredApis](#). An implementation that is not a layer will return 0 in [layeredApiCount](#).

In the presence of multiple layered implementations, each element of [pLayeredApis](#) corresponds to an API implementation that is implemented on top of the API at the previous index. If there are layered implementations underneath a non-Vulkan implementation, they may not be visible in this query as the corresponding APIs may lack such a query.

If the [VkPhysicalDeviceLayeredApiPropertiesListKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with

each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiPropertiesListKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_PROPERTIES_LIST_KHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesListKHR-pLayeredApis-parameter  
If `layeredApiCount` is not 0, and `pLayeredApis` is not `NULL`, `pLayeredApis` **must** be a valid pointer to an array of `layeredApiCount` `VkPhysicalDeviceLayeredApiPropertiesKHR` structures

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceLayeredApiPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           vendorID;
    uint32_t           deviceID;
    VkPhysicalDeviceLayeredApiKHR    layeredAPI;
    char               deviceName[VK_MAX_PHYSICAL_DEVICE_NAME_SIZE];
} VkPhysicalDeviceLayeredApiPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vendorID` is a unique identifier for the vendor of the layered implementation.
- `deviceID` is a unique identifier for the layered implementation among devices available from the vendor.
- `layeredAPI` is a `VkPhysicalDeviceLayeredApiKHR` specifying the API implemented by the layered implementation.
- `deviceName` is an array of `VK_MAX_PHYSICAL_DEVICE_NAME_SIZE` `char` containing a null-terminated UTF-8 string which is the name of the device.

If `layeredAPI` is `VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR`, additional Vulkan-specific information can be queried by including the `VkPhysicalDeviceLayeredApiVulkanPropertiesKHR` structure in the `pNext` chain. Otherwise if such a structure is included in the `pNext` chain, it is ignored.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_PROPERTIES_KHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-pNext-pNext **must** be `NULL` or a pointer to a valid instance of `VkPhysicalDeviceLayeredApiVulkanPropertiesKHR`
- VUID-VkPhysicalDeviceLayeredApiPropertiesKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

The list of possible API implementations of a layered implementation underneath the Vulkan physical device, as returned in `VkPhysicalDeviceLayeredApiPropertiesKHR::layeredAPI`, are:

```
// Provided by VK_KHR_maintenance7
typedef enum VkPhysicalDeviceLayeredApiKHR {
    VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR = 0,
    VK_PHYSICAL_DEVICE_LAYERED_API_D3D12_KHR = 1,
    VK_PHYSICAL_DEVICE_LAYERED_API_METAL_KHR = 2,
    VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_KHR = 3,
    VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_ES_KHR = 4,
} VkPhysicalDeviceLayeredApiKHR;
```

- `VK_PHYSICAL_DEVICE_LAYERED_API_VULKAN_KHR` - the device implements the Vulkan API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_D3D12_KHR` - the device implements the D3D12 API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_METAL_KHR` - the device implements the Metal API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_KHR` - the device implements the OpenGL API.
- `VK_PHYSICAL_DEVICE_LAYERED_API_OPENGL_ES_KHR` - the device implements the OpenGL ES API.

The `VkPhysicalDeviceLayeredApiVulkanPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance7
typedef struct VkPhysicalDeviceLayeredApiVulkanPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkPhysicalDeviceProperties2 properties;
} VkPhysicalDeviceLayeredApiVulkanPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `properties` is a `VkPhysicalDeviceProperties2` in which properties of the underlying layered Vulkan implementation are returned.

The implementation **must** zero-fill the contents of `properties.properties.limits` and `properties.properties.sparseProperties`.

### Valid Usage

- VUID-VkPhysicalDeviceLayeredApiVulkanPropertiesKHR-pNext-10011  
Only `VkPhysicalDeviceDriverProperties` and `VkPhysicalDeviceIDProperties` are allowed in the `pNext` chain of `properties`

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLayeredApiVulkanPropertiesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LAYERED_API_VULKAN_PROPERTIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceLayeredApiPropertiesKHR`

The `VkPhysicalDeviceMaintenance9PropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance9
typedef struct VkPhysicalDeviceMaintenance9PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           image2DViewOf3DSparse;
    VkDefaultVertexAttributeValueKHR defaultVertexAttributeValue;
} VkPhysicalDeviceMaintenance9PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- If the `image2DViewOf3D` feature is enabled, `image2DViewOf3DSparse` indicates whether the implementation supports binding a slice of a sparse 3D image to a 2D image view.
- `defaultVertexAttributeValue` is a `VkDefaultVertexAttributeValueKHR` that indicates what value the implementation will return when the vertex shader reads unbound vertex attributes. Unbound attributes are those that have no corresponding `VkVertexInputAttributeDescription::location` defined in the bound graphics pipeline or no corresponding `VkVertexInputAttributeDescription2EXT::location` set by the most recent call to `vkCmdSetVertexInputEXT` when the state is dynamic .

If the `VkPhysicalDeviceMaintenance9PropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with

each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceMaintenance9PropertiesKHR-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_9_PROPERTIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The possible values returned by the implementation when the vertex shader reads an unbound vertex attribute are:

```
// Provided by VK_KHR_maintenance9
typedef enum VkDefaultVertexAttributeValueKHR {
    VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ZERO_KHR = 0,
    VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ONE_KHR = 1,
} VkDefaultVertexAttributeValueKHR;
```

- `VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ZERO_KHR` - the value read for an unbound vertex attribute is (0,0,0,0).
- `VK_DEFAULT_VERTEX_ATTRIBUTE_VALUE_ZERO_ZERO_ZERO_ONE_KHR` - the value read for an unbound vertex attribute is (0,0,0,1).

The `VkPhysicalDeviceMaintenance10PropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_maintenance10
typedef struct VkPhysicalDeviceMaintenance10PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           rgba40paqueBlackSwizzled;
    VkBool32           resolveSrgbFormatAppliesTransferFunction;
    VkBool32           resolveSrgbFormatSupportsTransferFunctionControl;
} VkPhysicalDeviceMaintenance10PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rgba40paqueBlackSwizzled` indicates whether correct swizzling is applied to the opaque black border color when using either the `VK_FORMAT_B4G4R4A4_UNORM_PACK16` or `VK_FORMAT_R4G4B4A4_UNORM_PACK16` format. If it is `VK_TRUE`, the implementation will correctly produce an opaque black border color with these formats. If it is `VK_FALSE`, the

implementation **may** swap the first channel with the alpha channel for the border color when sampling.

- `resolveSrgbFormatAppliesTransferFunction` indicates whether resolving a multi-sampled sRGB format to single-sampled sRGB by a weighted average converts the samples to linear before averaging. This applies to both attachment resolves in a render pass and standalone resolve commands. If `VK_TRUE`, implementation always converts to linear before averaging unless overridden. If `VK_FALSE`, implementation never converts to linear before averaging unless overridden.
- `resolveSrgbFormatSupportsTransferFunctionControl` indicates whether the implementation supports overriding the default behavior in `resolveSrgbFormatAppliesTransferFunction` in render passes and `vkCmdResolveImage2`.

Implementations supporting `maintenance10` **should** set `resolveSrgbFormatAppliesTransferFunction` to `VK_TRUE`.

If the `VkPhysicalDeviceMaintenance10PropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance10PropertiesKHR-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_10_PROPERTIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceMeshShaderPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxTaskWorkGroupTotalCount;
    uint32_t           maxTaskWorkGroupCount[3];
    uint32_t           maxTaskWorkGroupInvocations;
    uint32_t           maxTaskWorkGroupSize[3];
    uint32_t           maxTaskPayloadSize;
    uint32_t           maxTaskSharedMemorySize;
    uint32_t           maxTaskPayloadAndSharedMemorySize;
    uint32_t           maxMeshWorkGroupTotalCount;
    uint32_t           maxMeshWorkGroupCount[3];
    uint32_t           maxMeshWorkGroupInvocations;
    uint32_t           maxMeshWorkGroupSize[3];
    uint32_t           maxMeshSharedMemorySize;
    uint32_t           maxMeshPayloadAndSharedMemorySize;
    uint32_t           maxMeshOutputMemorySize;
    uint32_t           maxMeshPayloadAndOutputMemorySize;
    uint32_t           maxMeshOutputComponents;
    uint32_t           maxMeshOutputVertices;
    uint32_t           maxMeshOutputPrimitives;
    uint32_t           maxMeshOutputLayers;
    uint32_t           maxMeshMultiviewViewCount;
    uint32_t           meshOutputPerVertexGranularity;
    uint32_t           meshOutputPerPrimitiveGranularity;
    uint32_t           maxPreferredTaskWorkGroupInvocations;
    uint32_t           maxPreferredMeshWorkGroupInvocations;
    VkBool32           prefersLocalInvocationVertexOutput;
    VkBool32           prefersLocalInvocationPrimitiveOutput;
    VkBool32           prefersCompactVertexOutput;
    VkBool32           prefersCompactPrimitiveOutput;
} VkPhysicalDeviceMeshShaderPropertiesEXT;
```

The members of the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure describe the following implementation-dependent limits:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTaskWorkGroupTotalCount` is the maximum number of local workgroups that **can** be launched for a task shader by a [mesh tasks drawing command](#).
- `maxTaskWorkGroupCount[3]` is the maximum number of local workgroups that **can** be launched for a task shader in each dimension by a [mesh tasks drawing command](#). These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the drawing commands **must** be less than or equal to the corresponding limit. The product of these dimensions **must** be less than or equal to `maxTaskWorkGroupTotalCount`.

- `maxTaskWorkGroupInvocations` is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxTaskWorkGroupSize[3]` is the maximum size of a local workgroup for a task shader in each dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxTaskPayloadSize` is the maximum total storage size, in bytes, available for variables declared with the `TaskPayloadWorkgroupEXT` storage class in shader modules in the task shader stage.
- `maxTaskSharedMemorySize` is the maximum total storage size, in bytes, available for variables declared with the `Workgroup` storage class in shader modules in the task shader stage.
- `maxTaskPayloadAndSharedMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` or `Workgroup` storage class, in shader modules in the task shader stage.
- `maxMeshWorkGroupTotalCount` is the maximum number of local workgroups that **can** be launched for a mesh shader, either directly by a [mesh tasks drawing command](#), or emitted by a single task shader workgroup.
- `maxMeshWorkGroupCount[3]` is the maximum number of local workgroups that **can** be launched for a mesh shader in each dimension, either directly by a [mesh tasks drawing command](#), or emitted by a single task shader workgroup. These three values represent the maximum number of local output tasks for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the `OpEmitMeshTasksEXT` **must** be less than or equal to the corresponding limit. The product of these dimensions **must** be less than or equal to `maxMeshWorkGroupTotalCount`.
- `maxMeshWorkGroupInvocations` is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, **must** be less than or equal to this limit.
- `maxMeshWorkGroupSize[3]` is the maximum size of a local workgroup for a mesh shader in each dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The `x`, `y`, and `z` sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, **must** be less than or equal to the corresponding limit.
- `maxMeshSharedMemorySize` is the maximum total storage size, in bytes, available for variables declared with the `Workgroup` storage class in shader modules in the mesh shader stage.
- `maxMeshPayloadAndSharedMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` or `Workgroup` storage class in shader modules in the mesh shader stage.
- `maxMeshOutputMemorySize` is the maximum total storage size, in bytes, available for output variables in shader modules in the mesh shader stage, according to the formula in [Mesh Shader Output](#).
- `maxMeshPayloadAndOutputMemorySize` is the maximum total storage size, in bytes, available for

variables that are declared with the `TaskPayloadWorkgroupEXT` storage class, or output variables in shader modules in the mesh shader stage, according to the formula in [Mesh Shader Output](#).

- `maxMeshOutputComponents` is the maximum number of components of output variables which **can** be output from the mesh shader stage.
- `maxMeshOutputVertices` is the maximum number of vertices which **can** be emitted by a single mesh shader workgroup.
- `maxMeshOutputPrimitives` is the maximum number of primitives which **can** be emitted by a single mesh shader workgroup.
- `maxMeshOutputLayers` is one greater than the maximum layer index that **can** be output from the mesh shader stage.
- `maxMeshMultiviewViewCount` is one greater than the maximum view index that **can** be used by any mesh shader.
- `meshOutputPerVertexGranularity` is the granularity of vertex allocation. The number of output vertices allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which **must** be less than or equal to `maxMeshOutputMemorySize`.
- `meshOutputPerPrimitiveGranularity` is the granularity of primitive allocation. The number of output primitives allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which **must** be less than or equal to `maxMeshOutputMemorySize`.
- `maxPreferredTaskWorkGroupInvocations` is the maximum number of task shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the task shader stage.
- `maxPreferredMeshWorkGroupInvocations` is the maximum number of mesh shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the mesh shader stage.
- `prefersLocalInvocationVertexOutput` specifies whether writes to the vertex output array in a mesh shader yield best performance when the array index matches `LocalInvocationIndex`.
- `prefersLocalInvocationPrimitiveOutput` specifies whether writes to the primitive output array in a mesh shader yield best performance when the array index matches `LocalInvocationIndex`.
- `prefersCompactVertexOutput` specifies whether output vertices should be compacted after custom culling in the mesh shader for best performance, otherwise keeping the vertices at their original location may be better.
- `prefersCompactPrimitiveOutput` specifies whether output primitives should be compacted after custom culling in the mesh shader for best performance, otherwise the use of `CullPrimitiveEXT` may be better.

If the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure is included in the `pNext` chain of [VkPhysicalDeviceProperties2](#), it is filled with the implementation-dependent limits.

### Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceMeshShaderPropertiesEXT-sType-sType`

sType

must

be

VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_MESH\_SHADER\_PROPERTIES\_EXT

## Structure Chaining

    uint32_t           maxPerStageDescriptorUpdateAfterBindSampledImages;
    uint32_t           maxPerStageDescriptorUpdateAfterBindStorageImages;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInputAttachments;
    uint32_t           maxPerStageUpdateAfterBindResources;
    uint32_t           maxDescriptorSetUpdateAfterBindSamplers;
    uint32_t           maxDescriptorSetUpdateAfterBindUniformBuffers;
    uint32_t           maxDescriptorSetUpdateAfterBindUniformBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageBuffers;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageBuffersDynamic;
    uint32_t           maxDescriptorSetUpdateAfterBindSampledImages;
    uint32_t           maxDescriptorSetUpdateAfterBindStorageImages;
    uint32_t           maxDescriptorSetUpdateAfterBindInputAttachments;
} VkPhysicalDeviceDescriptorIndexingProperties;
```

```
// Provided by VK_EXT_descriptor_indexing
// Equivalent to VkPhysicalDeviceDescriptorIndexingProperties
typedef VkPhysicalDeviceDescriptorIndexingProperties
VkPhysicalDeviceDescriptorIndexingPropertiesEXT;
```

- sType is a [VkStructureType](#) value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxUpdateAfterBindDescriptorsInAllPools` is the maximum number of descriptors (summed over all descriptor types) that **can** be created across all pools that are created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit set. Pool creation **may** fail when this limit is exceeded, or when the space this limit represents is unable to satisfy a pool creation due to fragmentation.
- `shaderUniformBufferArrayNonUniformIndexingNative` is a boolean value indicating whether uniform buffer descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of uniform buffers **may** execute multiple times in order to access all the descriptors.
- `shaderSampledImageArrayNonUniformIndexingNative` is a boolean value indicating whether sampler and image descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of samplers or images **may** execute multiple times in order to access all the descriptors.
- `shaderStorageBufferArrayNonUniformIndexingNative` is a boolean value indicating whether storage buffer descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of storage buffers **may** execute multiple times in order to access all the descriptors.
- `shaderStorageImageArrayNonUniformIndexingNative` is a boolean value indicating whether storage image descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of storage images **may** execute multiple times in order to access all the descriptors.
- `shaderInputAttachmentArrayNonUniformIndexingNative` is a boolean value indicating whether input attachment descriptors natively support non-uniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that non-uniformly indexes an array of input attachments **may** execute multiple times in order to access all the descriptors.
- `robustBufferAccessUpdateAfterBind` is a boolean value indicating whether `robustBufferAccess` **can** be enabled on a device simultaneously with `descriptorBindingUniformBufferUpdateAfterBind`, `descriptorBindingStorageBufferUpdateAfterBind`, `descriptorBindingUniformTexelBufferUpdateAfterBind`, and/or `descriptorBindingStorageTexelBufferUpdateAfterBind`. If this is `VK_FALSE`, then either `robustBufferAccess` **must** be disabled or all of these update-after-bind features **must** be disabled. Similarly, if this property is `VK_FALSE`, robustness **must** not be enabled through the `VkPipelineRobustnessCreateInfo` mechanism.
- `quadDivergentImplicitLod` is a boolean value indicating whether implicit LOD calculations for image operations have well-defined results when the image and/or sampler objects used for the instruction are not uniform within a quad. See [Derivative Image Operations](#).
- `maxPerStageDescriptorUpdateAfterBindSamplers` is similar to `maxPerStageDescriptorSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindUniformBuffers` is similar to `maxPerStageDescriptorUniformBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

- `maxPerStageDescriptorUpdateAfterBindStorageBuffers` is similar to `maxPerStageDescriptorStorageBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindSampledImages` is similar to `maxPerStageDescriptorSampledImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindStorageImages` is similar to `maxPerStageDescriptorStorageImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageDescriptorUpdateAfterBindInputAttachments` is similar to `maxPerStageDescriptorInputAttachments` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxPerStageUpdateAfterBindResources` is similar to `maxPerStageResources` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindSamplers` is similar to `maxDescriptorSetSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindUniformBuffers` is similar to `maxDescriptorSetUniformBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindUniformBuffersDynamic` is similar to `maxDescriptorSetUniformBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic uniform buffer descriptors from a pool created with `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT`, and **can** include dynamic uniform buffer descriptors in descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`. Therefore this limit has no practical effect and **may** be zero.
- `maxDescriptorSetUpdateAfterBindStorageBuffers` is similar to `maxDescriptorSetStorageBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindStorageBuffersDynamic` is similar to `maxDescriptorSetStorageBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate dynamic storage buffer descriptors from a pool created with `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT`, and **can** include dynamic storage buffer descriptors in descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`. Therefore this limit has no practical effect and **may** be zero.

- `maxDescriptorSetUpdateAfterBindSampledImages` is similar to `maxDescriptorSetSampledImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindStorageImages` is similar to `maxDescriptorSetStorageImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetUpdateAfterBindInputAttachments` is similar to `maxDescriptorSetInputAttachments` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application **can** allocate input attachment descriptors from a pool created with `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT`, and **can** include dynamic uniform buffer descriptors in descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors **must** not be created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`. Therefore this limit only exists to allow implementations exposing a higher limit for input attachment descriptors in a pipeline layout including any descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` than in a pipeline layout not including any descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` and **may** be zero to indicate that only the `maxDescriptorSetInputAttachments` applies.

If the `VkPhysicalDeviceDescriptorIndexingProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingProperties-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_PROPERTIES`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceInlineUniformBlockProperties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxInlineUniformBlockSize;
    uint32_t           maxPerStageDescriptorInlineUniformBlocks;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks;
    uint32_t           maxDescriptorSetInlineUniformBlocks;
    uint32_t           maxDescriptorSetUpdateAfterBindInlineUniformBlocks;
} VkPhysicalDeviceInlineUniformBlockProperties;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxInlineUniformBlockSize` is the maximum size in bytes of an `inline uniform block` binding.
- `maxPerStageDescriptorInlineUniformBlocks` is the maximum number of inline uniform block bindings that **can** be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks` is similar to `maxPerStageDescriptorInlineUniformBlocks` but counts descriptor bindings from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
- `maxDescriptorSetInlineUniformBlocks` is the maximum number of inline uniform block bindings that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxDescriptorSetUpdateAfterBindInlineUniformBlocks` is similar to `maxDescriptorSetInlineUniformBlocks` but counts descriptor bindings from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

If the `VkPhysicalDeviceInlineUniformBlockProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInlineUniformBlockProperties-sType-sType **must** be

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceConservativeRasterizationPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_conservative_rasterization
typedef struct VkPhysicalDeviceConservativeRasterizationPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    float               primitiveOverestimationSize;
    float               maxExtraPrimitiveOverestimationSize;
    float               extraPrimitiveOverestimationSizeGranularity;
    VkBool32            primitiveUnderestimation;
    VkBool32            conservativePointAndLineRasterization;
    VkBool32            degenerateTrianglesRasterized;
    VkBool32            degenerateLinesRasterized;
    VkBool32            fullyCoveredFragmentShaderInputVariable;
    VkBool32            conservativeRasterizationPostDepthCoverage;
} VkPhysicalDeviceConservativeRasterizationPropertiesEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `primitiveOverestimationSize` is the size in pixels the generating primitive is increased at each of its edges during conservative rasterization overestimation mode. Even with a size of 0.0, conservative rasterization overestimation rules still apply and if any part of the pixel rectangle is covered by the generating primitive, fragments are generated for the entire pixel. However implementations **may** make the pixel coverage area even more conservative by increasing the size of the generating primitive.
- `maxExtraPrimitiveOverestimationSize` is the maximum size in pixels of extra overestimation the implementation supports in the pipeline state. A value of 0.0 means the implementation does not support any additional overestimation of the generating primitive during conservative rasterization. A value above 0.0 allows the application to further increase the size of the generating primitive during conservative rasterization overestimation.
- `extraPrimitiveOverestimationSizeGranularity` is the granularity of extra overestimation that can be specified in the pipeline state between 0.0 and `maxExtraPrimitiveOverestimationSize` inclusive. A value of 0.0 means the implementation can use the smallest representable non-zero value in the screen space pixel fixed-point grid.
- `primitiveUnderestimation` is `VK_TRUE` if the implementation supports the [VK\\_CONSERVATIVE\\_RASTERIZATION\\_MODE\\_UNDERESTIMATE\\_EXT](#) conservative rasterization mode in addition to [VK\\_CONSERVATIVE\\_RASTERIZATION\\_MODE\\_OVERESTIMATE\\_EXT](#).

Otherwise the implementation only supports [VK\\_CONSERVATIVE\\_RASTERIZATION\\_MODE\\_OVERESTIMATE\\_EXT](#).

- `conservativePointAndLineRasterization` is [VK\\_TRUE](#) if the implementation supports conservative rasterization of point and line primitives as well as triangle primitives. Otherwise the implementation only supports triangle primitives.
- `degenerateTrianglesRasterized` is [VK\\_FALSE](#) if the implementation culls primitives generated from triangles that become zero area after they are quantized to the fixed-point rasterization pixel grid. `degenerateTrianglesRasterized` is [VK\\_TRUE](#) if these primitives are not culled and the provoking vertex attributes and depth value are used for the fragments. The primitive area calculation is done on the primitive generated from the clipped triangle if applicable. Zero area primitives are backfacing and the application **can** enable backface culling if desired.
- `degenerateLinesRasterized` is [VK\\_FALSE](#) if the implementation culls lines that become zero length after they are quantized to the fixed-point rasterization pixel grid. `degenerateLinesRasterized` is [VK\\_TRUE](#) if zero length lines are not culled and the provoking vertex attributes and depth value are used for the fragments.
- `fullyCoveredFragmentShaderInputVariable` is [VK\\_TRUE](#) if the implementation supports the SPIR-V builtin fragment shader input variable `FullyCoveredEXT` specifying that conservative rasterization is enabled and the fragment area is fully covered by the generating primitive.
- `conservativeRasterizationPostDepthCoverage` is [VK\\_TRUE](#) if the implementation supports conservative rasterization with the `PostDepthCoverage` execution mode enabled. Otherwise the `PostDepthCoverage` execution mode **must** not be used when conservative rasterization is enabled.

If the `VkPhysicalDeviceConservativeRasterizationPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

The `VkPhysicalDeviceDepthStencilResolveProperties` structure is defined as:

```
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDepthStencilResolveProperties {
    VkStructureType    sType;
    void*              pNext;
    VkResolveModeFlags supportedDepthResolveModes;
    VkResolveModeFlags supportedStencilResolveModes;
    VkBool32           independentResolveNone;
    VkBool32           independentResolve;
} VkPhysicalDeviceDepthStencilResolveProperties;
```

```
// Provided by VK_KHR_depth_stencil_resolve
// Equivalent to VkPhysicalDeviceDepthStencilResolveProperties
typedef VkPhysicalDeviceDepthStencilResolveProperties
VkPhysicalDeviceDepthStencilResolvePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportedDepthResolveModes` is a bitmask of `VkResolveModeFlagBits` indicating the set of supported depth resolve modes. `VK_RESOLVE_MODE_SAMPLE_ZERO_BIT` **must** be included in the set but implementations **may** support additional modes.
- `supportedStencilResolveModes` is a bitmask of `VkResolveModeFlagBits` indicating the set of supported stencil resolve modes. `VK_RESOLVE_MODE_SAMPLE_ZERO_BIT` **must** be included in the set but implementations **may** support additional modes. `VK_RESOLVE_MODE_AVERAGE_BIT` **must** not be included in the set.
- `independentResolveNone` is `VK_TRUE` if the implementation supports setting the depth and stencil resolve modes to different values when one of those modes is `VK_RESOLVE_MODE_NONE`. Otherwise the implementation only supports setting both modes to the same value.
- `independentResolve` is `VK_TRUE` if the implementation supports all combinations of the supported depth and stencil resolve modes, including setting either depth or stencil resolve mode to `VK_RESOLVE_MODE_NONE`. An implementation that supports `independentResolve` **must** also support `independentResolveNone`.

If the `VkPhysicalDeviceDepthStencilResolveProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

The `VkPhysicalDeviceTransformFeedbackPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxTransformFeedbackStreams;
    uint32_t           maxTransformFeedbackBuffers;
    VkDeviceSize        maxTransformFeedbackBufferSize;
    uint32_t           maxTransformFeedbackStreamDataSize;
    uint32_t           maxTransformFeedbackBufferDataSize;
    uint32_t           maxTransformFeedbackBufferDataStride;
    VkBool32           transformFeedbackQueries;
    VkBool32           transformFeedbackStreamsLinesTriangles;
    VkBool32           transformFeedbackRasterizationStreamSelect;
    VkBool32           transformFeedbackDraw;
} VkPhysicalDeviceTransformFeedbackPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTransformFeedbackStreams` is the maximum number of vertex streams that can be output from geometry shaders declared with the `GeometryStreams` capability. If the implementation does not support `VkPhysicalDeviceTransformFeedbackFeaturesEXT::geometryStreams` then `maxTransformFeedbackStreams` **must** be 1.
- `maxTransformFeedbackBuffers` is the maximum number of transform feedback buffers that can be bound for capturing shader outputs from the last `pre-rasterization shader stage`.
- `maxTransformFeedbackBufferSize` is the maximum size that can be specified when binding a buffer for transform feedback in `vkCmdBindTransformFeedbackBuffersEXT`.
- `maxTransformFeedbackStreamDataSize` is the maximum amount of data in bytes for each vertex that captured to one or more transform feedback buffers associated with a specific vertex stream.
- `maxTransformFeedbackBufferDataSize` is the maximum amount of data in bytes for each vertex that can be captured to a specific transform feedback buffer.
- `maxTransformFeedbackBufferDataStride` is the maximum stride between each capture of vertex data to the buffer.
- `transformFeedbackQueries` is `VK_TRUE` if the implementation supports the `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` query type. `transformFeedbackQueries` is `VK_FALSE` if queries of this type **cannot** be created.
- `transformFeedbackStreamsLinesTriangles` is `VK_TRUE` if the implementation supports the geometry shader `OpExecutionMode` of `OutputLineStrip` and `OutputTriangleStrip` in addition to `OutputPoints` when more than one vertex stream is output. If `transformFeedbackStreamsLinesTriangles` is `VK_FALSE` the implementation only supports an `OpExecutionMode` of `OutputPoints` when more than one vertex stream is output from the geometry shader.
- `transformFeedbackRasterizationStreamSelect` is `VK_TRUE` if the implementation supports the `GeometryStreams` SPIR-V capability and the application can use

`VkPipelineRasterizationStateStreamCreateInfoEXT` to modify which vertex stream output is used for rasterization. Otherwise vertex stream `0` **must** always be used for rasterization.

- `transformFeedbackDraw` is `VK_TRUE` if the implementation supports the `vkCmdDrawIndirectByteCountEXT` function otherwise the function **must** not be called.

If the `VkPhysicalDeviceTransformFeedbackPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

    uint32_t           minAccelerationStructureScratchOffsetAlignment;
} VkPhysicalDeviceAccelerationStructurePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration structure.
- `maxInstanceCount` is the maximum number of instances in the top level acceleration structure.
- `maxPrimitiveCount` is the maximum number of triangles or AABBs in all geometries in the bottom level acceleration structure.
- `maxPerStageDescriptorAccelerationStructures` is the maximum number of acceleration structure bindings that **can** be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxPerStageDescriptorUpdateAfterBindAccelerationStructures` is similar to `maxPerStageDescriptorAccelerationStructures` but counts descriptor bindings from descriptor sets created with or without the

[VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) bit set.

- [maxDescriptorSetAccelerationStructures](#) is the maximum number of acceleration structure descriptors that **can** be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of [VK\\_DESCRIPTOR\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_KHR](#) count against this limit. Only descriptor bindings in descriptor set layouts created without the [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) bit set count against this limit.
- [maxDescriptorSetUpdateAfterBindAccelerationStructures](#) is similar to [maxDescriptorSetAccelerationStructures](#) but counts descriptor bindings from descriptor sets created with or without the [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) bit set.
- [minAccelerationStructureScratchOffsetAlignment](#) is the minimum **required** alignment, in bytes, for scratch data passed in to an acceleration structure build command. The value **must** be a power of two.

Due to the fact that the geometry, instance, and primitive counts are specified at acceleration structure creation as 32-bit values, [maxGeometryCount](#), [maxInstanceCount](#), and [maxPrimitiveCount](#) **must** not exceed  $2^{32}-1$ .

If the [VkPhysicalDeviceAccelerationStructurePropertiesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAccelerationStructurePropertiesKHR-sType-sType **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_ACCELERATION\\_STRUCTURE\\_PROPERTIES\\_KHR](#)

### Structure Chaining

#### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceRayTracingPipelinePropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelinePropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           shaderGroupHandleSize;
    uint32_t           maxRayRecursionDepth;
    uint32_t           maxShaderGroupStride;
    uint32_t           shaderGroupBaseAlignment;
    uint32_t           shaderGroupHandleCaptureReplaySize;
    uint32_t           maxRayDispatchInvocationCount;
    uint32_t           shaderGroupHandleAlignment;
    uint32_t           maxRayHitAttributeSize;
} VkPhysicalDeviceRayTracingPipelinePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRayRecursionDepth` is the maximum number of levels of ray recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the **required** alignment in bytes for the base of the shader binding table.
- `shaderGroupHandleCaptureReplaySize` is the number of bytes for the information required to do capture and replay for shader group handles.
- `maxRayDispatchInvocationCount` is the maximum number of ray generation shader invocations which **may** be produced by a single `vkCmdTraceRaysIndirectKHR` or `vkCmdTraceRaysKHR` command.
- `shaderGroupHandleAlignment` is the **required** alignment in bytes for each entry in a shader binding table. The value **must** be a power of two.
- `maxRayHitAttributeSize` is the maximum size in bytes for a ray attribute structure

If the `VkPhysicalDeviceRayTracingPipelinePropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

The `VkPhysicalDeviceCooperativeMatrixPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkShaderStageFlags cooperativeMatrixSupportedStages;
} VkPhysicalDeviceCooperativeMatrixPropertiesKHR;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cooperativeMatrixSupportedStages` is a bitfield of [VkShaderStageFlagBits](#) describing the shader stages that cooperative matrix instructions are supported in. `cooperativeMatrixSupportedStages` will have the [VK\\_SHADER\\_STAGE\\_COMPUTE\\_BIT](#) bit set if any of the physical device's queues support [VK\\_QUEUE\\_COMPUTE\\_BIT](#).

`cooperativeMatrixSupportedStages` **must** not have any bits other than [VK\\_SHADER\\_STAGE\\_COMPUTE\\_BIT](#) set.

If the `VkPhysicalDeviceCooperativeMatrixPropertiesKHR` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

The `VkPhysicalDeviceShaderLongVectorPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_long_vector
typedef struct VkPhysicalDeviceShaderLongVectorPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxVectorComponents;
} VkPhysicalDeviceShaderLongVectorPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxVectorComponents` indicates the maximum number of components that **can** be in a vector type.

If the `VkPhysicalDeviceShaderLongVectorPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderLongVectorPropertiesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_LONG_VECTOR_PROPERTIES_EXT`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceTexelBufferAlignmentProperties` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTexelBufferAlignmentProperties {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        storageTexelBufferOffsetAlignmentBytes;
    VkBool32            storageTexelBufferOffsetSingleTexelAlignment;
    VkDeviceSize        uniformTexelBufferOffsetAlignmentBytes;
    VkBool32            uniformTexelBufferOffsetSingleTexelAlignment;
} VkPhysicalDeviceTexelBufferAlignmentProperties;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageTexelBufferOffsetAlignmentBytes` is a byte alignment that is sufficient for a storage texel buffer of any format. The value **must** be a power of two.

- `storageTexelBufferOffsetSingleTexelAlignment` indicates whether single texel alignment is sufficient for a storage texel buffer of any format.
- `uniformTexelBufferOffsetAlignmentBytes` is a byte alignment that is sufficient for a uniform texel buffer of any format. The value **must** be a power of two.
- `uniformTexelBufferOffsetSingleTexelAlignment` indicates whether single texel alignment is sufficient for a uniform texel buffer of any format.

If the `VkPhysicalDeviceTexelBufferAlignmentProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If the single texel alignment property is `VK_FALSE`, then the buffer view's offset **must** be aligned to the corresponding byte alignment value. If the single texel alignment property is `VK_TRUE`, then the buffer view's offset **must** be aligned to the lesser of the corresponding byte alignment value or the size of a single texel, based on `VkBufferViewCreateInfo::format`. If the size of a single texel is a multiple of three bytes, then the size of a single component of the format is used instead.

These limits **must** not advertise a larger alignment than the `required` maximum minimum value of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`, for any format that supports use as a texel buffer.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTexelBufferAlignmentProperties-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_PROPERTIES`

// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreProperties {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxTimelineSemaphoreValueDifference;
} VkPhysicalDeviceTimelineSemaphoreProperties;
```

```
// Provided by VK_KHR_timeline_semaphore
// Equivalent to VkPhysicalDeviceTimelineSemaphoreProperties
typedef VkPhysicalDeviceTimelineSemaphoreProperties
VkPhysicalDeviceTimelineSemaphorePropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxTimelineSemaphoreValueDifference** indicates the maximum difference allowed by the implementation between the current value of a timeline semaphore and any pending signal or wait operations.

If the **VkPhysicalDeviceTimelineSemaphoreProperties** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTimelineSemaphoreProperties-sType-sType **must** be **VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_TIMELINE\_SEMAPHORE\_PROPERTIES**

The `VkPhysicalDeviceRobustness2PropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_robustness2
typedef struct VkPhysicalDeviceRobustness2PropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        robustStorageBufferAccessSizeAlignment;
    VkDeviceSize        robustUniformBufferAccessSizeAlignment;
} VkPhysicalDeviceRobustness2PropertiesKHR;
```

```
// Provided by VK_EXT_robustness2
// Equivalent to VkPhysicalDeviceRobustness2PropertiesKHR
typedef VkPhysicalDeviceRobustness2PropertiesKHR
VkPhysicalDeviceRobustness2PropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustStorageBufferAccessSizeAlignment` is the number of bytes that the range of a storage buffer descriptor is rounded up to when used for bounds-checking when the `robustBufferAccess2` feature is enabled. This value **must** be either 1 or 4.
- `robustUniformBufferAccessSizeAlignment` is the number of bytes that the range of a uniform buffer descriptor is rounded up to when used for bounds-checking when the `robustBufferAccess2` feature is enabled. This value **must** be a power of two in the range [1, 256].

If the `VkPhysicalDeviceRobustness2PropertiesKHR` structure is included in the `pNext` chain of the

[VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

### Structure Chaining

#### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT](#) structure is defined as:

```
// Provided by VK_EXT_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT {
    VkStructureType          sType;
    void*                    pNext;
    uint32_t                  maxIndirectPipelineCount;
    uint32_t                  maxIndirectShaderObjectCount;
    uint32_t                  maxIndirectSequenceCount;
    uint32_t                  maxIndirectCommandsTokenCount;
    uint32_t                  maxIndirectCommandsTokenOffset;
    uint32_t                  maxIndirectCommandsIndirectStride;
    VkIndirectCommandsInputModeFlagsEXT supportedIndirectCommandsInputModes;
    VkShaderStageFlags        supportedIndirectCommandsShaderStages;
    VkShaderStageFlags
supportedIndirectCommandsShaderStagesPipelineBinding;
    VkShaderStageFlags
supportedIndirectCommandsShaderStagesShaderBinding;
    VkBool32                  deviceGeneratedCommandsTransformFeedback;
    VkBool32
deviceGeneratedCommandsMultiDrawIndirectCount;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [maxIndirectPipelineCount](#) is the maximum number of pipelines passed to [vkCreateIndirectExecutionSetEXT](#).
- [maxIndirectShaderObjectCount](#) is the maximum number of shader objects passed to [vkCreateIndirectExecutionSetEXT](#). If this value is zero, binding shader objects indirectly is not supported.

- `maxIndirectSequenceCount` is the maximum number of sequences in `VkGeneratedCommandsInfoEXT` and in `VkGeneratedCommandsMemoryRequirementsInfoEXT`.
- `maxIndirectCommandsTokenCount` is the maximum number of tokens in `VkIndirectCommandsLayoutCreateInfoEXT`.
- `maxIndirectCommandsTokenOffset` is the maximum offset in `VkIndirectCommandsLayoutTokenEXT`.
- `maxIndirectCommandsIndirectStride` is the maximum stream stride in `VkIndirectCommandsLayoutCreateInfoEXT`.
- `supportedIndirectCommandsInputModes` indicates the supported input modes.
- `supportedIndirectCommandsShaderStages` indicates the stages which **can** be used to generate indirect commands. Implementations are required to support, at minimum: `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_FRAGMENT_BIT`, `VK_SHADER_STAGE_COMPUTE_BIT`.
- `supportedIndirectCommandsShaderStagesPipelineBinding` indicates the stages which **can** be used within indirect execution sets for indirectly binding shader stages using pipelines.
- `supportedIndirectCommandsShaderStagesShaderBinding` indicates the stages which **can** be used within indirect execution sets for indirectly binding shader stages using shader objects.
- `deviceGeneratedCommandsTransformFeedback` indicates whether the implementation supports interactions with `VK_EXT_transform_feedback` for pipelines not created with `VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_EXT`.
- `deviceGeneratedCommandsMultiDrawIndirectCount` indicates whether the implementation supports COUNT variants of multi-draw indirect tokens.

If the `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

The `VkPhysicalDeviceFragmentShadingRatePropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPhysicalDeviceFragmentShadingRatePropertiesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkExtent2D           minFragmentShadingRateAttachmentTexelSize;
    VkExtent2D           maxFragmentShadingRateAttachmentTexelSize;
    uint32_t             maxFragmentShadingRateAttachmentTexelSizeAspectRatio;
    VkBool32             primitiveFragmentShadingRateWithMultipleViewports;
    VkBool32             layeredShadingRateAttachments;
    VkBool32             fragmentShadingRateNonTrivialCombinerOps;
    VkExtent2D           maxFragmentSize;
    uint32_t             maxFragmentSizeAspectRatio;
    uint32_t             maxFragmentShadingRateCoverageSamples;
    VkSampleCountFlagBits maxFragmentShadingRateRasterizationSamples;
    VkBool32             fragmentShadingRateWithShaderDepthStencilWrites;
    VkBool32             fragmentShadingRateWithSampleMask;
    VkBool32             fragmentShadingRateWithShaderSampleMask;
    VkBool32             fragmentShadingRateWithConservativeRasterization;
    VkBool32             fragmentShadingRateWithFragmentShaderInterlock;
    VkBool32             fragmentShadingRateWithCustomSampleLocations;
    VkBool32             fragmentShadingRateStrictMultiplyCombiner;
} VkPhysicalDeviceFragmentShadingRatePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minFragmentShadingRateAttachmentTexelSize` indicates minimum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value **must** be less than or equal to the values in `maxFragmentShadingRateAttachmentTexelSize`. Each value **must** be a power-of-two. It **must** be (0,0) if the `attachmentFragmentShadingRate` feature is not supported.
- `maxFragmentShadingRateAttachmentTexelSize` indicates maximum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value **must** be greater than or equal to the values in `minFragmentShadingRateAttachmentTexelSize`. Each value **must** be a power-of-two. It **must** be (0,0) if the `attachmentFragmentShadingRate` feature is not supported.
- `maxFragmentShadingRateAttachmentTexelSizeAspectRatio` indicates the maximum ratio between the width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. `maxFragmentShadingRateAttachmentTexelSizeAspectRatio` **must** be a power-of-two value, and **must** be less than or equal to  $\frac{\max(\maxFragmentShadingRateAttachmentTexelSize.width}{\minFragmentShadingRateAttachmentTexelSize.height}, \frac{\maxFragmentShadingRateAttachmentTexelSize.height}{\minFragmentShadingRateAttachmentTexelSize.width})$ . It **must** be 0 if the `attachmentFragmentShadingRate` feature is not supported.
- `primitiveFragmentShadingRateWithMultipleViewports` specifies whether the `primitive fragment shading rate` **can** be used when multiple viewports are used. If this value is `VK_FALSE`, only a

single viewport **must** be used, and applications **must** not write to the `ViewportIndex` built-in when setting `PrimitiveShadingRateKHR`. It **must** be `VK_FALSE` if the `shaderOutputViewportIndex` feature, or the `geometryShader` feature is not supported, or if the `primitiveFragmentShadingRate` feature is not supported.

- `layeredShadingRateAttachments` specifies whether a shading rate attachment image view **can** be created with multiple layers. If this value is `VK_FALSE`, when creating an image view with a `usage` that includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, `layerCount` **must** be 1. It **must** be `VK_FALSE` if the `multiview` feature, the `shaderOutputViewportIndex` feature, or the `geometryShader` feature is not supported, or if the `attachmentFragmentShadingRate` feature is not supported.
- `fragmentShadingRateNonTrivialCombinerOps` specifies whether `VkFragmentShadingRateCombinerOpKHR` enums other than `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR` or `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR` **can** be used. It **must** be `VK_FALSE` unless either the `primitiveFragmentShadingRate` or `attachmentFragmentShadingRate` feature is supported.
- `maxFragmentSize` indicates the maximum supported width and height of a fragment. Its `width` and `height` members **must** both be power-of-two values. This limit is purely informational, and is not validated.
- `maxFragmentSizeAspectRatio` indicates the maximum ratio between the width and height of a fragment. `maxFragmentSizeAspectRatio` **must** be a power-of-two value, and **must** be less than or equal to the maximum of the `width` and `height` members of `maxFragmentSize`. This limit is purely informational, and is not validated.
- `maxFragmentShadingRateCoverageSamples` specifies the maximum number of coverage samples supported in a single fragment. `maxFragmentShadingRateCoverageSamples` **must** be less than or equal to the product of the `width` and `height` members of `maxFragmentSize`, and the sample count reported by `maxFragmentShadingRateRasterizationSamples`. `maxFragmentShadingRateCoverageSamples` **must** be less than or equal to `maxSampleMaskWords` × 32 if `fragmentShadingRateWithShaderSampleMask` is supported. This limit is purely informational, and is not validated.
- `maxFragmentShadingRateRasterizationSamples` is a `VkSampleCountFlagBits` value specifying the maximum sample rate supported when a fragment covers multiple pixels. This limit is purely informational, and is not validated.
- `fragmentShadingRateWithShaderDepthStencilWrites` specifies whether the implementation supports writing `FragDepth` or `FragStencilRefEXT` from a fragment shader for multi-pixel fragments. If this value is `VK_FALSE`, writing to those built-ins will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithSampleMask` specifies whether the implementation supports setting valid bits of `VkPipelineMultisampleStateCreateInfo::pSampleMask` to 0 for multi-pixel fragments. If this value is `VK_FALSE`, zeroing valid bits in the sample mask will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithShaderSampleMask` specifies whether the implementation supports reading or writing `SampleMask` for multi-pixel fragments. If this value is `VK_FALSE`, using that built-in will clamp the fragment shading rate to (1,1).

- `fragmentShadingRateWithConservativeRasterization` specifies whether `conservative rasterization` is supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_conservative_rasterization` is not supported. If this value is `VK_FALSE`, using `conservative rasterization` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithFragmentShaderInterlock` specifies whether `fragment shader interlock` is supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_fragment_shader_interlock` is not supported. If this value is `VK_FALSE`, using `fragment shader interlock` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateWithCustomSampleLocations` specifies whether `custom sample locations` are supported for multi-pixel fragments. It **must** be `VK_FALSE` if `VK_EXT_sample_locations` is not supported. If this value is `VK_FALSE`, using `custom sample locations` will clamp the fragment shading rate to (1,1).
- `fragmentShadingRateStrictMultiplyCombiner` specifies whether `VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR` accurately performs a multiplication or not. Implementations where this value is `VK_FALSE` will instead combine rates with an addition. If `fragmentShadingRateNonTrivialCombinerOps` is `VK_FALSE`, implementations **must** report this as `VK_FALSE`. If `fragmentShadingRateNonTrivialCombinerOps` is `VK_TRUE`, implementations **should** report this as `VK_TRUE`.

#### NOTE

Multiplication of the combiner rates using the fragment width/height in linear space is equivalent to an addition of those values in log2 space. Some implementations inadvertently implemented an addition in linear space due to unclear requirements originating outside of this specification. This resulted in `fragmentShadingRateStrictMultiplyCombiner` being added. Fortunately, this only affects situations where a rate of 1 in either dimension is combined with another rate of 1. All other combinations result in the exact same result as if multiplication was performed in linear space due to the clamping logic, and the fact that both the sum and product of 2 and 2 are equal. In many cases, this limit will not affect the correct operation of applications.

If the `VkPhysicalDeviceFragmentShadingRatePropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

These properties are related to `fragment shading rates`.

    void*              pNext;
    uint32_t           maxCustomBorderColorSamplers;
} VkPhysicalDeviceCustomBorderColorPropertiesEXT;
```

- `maxCustomBorderColorSamplers` indicates the maximum number of samplers with custom border colors which **can** simultaneously exist on a device.

If the `VkPhysicalDeviceCustomBorderColorPropertiesEXT` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomBorderColorPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_PROPERTIES_EXT`

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           provokingVertexModePerPipeline;
    VkBool32           transformFeedbackPreservesTriangleFanProvokingVertex;
} VkPhysicalDeviceProvokingVertexPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `provokingVertexModePerPipeline` indicates whether the implementation supports graphics pipelines with different provoking vertex modes within the same render pass instance.
- `transformFeedbackPreservesTriangleFanProvokingVertex` indicates whether the implementation can preserve the provoking vertex order when writing triangle fan vertices to transform feedback.

If the `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VOID-VkPhysicalDeviceProvokingVertexPropertiesEXT-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_PROPERTIES_EXT`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceDescriptorBufferPropertiesEXT` structure is defined as:

#### WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           combinedImageSamplerDescriptorSingleArray;
    VkBool32           bufferlessPushDescriptors;
    VkBool32           allowSamplerImageViewPostSubmitCreation;
    VkDeviceSize       descriptorBufferOffsetAlignment;
    uint32_t           maxDescriptorBufferBindings;
    uint32_t           maxResourceDescriptorBufferBindings;
    uint32_t           maxSamplerDescriptorBufferBindings;
    uint32_t           maxEmbeddedImmutableSamplerBindings;
    uint32_t           maxEmbeddedImmutableSamplers;
    size_t             bufferCaptureReplayDescriptorDataSize;
    size_t             imageCaptureReplayDescriptorDataSize;
    size_t             imageViewCaptureReplayDescriptorDataSize;
    size_t             samplerCaptureReplayDescriptorDataSize;
    size_t             accelerationStructureCaptureReplayDescriptorDataSize;
    size_t             samplerDescriptorSize;
    size_t             combinedImageSamplerDescriptorSize;
    size_t             sampledImageDescriptorSize;
    size_t             storageImageDescriptorSize;
    size_t             uniformTexelBufferDescriptorSize;
    size_t             robustUniformTexelBufferDescriptorSize;
    size_t             storageTexelBufferDescriptorSize;
    size_t             robustStorageTexelBufferDescriptorSize;
    size_t             uniformBufferDescriptorSize;
    size_t             robustUniformBufferDescriptorSize;
    size_t             storageBufferDescriptorSize;
    size_t             robustStorageBufferDescriptorSize;
    size_t             inputAttachmentDescriptorSize;
    size_t             accelerationStructureDescriptorSize;
    VkDeviceSize       maxSamplerDescriptorBufferRange;
    VkDeviceSize       maxResourceDescriptorBufferRange;
    VkDeviceSize       samplerDescriptorBufferAddressSpaceSize;
    VkDeviceSize       resourceDescriptorBufferAddressSpaceSize;
    VkDeviceSize       descriptorBufferAddressSpaceSize;
} VkPhysicalDeviceDescriptorBufferPropertiesEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **combinedImageSamplerDescriptorSingleArray** indicates that the implementation does not require an array of [VK\\_DESCRIPTOR\\_TYPE\\_COMBINED\\_IMAGE\\_SAMPLER](#) descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors.
- **bufferlessPushDescriptors** indicates that the implementation does not require a buffer created with the [VK\\_BUFFER\\_USAGE\\_PUSH\\_DESCRIPTORS\\_DESCRIPTOR\\_BUFFER\\_BIT\\_EXT](#) usage flag set to be bound when using push descriptors.

- `allowSamplerImageViewPostSubmitCreation` indicates that the implementation does not restrict when the `VkSampler` or `VkImageView` objects used to retrieve descriptor data **can** be created in relation to command buffer submission. If this value is `VK_FALSE`, then the application **must** create any `VkSampler` or `VkImageView` objects whose descriptor data is accessed during the execution of a command buffer, before the `vkQueueSubmit`, or `vkQueueSubmit2`, call that submits that command buffer.
- `descriptorBufferOffsetAlignment` indicates the **required** alignment in bytes when setting offsets into the descriptor buffer.
- `maxDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings.
- `maxResourceDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings with `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` that **can** be used.
- `maxSamplerDescriptorBufferBindings` indicates the maximum number of descriptor buffer bindings with `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` that **can** be used.
- `maxEmbeddedImmutableSamplerBindings` indicates the maximum number of embedded immutable sampler sets that **can** be bound.
- `maxEmbeddedImmutableSamplers` indicates the maximum number of unique immutable samplers in descriptor set layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, and pipeline layouts created from them, which **can** simultaneously exist on a device.
- `bufferCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with buffers.
- `imageCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with images.
- `imageViewCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with image views.
- `samplerCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with samplers.
- `accelerationStructureCaptureReplayDescriptorDataSize` indicates the maximum size in bytes of the opaque data used for capture and replay with acceleration structures.
- `samplerDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_SAMPLER` descriptor.
- `combinedImageSamplerDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor.
- `sampledImageDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` descriptor.
- `storageImageDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` descriptor.
- `uniformTexelBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is not enabled.
- `robustUniformTexelBufferDescriptorSize` indicates the size in bytes of a

`VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.

- `storageTexelBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is not enabled.
- `robustStorageTexelBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.
- `uniformBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor.
- `robustUniformBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.
- `storageBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor.
- `robustStorageBufferDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.
- `inputAttachmentDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` descriptor.
- `accelerationStructureDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` descriptor.
- `maxSamplerDescriptorBufferRange` indicates the maximum range in bytes from the address of a sampler descriptor buffer binding that is accessible to a shader.
- `maxResourceDescriptorBufferRange` indicates the maximum range in bytes from the address of a resource descriptor buffer binding that is accessible to a shader.
- `samplerDescriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with the `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` usage flag set.
- `resourceDescriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with the `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` usage flag set.
- `descriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with both the `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` and `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` usage flags set.

A descriptor binding with type `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` has a descriptor size which is implied by the descriptor types included in the `VkMutableDescriptorTypeCreateInfoEXT::pDescriptorTypes` list. The descriptor size is equal to the maximum size of any descriptor type included in the `pDescriptorTypes` list.

As there is no way to request robust and non-robust descriptors separately, or specify robust/non-robust descriptors in the set layout, if the `robustBufferAccess` feature is enabled then robust descriptors are always used.

If the `VkPhysicalDeviceDescriptorBufferPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorBufferPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_PROPERTIES_EXT`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT` structure is defined as:

#### WARNING

This functionality is superseded by `VK_EXT_descriptor_heap`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_EXT_descriptor_buffer with VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    size_t              combinedImageSamplerDensityMapDescriptorSize;
} VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `combinedImageSamplerDensityMapDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor when creating the descriptor with `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` set.

If the `VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT-sType-sType

`sType` must be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_DENSITY_MAP_PROPERTIES_EXT`

## Structure Chaining

### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceHostImageCopyProperties` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDeviceHostImageCopyProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           copySrcLayoutCount;
    VkImageLayout*     pCopySrcLayouts;
    uint32_t           copyDstLayoutCount;
    VkImageLayout*     pCopyDstLayouts;
    uint8_t            optimalTilingLayoutUUID[VK_UUID_SIZE];
    VkBool32           identicalMemoryTypeRequirements;
} VkPhysicalDeviceHostImageCopyProperties;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkPhysicalDeviceHostImageCopyProperties
typedef VkPhysicalDeviceHostImageCopyProperties
VkPhysicalDeviceHostImageCopyPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `copySrcLayoutCount` is an integer related to the number of image layouts for host copies from images available or queried, as described below.
- `pCopySrcLayouts` is a pointer to an array of `VkImageLayout` in which supported image layouts for use with host copy operations from images are returned.
- `copyDstLayoutCount` is an integer related to the number of image layouts for host copies to images available or queried, as described below.
- `pCopyDstLayouts` is a pointer to an array of `VkImageLayout` in which supported image layouts for use with host copy operations to images are returned.
- `optimalTilingLayoutUUID` is an array of `VK_UUID_SIZE` `uint8_t` values representing a universally unique identifier for the implementation's swizzling layout of images created with `VK_IMAGE_TILING_OPTIMAL`.
- `identicalMemoryTypeRequirements` indicates that specifying the

`VK_IMAGE_USAGE_HOST_TRANSFER_BIT` flag in `VkImageCreateInfo::usage` does not affect the memory type requirements of the image.

If the `VkPhysicalDeviceHostImageCopyProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `pCopyDstLayouts` is `NULL`, then the number of image layouts that are supported in `VkCopyMemoryToImageInfo::dstImageLayout` and `VkCopyImageToImageInfo::dstImageLayout` is returned in `copyDstLayoutCount`. Otherwise, `copyDstLayoutCount` **must** be set by the application to the number of elements in the `pCopyDstLayouts` array, and on return is overwritten with the number of values actually written to `pCopyDstLayouts`. If the value of `copyDstLayoutCount` is less than the number of image layouts that are supported, at most `copyDstLayoutCount` values will be written to `pCopyDstLayouts`. The implementation **must** include the `VK_IMAGE_LAYOUT_GENERAL` image layout in `pCopyDstLayouts`. If the `unifiedImageLayouts` feature is supported, the implementation **must** include all the image layouts that are interchangeable with `VK_IMAGE_LAYOUT_GENERAL` in `pCopyDstLayouts`.

If `pCopySrcLayouts` is `NULL`, then the number of image layouts that are supported in `VkCopyImageToMemoryInfo::srcImageLayout` and `VkCopyImageToImageInfo::srcImageLayout` is returned in `copySrcLayoutCount`. Otherwise, `copySrcLayoutCount` **must** be set by the application to the number of elements in the `pCopySrcLayouts` array, and on return is overwritten with the number of values actually written to `pCopySrcLayouts`. If the value of `copySrcLayoutCount` is less than the number of image layouts that are supported, at most `copySrcLayoutCount` values will be written to `pCopySrcLayouts`. The implementation **must** include the `VK_IMAGE_LAYOUT_GENERAL` image layout in `pCopySrcLayouts`. If the `unifiedImageLayouts` feature is supported, the implementation **must** include all the image layouts that are interchangeable with `VK_IMAGE_LAYOUT_GENERAL` in `pCopySrcLayouts`.

The `optimalTilingLayoutUUID` value can be used to ensure compatible data layouts when using the `VK_HOST_IMAGE_COPY_MEMCPY_BIT` flag in `vkCopyMemoryToImage` and `vkCopyImageToMemory`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostImageCopyProperties-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_IMAGE_COPY_PROPERTIES`
- VUID-VkPhysicalDeviceHostImageCopyProperties-pCopySrcLayouts-parameter  
If `copySrcLayoutCount` is not 0, and `pCopySrcLayouts` is not `NULL`, `pCopySrcLayouts` **must** be a valid pointer to an array of `copySrcLayoutCount` `VkImageLayout` values
- VUID-VkPhysicalDeviceHostImageCopyProperties-pCopyDstLayouts-parameter  
If `copyDstLayoutCount` is not 0, and `pCopyDstLayouts` is not `NULL`, `pCopyDstLayouts` **must** be a valid pointer to an array of `copyDstLayoutCount` `VkImageLayout` values

## Structure Chaining

The `VkPhysicalDeviceMultiDrawPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxMultiDrawCount;
} VkPhysicalDeviceMultiDrawPropertiesEXT;
```

The members of the `VkPhysicalDeviceMultiDrawPropertiesEXT` structure describe the following features:

- `maxMultiDrawCount` indicates the maximum number of draw calls which **can** be batched into a single multidraw.

If the `VkPhysicalDeviceMultiDrawPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiDrawPropertiesEXT-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_PROPERTIES_EXT`

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_nested_command_buffer
typedef struct VkPhysicalDeviceNestedCommandBufferPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxCommandBufferNestingLevel;
} VkPhysicalDeviceNestedCommandBufferPropertiesEXT;
```

The members of the `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure describe the

following features:

- `maxCommandBufferNestingLevel` indicates the maximum nesting level of calls to `vkCmdExecuteCommands` from `Secondary Command Buffers`. A `maxCommandBufferNestingLevel` of `UINT32_MAX` means there is no limit to the nesting level.

If the `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNestedCommandBufferPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NESTED_COMMAND_BUFFER_PROPERTIES_EXT`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           graphicsPipelineLibraryFastLinking;
    VkBool32           graphicsPipelineLibraryIndependentInterpolationDecoration;
} VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT;
```

- `graphicsPipelineLibraryFastLinking` indicates whether fast linking of graphics pipelines is supported. If it is `VK_TRUE`, creating a graphics pipeline entirely from pipeline libraries without `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT` is comparable in cost to recording a command in a command buffer.
- `graphicsPipelineLibraryIndependentInterpolationDecoration` indicates whether `NoPerspective` and `Flat` interpolation decorations in the last vertex processing stage and the fragment shader are required to match when using graphics pipeline libraries. If it is `VK_TRUE`, the interpolation decorations do not need to match. If it is `VK_FALSE`, these decorations **must** either be present in both stages or neither stage in order for a given interface variable to match.

If the `VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_GRAPHICS\_PIPELINE\_LIBRARY\_PROPERTIES\_EXT

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The [VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_fragment_shader_barycentric with VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           triStripVertexOrderIndependentOfProvokingVertex;
} VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR;
```

- When the [provoking vertex mode](#) is [VK\\_PROVOKING\\_VERTEX\\_MODE\\_LAST\\_VERTEX\\_EXT](#), and the primitive order is odd in a triangle strip, the ordering of vertices is defined in [last vertex table](#). [triStripVertexOrderIndependentOfProvokingVertex](#) equal to [VK\\_TRUE](#) indicates that the implementation ignores this and uses the vertex order defined by [VK\\_PROVOKING\\_VERTEX\\_MODE\\_FIRST\\_VERTEX\\_EXT](#) instead.

If the [VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_FRAGMENT\_SHADER\_BARYCENTRIC\_PROPERTIES\_KHR

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t            shaderModuleIdentifierAlgorithmUUID[VK_UUID_SIZE];
} VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT;
```

The members of the `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure describe the following:

- `shaderModuleIdentifierAlgorithmUUID` is an array of `VK_UUID_SIZE` `uint8_t` values which uniquely represents the algorithm used to compute an identifier in `vkGetShaderModuleIdentifierEXT` and `vkGetShaderModuleCreateInfoIdentifierEXT`. Implementations **should** not change this value in different driver versions if the algorithm used to compute an identifier is the same.

#### NOTE

The algorithm UUID may be the same in different ICDs if the algorithms are guaranteed to produce the same results. This may happen in driver stacks which support different kinds of hardware with shared code.

Khronos' conformance testing can not guarantee that `shaderModuleIdentifierAlgorithmUUID` values are actually unique, so implementors should make their own best efforts to ensure that their UUID is unlikely to conflict with other implementations which may use a different algorithm. In particular, hard-coded values which easily conflict, such as all-0 bits, **should** never be used. Hard-coded values are acceptable if best effort is ensured that the value will not accidentally conflict.

If the `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_PROPERTIES_EXT`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDevicePipelineRobustnessProperties` structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkPhysicalDevicePipelineRobustnessProperties {
    VkStructureType          sType;
    void*                    pNext;
    VkPipelineRobustnessBufferBehavior defaultRobustnessStorageBuffers;
    VkPipelineRobustnessBufferBehavior defaultRobustnessUniformBuffers;
    VkPipelineRobustnessBufferBehavior defaultRobustnessVertexInputs;
    VkPipelineRobustnessImageBehavior defaultRobustnessImages;
} VkPhysicalDevicePipelineRobustnessProperties;
```

```
// Provided by VK_EXT_pipeline_robustness
// Equivalent to VkPhysicalDevicePipelineRobustnessProperties
typedef VkPhysicalDevicePipelineRobustnessProperties
VkPhysicalDevicePipelineRobustnessPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `defaultRobustnessStorageBuffers` describes the behavior of out of bounds accesses made to storage buffers when no robustness features are enabled
- `defaultRobustnessUniformBuffers` describes the behavior of out of bounds accesses made to uniform buffers when no robustness features are enabled
- `defaultRobustnessVertexInputs` describes the behavior of out of bounds accesses made to vertex input attributes when no robustness features are enabled
- `defaultRobustnessImages` describes the behavior of out of bounds accesses made to images when no robustness features are enabled

Some implementations of Vulkan may be able to guarantee that certain types of accesses are always performed with robustness even when the Vulkan API's robustness features are not explicitly enabled.

Even when an implementation reports that accesses to a given resource type are robust by default, it remains invalid to make an out of bounds access without requesting the appropriate robustness feature.

If the `VkPhysicalDevicePipelineRobustnessProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

    uint32_t           maxOpacity4StateSubdivisionLevel;
    uint32_t           maxOpacityLossy4StateSubdivisionLevel;
    uint64_t           maxMicromapTriangles;
} VkPhysicalDeviceOpacityMicromapPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxOpacity2StateSubdivisionLevel` is the maximum allowed `subdivisionLevel` when `format` is `VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR`.
- `maxOpacity4StateSubdivisionLevel` is the maximum allowed `subdivisionLevel` when `format` is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR` and the micromap is not built with `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`.
- `maxOpacityLossy4StateSubdivisionLevel` is the maximum allowed `subdivisionLevel` when `format` is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR` and the micromap is built with `VK_BUILD_ACCELERATION_STRUCTURE_MICROMAP_LOSSY_BIT_KHR`.
- `maxMicromapTriangles` limits the number of triangles allowed to be specified when building a micromap

If the `VkPhysicalDeviceOpacityMicromapPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpacityMicromapPropertiesKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPACITY_MICROMAP_PROPERTIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceOpacityMicromapPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxOpacity2StateSubdivisionLevel;
    uint32_t           maxOpacity4StateSubdivisionLevel;
} VkPhysicalDeviceOpacityMicromapPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxOpacity2StateSubdivisionLevel` is the maximum allowed `subdivisionLevel` when `format` is `VK_OPACITY_MICROMAP_FORMAT_2_STATE_KHR`
- `maxOpacity4StateSubdivisionLevel` is the maximum allowed `subdivisionLevel` when `format` is `VK_OPACITY_MICROMAP_FORMAT_4_STATE_KHR`

If the `VkPhysicalDeviceOpacityMicromapPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpacityMicromapPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPACITY_MICROMAP_PROPERTIES_EXT`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

Values which **may** be returned in the `rayTracingInvocationReorderReorderingHint` field of `VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT` or are:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef enum VkRayTracingInvocationReorderModeEXT {
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_EXT = 0,
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT = 1,
} VkRayTracingInvocationReorderModeEXT;
```

- `VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_EXT` specifies that the implementation does not reorder at reorder calls.
- `VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT` specifies that the implementation **may** reorder at reorder calls.

The `VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT {
    VkStructureType             sType;
    void*                       pNext;
    VkRayTracingInvocationReorderModeEXT rayTracingInvocationReorderReorderingHint;
    uint32_t                    maxShaderBindingTableRecordIndex;
} VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingInvocationReorderReorderingHint` is a hint indicating if the implementation **may** reorder at the reorder calls.
- `maxShaderBindingTableRecordIndex` is the maximum shader binding table record index allowed to be passed in to `OpHitObjectSetShaderBindingTableRecordIndexEXT`

If `rayTracingInvocationReorderReorderingHint` is `VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_EXT` there **must** exist conditions under which the ordered set of invocations before a reorder instruction is different than the ordered set of invocations after the reorder instruction. The ordering of a set of invocations is determined by the `SubgroupId` of an invocation's subgroup and the `SubGroupInvocationId` of an invocation within that subgroup.

The reorder instructions are:

- `OpReorderThreadWithHintEXT`
- `OpReorderThreadWithHitObjectEXT`
- `OpHitObjectReorderExecuteShaderEXT`
- `OpHitObjectTraceReorderExecuteEXT`

**NOTE**

Because the extension changes how hits are managed there is a compatibility reason to expose the extension even when an implementation does not have sorting active.

If the `VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_PROPERTIES_EXT`

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceShaderObjectPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    uint8_t             shaderBinaryUUID[VK_UUID_SIZE];
    uint32_t            shaderBinaryVersion;
} VkPhysicalDeviceShaderObjectPropertiesEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBinaryUUID` is an array of [VK\\_UUID\\_SIZE](#) `uint8_t` values representing a universally unique identifier for one or more implementations whose shader binaries are guaranteed to be compatible with each other.
- `shaderBinaryVersion` is an unsigned integer incremented to represent backwards compatible differences between implementations with the same `shaderBinaryUUID`.

The purpose and usage of the values of this structure are described in greater detail in [Binary Shader Compatibility](#).

If the `VkPhysicalDeviceShaderObjectPropertiesEXT` structure is included in the `pNext` chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderObjectPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_PROPERTIES_EXT`

## Structure Chaining

### Extends the structure

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDevicePipelineBinaryPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_pipeline_binary
typedef struct VkPhysicalDevicePipelineBinaryPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           pipelineBinaryInternalCache;
    VkBool32           pipelineBinaryInternalCacheControl;
    VkBool32           pipelineBinaryPrefersInternalCache;
    VkBool32           pipelineBinaryPrecompiledInternalCache;
    VkBool32           pipelineBinaryCompressedData;
} VkPhysicalDevicePipelineBinaryPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineBinaryInternalCache` specifies that the implementation maintains a pipeline cache internal to the implementation. If this is `VK_TRUE`, applications **can** create pipeline binaries with only a pipeline create info, and in this case, an implementation **may** be able to create a pipeline binary directly without application needing to capture the binary itself.
- `pipelineBinaryInternalCacheControl` specifies whether the driver's internal cache **can** be disabled. If this property is `VK_TRUE` `VkDevicePipelineBinaryInternalCacheControlKHR::disableInternalCache` **can** be used to disable the driver's internal cache, allowing an application to take full control of both memory and disk usage.
- `pipelineBinaryPrefersInternalCache` specifies that the implementation prefers to maintain an internal cache, and applications **should** not store pipeline binaries in their own on-disk caches to avoid increased on-disk storage requirements. Applications are encouraged to only store pipeline keys instead, and aim to create pipeline binaries from key alone on subsequent runs of the application.
- `pipelineBinaryPrecompiledInternalCache` specifies that the implementation **may** have pipeline binaries in its internal cache, which is populated without the application ever having generated that pipeline itself. Applications **can** attempt to create binaries without extracting pipeline binary data from the pipeline prior for a set of pipeline keys, including from previous runs of the application.
- `pipelineBinaryCompressedData` specifies that the binary data is already compressed and so applications **should** not attempt to compress it.

#### NOTE

These properties tend to be platform specific and may change depending on external configuration which is outside the scope of this specification. These properties are intended to guide applications when implementations have dedicated caching solutions available. In particular, if the `pipelineBinaryPrefersInternalCache` limit is exposed, relying on the internal cache may provide some advantage compared to an application-specific solution. An application with its own dedicated solution may still use its own caching system even with this limit exposed.

If the `VkPhysicalDevicePipelineBinaryPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with

each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineBinaryPropertiesKHR-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_PIPELINE\_BINARY\_PROPERTIES\_KHR

### Structure Chaining

The [VkPhysicalDeviceComputeShaderDerivativesPropertiesKHR](#) structure is defined as:

```
// Provided by VK_KHR_compute_shader_derivatives
typedef struct VkPhysicalDeviceComputeShaderDerivativesPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           meshAndTaskShaderDerivatives;
} VkPhysicalDeviceComputeShaderDerivativesPropertiesKHR;
```

The members of the [VkPhysicalDeviceComputeShaderDerivativesPropertiesKHR](#) structure describe the following:

- [meshAndTaskShaderDerivatives](#) indicates whether the mesh and task shader stages support the [ComputeDerivativeGroupQuadsKHR](#) and [ComputeDerivativeGroupLinearKHR](#) SPIR-V capabilities.

If the [VkPhysicalDeviceComputeShaderDerivativesPropertiesKHR](#) structure is included in the [pNext](#) chain of the [VkPhysicalDeviceProperties2](#) structure passed to [vkGetPhysicalDeviceProperties2](#), it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceComputeShaderDerivativesPropertiesKHR-sType-sType must be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_COMPUTE\_SHADER\_DERIVATIVES\_PROPERTIES\_KHR

### Structure Chaining

- [VkPhysicalDeviceProperties2](#)

The `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_map_memory_placed
typedef struct VkPhysicalDeviceMapMemoryPlacedPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        minPlacedMemoryMapAlignment;
} VkPhysicalDeviceMapMemoryPlacedPropertiesEXT;
```

The members of the `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT` structure describe the following:

- `minPlacedMemoryMapAlignment` is the minimum alignment required for memory object offsets and virtual address ranges when using placed memory mapping.

If the `VkPhysicalDeviceMapMemoryPlacedPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMapMemoryPlacedPropertiesEXT-sType-sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAP_MEMORY_PLACED_PROPERTIES_EXT`

### Structure Chaining

#### Extends the structure

The `VkPhysicalDeviceFaultPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_device_fault
typedef struct VkPhysicalDeviceFaultPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxDeviceFaultCount;
} VkPhysicalDeviceFaultPropertiesKHR;
```

The members of the `VkPhysicalDeviceFaultPropertiesKHR` structure describe the following:

- `maxDeviceFaultCount` is the maximum number of instances of `VkDeviceFaultInfoKHR` that will be retained by the implementation. This **must** be greater than or equal to 1. If the application does not retrieve fault reports and overflow occurs, the oldest fault reports will be overwritten by the most recent record.

If the `VkPhysicalDeviceFaultPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFaultPropertiesKHR-sType-sType  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FAULT_PROPERTIES_KHR`

### Structure Chaining

#### Extends the structure

- `VkPhysicalDeviceProperties2`

The `VkPhysicalDeviceDescriptorHeapPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap
typedef struct VkPhysicalDeviceDescriptorHeapPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkDeviceSize        samplerHeapAlignment;
    VkDeviceSize        resourceHeapAlignment;
    VkDeviceSize        maxSamplerHeapSize;
    VkDeviceSize        maxResourceHeapSize;
    VkDeviceSize        minSamplerHeapReservedRange;
    VkDeviceSize        minSamplerHeapReservedRangeWithEmbedded;
    VkDeviceSize        minResourceHeapReservedRange;
    VkDeviceSize        samplerDescriptorSize;
    VkDeviceSize        imageDescriptorSize;
    VkDeviceSize        bufferDescriptorSize;
    VkDeviceSize        samplerDescriptorAlignment;
    VkDeviceSize        imageDescriptorAlignment;
    VkDeviceSize        bufferDescriptorAlignment;
    VkDeviceSize        maxPushDataSize;
    size_t              imageCaptureReplayOpaqueDataSize;
    uint32_t            maxDescriptorHeapEmbeddedSamplers;
    uint32_t            samplerYcbcrConversionCount;
    VkBool32            sparseDescriptorHeaps;
    VkBool32            protectedDescriptorHeaps;
} VkPhysicalDeviceDescriptorHeapPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `samplerHeapAlignment` specifies the required alignment of the `heapRange->address` member of `VkBindHeapInfoEXT` for binding sampler heaps. It must be a power-of-two value.

- **resourceHeapAlignment** specifies the required alignment of the **heapRange->address** member of **VkBindHeapInfoEXT** for binding resource heaps. It must be a power-of-two value.
- **maxSamplerHeapSize** describes maximum value of the **size** member of **VkDeviceAddressRangeKHR** for binding sampler heaps, including the reservation, when embedded samplers are used.
- **maxResourceHeapSize** describes maximum value of the **size** member of **VkDeviceAddressRangeKHR** for binding resource heaps, including the reservation.
- **minSamplerHeapReservedRange** specifies the minimum amount of data that the implementation needs to be reserved within the bound sampler heap range when embedded samplers are not used.
- **minSamplerHeapReservedRangeWithEmbedded** specifies the minimum amount of data that the implementation needs to be reserved within the bound sampler heap range when embedded samplers are used.
- **minResourceHeapReservedRange** specifies the minimum amount of data that the implementation needs to be reserved within the bound resource heap range.
- **samplerDescriptorSize** specifies the size of sampler descriptors written by **vkWriteSamplerDescriptorsEXT**. It **must** be a power-of-two value.
- **imageDescriptorSize** specifies the maximum size of image and texel buffer descriptors written by **vkWriteResourceDescriptorsEXT**. It **must** be a power-of-two value.
- **bufferDescriptorSize** specifies the maximum size of unformatted buffer descriptors or acceleration structures written by **vkWriteResourceDescriptorsEXT**. It **must** be a power-of-two value.
- **samplerDescriptorAlignment** specifies the required alignment of sampler descriptors within a sampler heap. It must be a power-of-two value, and less than or equal to **samplerDescriptorSize**.
- **imageDescriptorAlignment** specifies the required alignment of image descriptors within a resource heap. It must be a power-of-two value, and less than or equal to **imageDescriptorSize**.
- **bufferDescriptorAlignment** specifies the required alignment of unformatted buffer descriptors or acceleration structures within a resource heap. It must be a power-of-two value, and less than or equal to **bufferDescriptorSize**.
- **maxPushDataSize** specifies the maximum total size of all push data. It must be greater than or equal to **maxPushConstantsSize**
- **imageCaptureReplayOpaqueDataSize** specifies the size of the opaque capture/replay data for an image.
- **maxDescriptorHeapEmbeddedSamplers** specifies the maximum number of unique embedded samplers across all pipelines.
- **samplerYcbcrConversionCount** specifies the number of sampler descriptors required for any sampler using YC<sub>B</sub>C<sub>R</sub> conversion.
- **sparseDescriptorHeaps** specifies whether descriptor heaps can be backed by sparse memory or not. If this value is **VK\_FALSE**, buffers cannot be specified as both sparse and having descriptor heap usage.
- **protectedDescriptorHeaps** specifies whether descriptor heaps can be used with protected

submissions or not. If this value is `VK_FALSE`, buffers cannot be specified as both protected and having descriptor heap usage.

If the `VkPhysicalDeviceDescriptorHeapPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceDescriptorHeapPropertiesEXT-sType-sType`  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_HEAP_PROPERTIES_EXT`

### Structure Chaining

#### Extends the structure

The `VkPhysicalDeviceShaderAbortPropertiesKHR` structure is defined as:

```
// Provided by VK_KHR_shader_abort
typedef struct VkPhysicalDeviceShaderAbortPropertiesKHR {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           maxShaderAbortMessageSize;
} VkPhysicalDeviceShaderAbortPropertiesKHR;
```

The `VkPhysicalDeviceShaderAbortPropertiesKHR` structure describes the following:

- `maxShaderAbortMessageSize` indicates the maximum size of a shader abort message that the application **can** specify.

If the `VkPhysicalDeviceShaderAbortPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderAbortPropertiesKHR-sType-sType`  
`sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ABORT_PROPERTIES_KHR`

## Structure Chaining

## 48.1. Limit Requirements

The following table specifies the **required** minimum/maximum for all Vulkan graphics implementations. Where a limit corresponds to a fine-grained device feature which is **optional**, the feature name is listed with two **required** limits, one when the feature is supported and one when it is not supported. If an implementation supports a feature, the limits reported are the same whether or not the feature is enabled.

Table 68. Required Limit Types

| Type                         | Limit                                                 | Feature                       |
|------------------------------|-------------------------------------------------------|-------------------------------|
| <a href="#">uint32_t</a>     | <a href="#">maxImageDimension1D</a>                   | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxImageDimension2D</a>                   | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxImageDimension3D</a>                   | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxImageDimensionCube</a>                 | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxImageArrayLayers</a>                   | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxTexelBufferElements</a>                | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxUniformBufferRange</a>                 | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxStorageBufferRange</a>                 | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxPushConstantsSize</a>                  | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxMemoryAllocationCount</a>              | -                             |
| <a href="#">uint32_t</a>     | <a href="#">maxSamplerAllocationCount</a>             | -                             |
| <a href="#">VkDeviceSize</a> | <a href="#">bufferImageGranularity</a>                | -                             |
| <a href="#">VkDeviceSize</a> | <a href="#">sparseAddressSpaceSize</a>                | <a href="#">sparseBinding</a> |
| <a href="#">uint32_t</a>     | <a href="#">maxBoundDescriptorSets</a>                | -                             |

## 1

The **Limit Type** column specifies the limit is either the minimum limit all implementations **must** support, the maximum limit all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum limit is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

## 2

The **maxPerStageResources** **must** be at least the smallest of the following:

- the sum of the **maxPerStageDescriptorUniformBuffers**, **maxPerStageDescriptorStorageBuffers**, **maxPerStageDescriptorSampledImages**, **maxPerStageDescriptorStorageImages**, **maxPerStageDescriptorInputAttachments**, **maxColorAttachments** limits, or
- 128.

It **may** not be possible to reach this limit in every stage.

3

See `maxViewportDimensions` for the **required** relationship to other limits.

4

See `viewportBoundsRange` for the **required** relationship to other limits.

5

The values `minInterpolationOffset` and `maxInterpolationOffset` describe the closed interval of supported interpolation offsets: `[minInterpolationOffset, maxInterpolationOffset]`. The ULP is determined by `subPixelInterpolationOffsetBits`. If `subPixelInterpolationOffsetBits` is 4, this provides increments of  $(1/2^4) = 0.0625$ , and thus the range of supported interpolation offsets would be `[-0.5, 0.4375]`.

6

The point size ULP is determined by `pointSizeGranularity`. If the `pointSizeGranularity` is 0.125, the range of supported point sizes **must** be at least `[1.0, 63.875]`.

7

The line width ULP is determined by `lineWidthGranularity`. If the `lineWidthGranularity` is 0.0625, the range of supported line widths **must** be at least `[1.0, 7.9375]`.

8

The minimum `maxDescriptorSet*` limit is  $n$  times the corresponding *specification* minimum `maxPerStageDescriptor*` limit, where  $n$  is the number of shader stages supported by the `VkPhysicalDevice`. If all shader stages are supported,  $n = 6$  (vertex, tessellation control, tessellation evaluation, geometry, fragment, compute).

9

This `UpdateAfterBind` descriptor limit **must** be greater than or equal to the corresponding **non**-`UpdateAfterBind` limit if the corresponding `UpdateAfterBind` feature is supported. Otherwise it **can** be zero.

10

If the `VK_KHR_portability_subset` extension is enabled, the required minimum value of `maxVertexInputBindings` is 8.

12

`maxResourceDescriptorSize` is defined as the maximum value of `storageImageDescriptorSize`, `sampledImageDescriptorSize`, `robustUniformTexelBufferDescriptorSize`, `robustStorageTexelBufferDescriptorSize`, `robustUniformBufferDescriptorSize`, `robustStorageBufferDescriptorSize`, `inputAttachmentDescriptorSize`, and `accelerationStructureDescriptorSize`.

13

This `UpdateAfterBind` descriptor limit exists and is defined to have a non-zero supported limit for historical reasons. As `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` **must** not be used

with the corresponding descriptor type, and descriptors of this type **must** not be included in any descriptor set layout that includes bindings created with [VK\\_DESCRIPTOR\\_BINDING\\_UPDATE\\_AFTER\\_BIND\\_BIT](#), the limit has no practical effect and **may** be zero.

14

As [VK\\_DESCRIPTOR\\_BINDING\\_UPDATE\\_AFTER\\_BIND\\_BIT](#) **must** not be used with the corresponding descriptor type, this limit only exists to allow implementations exposing a higher limit for descriptors of this type in a pipeline layout including any descriptor set layouts created with [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) than in a pipeline layout not including any descriptor set layouts created with [VK\\_DESCRIPTOR\\_SET\\_LAYOUT\\_CREATE\\_UPDATE\\_AFTER\\_BIND\\_POOL\\_BIT](#) and **may** be zero to indicate that only the corresponding **non-UpdateAfterBind** limit applies.

## 48.2. Additional Multisampling Capabilities

To query additional multisampling capabilities which **may** be supported for a specific sample count, beyond the minimum capabilities described for [Limits](#) above, call:

```
// Provided by VK_EXT_sample_locations
void vkGetPhysicalDeviceMultisamplePropertiesEXT(
    VkPhysicalDevice          physicalDevice,
    VkSampleCountFlagBits    samples,
    VkMultisamplePropertiesEXT* pMultisampleProperties);
```

- **physicalDevice** is the physical device from which to query the additional multisampling capabilities.
- **samples** is a [VkSampleCountFlagBits](#) value specifying the sample count to query capabilities for.
- **pMultisampleProperties** is a pointer to a [VkMultisamplePropertiesEXT](#) structure in which information about additional multisampling capabilities specific to the sample count is returned.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-samples-parameter **samples** **must** be a valid [VkSampleCountFlagBits](#) value
- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-pMultisampleProperties-parameter **pMultisampleProperties** **must** be a valid pointer to a [VkMultisamplePropertiesEXT](#) structure

The [VkMultisamplePropertiesEXT](#) structure is defined as

```
// Provided by VK_EXT_sample_locations
typedef struct VkMultisamplePropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkExtent2D         maxSampleLocationGridSize;
} VkMultisamplePropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations **can** vary.

### Valid Usage (Implicit)

- VUID-VkMultisamplePropertiesEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_MULTISAMPLE_PROPERTIES_EXT`
- VUID-VkMultisamplePropertiesEXT-pNext-pNext  
`pNext` **must** be `NULL`

If the sample count for which additional multisampling capabilities are requested using `vkGetPhysicalDeviceMultisamplePropertiesEXT` is set in `sampleLocationSampleCounts` the `width` and `height` members of `VkMultisamplePropertiesEXT::maxSampleLocationGridSize` **must** be greater than or equal to the corresponding members of `maxSampleLocationGridSize`, respectively, otherwise both members **must** be `0`.

## 48.3. Milestone Limits

### 48.3.1. Roadmap 2022

Implementations that claim support for the [Roadmap 2022](#) milestone **must** satisfy the following additional limit requirements:

| Limit                                            | Supported Limit | Limit Type <sup>1</sup> |
|--------------------------------------------------|-----------------|-------------------------|
| <code>maxImageDimension1D</code>                 | 8192            | min                     |
| <code>maxImageDimension2D</code>                 | 8192            | min                     |
| <code>maxImageDimensionCube</code>               | 8192            | min                     |
| <code>maxImageArrayLayers</code>                 | 2048            | min                     |
| <code>maxUniformBufferRange</code>               | 65536           | min                     |
| <code>bufferImageGranularity</code>              | 4096            | max                     |
| <code>maxPerStageDescriptorSamplers</code>       | 64              | min                     |
| <code>maxPerStageDescriptorUniformBuffers</code> | 15              | min                     |

| Limit                               | Supported Limit                                             | Limit Type <sup>1</sup> |
|-------------------------------------|-------------------------------------------------------------|-------------------------|
| maxPerStageDescriptorStorageBuffers | 30                                                          | min                     |
| maxPerStageDescriptorSampledImages  | 200                                                         | min                     |
| maxPerStageDescriptorStorageImages  | 16                                                          | min                     |
| maxPerStageResources                | 200                                                         | min                     |
| maxDescriptorSetSamplers            | 576                                                         | min                     |
| maxDescriptorSetUniformBuffers      | 90                                                          | min                     |
| maxDescriptorSetStorageBuffers      | 96                                                          | min                     |
| maxDescriptorSetSampledImages       | 1800                                                        | min                     |
| maxDescriptorSetStorageImages       | 144                                                         | min                     |
| maxFragmentCombinedOutputResources  | 16                                                          | min                     |
| maxComputeWorkGroupInvocations      | 256                                                         | min                     |
| maxComputeWorkGroupSize             | (256,256,64)                                                | min                     |
| subTexelPrecisionBits               | 8                                                           | min                     |
| mipmapPrecisionBits                 | 6                                                           | min                     |
| maxSamplerLodBias                   | 14                                                          | min                     |
| pointSizeGranularity                | 0.125                                                       | max                     |

# Chapter 49. Formats

Supported buffer and image formats **may** vary across implementations. A minimum set of format features are guaranteed, but others **must** be explicitly queried before use to ensure they are supported by the implementation.

The features for the set of formats ([VkFormat](#)) supported by the implementation are queried individually using the [vkGetPhysicalDeviceFormatProperties](#) command.

## 49.1. Format Definition

The following image formats **can** be passed to, and **may** be returned from Vulkan commands. The memory required to store each format is discussed with that format, and also summarized in the [Representation and Texel Block Size](#) section and the [Compatible formats](#) table.

```
// Provided by VK_VERSION_1_0

- [VK\\_FORMAT\\_UNDEFINED](#) specifies that the format is not specified.
- [VK\\_FORMAT\\_R4G4\\_UNORM\\_PACK8](#) specifies a two-component, 8-bit packed unsigned normalized format that has a 4-bit R component in bits 4..7, and a 4-bit G component in bits 0..3.
- [VK\\_FORMAT\\_R4G4B4A4\\_UNORM\\_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit R component in bits 12..15, a 4-bit G component in bits 8..11, a 4-bit B component in bits 4..7, and a 4-bit A component in bits 0..3.
- [VK\\_FORMAT\\_B4G4R4A4\\_UNORM\\_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit B component in bits 12..15, a 4-bit G component in bits 8..11, a 4-bit R component in bits 4..7, and a 4-bit A component in bits 0..3.
- [VK\\_FORMAT\\_A4R4G4B4\\_UNORM\\_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit A component in bits 12..15, a 4-bit R component in bits 8..11, a 4-bit G component in bits 4..7, and a 4-bit B component in bits 0..3.
- [VK\\_FORMAT\\_A4B4G4R4\\_UNORM\\_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit A component in bits 12..15, a 4-bit B component in bits 8..11, a 4-bit G component in bits 4..7, and a 4-bit R component in bits 0..3.
- [VK\\_FORMAT\\_R5G6B5\\_UNORM\\_PACK16](#) specifies a three-component, 16-bit packed unsigned normalized format that has a 5-bit R component in bits 11..15, a 6-bit G component in bits 5..10, and a 5-bit B component in bits 0..4.
- [VK\\_FORMAT\\_B5G6R5\\_UNORM\\_PACK16](#) specifies a three-component, 16-bit packed unsigned normalized format that has a 5-bit B component in bits 11..15, a 6-bit G component in bits 5..10, and a 5-bit R component in bits 0..4.
- [VK\\_FORMAT\\_R5G5B5A1\\_UNORM\\_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 5-bit R component in bits 11..15, a 5-bit G component in bits 6..10, a 5-bit B component in bits 1..5, and a 1-bit A component in bit 0.
- [VK\\_FORMAT\\_B5G5R5A1\\_UNORM\\_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 5-bit B component in bits 11..15, a 5-bit G component in bits 6..10, a 5-bit R component in bits 1..5, and a 1-bit A component in bit 0.
- [VK\\_FORMAT\\_A1R5G5B5\\_UNORM\\_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 1-bit A component in bit 15, a 5-bit R component in bits 10..14, a 5-bit G component in bits 5..9, and a 5-bit B component in bits 0..4.
- [VK\\_FORMAT\\_A1B5G5R5\\_UNORM\\_PACK16](#) specifies a four-component, 16-bit packed unsigned normalized format that has a 1-bit A component in bit 15, a 5-bit B component in bits 10..14, a 5-bit G component in bits 5..9, and a 5-bit R component in bits 0..4.

- [VK\\_FORMAT\\_A8\\_UNORM](#) specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit A component.
- [VK\\_FORMAT\\_R8\\_UNORM](#) specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit R component.
- [VK\\_FORMAT\\_R8\\_SNORM](#) specifies a one-component, 8-bit signed normalized format that has a single 8-bit R component.
- [VK\\_FORMAT\\_R8\\_USCALED](#) specifies a one-component, 8-bit unsigned scaled integer format that has a single 8-bit R component.
- [VK\\_FORMAT\\_R8\\_SSCALED](#) specifies a one-component, 8-bit signed scaled integer format that has a single 8-bit R component.
- [VK\\_FORMAT\\_R8\\_UINT](#) specifies a one-component, 8-bit unsigned integer format that has a single 8-bit R component.
- [VK\\_FORMAT\\_R8\\_SINT](#) specifies a one-component, 8-bit signed integer format that has a single 8-bit R component.
- [VK\\_FORMAT\\_R8\\_SRGB](#) specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit R component stored with sRGB nonlinear encoding.
- [VK\\_FORMAT\\_R8G8\\_UNORM](#) specifies a two-component, 16-bit unsigned normalized format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK\\_FORMAT\\_R8G8\\_SNORM](#) specifies a two-component, 16-bit signed normalized format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK\\_FORMAT\\_R8G8\\_USCALED](#) specifies a two-component, 16-bit unsigned scaled integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK\\_FORMAT\\_R8G8\\_SSCALED](#) specifies a two-component, 16-bit signed scaled integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK\\_FORMAT\\_R8G8\\_UINT](#) specifies a two-component, 16-bit unsigned integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK\\_FORMAT\\_R8G8\\_SINT](#) specifies a two-component, 16-bit signed integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- [VK\\_FORMAT\\_R8G8\\_SRGB](#) specifies a two-component, 16-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, and an 8-bit G component stored with sRGB nonlinear encoding in byte 1.
- [VK\\_FORMAT\\_R8G8B8\\_UNORM](#) specifies a three-component, 24-bit unsigned normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK\\_FORMAT\\_R8G8B8\\_SNORM](#) specifies a three-component, 24-bit signed normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK\\_FORMAT\\_R8G8B8\\_USCALED](#) specifies a three-component, 24-bit unsigned scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK\\_FORMAT\\_R8G8B8\\_SSCALED](#) specifies a three-component, 24-bit signed scaled format that

has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.

- [VK\\_FORMAT\\_R8G8B8\\_UINT](#) specifies a three-component, 24-bit unsigned integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK\\_FORMAT\\_R8G8B8\\_SINT](#) specifies a three-component, 24-bit signed integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- [VK\\_FORMAT\\_R8G8B8\\_SRGB](#) specifies a three-component, 24-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, and an 8-bit B component stored with sRGB nonlinear encoding in byte 2.
- [VK\\_FORMAT\\_B8G8R8\\_UNORM](#) specifies a three-component, 24-bit unsigned normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK\\_FORMAT\\_B8G8R8\\_SNORM](#) specifies a three-component, 24-bit signed normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK\\_FORMAT\\_B8G8R8\\_USCALED](#) specifies a three-component, 24-bit unsigned scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK\\_FORMAT\\_B8G8R8\\_SCALED](#) specifies a three-component, 24-bit signed scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK\\_FORMAT\\_B8G8R8\\_UINT](#) specifies a three-component, 24-bit unsigned integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK\\_FORMAT\\_B8G8R8\\_SINT](#) specifies a three-component, 24-bit signed integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
- [VK\\_FORMAT\\_B8G8R8\\_SRGB](#) specifies a three-component, 24-bit unsigned normalized format that has an 8-bit B component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, and an 8-bit R component stored with sRGB nonlinear encoding in byte 2.
- [VK\\_FORMAT\\_R8G8B8A8\\_UNORM](#) specifies a four-component, 32-bit unsigned normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_R8G8B8A8\\_SNORM](#) specifies a four-component, 32-bit signed normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_R8G8B8A8\\_USCALED](#) specifies a four-component, 32-bit unsigned scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

- [VK\\_FORMAT\\_R8G8B8A8\\_SSCALED](#) specifies a four-component, 32-bit signed scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_R8G8B8A8\\_UINT](#) specifies a four-component, 32-bit unsigned integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_R8G8B8A8\\_SINT](#) specifies a four-component, 32-bit signed integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_R8G8B8A8\\_SRGB](#) specifies a four-component, 32-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, an 8-bit B component stored with sRGB nonlinear encoding in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_B8G8R8A8\\_UNORM](#) specifies a four-component, 32-bit unsigned normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_B8G8R8A8\\_SNORM](#) specifies a four-component, 32-bit signed normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_B8G8R8A8\\_USCALED](#) specifies a four-component, 32-bit unsigned scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_B8G8R8A8\\_SSCALED](#) specifies a four-component, 32-bit signed scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_B8G8R8A8\\_UINT](#) specifies a four-component, 32-bit unsigned integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_B8G8R8A8\\_SINT](#) specifies a four-component, 32-bit signed integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_B8G8R8A8\\_SRGB](#) specifies a four-component, 32-bit unsigned normalized format that has an 8-bit B component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, an 8-bit R component stored with sRGB nonlinear encoding in byte 2, and an 8-bit A component in byte 3.
- [VK\\_FORMAT\\_A8B8G8R8\\_UNORM\\_PACK32](#) specifies a four-component, 32-bit packed unsigned normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK\\_FORMAT\\_A8B8G8R8\\_SNORM\\_PACK32](#) specifies a four-component, 32-bit packed signed normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK\\_FORMAT\\_A8B8G8R8\\_USCALED\\_PACK32](#) specifies a four-component, 32-bit packed unsigned scaled integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits

16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

- [VK\\_FORMAT\\_A8B8G8R8\\_SSCALED\\_PACK32](#) specifies a four-component, 32-bit packed signed scaled integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK\\_FORMAT\\_A8B8G8R8\\_UINT\\_PACK32](#) specifies a four-component, 32-bit packed unsigned integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK\\_FORMAT\\_A8B8G8R8\\_SINT\\_PACK32](#) specifies a four-component, 32-bit packed signed integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
- [VK\\_FORMAT\\_A8B8G8R8\\_SRGB\\_PACK32](#) specifies a four-component, 32-bit packed unsigned normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component stored with sRGB nonlinear encoding in bits 16..23, an 8-bit G component stored with sRGB nonlinear encoding in bits 8..15, and an 8-bit R component stored with sRGB nonlinear encoding in bits 0..7.
- [VK\\_FORMAT\\_A2R10G10B10\\_UNORM\\_PACK32](#) specifies a four-component, 32-bit packed unsigned normalized format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK\\_FORMAT\\_A2R10G10B10\\_SNORM\\_PACK32](#) specifies a four-component, 32-bit packed signed normalized format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK\\_FORMAT\\_A2R10G10B10\\_USCALED\\_PACK32](#) specifies a four-component, 32-bit packed unsigned scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK\\_FORMAT\\_A2R10G10B10\\_SSCALED\\_PACK32](#) specifies a four-component, 32-bit packed signed scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK\\_FORMAT\\_A2R10G10B10\\_UINT\\_PACK32](#) specifies a four-component, 32-bit packed unsigned integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK\\_FORMAT\\_A2R10G10B10\\_SINT\\_PACK32](#) specifies a four-component, 32-bit packed signed integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
- [VK\\_FORMAT\\_A2B10G10R10\\_UNORM\\_PACK32](#) specifies a four-component, 32-bit packed unsigned normalized format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK\\_FORMAT\\_A2B10G10R10\\_SNORM\\_PACK32](#) specifies a four-component, 32-bit packed signed normalized format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK\\_FORMAT\\_A2B10G10R10\\_USCALED\\_PACK32](#) specifies a four-component, 32-bit packed unsigned scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

- [VK\\_FORMAT\\_A2B10G10R10\\_SSCALED\\_PACK32](#) specifies a four-component, 32-bit packed signed scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK\\_FORMAT\\_A2B10G10R10\\_UINT\\_PACK32](#) specifies a four-component, 32-bit packed unsigned integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK\\_FORMAT\\_A2B10G10R10\\_SINT\\_PACK32](#) specifies a four-component, 32-bit packed signed integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.
- [VK\\_FORMAT\\_R16\\_UNORM](#) specifies a one-component, 16-bit unsigned normalized format that has a single 16-bit R component.
- [VK\\_FORMAT\\_R16\\_SNORM](#) specifies a one-component, 16-bit signed normalized format that has a single 16-bit R component.
- [VK\\_FORMAT\\_R16\\_USCALED](#) specifies a one-component, 16-bit unsigned scaled integer format that has a single 16-bit R component.
- [VK\\_FORMAT\\_R16\\_SSCALED](#) specifies a one-component, 16-bit signed scaled integer format that has a single 16-bit R component.
- [VK\\_FORMAT\\_R16\\_UINT](#) specifies a one-component, 16-bit unsigned integer format that has a single 16-bit R component.
- [VK\\_FORMAT\\_R16\\_SINT](#) specifies a one-component, 16-bit signed integer format that has a single 16-bit R component.
- [VK\\_FORMAT\\_R16\\_SFLOAT](#) specifies a one-component, 16-bit signed floating-point format that has a single 16-bit R component.
- [VK\\_FORMAT\\_R16G16\\_UNORM](#) specifies a two-component, 32-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK\\_FORMAT\\_R16G16\\_SNORM](#) specifies a two-component, 32-bit signed normalized format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK\\_FORMAT\\_R16G16\\_USCALED](#) specifies a two-component, 32-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK\\_FORMAT\\_R16G16\\_SSCALED](#) specifies a two-component, 32-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK\\_FORMAT\\_R16G16\\_UINT](#) specifies a two-component, 32-bit unsigned integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK\\_FORMAT\\_R16G16\\_SINT](#) specifies a two-component, 32-bit signed integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK\\_FORMAT\\_R16G16\\_SFLOAT](#) specifies a two-component, 32-bit signed floating-point format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.
- [VK\\_FORMAT\\_R16G16B16\\_UNORM](#) specifies a three-component, 48-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK\\_FORMAT\\_R16G16B16\\_SNORM](#) specifies a three-component, 48-bit signed normalized format

that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- [VK\\_FORMAT\\_R16G16B16\\_USCALED](#) specifies a three-component, 48-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK\\_FORMAT\\_R16G16B16\\_SSCALED](#) specifies a three-component, 48-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK\\_FORMAT\\_R16G16B16\\_UINT](#) specifies a three-component, 48-bit unsigned integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK\\_FORMAT\\_R16G16B16\\_SINT](#) specifies a three-component, 48-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK\\_FORMAT\\_R16G16B16\\_SFLOAT](#) specifies a three-component, 48-bit signed floating-point format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.
- [VK\\_FORMAT\\_R16G16B16A16\\_UNORM](#) specifies a four-component, 64-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK\\_FORMAT\\_R16G16B16A16\\_SNORM](#) specifies a four-component, 64-bit signed normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK\\_FORMAT\\_R16G16B16A16\\_USCALED](#) specifies a four-component, 64-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK\\_FORMAT\\_R16G16B16A16\\_SSCALED](#) specifies a four-component, 64-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK\\_FORMAT\\_R16G16B16A16\\_UINT](#) specifies a four-component, 64-bit unsigned integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK\\_FORMAT\\_R16G16B16A16\\_SINT](#) specifies a four-component, 64-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK\\_FORMAT\\_R16G16B16A16\\_SFLOAT](#) specifies a four-component, 64-bit signed floating-point format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.
- [VK\\_FORMAT\\_R32\\_UINT](#) specifies a one-component, 32-bit unsigned integer format that has a single 32-bit R component.
- [VK\\_FORMAT\\_R32\\_SINT](#) specifies a one-component, 32-bit signed integer format that has a single 32-bit R component.

- [VK\\_FORMAT\\_R32\\_SFLOAT](#) specifies a one-component, 32-bit signed floating-point format that has a single 32-bit R component.
- [VK\\_FORMAT\\_R32G32\\_UINT](#) specifies a two-component, 64-bit unsigned integer format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.
- [VK\\_FORMAT\\_R32G32\\_SINT](#) specifies a two-component, 64-bit signed integer format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.
- [VK\\_FORMAT\\_R32G32\\_SFLOAT](#) specifies a two-component, 64-bit signed floating-point format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.
- [VK\\_FORMAT\\_R32G32B32\\_UINT](#) specifies a three-component, 96-bit unsigned integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.
- [VK\\_FORMAT\\_R32G32B32\\_SINT](#) specifies a three-component, 96-bit signed integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.
- [VK\\_FORMAT\\_R32G32B32\\_SFLOAT](#) specifies a three-component, 96-bit signed floating-point format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.
- [VK\\_FORMAT\\_R32G32B32A32\\_UINT](#) specifies a four-component, 128-bit unsigned integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.
- [VK\\_FORMAT\\_R32G32B32A32\\_SINT](#) specifies a four-component, 128-bit signed integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.
- [VK\\_FORMAT\\_R32G32B32A32\\_SFLOAT](#) specifies a four-component, 128-bit signed floating-point format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.
- [VK\\_FORMAT\\_R64\\_UINT](#) specifies a one-component, 64-bit unsigned integer format that has a single 64-bit R component.
- [VK\\_FORMAT\\_R64\\_SINT](#) specifies a one-component, 64-bit signed integer format that has a single 64-bit R component.
- [VK\\_FORMAT\\_R64\\_SFLOAT](#) specifies a one-component, 64-bit signed floating-point format that has a single 64-bit R component.
- [VK\\_FORMAT\\_R64G64\\_UINT](#) specifies a two-component, 128-bit unsigned integer format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.
- [VK\\_FORMAT\\_R64G64\\_SINT](#) specifies a two-component, 128-bit signed integer format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.
- [VK\\_FORMAT\\_R64G64\\_SFLOAT](#) specifies a two-component, 128-bit signed floating-point format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.
- [VK\\_FORMAT\\_R64G64B64\\_UINT](#) specifies a three-component, 192-bit unsigned integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.

- [VK\\_FORMAT\\_R64G64B64\\_SINT](#) specifies a three-component, 192-bit signed integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.
- [VK\\_FORMAT\\_R64G64B64\\_SFLOAT](#) specifies a three-component, 192-bit signed floating-point format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.
- [VK\\_FORMAT\\_R64G64B64A64\\_UINT](#) specifies a four-component, 256-bit unsigned integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.
- [VK\\_FORMAT\\_R64G64B64A64\\_SINT](#) specifies a four-component, 256-bit signed integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.
- [VK\\_FORMAT\\_R64G64B64A64\\_SFLOAT](#) specifies a four-component, 256-bit signed floating-point format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.
- [VK\\_FORMAT\\_B10G11R11\\_UFLOAT\\_PACK32](#) specifies a three-component, 32-bit packed unsigned floating-point format that has a 10-bit B component in bits 22..31, an 11-bit G component in bits 11..21, an 11-bit R component in bits 0..10. See [Unsigned 10-Bit Floating-Point Numbers](#) and [Unsigned 11-Bit Floating-Point Numbers](#).
- [VK\\_FORMAT\\_E5B9G9R9\\_UFLOAT\\_PACK32](#) specifies a three-component, 32-bit packed unsigned floating-point format that has a 5-bit shared exponent in bits 27..31, a 9-bit B component mantissa in bits 18..26, a 9-bit G component mantissa in bits 9..17, and a 9-bit R component mantissa in bits 0..8.
- [VK\\_FORMAT\\_D16\\_UNORM](#) specifies a one-component, 16-bit unsigned normalized format that has a single 16-bit depth component.
- [VK\\_FORMAT\\_X8\\_D24\\_UNORM\\_PACK32](#) specifies a two-component, 32-bit format that has 24 unsigned normalized bits in the depth component and, **optionally**, 8 bits that are unused.
- [VK\\_FORMAT\\_D32\\_SFLOAT](#) specifies a one-component, 32-bit signed floating-point format that has 32 bits in the depth component.
- [VK\\_FORMAT\\_S8\\_UINT](#) specifies a one-component, 8-bit unsigned integer format that has 8 bits in the stencil component.
- [VK\\_FORMAT\\_D16\\_UNORM\\_S8\\_UINT](#) specifies a two-component, 24-bit format that has 16 unsigned normalized bits in the depth component and 8 unsigned integer bits in the stencil component.
- [VK\\_FORMAT\\_D24\\_UNORM\\_S8\\_UINT](#) specifies a two-component, 32-bit packed format that has 8 unsigned integer bits in the stencil component, and 24 unsigned normalized bits in the depth component.
- [VK\\_FORMAT\\_D32\\_SFLOAT\\_S8\\_UINT](#) specifies a two-component format that has 32 signed float bits in the depth component and 8 unsigned integer bits in the stencil component. There are **optionally** 24 bits that are unused.
- [VK\\_FORMAT\\_BC1\\_RGB\\_UNORM\\_BLOCK](#) specifies a three-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB

texel data. This format has no alpha and is considered opaque.

- [VK\\_FORMAT\\_BC1\\_RGB\\_SRGB\\_BLOCK](#) specifies a three-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding. This format has no alpha and is considered opaque.
- [VK\\_FORMAT\\_BC1\\_RGBA\\_UNORM\\_BLOCK](#) specifies a four-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data, and provides 1 bit of alpha.
- [VK\\_FORMAT\\_BC1\\_RGBA\\_SRGB\\_BLOCK](#) specifies a four-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding, and provides 1 bit of alpha.
- [VK\\_FORMAT\\_BC2\\_UNORM\\_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.
- [VK\\_FORMAT\\_BC2\\_SRGB\\_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding.
- [VK\\_FORMAT\\_BC3\\_UNORM\\_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.
- [VK\\_FORMAT\\_BC3\\_SRGB\\_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding.
- [VK\\_FORMAT\\_BC4\\_UNORM\\_BLOCK](#) specifies a one-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized red texel data.
- [VK\\_FORMAT\\_BC4\\_SNORM\\_BLOCK](#) specifies a one-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of signed normalized red texel data.
- [VK\\_FORMAT\\_BC5\\_UNORM\\_BLOCK](#) specifies a two-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- [VK\\_FORMAT\\_BC5\\_SNORM\\_BLOCK](#) specifies a two-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- [VK\\_FORMAT\\_BC6H\\_UFLOAT\\_BLOCK](#) specifies a three-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned floating-point RGB texel data.
- [VK\\_FORMAT\\_BC6H\\_SFLOAT\\_BLOCK](#) specifies a three-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed floating-point RGB texel data.
- [VK\\_FORMAT\\_BC7\\_UNORM\\_BLOCK](#) specifies a four-component, block-compressed format where

each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.

- [VK\\_FORMAT\\_BC7\\_SRGB\\_BLOCK](#) specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ETC2\\_R8G8B8\\_UNORM\\_BLOCK](#) specifies a three-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data. This format has no alpha and is considered opaque.
- [VK\\_FORMAT\\_ETC2\\_R8G8B8\\_SRGB\\_BLOCK](#) specifies a three-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding. This format has no alpha and is considered opaque.
- [VK\\_FORMAT\\_ETC2\\_R8G8B8A1\\_UNORM\\_BLOCK](#) specifies a four-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data, and provides 1 bit of alpha.
- [VK\\_FORMAT\\_ETC2\\_R8G8B8A1\\_SRGB\\_BLOCK](#) specifies a four-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding, and provides 1 bit of alpha.
- [VK\\_FORMAT\\_ETC2\\_R8G8B8A8\\_UNORM\\_BLOCK](#) specifies a four-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.
- [VK\\_FORMAT\\_ETC2\\_R8G8B8A8\\_SRGB\\_BLOCK](#) specifies a four-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding applied.
- [VK\\_FORMAT\\_EAC\\_R11\\_UNORM\\_BLOCK](#) specifies a one-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized red texel data.
- [VK\\_FORMAT\\_EAC\\_R11\\_SNORM\\_BLOCK](#) specifies a one-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of signed normalized red texel data.
- [VK\\_FORMAT\\_EAC\\_R11G11\\_UNORM\\_BLOCK](#) specifies a two-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- [VK\\_FORMAT\\_EAC\\_R11G11\\_SNORM\\_BLOCK](#) specifies a two-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- [VK\\_FORMAT\\_ASTC\\_4x4\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_4x4\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized

RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- [VK\\_FORMAT\\_ASTC\\_4x4\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x4\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x4\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_5x4\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x5\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x5\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_5x5\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x5\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x5\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_6x5\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x6\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x6\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_6x6\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_8x5\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×5 rectangle of unsigned normalized

RGBA texel data.

- [VK\\_FORMAT\\_ASTC\\_8x5\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_8x5\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×5 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_8x6\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×6 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_8x6\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_8x6\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×6 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_8x8\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_8x8\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_8x8\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×8 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_10x5\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_10x5\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_10x5\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_10x6\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_10x6\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_10x6\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of signed floating-point

RGBA texel data.

- [VK\\_FORMAT\\_ASTC\\_10x8\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_10x8\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_10x8\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_10x10\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_10x10\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_10x10\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_12x10\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_12x10\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_12x10\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_12x12\\_UNORM\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_12x12\\_SRGB\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_12x12\\_SFLOAT\\_BLOCK](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_3x3x3\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 3×3×3 cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_3x3x3\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 3×3×3 cuboid of unsigned normalized RGBA texel data.

normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- [VK\\_FORMAT\\_ASTC\\_3x3x3\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $3 \times 3 \times 3$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_4x3x3\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 3 \times 3$  cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_4x3x3\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 3 \times 3$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_4x3x3\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 3 \times 3$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_4x4x3\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 4 \times 3$  cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_4x4x3\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 4 \times 3$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_4x4x3\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 4 \times 3$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_4x4x4\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 4 \times 4$  cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_4x4x4\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 4 \times 4$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_4x4x4\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $4 \times 4 \times 4$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x4x4\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 4 \times 4$  cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x4x4\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 4 \times 4$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_5x4x4\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 4 \times 4$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x5x4\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 5 \times 4$  cuboid of unsigned normalized RGBA texel data.

normalized RGBA texel data.

- [VK\\_FORMAT\\_ASTC\\_5x5x4\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 5 \times 4$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_5x5x4\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 5 \times 4$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x5x5\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 5 \times 5$  cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_5x5x5\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 5 \times 5$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_5x5x5\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $5 \times 5 \times 5$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x5x5\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 5 \times 5$  cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x5x5\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 5 \times 5$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_6x5x5\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 5 \times 5$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x6x5\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 6 \times 5$  cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x6x5\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 6 \times 5$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_6x6x5\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 6 \times 5$  cuboid of signed floating-point RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x6x6\\_UNORM\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 6 \times 6$  cuboid of unsigned normalized RGBA texel data.
- [VK\\_FORMAT\\_ASTC\\_6x6x6\\_SRGB\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 6 \times 6$  cuboid of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- [VK\\_FORMAT\\_ASTC\\_6x6x6\\_SFLOAT\\_BLOCK\\_EXT](#) specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a  $6 \times 6 \times 6$  cuboid of signed floating-point RGBA texel data.

point RGBA texel data.

- [VK\\_FORMAT\\_G8B8G8R8\\_422\\_UNORM](#) specifies a four-component, 32-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each  $i$  coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has an 8-bit G component for the even  $i$  coordinate in byte 0, an 8-bit B component in byte 1, an 8-bit G component for the odd  $i$  coordinate in byte 2, and an 8-bit R component in byte 3. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.
- [VK\\_FORMAT\\_B8G8R8G8\\_422\\_UNORM](#) specifies a four-component, 32-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each  $i$  coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has an 8-bit B component in byte 0, an 8-bit G component for the even  $i$  coordinate in byte 1, an 8-bit R component in byte 2, and an 8-bit G component for the odd  $i$  coordinate in byte 3. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.
- [VK\\_FORMAT\\_G8\\_B8\\_R8\\_3PLANE\\_420\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$  and  $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane. This format only supports images with a width and height that is a multiple of two.
- [VK\\_FORMAT\\_G8\\_B8R8\\_2PLANE\\_420\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$  and  $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane. This format only supports images with a width and height that is a multiple of two.
- [VK\\_FORMAT\\_G8\\_B8\\_R8\\_3PLANE\\_422\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane. This format only supports images with a width that is a multiple of two.

- [VK\\_FORMAT\\_G8\\_B8R8\\_2PLANE\\_422\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane. This format only supports images with a width that is a multiple of two.
- [VK\\_FORMAT\\_G8\\_B8\\_R8\\_3PLANE\\_444\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. Each plane has the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane.
- [VK\\_FORMAT\\_R10X6\\_UNORM\\_PACK16](#) specifies a one-component, 16-bit unsigned normalized format that has a single 10-bit R component in the top 10 bits of a 16-bit word, with the bottom 6 bits unused.
- [VK\\_FORMAT\\_R10X6G10X6\\_UNORM\\_2PACK16](#) specifies a two-component, 32-bit unsigned normalized format that has a 10-bit R component in the top 10 bits of the word in bytes 0..1, and a 10-bit G component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused.
- [VK\\_FORMAT\\_R10X6G10X6B10X6A10X6\\_UNORM\\_4PACK16](#) specifies a four-component, 64-bit unsigned normalized format that has a 10-bit R component in the top 10 bits of the word in bytes 0..1, a 10-bit G component in the top 10 bits of the word in bytes 2..3, a 10-bit B component in the top 10 bits of the word in bytes 4..5, and a 10-bit A component in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused.
- [VK\\_FORMAT\\_G10X6B10X6G10X6R10X6\\_422\\_UNORM\\_4PACK16](#) specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each  $i$  coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 10-bit G component for the even  $i$  coordinate in the top 10 bits of the word in bytes 0..1, a 10-bit B component in the top 10 bits of the word in bytes 2..3, a 10-bit G component for the odd  $i$  coordinate in the top 10 bits of the word in bytes 4..5, and a 10-bit R component in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.
- [VK\\_FORMAT\\_B10X6G10X6R10X6G10X6\\_422\\_UNORM\\_4PACK16](#) specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each  $i$  coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 10-bit B component in the top 10 bits of the word in bytes 0..1, a 10-bit G component for the even  $i$  coordinate in the top 10 bits of the word in bytes 2..3, a 10-bit R component in the top 10 bits of the word in bytes 4..5, and a 10-bit G

component for the odd  $i$  coordinate in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- [VK\\_FORMAT\\_G10X6\\_B10X6\\_R10X6\\_3PLANE\\_420\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$  and  $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane. This format only supports images with a width and height that is a multiple of two.
- [VK\\_FORMAT\\_G10X6\\_B10X6R10X6\\_2PLANE\\_420\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$  and  $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane. This format only supports images with a width and height that is a multiple of two.
- [VK\\_FORMAT\\_G10X6\\_B10X6\\_R10X6\\_3PLANE\\_422\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane. This format only supports images with a width that is a multiple of two.
- [VK\\_FORMAT\\_G10X6\\_B10X6R10X6\\_2PLANE\\_422\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for

the BR plane. This format only supports images with a width that is a multiple of two.

- [VK\\_FORMAT\\_G10X6\\_B10X6\\_R10X6\\_3PLANE\\_444\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. Each plane has the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane.
- [VK\\_FORMAT\\_R12X4\\_UNORM\\_PACK16](#) specifies a one-component, 16-bit unsigned normalized format that has a single 12-bit R component in the top 12 bits of a 16-bit word, with the bottom 4 bits unused.
- [VK\\_FORMAT\\_R12X4G12X4\\_UNORM\\_2PACK16](#) specifies a two-component, 32-bit unsigned normalized format that has a 12-bit R component in the top 12 bits of the word in bytes 0..1, and a 12-bit G component in the top 12 bits of the word in bytes 2..3, with the bottom 4 bits of each word unused.
- [VK\\_FORMAT\\_R12X4G12X4B12X4A12X4\\_UNORM\\_4PACK16](#) specifies a four-component, 64-bit unsigned normalized format that has a 12-bit R component in the top 12 bits of the word in bytes 0..1, a 12-bit G component in the top 12 bits of the word in bytes 2..3, a 12-bit B component in the top 12 bits of the word in bytes 4..5, and a 12-bit A component in the top 12 bits of the word in bytes 6..7, with the bottom 4 bits of each word unused.
- [VK\\_FORMAT\\_G12X4B12X4G12X4R12X4\\_422\\_UNORM\\_4PACK16](#) specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each *i* coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 12-bit G component for the even *i* coordinate in the top 12 bits of the word in bytes 0..1, a 12-bit B component in the top 12 bits of the word in bytes 2..3, a 12-bit G component for the odd *i* coordinate in the top 12 bits of the word in bytes 4..5, and a 12-bit R component in the top 12 bits of the word in bytes 6..7, with the bottom 4 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.
- [VK\\_FORMAT\\_B12X4G12X4R12X4G12X4\\_422\\_UNORM\\_4PACK16](#) specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each *i* coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 12-bit B component in the top 12 bits of the word in bytes 0..1, a 12-bit G component for the even *i* coordinate in the top 12 bits of the word in bytes 2..3, a 12-bit R component in the top 12 bits of the word in bytes 4..5, and a 12-bit G component for the odd *i* coordinate in the top 12 bits of the word in bytes 6..7, with the bottom 4 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.
- [VK\\_FORMAT\\_G12X4\\_B12X4\\_R12X4\\_3PLANE\\_420\\_UNORM\\_3PACK16](#) specifies an unsigned

normalized *multi-planar format* that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a 12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each word unused. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$  and  $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane. This format only supports images with a width and height that is a multiple of two.

- [VK\\_FORMAT\\_G12X4\\_B12X4R12X4\\_2PLANE\\_420\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word in bytes 2..3, with the bottom 4 bits of each word unused. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$  and  $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane. This format only supports images with a width and height that is a multiple of two.
- [VK\\_FORMAT\\_G12X4\\_B12X4\\_R12X4\\_3PLANE\\_422\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a 12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each word unused. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane. This format only supports images with a width that is a multiple of two.
- [VK\\_FORMAT\\_G12X4\\_B12X4R12X4\\_2PLANE\\_422\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word in bytes 2..3, with the bottom 4 bits of each word unused. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane. This format only supports images with a width that is a multiple of two.
- [VK\\_FORMAT\\_G12X4\\_B12X4\\_R12X4\\_3PLANE\\_444\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a 12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each

word unused. Each plane has the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane.

- [VK\\_FORMAT\\_G16B16G16R16\\_422\\_UNORM](#) specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a  $2 \times 1$  rectangle of unsigned normalized RGB texel data. One G value is present at each  $i$  coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 16-bit G component for the even  $i$  coordinate in the word in bytes 0..1, a 16-bit B component in the word in bytes 2..3, a 16-bit G component for the odd  $i$  coordinate in the word in bytes 4..5, and a 16-bit R component in the word in bytes 6..7. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a  $2 \times 1$  compressed texel block.
- [VK\\_FORMAT\\_B16G16R16G16\\_422\\_UNORM](#) specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a  $2 \times 1$  rectangle of unsigned normalized RGB texel data. One G value is present at each  $i$  coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 16-bit B component in the word in bytes 0..1, a 16-bit G component for the even  $i$  coordinate in the word in bytes 2..3, a 16-bit R component in the word in bytes 4..5, and a 16-bit G component for the odd  $i$  coordinate in the word in bytes 6..7. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a  $2 \times 1$  compressed texel block.
- [VK\\_FORMAT\\_G16\\_B16\\_R16\\_3PLANE\\_420\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$  and  $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane. This format only supports images with a width and height that is a multiple of two.
- [VK\\_FORMAT\\_G16\\_B16R16\\_2PLANE\\_420\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in the word in bytes 2..3. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$  and  $\lfloor j_G \times 0.5 \rfloor = j_B = j_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane. This format only supports images with a width and height that is a multiple of two.
- [VK\\_FORMAT\\_G16\\_B16\\_R16\\_3PLANE\\_422\\_UNORM](#) specifies an unsigned normalized *multi-*

*planar format* that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane. This format only supports images with a width that is a multiple of two.

- [VK\\_FORMAT\\_G16\\_B16R16\\_2PLANE\\_422\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in the word in bytes 2..3. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which  $\lfloor i_G \times 0.5 \rfloor = i_B = i_R$ . The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane. This format only supports images with a width that is a multiple of two.
- [VK\\_FORMAT\\_G16\\_B16\\_R16\\_3PLANE\\_444\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. Each plane has the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the B plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#) for the R plane.
- [VK\\_FORMAT\\_G8\\_B8R8\\_2PLANE\\_444\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. Both planes have the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane.
- [VK\\_FORMAT\\_G10X6\\_B10X6R10X6\\_2PLANE\\_444\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, the bottom 6 bits of each word unused. Both planes have the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane.
- [VK\\_FORMAT\\_G12X4\\_B12X4R12X4\\_2PLANE\\_444\\_UNORM\\_3PACK16](#) specifies an unsigned normalized *multi-planar format* that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word

in bytes 2..3, the bottom 4 bits of each word unused. Both planes have the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane.

- [VK\\_FORMAT\\_G16\\_B16R16\\_2PLANE\\_444\\_UNORM](#) specifies an unsigned normalized *multi-planar format* that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in the word in bytes 2..3. Both planes have the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via [vkGetImageSubresourceLayout](#), using [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#) for the G plane, and [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#) for the BR plane.

### 49.1.1. Compatible Formats of Planes of Multi-Planar Formats

Individual planes of [multi-planar formats](#) are size-compatible with single-plane color formats if they occupy the same number of bits per texel block, and are compatible with those formats if they have the same block extent.

In the following table, individual planes of a *multi-planar* format are compatible with the format listed against the relevant plane index for that multi-planar format, and any format compatible with the listed single-plane format according to [Format Compatibility Classes](#). These planes are also [size-compatible](#) with any format that is [size-compatible](#) with the listed single-plane format.

Table 70. Plane Format Compatibility

| Plane                                               | Compatible format for plane          | Width relative to the width $w$ of the plane with the largest dimensions | Height relative to the height $h$ of the plane with the largest dimensions |
|-----------------------------------------------------|--------------------------------------|--------------------------------------------------------------------------|----------------------------------------------------------------------------|
| <a href="#">VK_FORMAT_G8_B8_R8_3PLANE_420_UNORM</a> |                                      |                                                                          |                                                                            |
| 0                                                   | <a href="#">VK_FORMAT_R8_UNORM</a>   | $w$                                                                      | $h$                                                                        |
| 1                                                   | <a href="#">VK_FORMAT_R8_UNORM</a>   | $w/2$                                                                    | $h/2$                                                                      |

### 49.1.2. Compatible Formats for Depth-Stencil to/from Color Copies

If the `maintenance8` feature is enabled, individual aspects of depth-stencil formats are size-compatible with certain single-component color formats when performing bit-wise copy operations. The following is a complete list of all per-aspect format compatibility relations by size:

- 32-bit depth (VK\_FORMAT\_D32\_SFLOAT, VK\_FORMAT\_D32\_SFLOAT\_S8\_UINT)
  - VK\_FORMAT\_R32\_SFLOAT, VK\_FORMAT\_R32\_SINT, VK\_FORMAT\_R32\_UINT
- 24-bit depth (VK\_FORMAT\_X8\_D24\_UNORM\_PACK32, VK\_FORMAT\_D24\_UNORM\_S8\_UINT)
  - VK\_FORMAT\_R32\_SFLOAT, VK\_FORMAT\_R32\_SINT, VK\_FORMAT\_R32\_UINT
- 16-bit depth (VK\_FORMAT\_D16\_UNORM, VK\_FORMAT\_D16\_UNORM\_S8\_UINT)
  - VK\_FORMAT\_R16\_SFLOAT, VK\_FORMAT\_R16\_UNORM, VK\_FORMAT\_R16\_SNORM, VK\_FORMAT\_R16\_UINT, VK\_FORMAT\_R16\_SINT
- 8-bit stencil (VK\_FORMAT\_S8\_UINT, VK\_FORMAT\_D16\_UNORM\_S8\_UINT, VK\_FORMAT\_D24\_UNORM\_S8\_UINT, VK\_FORMAT\_D32\_SFLOAT\_S8\_UINT)
  - VK\_FORMAT\_R8\_UINT, VK\_FORMAT\_R8\_SINT, VK\_FORMAT\_R8\_UNORM, VK\_FORMAT\_R8\_SNORM

### 49.1.3. Multi-Planar Format Image Aspect

When using `VkImageAspectFlagBits` to select a plane of a `multi-planar format`, the following are the

valid options:

- Two planes
  - [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#)
  - [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#)
- Three planes
  - [VK\\_IMAGE\\_ASPECT\\_PLANE\\_0\\_BIT](#)
  - [VK\\_IMAGE\\_ASPECT\\_PLANE\\_1\\_BIT](#)
  - [VK\\_IMAGE\\_ASPECT\\_PLANE\\_2\\_BIT](#)

#### 49.1.4. Packed Formats

For the purposes of address alignment when accessing buffer memory containing vertex attribute or texel data, the following formats are considered *packed* - components of the texels or attributes are stored in bitfields packed into one or more 8-, 16-, or 32-bit fundamental data type.

- [Packed into 8-bit data types:](#)
  - [VK\\_FORMAT\\_R4G4\\_UNORM\\_PACK8](#)
- [Packed into 16-bit data types:](#)
  - [VK\\_FORMAT\\_R4G4B4A4\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_B4G4R4A4\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_R5G6B5\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_B5G6R5\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_R5G5B5A1\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_B5G5R5A1\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_A1R5G5B5\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_A1B5G5R5\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_R10X6\\_UNORM\\_PACK16](#)
  - [VK\\_FORMAT\\_R10X6G10X6\\_UNORM\\_2PACK16](#)
  - [VK\\_FORMAT\\_R10X6G10X6B10X6A10X6\\_UNORM\\_4PACK16](#)

### 49.1.5. Identification of Formats

A “format” is represented by a single enum value. The name of a format is usually built up by using the following pattern:

```
VK_FORMAT_{component-format|compression-scheme}_{numeric-format}
```

The component-format indicates either the size of the R, G, B, and A components (if they are present) in the case of a color format, or the size of the depth (D) and stencil (S) components (if they are present) in the case of a depth/stencil format (see below). An X indicates a component that is unused, but **may** be present for padding.

Table 71. Interpretation of Numeric Format

| Numeric format                            | Type-Declaration instructions | Numeric type     | Description                                                                                                                                                                                 |
|-------------------------------------------|-------------------------------|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UNORM                                     | OpTypeFloat                   | floating-point   | The components are unsigned normalized values in the range [0,1]                                                                                                                            |
| SNORM                                     | OpTypeFloat                   | floating-point   | The components are signed normalized values in the range [-1,1]                                                                                                                             |
| USCALED                                   | OpTypeFloat                   | floating-point   | The components are unsigned integer values that get converted to floating-point in the range $[0, 2^n - 1]$                                                                                 |
| SSCALED                                   | OpTypeFloat                   | floating-point   | The components are signed integer values that get converted to floating-point in the range $[-2^{n-1}, 2^{n-1} - 1]$                                                                        |
| UINT                                      | OpTypeInt                     | unsigned integer | The components are unsigned integer values in the range $[0, 2^n - 1]$                                                                                                                      |
| SINT                                      | OpTypeInt                     | signed integer   | The components are signed integer values in the range $[-2^{n-1}, 2^{n-1} - 1]$                                                                                                             |
| UFLOAT                                    | OpTypeFloat                   | floating-point   | The components are unsigned floating-point numbers (used by packed, shared exponent, and some compressed formats)                                                                           |
| SFLOAT                                    | OpTypeFloat                   | floating-point   | The components are signed floating-point numbers                                                                                                                                            |
| SRGB                                      | OpTypeFloat                   | floating-point   | The R, G, and B components are unsigned normalized values that represent values using sRGB nonlinear encoding, while the A component (if one exists) is a regular unsigned normalized value |
| n is the number of bits in the component. |                               |                  |                                                                                                                                                                                             |

The suffix **\_PACKnn** indicates that the format is packed into an underlying type with **nn** bits. The suffix **\_mPACKnn** is a short-hand that indicates that the format has **m** groups of components (which may or may not be stored in separate *planes*) that are each packed into an underlying type with **nn** bits.

The suffix **\_BLOCK** indicates that the format is a block-compressed format, with the representation of multiple texels encoded interdependently within a region.

Table 72. Interpretation of Compression Scheme

| Compression scheme | Description                                                                      |

Packed formats store multiple components within one underlying type. The bit representation is that the first component specified in the name of the format is in the most-significant bits and the last component specified is in the least-significant bits of the underlying type. The in-memory ordering of bytes comprising the underlying type is determined by the host endianness.

Table 74. Bit Mappings for Packed 8-Bit Formats

### 49.1.7. Depth/Stencil Formats

Depth/stencil formats are considered opaque and need not be stored in the exact number of bits per texel or component ordering indicated by the format enum. However, implementations **must** not substitute a different depth or stencil precision than is described in the format (e.g. D16 **must** not be implemented as D24 or D32).

### 49.1.8. Format Compatibility Classes

Uncompressed color formats are *compatible* with each other if they occupy the same number of bits per texel block as long as neither or both are alpha formats (e.g., [VK\\_FORMAT\\_A8\\_UNORM](#)) . Compressed color formats are compatible with each other if the only difference between them is the [numeric format](#) of the uncompressed texels. Each depth/stencil format is only compatible with itself. In the [following](#) table, all the formats in the same row are compatible. Each format has a defined *texel block extent* specifying how many texels each texel block represents in each dimension.

Table 77. Compatible Formats

| Class, Texel Block Size, Texel Block Extent, # Texels/Block             | Formats                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Size Compatibility

Color formats with the same texel block size are considered *size-compatible* as long as neither or both are alpha formats (e.g., [VK\\_FORMAT\\_A8\\_UNORM](#)). If two size-compatible formats have

different block extents (i.e. for compressed formats), then an image with size  $A \times B \times C$  in one format with a block extent of  $a \times b \times c$  can be represented as an image with size  $X \times Y \times Z$  in the other format with block extent  $x \times y \times z$  at the ratio between the block extents for each format, where

$$\lceil A/a \rceil = \lceil X/x \rceil$$

$$\lceil B/b \rceil = \lceil Y/y \rceil$$

$$\lceil C/c \rceil = \lceil Z/z \rceil$$

#### NOTE

For example, a 7x3 image in the [VK\\_FORMAT\\_ASTC\\_8x5\\_UNORM\\_BLOCK](#) format can be represented as a 1x1 [VK\\_FORMAT\\_R64G64\\_UINT](#) image.

Images created with the [VK\\_IMAGE\\_CREATE\\_BLOCK\\_TEXEL\\_VIEW\\_COMPATIBLE\\_BIT](#) flag can have size-compatible views created from them to enable access via different size-compatible formats. Image views created in this way will be sized to match the expectations of the block extents noted above.

Copy operations are able to copy between size-compatible formats in different resources to enable manipulation of data in different formats. The extent used in these copy operations always matches the source image, and is resized to the expectations of the block extents noted above for the destination image.

Copy operations between color formats and a depth-stencil are size-compatible as defined by [the list of compatible depth-stencil and color formats](#).

## 49.2. Format Properties

To query supported format features which are properties of the physical device, call:

#### WARNING

This functionality is superseded by [vkGetPhysicalDeviceFormatProperties2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceFormatProperties(
    VkPhysicalDevice    physicalDevice,
    VkFormat            format,
    VkFormatProperties*  pFormatProperties);
```

- `physicalDevice` is the physical device from which to query the format properties.
- `format` is the format whose properties are queried.
- `pFormatProperties` is a pointer to a [VkFormatProperties](#) structure in which physical device

properties for `format` are returned.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFormatProperties-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceFormatProperties-format-parameter `format` **must** be a valid `VkFormat` value
- VUID-vkGetPhysicalDeviceFormatProperties-pFormatProperties-parameter `pFormatProperties` **must** be a valid pointer to a `VkFormatProperties` structure

The `VkFormatProperties` structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkFormatProperties {
    VkFormatFeatureFlags    linearTilingFeatures;
    VkFormatFeatureFlags    optimalTilingFeatures;
    VkFormatFeatureFlags    bufferFeatures;
} VkFormatProperties;
```

- `linearTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_LINEAR`.
- `optimalTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_OPTIMAL`.
- `bufferFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by buffers.

#### NOTE

If no format feature flags are supported, the format itself is not supported, and images of that format cannot be created.

If `format` is block-compressed, [requires sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#), or is a depth/stencil format then `bufferFeatures` **must** not support any features for the format.

If `format` is not a multi-plane format then `linearTilingFeatures` and `optimalTilingFeatures` **must** not contain `VK_FORMAT_FEATURE_DISJOINT_BIT`.

Bits which **can** be set in the `VkFormatProperties` features `linearTilingFeatures`, `optimalTilingFeatures`, `VkDrmFormatModifierPropertiesEXT::drmFormatModifierTilingFeatures`, and `bufferFeatures` are:

#### WARNING

This functionality is superseded by `VkFormatFeatureFlagBits2`. See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
typedef enum VkFormatFeatureFlagBits {
```

```

VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT = 0x00000001,

VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT_KHR =
VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT,
} VkFormatFeatureFlagBits;

```

These values all have the same meaning as the equivalently named values for `VkFormatFeatureFlags2` and **may** be set in `linearTilingFeatures`, `optimalTilingFeatures`, and `VkDrmFormatModifierPropertiesEXT::drmFormatModifierTilingFeatures`, specifying that the features are supported by `images` or `image views` or `sampler Y'CBCR conversion objects` created with the queried `vkGetPhysicalDeviceFormatProperties::format:`

- `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` specifies that an image view **can** be `sampled from`.
- `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT` specifies that an image view **can** be used as a `storage image`.
- `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT` specifies that an image view **can** be used as storage image that supports atomic operations.

- `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` specifies that an image view **can** be used as a framebuffer color attachment and as an input attachment.
- `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT` specifies that an image view **can** be used as a framebuffer color attachment that supports blending.
- `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT` specifies that an image view **can** be used as a framebuffer depth/stencil attachment and as an input attachment.
- `VK_FORMAT_FEATURE_BLIT_SRC_BIT` specifies that an image **can** be used as `srcImage` for the `vkCmdBlitImage2` and `vkCmdBlitImage` commands.
- `VK_FORMAT_FEATURE_BLIT_DST_BIT` specifies that an image **can** be used as `dstImage` for the `vkCmdBlitImage2` and `vkCmdBlitImage` commands.
- `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` specifies that if `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` is also set, an image view **can** be used with a sampler that has either of `magFilter` or `minFilter` set to `VK_FILTER_LINEAR`, or `mipmapMode` set to `VK_SAMPLER_MIPMAP_MODE_LINEAR`. If `VK_FORMAT_FEATURE_BLIT_SRC_BIT` is also set, an image can be used as the `srcImage` to `vkCmdBlitImage2` and `vkCmdBlitImage` with a `filter` of `VK_FILTER_LINEAR`. This bit **must** only be exposed for formats that also support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` or `VK_FORMAT_FEATURE_BLIT_SRC_BIT`.

If the format being queried is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports linear filtering, and that linear filtering of the depth aspect is supported whether depth compare is enabled in the sampler or not. Where depth comparison is supported it **may** be linear filtered whether this bit is present or not, but where this bit is not present the filtered value **may** be computed in an implementation-dependent manner which differs from the normal rules of linear filtering. The resulting value **must** be in the range [0,1] and **should** be proportional to, or a weighted average of, the number of comparison passes or failures.

- `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT` specifies that an image **can** be used as a source image for `copy commands`. If the application `apiVersion` is Vulkan 1.0 and `VK_KHR_maintenance1` is not supported, `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT` is implied to be set when the format feature flag is not 0.
- `VK_FORMAT_FEATURE_TRANSFER_DST_BIT` specifies that an image **can** be used as a destination image for `copy commands` and `clear commands`. If the application `apiVersion` is Vulkan 1.0 and `VK_KHR_maintenance1` is not supported, `VK_FORMAT_FEATURE_TRANSFER_DST_BIT` is implied to be set when the format feature flag is not 0.
- `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT` specifies `VkImage` **can** be used as a sampled image with a min or max `VkSamplerReductionMode`. This bit **must** only be exposed for formats that also support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`.
- `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT` specifies that `VkImage` **can** be used with a sampler that has either of `magFilter` or `minFilter` set to `VK_FILTER_CUBIC_EXT`, or be the source image for a blit with `filter` set to `VK_FILTER_CUBIC_EXT`. This bit **must** only be exposed for formats that also support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`. If the format being queried is a depth/stencil format, this only specifies that the depth aspect is cubic filterable.
- `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT` specifies that an application **can**

define a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) using this format as a source, and that an image of this format **can** be used with a [VkSamplerYcbcrConversionCreateInfo](#) [xChromaOffset](#) and/or [yChromaOffset](#) of [VK\\_CHROMA\\_LOCATION\\_MIDPOINT](#). Otherwise both [xChromaOffset](#) and [yChromaOffset](#) **must** be [VK\\_CHROMA\\_LOCATION\\_COSITED\\_EVEN](#). If a format does not incorporate chroma downsampling (it is not a “422” or “420” format) but the implementation supports sampler Y'C<sub>B</sub>C<sub>R</sub> conversion for this format, the implementation **must** set [VK\\_FORMAT\\_FEATURE\\_MIDPOINT\\_CHROMA\\_SAMPLES\\_BIT](#).

- [VK\\_FORMAT\\_FEATURE\\_COSITED\\_CHROMA\\_SAMPLES\\_BIT](#) specifies that an application **can** define a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) using this format as a source, and that an image of this format **can** be used with a [VkSamplerYcbcrConversionCreateInfo](#) [xChromaOffset](#) and/or [yChromaOffset](#) of [VK\\_CHROMA\\_LOCATION\\_COSITED\\_EVEN](#). Otherwise both [xChromaOffset](#) and [yChromaOffset](#) **must** be [VK\\_CHROMA\\_LOCATION\\_MIDPOINT](#). If neither [VK\\_FORMAT\\_FEATURE\\_COSITED\\_CHROMA\\_SAMPLES\\_BIT](#) nor [VK\\_FORMAT\\_FEATURE\\_MIDPOINT\\_CHROMA\\_SAMPLES\\_BIT](#) is set, the application **must** not define a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) using this format as a source.
- [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_LINEAR\\_FILTER\\_BIT](#) specifies that an application **can** define a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) using this format as a source with [chromaFilter](#) set to [VK\\_FILTER\\_LINEAR](#).
- [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_SEPARATE\\_RECONSTRUCTION\\_FILTER\\_BIT](#) specifies that the format can have different chroma, min, and mag filters.
- [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_CHROMA\\_RECONSTRUCTION\\_EXPLICIT\\_BIT](#) specifies that reconstruction is explicit, as described in [Chroma Reconstruction](#). If this bit is not present, reconstruction is implicit by default.
- [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_CHROMA\\_RECONSTRUCTION\\_EXPLICIT\\_FORCEABLE\\_BIT](#) specifies that reconstruction **can** be forcibly made explicit by setting [VkSamplerYcbcrConversionCreateInfo::forceExplicitReconstruction](#) to [VK\\_TRUE](#). If the format being queried supports [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_CHROMA\\_RECONSTRUCTION\\_EXPLICIT\\_BIT](#) it **must** also support [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_CHROMA\\_RECONSTRUCTION\\_EXPLICIT\\_FORCEABLE\\_BIT](#).
- [VK\\_FORMAT\\_FEATURE\\_DISJOINT\\_BIT](#) specifies that a multi-planar image **can** have the [VK\\_IMAGE\\_CREATE\\_DISJOINT\\_BIT](#) set during image creation. An implementation **must** not set [VK\\_FORMAT\\_FEATURE\\_DISJOINT\\_BIT](#) for *single-plane formats*.
- [VK\\_FORMAT\\_FEATURE\\_FRAGMENT\\_DENSITY\\_MAP\\_BIT\\_EXT](#) specifies that an image view **can** be used as a [fragment density map attachment](#).
- [VK\\_FORMAT\\_FEATURE\\_FRAGMENT\\_SHADING\\_RATE\\_ATTACHMENT\\_BIT\\_KHR](#) specifies that an image view **can** be used as a [fragment shading rate attachment](#). An implementation **must** not set this feature for formats with a [numeric format](#) other than [UINT](#), or set it as a buffer feature.
- [VK\\_FORMAT\\_FEATURE\\_VIDEO\\_DECODE\\_OUTPUT\\_BIT\\_KHR](#) specifies that an image view with this format **can** be used as a [decode output picture](#) in [video decode operations](#).
- [VK\\_FORMAT\\_FEATURE\\_VIDEO\\_DECODE\\_DPB\\_BIT\\_KHR](#) specifies that an image view with this format **can** be used as an output [reconstructed picture](#) or an input [reference picture](#) in [video decode operations](#).

- [VK\\_FORMAT\\_FEATURE\\_VIDEO\\_ENCODE\\_INPUT\\_BIT\\_KHR](#) specifies that an image view with this format **can** be used as an [encode input picture](#) in [video encode operations](#).
- [VK\\_FORMAT\\_FEATURE\\_VIDEO\\_ENCODE\\_DPB\\_BIT\\_KHR](#) specifies that an image view with this format **can** be used as an output [reconstructed picture](#) or an input [reference picture](#) in [video encode operations](#).

#### NOTE

Specific [video profiles](#) **may** have additional restrictions on the format and other image creation parameters corresponding to image views used by video coding operations that **can** be enumerated using the [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#) command.

The following bits **may** be set in [bufferFeatures](#), specifying that the features are supported by [buffers](#) or [buffer views](#) created with the queried [vkGetPhysicalDeviceFormatProperties::format](#):

- [VK\\_FORMAT\\_FEATURE\\_UNIFORM\\_TEXEL\\_BUFFER\\_BIT](#) specifies that the format **can** be used to create a buffer view that **can** be bound to a [VK\\_DESCRIPTOR\\_TYPE\\_UNIFORM\\_TEXEL\\_BUFFER](#) descriptor.
- [VK\\_FORMAT\\_FEATURE\\_STORAGE\\_TEXEL\\_BUFFER\\_BIT](#) specifies that the format **can** be used to create a buffer view that **can** be bound to a [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_TEXEL\\_BUFFER](#) descriptor.
- [VK\\_FORMAT\\_FEATURE\\_STORAGE\\_TEXEL\\_BUFFER\\_ATOMIC\\_BIT](#) specifies that atomic operations are supported on [VK\\_DESCRIPTOR\\_TYPE\\_STORAGE\\_TEXEL\\_BUFFER](#) with this format.
- [VK\\_FORMAT\\_FEATURE\\_VERTEX\\_BUFFER\\_BIT](#) specifies that the format **can** be used as a vertex attribute format ([VkVertexInputAttributeDescription::format](#)).
- [VK\\_FORMAT\\_FEATURE\\_ACCELERATION\\_STRUCTURE\\_VERTEX\\_BUFFER\\_BIT\\_KHR](#) specifies that the format **can** be used as the vertex format when creating an [acceleration structure](#) ([VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat](#)). This format **can** also be used as the vertex format in host memory when doing [host acceleration structure](#) builds.

#### NOTE

[VK\\_FORMAT\\_FEATURE\\_STORAGE\\_IMAGE\\_ATOMIC\\_BIT](#) and [VK\\_FORMAT\\_FEATURE\\_STORAGE\\_TEXEL\\_BUFFER\\_ATOMIC\\_BIT](#) are only intended to be advertised for single-component formats, since SPIR-V atomic operations require a scalar type.

#### WARNING

This functionality is superseded by [VkFormatFeatureFlags2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
typedef VkFlags VkFormatFeatureFlags;
```

[VkFormatFeatureFlags](#) is a bitmask type for setting a mask of zero or more [VkFormatFeatureFlagBits](#).

To query supported format features which are properties of the physical device, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceFormatProperties2(
    VkPhysicalDevice          physicalDevice,
    VkFormat                  format,
    VkFormatProperties2*      pFormatProperties);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceFormatProperties2
void vkGetPhysicalDeviceFormatProperties2KHR(
    VkPhysicalDevice          physicalDevice,
    VkFormat                  format,
    VkFormatProperties2*      pFormatProperties);
```

- **physicalDevice** is the physical device from which to query the format properties.
- **format** is the format whose properties are queried.
- **pFormatProperties** is a pointer to a [VkFormatProperties2](#) structure in which physical device properties for **format** are returned.

**vkGetPhysicalDeviceFormatProperties2** behaves similarly to [vkGetPhysicalDeviceFormatProperties](#), with the ability to return extended information in a **pNext** chain of output structures.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFormatProperties2-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceFormatProperties2-format-parameter **format** **must** be a valid [VkFormat](#) value
- VUID-vkGetPhysicalDeviceFormatProperties2-pFormatProperties-parameter **pFormatProperties** **must** be a valid pointer to a [VkFormatProperties2](#) structure

The **VkFormatProperties2** structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkFormatProperties2 {
    VkStructureType    sType;
    void*              pNext;
    VkFormatProperties  formatProperties;
} VkFormatProperties2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkFormatProperties2
typedef VkFormatProperties2 VkFormatProperties2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatProperties` is a `VkFormatProperties` structure describing features supported by the requested format.

### Valid Usage (Implicit)

- VUID-VkFormatProperties2-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_2`
- VUID-VkFormatProperties2-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkDrmFormatModifierPropertiesList2EXT`, `VkDrmFormatModifierPropertiesListEXT`, `VkFormatProperties3`, `VkFormatProperties4KHR`, or `VkSubpassResolvePerformanceQueryEXT`
- VUID-VkFormatProperties2-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

To obtain the list of `Linux DRM format modifiers` compatible with a `VkFormat`, add a `VkDrmFormatModifierPropertiesListEXT` structure to the `pNext` chain of `VkFormatProperties2`.

The `VkDrmFormatModifierPropertiesListEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierPropertiesListEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            drmFormatModifierCount;
    VkDrmFormatModifierPropertiesEXT* pDrmFormatModifierProperties;
} VkDrmFormatModifierPropertiesListEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifierCount` is an inout parameter related to the number of modifiers compatible with the `format`, as described below.
- `pDrmFormatModifierProperties` is either `NULL` or a pointer to an array of `VkDrmFormatModifierPropertiesEXT` structures.

If `pDrmFormatModifierProperties` is `NULL`, then the function returns in `drmFormatModifierCount` the number of modifiers compatible with the queried `format`. Otherwise, the application **must** set `drmFormatModifierCount` to the length of the array `pDrmFormatModifierProperties`; the function will write at most `drmFormatModifierCount` elements to the array, and will return in `drmFormatModifierCount` the number of elements written.

Among the elements in array `pDrmFormatModifierProperties`, each returned `drmFormatModifier` **must**

be unique.

### Valid Usage (Implicit)

- `VUID-VkDrmFormatModifierPropertiesListEXT-sType-sType`  
`sType` **must** be `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_EXT`

### Structure Chaining

#### Extends the structure

- `VkFormatProperties2`

The `VkDrmFormatModifierPropertiesEXT` structure describes properties of a `VkFormat` when that format is combined with a `Linux DRM format modifier`. These properties, like those of `VkFormatProperties2`, are independent of any particular image.

The `VkDrmFormatModifierPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierPropertiesEXT {
    uint64_t          drmFormatModifier;
    uint32_t          drmFormatModifierPlaneCount;
    VkFormatFeatureFlags  drmFormatModifierTilingFeatures;
} VkDrmFormatModifierPropertiesEXT;
```

- `drmFormatModifier` is a *Linux DRM format modifier*.
- `drmFormatModifierPlaneCount` is the number of *memory planes* in any image created with `format` and `drmFormatModifier`. An image's *memory planecount* is distinct from its *format planecount*, as explained below.
- `drmFormatModifierTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` that are supported by any image created with `format` and `drmFormatModifier`.

The returned `drmFormatModifierTilingFeatures` **must** contain at least one bit.

The implementation **must** not return `DRM_FORMAT_MOD_INVALID` in `drmFormatModifier`.

An image's *memory planecount* (as returned by `drmFormatModifierPlaneCount`) is distinct from its *format planecount* (in the sense of `multi-planar format`). In `VkImageAspectFlags`, each `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` represents a *memory plane* and each `VK_IMAGE_ASPECT_PLANE_i_BIT` a *format plane*.

An image's set of *format planes* is an ordered partition of the image's **content** into separable groups of format components. The ordered partition is encoded in the name of each `VkFormat`. For example, `VK_FORMAT_G8_B8R8_2PLANE_420_UNORM` contains two *format planes*; the first plane contains the green component and the second plane contains the blue component and red

component. If the format name does not contain **PLANE**, then the format contains a single plane; for example, **VK\_FORMAT\_R8G8B8A8\_UNORM**. Some commands, such as **vkCmdCopyBufferToImage**, do not operate on all format components in the image, but instead operate only on the *format planes* explicitly chosen by the application and operate on each *format plane* independently.

An image's set of *memory planes* is an ordered partition of the image's **memory** rather than the image's **content**. Each *memory plane* is a contiguous range of memory. The union of an image's *memory planes* is not necessarily contiguous.

If an image is **linear**, then the partition is the same for *memory planes* and for *format planes*. Therefore, if the returned **drmFormatModifier** is **DRM\_FORMAT\_MOD\_LINEAR**, then **drmFormatModifierPlaneCount** **must** equal the *format plane*count, and **drmFormatModifierTilingFeatures** **must** be identical to the **VkFormatProperties2::formatProperties.linearTilingFeatures** returned in the same **pNext** chain.

If an image is **non-linear**, then the partition of the image's **memory** into *memory planes* is implementation-specific and **may** be unrelated to the partition of the image's **content** into *format planes*. For example, consider an image whose **format** is **VK\_FORMAT\_G8\_B8\_R8\_3PLANE\_420\_UNORM**, **tiling** is **VK\_IMAGE\_TILING\_DRM\_FORMAT\_MODIFIER\_EXT**, whose **drmFormatModifier** is not **DRM\_FORMAT\_MOD\_LINEAR**, and **flags** lacks **VK\_IMAGE\_CREATE\_DISJOINT\_BIT**. The image has 3 *format planes*, and commands such **vkCmdCopyBufferToImage** act on each *format plane* independently as if the data of each *format plane* were separable from the data of the other planes. In a straightforward implementation, the implementation **may** store the image's content in 3 adjacent *memory planes* where each *memory plane* corresponds exactly to a *format plane*. However, the implementation **may** also store the image's content in a single *memory plane* where all format components are combined using an implementation-private block-compressed format; or the implementation **may** store the image's content in a collection of 7 adjacent *memory planes* using an implementation-private sharding technique. Because the image is non-linear and non-disjoint, the implementation has much freedom when choosing the image's placement in memory.

The *memory plane*count applies to function parameters and structures only when the API specifies an explicit requirement on **drmFormatModifierPlaneCount**. In all other cases, the *memory plane*count is ignored.

The list of **Linux DRM format modifiers** compatible with a **VkFormat** **can** be obtained by adding a **VkDrmFormatModifierPropertiesList2EXT** structure to the **pNext** chain of **VkFormatProperties2**.

The **VkDrmFormatModifierPropertiesList2EXT** structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier with VK_KHR_format_feature_flags2 or
VK_VERSION_1_3
typedef struct VkDrmFormatModifierPropertiesList2EXT {
    VkStructureType          sType;
    void*                    pNext;
    uint32_t                 drmFormatModifierCount;
    VkDrmFormatModifierProperties2EXT* pDrmFormatModifierProperties;
} VkDrmFormatModifierPropertiesList2EXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifierCount` is an inout parameter related to the number of modifiers compatible with the `format`, as described below.
- `pDrmFormatModifierProperties` is either `NULL` or a pointer to an array of `VkDrmFormatModifierProperties2EXT` structures.

If `pDrmFormatModifierProperties` is `NULL`, the number of modifiers compatible with the queried `format` is returned in `drmFormatModifierCount`. Otherwise, the application **must** set `drmFormatModifierCount` to the length of the array `pDrmFormatModifierProperties`; the function will write at most `drmFormatModifierCount` elements to the array, and will return in `drmFormatModifierCount` the number of elements written.

Among the elements in array `pDrmFormatModifierProperties`, each returned `drmFormatModifier` **must** be unique.

Among the elements in array `pDrmFormatModifierProperties`, the bits reported in `drmFormatModifierTilingFeatures` **must** include the bits reported in the corresponding element of `VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties`.

### Valid Usage (Implicit)

- VUID-VkDrmFormatModifierPropertiesList2EXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_2_EXT`

### Structure Chaining

#### Extends the structure

- `VkFormatProperties2`

The `VkDrmFormatModifierProperties2EXT` structure describes properties of a `VkFormat` when that format is combined with a `Linux DRM format modifier`. These properties, like those of `VkFormatProperties2`, are independent of any particular image.

The `VkDrmFormatModifierPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier with VK_KHR_format_feature_flags2 or
VK_VERSION_1_3
typedef struct VkDrmFormatModifierProperties2EXT {
    uint64_t          drmFormatModifier;
    uint32_t          drmFormatModifierPlaneCount;
    VkFormatFeatureFlags2  drmFormatModifierTilingFeatures;
} VkDrmFormatModifierProperties2EXT;
```

- `drmFormatModifier` is a *Linux DRM format modifier*.

- `drmFormatModifierPlaneCount` is the number of *memory planes* in any image created with `format` and `drmFormatModifier`. An image's *memory plane count* is distinct from its *format plane count*, as explained below.
- `drmFormatModifierTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits2` that are supported by any image created with `format` and `drmFormatModifier`.

To query supported format extended features which are properties of the physical device, add `VkFormatProperties3` structure to the `pNext` chain of `VkFormatProperties2`.

The `VkFormatProperties3` structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkFormatProperties3 {
    VkStructureType    sType;
    void*              pNext;
    VkFormatFeatureFlags2 linearTilingFeatures;
    VkFormatFeatureFlags2 optimalTilingFeatures;
    VkFormatFeatureFlags2 bufferFeatures;
} VkFormatProperties3;
```

```
// Provided by VK_KHR_format_feature_flags2
// Equivalent to VkFormatProperties3
typedef VkFormatProperties3 VkFormatProperties3KHR;
```

- `linearTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits2` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_LINEAR`.
- `optimalTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits2` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_OPTIMAL`.
- `bufferFeatures` is a bitmask of `VkFormatFeatureFlagBits2` specifying features supported by buffers.

The bits reported in `linearTilingFeatures`, `optimalTilingFeatures` and `bufferFeatures` **must** include the bits reported in the corresponding fields of `VkFormatProperties2::formatProperties`.

### Valid Usage (Implicit)

- VUID-VkFormatProperties3-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_3`

### Structure Chaining

#### Extends the structure

- `VkFormatProperties2`

Bits which can be set in the [VkFormatProperties3](#) features [linearTilingFeatures](#), [optimalTilingFeatures](#), and [bufferFeatures](#) are:

```
// Provided by VK_VERSION_1_3
// Flag bits for VkFormatFeatureFlagBits2
typedef VkFlags64 VkFormatFeatureFlagBits2;

The following bits **may** be set in `linearTilingFeatures` and `optimalTilingFeatures`, specifying that the features are supported by `images` or `image views` or `sampler Y'CBCR conversion objects` created with the queried `vkGetPhysicalDeviceFormatProperties2::format`:

- `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT` specifies that an image view **can** be `sampled from`.
- `VK_FORMAT_FEATURE_2_STORAGE_IMAGE_BIT` specifies that an image view **can** be used as a `storage image`.
- `VK_FORMAT_FEATURE_2_STORAGE_IMAGE_ATOMIC_BIT` specifies that an image view **can** be used as storage image that supports atomic operations.
- `VK_FORMAT_FEATURE_2_COLOR_ATTACHMENT_BIT` specifies that an image view **can** be used as a framebuffer color attachment and as an input attachment.
- `VK_FORMAT_FEATURE_2_COLOR_ATTACHMENT_BLEND_BIT` specifies that an image view **can** be used as a framebuffer color attachment that supports blending.
- `VK_FORMAT_FEATURE_2_DEPTH_STENCIL_ATTACHMENT_BIT` specifies that an image view **can** be used as a framebuffer depth/stencil attachment and as an input attachment.
- `VK_FORMAT_FEATURE_2_BLIT_SRC_BIT` specifies that an image **can** be used as the `srcImage` for `vkCmdBlitImage2` and `vkCmdBlitImage`.
- `VK_FORMAT_FEATURE_2_BLIT_DST_BIT` specifies that an image **can** be used as the `dstImage` for `vkCmdBlitImage2` and `vkCmdBlitImage`.
- `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_FILTER_LINEAR_BIT` specifies that if `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT` is also set, an image view **can** be used with a sampler that has either of `magFilter` or `minFilter` set to `VK_FILTER_LINEAR`, or `mipmapMode` set to `VK_SAMPLER_MIPMAP_MODE_LINEAR`. If `VK_FORMAT_FEATURE_2_BLIT_SRC_BIT` is also set, an image can be used as the `srcImage` for `vkCmdBlitImage2` and `vkCmdBlitImage` with a `filter` of `VK_FILTER_LINEAR`. This bit **must** only be exposed for formats that also support the `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT` or `VK_FORMAT_FEATURE_2_BLIT_SRC_BIT`.

If the format being queried is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports linear filtering. Where depth comparison is supported it **may** be linear filtered whether this bit is present or not, but where this bit is not present the filtered value **may** be computed in an implementation-dependent

manner which differs from the normal rules of linear filtering. The resulting value **must** be in the range [0,1] and **should** be proportional to, or a weighted average of, the number of comparison passes or failures.

- [VK\\_FORMAT\\_FEATURE\\_2\\_TRANSFER\\_SRC\\_BIT](#) specifies that an image **can** be used as a source image for [copy commands](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_TRANSFER\\_DST\\_BIT](#) specifies that an image **can** be used as a destination image for [copy commands](#) and [clear commands](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_FILTER\\_MINMAX\\_BIT](#) specifies [VkImage](#) **can** be used as a sampled image with a min or max [VkSamplerReductionMode](#). This bit **must** only be exposed for formats that also support the [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_BIT](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_FILTER\\_CUBIC\\_BIT](#) specifies that [VkImage](#) **can** be used with a sampler that has either of [magFilter](#) or [minFilter](#) set to [VK\\_FILTER\\_CUBIC\\_EXT](#), or be the source image for a blit with [filter](#) set to [VK\\_FILTER\\_CUBIC\\_EXT](#). This bit **must** only be exposed for formats that also support the [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_BIT](#). If the format being queried is a depth/stencil format, this only specifies that the depth aspect is cubic filterable.
- [VK\\_FORMAT\\_FEATURE\\_2\\_MIDPOINT\\_CHROMA\\_SAMPLES\\_BIT](#) specifies that an application **can** define a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) using this format as a source, and that an image of this format **can** be used with a [VkSamplerYcbcrConversionCreateInfo](#) [xChromaOffset](#) and/or [yChromaOffset](#) of [VK\\_CHROMA\\_LOCATION\\_MIDPOINT](#). Otherwise both [xChromaOffset](#) and [yChromaOffset](#) **must** be [VK\\_CHROMA\\_LOCATION\\_COSITED\\_EVEN](#). If a format does not incorporate chroma downsampling (it is not a “422” or “420” format) but the implementation supports sampler Y'C<sub>B</sub>C<sub>R</sub> conversion for this format, the implementation **must** set [VK\\_FORMAT\\_FEATURE\\_2\\_MIDPOINT\\_CHROMA\\_SAMPLES\\_BIT](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_COSITED\\_CHROMA\\_SAMPLES\\_BIT](#) specifies that an application **can** define a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) using this format as a source, and that an image of this format **can** be used with a [VkSamplerYcbcrConversionCreateInfo](#) [xChromaOffset](#) and/or [yChromaOffset](#) of [VK\\_CHROMA\\_LOCATION\\_COSITED\\_EVEN](#). Otherwise both [xChromaOffset](#) and [yChromaOffset](#) **must** be [VK\\_CHROMA\\_LOCATION\\_MIDPOINT](#). If neither [VK\\_FORMAT\\_FEATURE\\_2\\_COSITED\\_CHROMA\\_SAMPLES\\_BIT](#) nor [VK\\_FORMAT\\_FEATURE\\_2\\_MIDPOINT\\_CHROMA\\_SAMPLES\\_BIT](#) is set, the application **must** not define a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) using this format as a source.
- [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_LINEAR\\_FILTER\\_BIT](#) specifies that an application **can** define a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) using this format as a source with [chromaFilter](#) set to [VK\\_FILTER\\_LINEAR](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_SEPARATE\\_RECONSTRUCTION\\_FILTER\\_BIT](#) specifies that the format can have different chroma, min, and mag filters.
- [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_CHROMA\\_RECONSTRUCTION\\_EXPLICIT\\_BIT](#) specifies that reconstruction is explicit, as described in [Chroma Reconstruction](#). If this bit is not present, reconstruction is implicit by default.
- [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_YCBCR\\_CONVERSION\\_CHROMA\\_RECONSTRUCTION\\_EXPLICIT\\_FORCEABLE\\_BIT](#) specifies that reconstruction **can** be forcibly made explicit by setting [VkSamplerYcbcrConversionCreateInfo::forceExplicitReconstruction](#) to [VK\\_TRUE](#). If the

format being queried supports  
 VK\_FORMAT\_FEATURE\_2\_SAMPLED\_IMAGE\_YCBCR\_CONVERSION\_CHROMA\_RECONSTRUCTION\_EXPLICIT\_BIT it **must** also support  
 VK\_FORMAT\_FEATURE\_2\_SAMPLED\_IMAGE\_YCBCR\_CONVERSION\_CHROMA\_RECONSTRUCTION\_EXPLICIT\_FORCEABLE\_BIT.

- [VK\\_FORMAT\\_FEATURE\\_2\\_DISJOINT\\_BIT](#) specifies that a multi-planar image **can** have the [VK\\_IMAGE\\_CREATE\\_DISJOINT\\_BIT](#) set during image creation. An implementation **must** not set [VK\\_FORMAT\\_FEATURE\\_2\\_DISJOINT\\_BIT](#) for *single-plane formats*.
- [VK\\_FORMAT\\_FEATURE\\_2\\_FRAGMENT\\_DENSITY\\_MAP\\_BIT\\_EXT](#) specifies that an image view **can** be used as a [fragment density map attachment](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_FRAGMENT\\_SHADING\\_RATE\\_ATTACHMENT\\_BIT\\_KHR](#) specifies that an image view **can** be used as a [fragment shading rate attachment](#). An implementation **must** not set this feature for formats with a [numeric format](#) other than [UINT](#), or set it as a buffer feature.
- [VK\\_FORMAT\\_FEATURE\\_2\\_VIDEO\\_DECODE\\_OUTPUT\\_BIT\\_KHR](#) specifies that an image view with this format **can** be used as a [decode output picture](#) in [video decode operations](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_VIDEO\\_DECODE\\_DPB\\_BIT\\_KHR](#) specifies that an image view with this format **can** be used as an output [reconstructed picture](#) or an input [reference picture](#) in [video decode operations](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_VIDEO\\_ENCODE\\_INPUT\\_BIT\\_KHR](#) specifies that an image view with this format **can** be used as an [encode input picture](#) in [video encode operations](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_VIDEO\\_ENCODE\\_DPB\\_BIT\\_KHR](#) specifies that an image view with this format **can** be used as an output [reconstructed picture](#) or an input [reference picture](#) in [video encode operations](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_DEPTH\\_COPY\\_ON\\_COMPUTE\\_QUEUE\\_BIT\\_KHR](#) specifies that the depth aspect of this format can be copied using a queue family that supports [VK\\_QUEUE\\_COMPUTE\\_BIT](#) but does not support [VK\\_QUEUE\\_GRAPHICS\\_BIT](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_DEPTH\\_COPY\\_ON\\_TRANSFER\\_QUEUE\\_BIT\\_KHR](#) specifies that the depth aspect of this format can be copied using a queue family that supports [VK\\_QUEUE\\_TRANSFER\\_BIT](#) but does not support [VK\\_QUEUE\\_GRAPHICS\\_BIT](#) or [VK\\_QUEUE\\_COMPUTE\\_BIT](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_STENCIL\\_COPY\\_ON\\_COMPUTE\\_QUEUE\\_BIT\\_KHR](#) specifies that the stencil aspect of this format can be copied using a queue family that supports [VK\\_QUEUE\\_COMPUTE\\_BIT](#) but does not support [VK\\_QUEUE\\_GRAPHICS\\_BIT](#).
- [VK\\_FORMAT\\_FEATURE\\_2\\_STENCIL\\_COPY\\_ON\\_TRANSFER\\_QUEUE\\_BIT\\_KHR](#) specifies that the stencil aspect of this format can be copied using a queue family that supports [VK\\_QUEUE\\_TRANSFER\\_BIT](#) but does not support [VK\\_QUEUE\\_GRAPHICS\\_BIT](#) or [VK\\_QUEUE\\_COMPUTE\\_BIT](#).

#### NOTE

Specific [video profiles](#) **may** have additional restrictions on the format and other image creation parameters corresponding to image views used by video coding operations that **can** be enumerated using the [vkGetPhysicalDeviceVideoFormatPropertiesKHR](#) command.

- `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT` specifies that image views or buffer views created with this format **can** be used as [storage images](#) or [storage texel buffers](#) respectively for read operations without specifying a format.
- `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT` specifies that image views or buffer views created with this format **can** be used as [storage images](#) or [storage texel buffers](#) respectively for write operations without specifying a format.
- `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT` specifies that image views created with this format **can** be used for depth comparison performed by `OpImage*Dref*` instructions.
- `VK_FORMAT_FEATURE_2_HOST_IMAGE_TRANSFER_BIT` specifies that an image **can** be created with the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag set.
- `VK_FORMAT_FEATURE_2_COPY_IMAGE_INDIRECT_DST_BIT_KHR` specifies that a `VkImage` **can** be used as destination for [indirect copies](#).
- `VK_FORMAT_FEATURE_2_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR` specifies that an image view with this format **can** be used as a [quantization delta map](#) in [video encode operations](#).
- `VK_FORMAT_FEATURE_2_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR` specifies that an image view with this format **can** be used as an [emphasis map](#) in [video encode operations](#).

**NOTE**

[Video encode quantization maps](#) have additional restrictions specific to the [video profile](#) they are used with that **can** be enumerated using the `vkGetPhysicalDeviceVideoFormatPropertiesKHR` command.

The following bits **may** be set in `bufferFeatures`, specifying that the features are supported by [buffers](#) or [buffer views](#) created with the queried `vkGetPhysicalDeviceFormatProperties2::format`:

- `VK_FORMAT_FEATURE_2_UNIFORM_TEXEL_BUFFER_BIT` specifies that the format **can** be used to create a buffer view that **can** be bound to a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor.
- `VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_BIT` specifies that the format **can** be used to create a buffer view that **can** be bound to a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor.
- `VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_ATOMIC_BIT` specifies that atomic operations are supported on `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` with this format.
- `VK_FORMAT_FEATURE_2_VERTEX_BUFFER_BIT` specifies that the format **can** be used as a vertex attribute format (`VkVertexInputAttributeDescription::format`).
- `VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR` specifies that the format **can** be used as the vertex format when creating an [acceleration structure](#) (`VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat`). This format **can** also be used as the vertex format in host memory when doing [host acceleration structure](#) builds.
- `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT` specifies that buffer views created with this format **can** be used as [storage texel buffers](#) for read operations without specifying a format.

- [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_WRITE\\_WITHOUT\\_FORMAT\\_BIT](#) specifies that buffer views created with this format **can** be used as [storage texel buffers](#) for write operations without specifying a format.

```
// Provided by VK_VERSION_1_3
typedef VkFlags64 VkFormatFeatureFlags2;
```

```
// Provided by VK_KHR_format_feature_flags2
// Equivalent to VkFormatFeatureFlags2
typedef VkFormatFeatureFlags2 VkFormatFeatureFlags2KHR;
```

[VkFormatFeatureFlags2](#) is a bitmask type for setting a mask of zero or more [VkFormatFeatureFlagBits2](#).

The [VkFormatProperties4KHR](#) structure is defined as:

```
// Provided by VK_KHR_extended_flags
typedef struct VkFormatProperties4KHR {
    VkStructureType      sType;
    void*                 pNext;
    VkFormatFeatureFlags4KHR linearTilingFeatures;
    VkFormatFeatureFlags4KHR optimalTilingFeatures;
    VkFormatFeatureFlags4KHR bufferFeatures;
} VkFormatProperties4KHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [linearTilingFeatures](#) is a bitmask of [VkFormatFeatureFlagBits4KHR](#) specifying features supported by images created with a [tiling](#) parameter of `VK_IMAGE_TILING_LINEAR`.
- [optimalTilingFeatures](#) is a bitmask of [VkFormatFeatureFlagBits4KHR](#) specifying features supported by images created with a [tiling](#) parameter of `VK_IMAGE_TILING_OPTIMAL`.
- [bufferFeatures](#) is a bitmask of [VkFormatFeatureFlagBits4KHR](#) specifying features supported by buffers.

To query supported format extended features which are properties of the physical device, add a [VkFormatProperties4KHR](#) structure to the [pNext](#) chain of [VkFormatProperties2](#).

**NOTE**      [VkFormatProperties4KHR](#) supports additional format feature bits beyond those in [VkFormatProperties3](#).

### Valid Usage (Implicit)

- VUID-VkFormatProperties4KHR-sType-sType  
[sType](#) **must** be `VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_4_KHR`

## Structure Chaining

### Extends the structure

- [VkFormatProperties2](#)

Bits which **can** be set in the [VkFormatProperties4KHR](#) features [linearTilingFeatures](#), [optimalTilingFeatures](#), and [bufferFeatures](#) are:

```
// Provided by VK_KHR_extended_flags
// Flag bits for VkFormatFeatureFlagBits4KHR
typedef VkFlags64 VkFormatFeatureFlagBits4KHR;
```

```
// Provided by VK_KHR_extended_flags
typedef VkFlags64 VkFormatFeatureFlags4KHR;
```

[VkFormatFeatureFlags4KHR](#) is a bitmask type for setting a mask of zero or more [VkFormatFeatureFlagBits4KHR](#).

To query the performance characteristics of a [subpass resolve](#) operation for an attachment with a [VkFormat](#), add a [VkSubpassResolvePerformanceQueryEXT](#) structure to the [pNext](#) chain of [VkFormatProperties2](#).

The [VkSubpassResolvePerformanceQueryEXT](#) structure is defined as:

```
// Provided by VK_EXT_multisampled_render_to_single_sampled
typedef struct VkSubpassResolvePerformanceQueryEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           optimal;
} VkSubpassResolvePerformanceQueryEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [optimal](#) specifies that a subpass resolve operation is optimally performed.

If [optimal](#) is [VK\\_FALSE](#) for a [VkFormat](#), using a subpass resolve operation on a multisampled attachment with this format can incur additional costs, including additional memory bandwidth usage and a higher memory footprint. If an attachment with such a format is used in a [multisampled-render-to-single-sampled](#) subpass, the additional memory and memory bandwidth usage can nullify the benefits of using the [VK\\_EXT\\_multisampled\\_render\\_to\\_single\\_sampled](#) extension.

## Valid Usage (Implicit)

- VUID-VkSubpassResolvePerformanceQueryEXT-sType-sType

sType **must** be `VK_STRUCTURE_TYPE_SUBPASS_RESOLVE_PERFORMANCE_QUERY_EXT`

## Structure Chaining

### Extends the structure

- `VkFormatProperties2`

### 49.2.1. Potential Format Features

Some [valid usage conditions](#) depend on the format features supported by a `VkImage` whose `VkImageTiling` is unknown. In such cases the exact `VkFormatFeatureFlagBits` supported by the `VkImage` cannot be determined, so the valid usage conditions are expressed in terms of the *potential format features* of the `VkImage` format.

The *potential format features* of a `VkFormat` are defined as follows:

- The union of `VkFormatFeatureFlagBits` and `VkFormatFeatureFlagBits2`, supported when the `VkImageTiling` is `VK_IMAGE_TILING_OPTIMAL`, `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, or `VK_IMAGE_TILING_LINEAR`

## 49.3. Required Format Support

Implementations **must** support at least the following set of features on the listed formats. For images, these features **must** be supported for every `VkImageType` (including arrayed and cube variants) unless otherwise noted. These features are supported on existing formats without needing to advertise an extension or needing to explicitly enable them. Support for additional functionality beyond the requirements listed here is queried using the `vkGetPhysicalDeviceFormatProperties` command.

#### NOTE

Unless otherwise excluded below, the required formats are supported for all `VkImageCreateFlags` values as long as those flag values are otherwise allowed.

The following tables show which feature bits **must** be supported for each format. Formats that are required to support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` **must** also support `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT` and `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`.

Table 78. Key for Format Feature Tables

|   |                                                                                                                                          |
|---|------------------------------------------------------------------------------------------------------------------------------------------|
| ✓ | This feature <b>must</b> be supported on the named format                                                                                |
| † | This feature <b>must</b> be supported on at least some of the named formats, with more information in the table where the symbol appears |
| ‡ | This feature <b>must</b> be supported with some caveats or preconditions, with more information in the table where the symbol appears    |

|   |                                                                                                                                       |

| The <a href="#">VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT</a> , <a href="#">VK_FORMAT_FEATURE_BLIT_SRC_BIT</a> and <a href="#">VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT</a> features <b>must</b> be supported in <a href="#">optimalTilingFeatures</a> for all the formats in at least one of: this table, <a href="#">Mandatory Format Support: BC Compressed Formats With <i>VkImageType</i> VK_IMAGE_TYPE_2D and VK_IMAGE_TYPE_3D</a> , or <a href="#">Mandatory Format Support: ETC2 and EAC Compressed Formats With <i>VkImageType</i> VK_IMAGE_TYPE_2D</a> . |   |   |   |  |  |  |  |  |  |  |  |  |  |  |  |

If cubic filtering is supported, [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_FILTER\\_CUBIC\\_BIT\\_EXT](#) **must** be supported for the following image view types:

- [VK\\_IMAGE\\_VIEW\\_TYPE\\_2D](#)
- [VK\\_IMAGE\\_VIEW\\_TYPE\\_2D\\_ARRAY](#)

for the following formats:

- [VK\\_FORMAT\\_R4G4\\_UNORM\\_PACK8](#)
- [VK\\_FORMAT\\_R4G4B4A4\\_UNORM\\_PACK16](#)
- [VK\\_FORMAT\\_B4G4R4A4\\_UNORM\\_PACK16](#)
- [VK\\_FORMAT\\_R5G6B5\\_UNORM\\_PACK16](#)
- [VK\\_FORMAT\\_B5G6R5\\_UNORM\\_PACK16](#)
- [VK\\_FORMAT\\_R5G5B5A1\\_UNORM\\_PACK16](#)
- [VK\\_FORMAT\\_B5G5R5A1\\_UNORM\\_PACK16](#)
- [VK\\_FORMAT\\_A1R5G5B5\\_UNORM\\_PACK16](#)
- [VK\\_FORMAT\\_R8\\_UNORM](#)
- [VK\\_FORMAT\\_R8\\_SNORM](#)
- [VK\\_FORMAT\\_R8\\_SRGB](#)
- [VK\\_FORMAT\\_R8G8\\_UNORM](#)
- [VK\\_FORMAT\\_R8G8\\_SNORM](#)

- `VK_FORMAT_R8G8_SRGB`
- `VK_FORMAT_R8G8B8_UNORM`
- `VK_FORMAT_R8G8B8_SNORM`
- `VK_FORMAT_R8G8B8_SRGB`
- `VK_FORMAT_B8G8R8_UNORM`
- `VK_FORMAT_B8G8R8_SNORM`
- `VK_FORMAT_B8G8R8_SRGB`
- `VK_FORMAT_R8G8B8A8_UNORM`
- `VK_FORMAT_R8G8B8A8_SNORM`
- `VK_FORMAT_R8G8B8A8_SRGB`
- `VK_FORMAT_B8G8R8A8_UNORM`
- `VK_FORMAT_B8G8R8A8_SNORM`
- `VK_FORMAT_B8G8R8A8_SRGB`
- `VK_FORMAT_A8B8G8R8_UNORM_PACK32`
- `VK_FORMAT_A8B8G8R8_SNORM_PACK32`
- `VK_FORMAT_A8B8G8R8_SRGB_PACK32`

If ETC compressed formats are supported, `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT` **must** be supported for the following image view types:

- `VK_IMAGE_VIEW_TYPE_2D`
- `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

for the following additional formats:

- `VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK`

If cubic filtering is supported for any other formats, the following image view types **must** be supported for those formats:

- `VK_IMAGE_VIEW_TYPE_2D`
- `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

To be used with `VkImageView` with `subresourceRange.aspectMask` equal to `VK_IMAGE_ASPECT_COLOR_BIT`, sampler Y'C<sub>B</sub>C<sub>R</sub> conversion **must** be enabled for the following

formats:

Table 92. Formats Requiring Sampler  $Y'C_B C_R$  Conversion for `VK_IMAGE_ASPECT_COLOR_BIT` Image Views

[illegible]

|                                                      |   |  |  |  |  |  |  |  |  |  |  |  |  |

| VK_FORMAT_G16_B16R16_2PLANE_444_UNORM                | 2 |  |  |  |  |  |  |  |  |  |  |  |  |

Format features marked † **must** be supported for optimalTilingFeatures with VkImageType VK\_IMAGE\_TYPE\_2D if the VkPhysicalDevice supports the VkPhysicalDeviceSamplerYcbcrConversionFeatures feature.

Formats marked ‡ do not require a sampler Y'C<sub>B</sub>C<sub>R</sub> conversion for VK\_IMAGE\_ASPECT\_COLOR\_BIT image views if the VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT ::formatRgb10x6WithoutYCbCrSampler feature is enabled.

Implementations are not required to support the [VK\\_IMAGE\\_CREATE\\_SPARSE\\_BINDING\\_BIT](#),

`VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` `VkImageCreateFlags` for the above formats that require `sampler Y'CBCR conversion`. To determine whether the implementation supports sparse image creation flags with these formats use `vkGetPhysicalDeviceImageFormatProperties` or `vkGetPhysicalDeviceImageFormatProperties2`.

`VK_FORMAT_FEATURE_FRAGMENT_DENSITY_MAP_BIT_EXT` **must** be supported for the following formats if the `fragmentDensityMap` feature is enabled:

- `VK_FORMAT_R8G8_UNORM`

`VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR` **must** be supported in `bufferFeatures` for the following formats if the `accelerationStructure` feature is supported:

- `VK_FORMAT_R32G32_SFLOAT`
- `VK_FORMAT_R32G32B32_SFLOAT`
- `VK_FORMAT_R16G16_SFLOAT`
- `VK_FORMAT_R16G16B16A16_SFLOAT`
- `VK_FORMAT_R16G16_SNORM`
- `VK_FORMAT_R16G16B16A16_SNORM`

`VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` **must** be supported for the following formats if the `attachmentFragmentShadingRate` feature is supported:

- `VK_FORMAT_R8_UINT`

If the `hostImageCopy` feature is supported and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` is supported in `optimalTilingFeatures` or `linearTilingFeatures` for a color format, `VK_FORMAT_FEATURE_2_HOST_IMAGE_TRANSFER_BIT` **must** also be supported in `optimalTilingFeatures` or `linearTilingFeatures` respectively.

### 49.3.1. Formats Without Shader Storage Format

The device-level features for using a storage image or a storage texel buffer with an image format of `Unknown`, `shaderStorageImageReadWithoutFormat` and `shaderStorageImageWriteWithoutFormat`, only apply to the following formats:

- `VK_FORMAT_R8G8B8A8_UNORM`
- `VK_FORMAT_R8G8B8A8_SNORM`
- `VK_FORMAT_R8G8B8A8_UINT`
- `VK_FORMAT_R8G8B8A8_SINT`
- `VK_FORMAT_R32_UINT`
- `VK_FORMAT_R32_SINT`
- `VK_FORMAT_R32_SFLOAT`
- `VK_FORMAT_R32G32_UINT`

- VK\_FORMAT\_R32G32\_SINT
- VK\_FORMAT\_R32G32\_SFLOAT
- VK\_FORMAT\_R32G32B32A32\_UINT
- VK\_FORMAT\_R32G32B32A32\_SINT
- VK\_FORMAT\_R32G32B32A32\_SFLOAT
- VK\_FORMAT\_R16G16B16A16\_UINT
- VK\_FORMAT\_R16G16B16A16\_SINT
- VK\_FORMAT\_R16G16B16A16\_SFLOAT
- VK\_FORMAT\_R16G16\_SFLOAT
- VK\_FORMAT\_B10G11R11\_UFLOAT\_PACK32
- VK\_FORMAT\_R16\_SFLOAT
- VK\_FORMAT\_R16G16B16A16\_UNORM
- VK\_FORMAT\_A2B10G10R10\_UNORM\_PACK32
- VK\_FORMAT\_R16G16\_UNORM
- VK\_FORMAT\_R8G8\_UNORM
- VK\_FORMAT\_R16\_UNORM
- VK\_FORMAT\_R8\_UNORM
- VK\_FORMAT\_R16G16B16A16\_SNORM
- VK\_FORMAT\_R16G16\_SNORM
- VK\_FORMAT\_R8G8\_SNORM
- VK\_FORMAT\_R16\_SNORM
- VK\_FORMAT\_R8\_SNORM
- VK\_FORMAT\_R16G16\_SINT
- VK\_FORMAT\_R8G8\_SINT
- VK\_FORMAT\_R16\_SINT
- VK\_FORMAT\_R8\_SINT
- VK\_FORMAT\_A2B10G10R10\_UINT\_PACK32
- VK\_FORMAT\_R16G16\_UINT
- VK\_FORMAT\_R8G8\_UINT
- VK\_FORMAT\_R16\_UINT
- VK\_FORMAT\_R8\_UINT
- VK\_FORMAT\_A8\_UNORM

#### NOTE

This list of formats is the union of required storage formats from [Required Format Support](#) section and formats listed in [shaderStorageImageExtendedFormats](#).

An implementation that supports [VK\\_FORMAT\\_FEATURE\\_STORAGE\\_IMAGE\\_BIT](#) for any format from the given list of formats and supports [shaderStorageImageReadWithoutFormat](#) **must** support [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_READ\\_WITHOUT\\_FORMAT\\_BIT](#) for that same format if Vulkan 1.3 or the [VK\\_KHR\\_format\\_feature\\_flags2](#) extension is supported.

An implementation that supports [VK\\_FORMAT\\_FEATURE\\_STORAGE\\_IMAGE\\_BIT](#) for any format from the given list of formats and supports [shaderStorageImageWriteWithoutFormat](#) **must** support [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_WRITE\\_WITHOUT\\_FORMAT\\_BIT](#) for that same format if Vulkan 1.3 or the [VK\\_KHR\\_format\\_feature\\_flags2](#) extension is supported.

An implementation that does not support either of [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_READ\\_WITHOUT\\_FORMAT\\_BIT](#) or [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_WRITE\\_WITHOUT\\_FORMAT\\_BIT](#) for a format **must** not report support for [VK\\_FORMAT\\_FEATURE\\_STORAGE\\_IMAGE\\_BIT](#) or [VK\\_FORMAT\\_FEATURE\\_STORAGE\\_TEXEL\\_BUFFER\\_BIT](#) for that format if it is not listed in the [SPIR-V and Vulkan Image Format Compatibility](#) table.

#### NOTE

Some older implementations do not follow this restriction. They report support for formats as storage images even though they do not support access without the [Format](#) qualifier and there is no matching [Format](#) token. Such images cannot be either read from or written to.

Drivers which pass Vulkan conformance test suite version 1.3.9.0, or any subsequent version will conform to the requirement above.

### 49.3.2. Depth Comparison Format Support

If Vulkan 1.3 or the [VK\\_KHR\\_format\\_feature\\_flags2](#) extension is supported, a depth/stencil format with a depth component supporting [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_BIT](#) **must** support [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_DEPTH\\_COMPARISON\\_BIT](#).

### 49.3.3. Format Feature Dependent Usage Flags

Certain resource usage flags depend on support for the corresponding format feature flag for the format in question. The following tables list the [VkBufferUsageFlagBits](#) and [VkImageUsageFlagBits](#) that have such dependencies, and the format feature flags they depend on. Additional restrictions, including, but not limited to, further required format feature flags specific to the particular use of the resource **may** apply, as described in the respective sections of this specification.

Table 93. Format Feature Dependent Buffer Usage Flags

| Buffer usage flag                                        | Required format feature flag                               |
|----------------------------------------------------------|------------------------------------------------------------|
| <a href="#">VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT</a> | <a href="#">VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT</a> |
| <a href="#">VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT</a> | <a href="#">VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT</a> |
| <a href="#">VK_BUFFER_USAGE_VERTEX_BUFFER_BIT</a>        | <a href="#">VK_FORMAT_FEATURE_VERTEX_BUFFER_BIT</a>        |

Table 94. Format Feature Dependent Image Usage Flags

| Image usage flag                                           | Required format feature flag                                                                |
|------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| VK_IMAGE_USAGE_SAMPLED_BIT                                 | VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT                                                         |
| VK_IMAGE_USAGE_STORAGE_BIT                                 | VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT                                                         |
| VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT                        | VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT                                                      |
| VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT                | VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT                                              |
| VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT                        | VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT or<br>VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT |
| VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR    | VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR                                  |
| VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR                    | VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR                                               |
| VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR                    | VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR                                                  |
| VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR                    | VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR                                                |
| VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR                    | VK_FORMAT_FEATURE_VIDEO_ENCODE_DPB_BIT_KHR                                                  |
| VK_IMAGE_USAGE_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR | VK_FORMAT_FEATURE_2_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR                             |
| VK_IMAGE_USAGE_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR           | VK_FORMAT_FEATURE_2_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR                                       |

# Chapter 50. Additional Capabilities

This chapter describes additional capabilities beyond the minimum capabilities described in the [Limits](#) and [Formats](#) chapters, including:

- [Additional Image Capabilities](#)
- [Additional Buffer Capabilities](#)
- [Optional Semaphore Capabilities](#)
- [Optional Fence Capabilities](#)
- [Timestamp Calibration Capabilities](#)

## 50.1. Additional Image Capabilities

Additional image capabilities, such as larger dimensions or additional sample counts for certain image types, or additional capabilities for *linear* tiling format images, are described in this section.

To query additional capabilities specific to image types, call:

**WARNING** This functionality is superseded by [vkGetPhysicalDeviceImageFormatProperties2](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
VkResult vkGetPhysicalDeviceImageFormatProperties(
    VkPhysicalDevice    physicalDevice,
    VkFormat            format,
    VkImageType         type,
    VkImageTiling       tiling,
    VkImageUsageFlags   usage,
    VkImageCreateFlags   flags,
    VkImageFormatProperties* pImageFormatProperties);
```

- `physicalDevice` is the physical device from which to query the image capabilities.
- `format` is a [VkFormat](#) value specifying the image format, corresponding to [VkImageCreateInfo::format](#).
- `type` is a [VkImageType](#) value specifying the image type, corresponding to [VkImageCreateInfo::imageType](#).
- `tiling` is a [VkImageTiling](#) value specifying the image tiling, corresponding to [VkImageCreateInfo::tiling](#).
- `usage` is a bitmask of [VkImageUsageFlagBits](#) specifying the intended usage of the image, corresponding to [VkImageCreateInfo::usage](#).
- `flags` is a bitmask of [VkImageCreateFlagBits](#) specifying additional parameters of the image, corresponding to [VkImageCreateInfo::flags](#).

- `pImageFormatProperties` is a pointer to a `VkImageFormatProperties` structure in which capabilities are returned.

The `format`, `type`, `tiling`, `usage`, and `flags` parameters correspond to parameters that would be consumed by `vkCreateImage` (as members of `VkImageCreateInfo`).

If `format` is not a supported image format, or if the combination of `format`, `type`, `tiling`, `usage`, and `flags` is not supported for images, then `vkGetPhysicalDeviceImageFormatProperties` returns `VK_ERROR_FORMAT_NOT_SUPPORTED`.

The limitations on an image format that are reported by `vkGetPhysicalDeviceImageFormatProperties` have the following property: if `usage1` and `usage2` of type `VkImageUsageFlags` are such that the bits set in `usage1` are a subset of the bits set in `usage2`, and `flags1` and `flags2` of type `VkImageCreateFlags` are such that the bits set in `flags1` are a subset of the bits set in `flags2`, then the limitations for `usage1` and `flags1` **must** be no more strict than the limitations for `usage2` and `flags2`, for all values of `format`, `type`, and `tiling`.

If the `hostImageCopy` feature is supported, and:

- `usage` includes `VK_IMAGE_USAGE_SAMPLED_BIT`, and
- `flags` does not include any of `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`

Then the result of calls to `vkGetPhysicalDeviceImageFormatProperties` with identical parameters except for the inclusion of `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` in `usage` **must** be identical.

### Valid Usage

- VUID-vkGetPhysicalDeviceImageFormatProperties-tiling-02248  
`tiling` **must** not be `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceImageFormatProperties-physicalDevice-parameter  
`physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceImageFormatProperties-format-parameter  
`format` **must** be a valid `VkFormat` value
- VUID-vkGetPhysicalDeviceImageFormatProperties-type-parameter  
`type` **must** be a valid `VkImageType` value
- VUID-vkGetPhysicalDeviceImageFormatProperties-tiling-parameter  
`tiling` **must** be a valid `VkImageTiling` value
- VUID-vkGetPhysicalDeviceImageFormatProperties-usage-parameter  
`usage` **must** be a valid combination of `VkImageUsageFlagBits` values
- VUID-vkGetPhysicalDeviceImageFormatProperties-flags-parameter  
If `flags` is not 0, `flags` **must** be a valid combination of `VkImageCreateFlagBits` values

- VUID-vkGetPhysicalDeviceImageFormatProperties-pImageFormatProperties-parameter **pImageFormatProperties** **must** be a valid pointer to a [VkImageFormatProperties](#) structure

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_FORMAT\\_NOT\\_SUPPORTED](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkImageFormatProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageFormatProperties {
    VkExtent3D          maxExtent;
    uint32_t            maxMipLevels;
    uint32_t            maxArrayLayers;
    VkSampleCountFlags  sampleCounts;
    VkDeviceSize        maxResourceSize;
} VkImageFormatProperties;
```

- **maxExtent** are the maximum image dimensions. See the [Allowed Extent Values](#) section below for how these values are constrained by **type**.
- **maxMipLevels** is the maximum number of mipmap levels. **maxMipLevels** **must** be equal to the number of levels in the complete mipmap chain based on the **maxExtent.width**, **maxExtent.height**, and **maxExtent.depth**, except when one of the following conditions is true, in which case it **may** instead be 1:
  - [vkGetPhysicalDeviceImageFormatProperties::tiling](#) was [VK\\_IMAGE\\_TILING\\_LINEAR](#)
  - [VkPhysicalDeviceImageFormatInfo2::tiling](#) was [VK\\_IMAGE\\_TILING\\_DRM\\_FORMAT\\_MODIFIER\\_EXT](#)
  - the [VkPhysicalDeviceImageFormatInfo2::pNext](#) chain included a [VkPhysicalDeviceExternalImageFormatInfo](#) structure with a handle type included in the **handleTypes** member for which mipmap image support is not required
  - **image format** is one of the [formats that require a sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#)
  - **flags** contains [VK\\_IMAGE\\_CREATE\\_SUBSAMPLED\\_BIT\\_EXT](#)
- **maxArrayLayers** is the maximum number of array layers. **maxArrayLayers** **must** be no less than [VkPhysicalDeviceLimits::maxImageArrayLayers](#), except when one of the following conditions is

true, in which case it **may** instead be 1:

- **tiling** is `VK_IMAGE_TILING_LINEAR`
- **tiling** is `VK_IMAGE_TILING_OPTIMAL` and **type** is `VK_IMAGE_TYPE_3D`
- **format** is one of the [formats that require a sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#)
- If **tiling** is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then **maxArrayLayers** **must** not be 0.
- **sampleCounts** is a bitmask of `VkSampleCountFlagBits` specifying all the supported sample counts for this image as described [below](#).
- **maxResourceSize** is an upper bound on the total image size in bytes, inclusive of all image subresources. Implementations **may** have an address space limit on total size of a resource, which is advertised by this property. **maxResourceSize** **must** be at least  $2^{31}$ .

**NOTE**

There is no mechanism to query the size of an image before creating it, to compare that size against **maxResourceSize**. If an application attempts to create an image that exceeds this limit, the creation will fail and `vkCreateImage` will return `VK_ERROR_OUT_OF_DEVICE_MEMORY`. While the advertised limit **must** be at least  $2^{31}$ , it **may** not be possible to create an image that approaches that size, particularly for `VK_IMAGE_TYPE_1D`.

If the combination of parameters to `vkGetPhysicalDeviceImageFormatProperties` is not supported by the implementation for use in `vkCreateImage`, then all members of `VkImageFormatProperties` will be filled with zero.

**NOTE**

Filling `VkImageFormatProperties` with zero for unsupported formats is an exception to the usual rule that output structures have undefined contents on error. This exception was unintentional, but is preserved for backwards compatibility.

To query additional capabilities specific to image types, call:

```
// Provided by VK_VERSION_1_1
VkResult vkGetPhysicalDeviceImageFormatProperties2(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceImageFormatInfo2* pImageFormatInfo,
    VkImageFormatProperties2* pImageFormatProperties);
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to vkGetPhysicalDeviceImageFormatProperties2
VkResult vkGetPhysicalDeviceImageFormatProperties2KHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceImageFormatInfo2* pImageFormatInfo,
    VkImageFormatProperties2* pImageFormatProperties);
```

- **physicalDevice** is the physical device from which to query the image capabilities.

- `pImageFormatInfo` is a pointer to a `VkPhysicalDeviceImageFormatInfo2` structure describing the parameters that would be consumed by `vkCreateImage`.
- `pImageFormatProperties` is a pointer to a `VkImageFormatProperties2` structure in which capabilities are returned.

`vkGetPhysicalDeviceImageFormatProperties2` behaves similarly to `vkGetPhysicalDeviceImageFormatProperties`, with the ability to return extended information in a `pNext` chain of output structures.

If the `pNext` chain of `pImageFormatInfo` includes a `VkVideoProfileListInfoKHR` structure with a `profileCount` member greater than 0, then this command returns format capabilities specific to image types used in conjunction with the specified video profiles. In this case, this command will return one of the video-profile-specific error codes if any of the profiles specified via `VkVideoProfileListInfoKHR::pProfiles` are not supported. Furthermore, if `VkPhysicalDeviceImageFormatInfo2::usage` includes any image usage flag not supported by the specified video profiles, then this command returns `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`.

If the `hostImageCopy` feature is supported, and:

- `pImageFormatInfo->usage` includes `VK_IMAGE_USAGE_SAMPLED_BIT`
- `pImageFormatInfo->flags` does not include either of `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`
- The `pNext` chain of `pImageFormatInfo` does not include a `VkPhysicalDeviceExternalImageFormatInfo` structure with non-zero `handleType`
- `pImageFormatInfo->tiling` is not `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`

Then the result of calls to `vkGetPhysicalDeviceImageFormatProperties2` with identical parameters except for the inclusion of `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` in `pImageFormatInfo->usage` **must** be identical.

### Valid Usage

- VUID-vkGetPhysicalDeviceImageFormatProperties2-pNext-09004  
If the `pNext` chain of `pImageFormatProperties` includes a `VkHostImageCopyDevicePerformanceQuery` structure, `pImageFormatInfo->usage` **must** contain `VK_IMAGE_USAGE_HOST_TRANSFER_BIT`

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceImageFormatProperties2-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceImageFormatProperties2-pImageFormatInfo-parameter `pImageFormatInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceImageFormatInfo2` structure

- VUID-vkGetPhysicalDeviceImageFormatProperties2-pImageFormatProperties-parameter **pImageFormatProperties** **must** be a valid pointer to a [VkImageFormatProperties2](#) structure

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_FORMAT\\_NOT\\_SUPPORTED](#)
- [VK\\_ERROR\\_IMAGE\\_USAGE\\_NOT\\_SUPPORTED\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)
- [VK\\_ERROR\\_VIDEO\\_PICTURE\\_LAYOUT\\_NOT\\_SUPPORTED\\_KHR](#)
- [VK\\_ERROR\\_VIDEO\\_PROFILE\\_CODEC\\_NOT\\_SUPPORTED\\_KHR](#)
- [VK\\_ERROR\\_VIDEO\\_PROFILE\\_FORMAT\\_NOT\\_SUPPORTED\\_KHR](#)
- [VK\\_ERROR\\_VIDEO\\_PROFILE\\_OPERATION\\_NOT\\_SUPPORTED\\_KHR](#)

The [VkPhysicalDeviceImageFormatInfo2](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceImageFormatInfo2 {
    VkStructureType    sType;
    const void*        pNext;
    VkFormat            format;
    VkImageType         type;
    VkImageTiling        tiling;
    VkImageUsageFlags   usage;
    VkImageCreateFlags   flags;
} VkPhysicalDeviceImageFormatInfo2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkPhysicalDeviceImageFormatInfo2
typedef VkPhysicalDeviceImageFormatInfo2 VkPhysicalDeviceImageFormatInfo2KHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure. The **pNext** chain of [VkPhysicalDeviceImageFormatInfo2](#) is used to provide additional image parameters to [vkGetPhysicalDeviceImageFormatProperties2](#).

- **format** is a `VkFormat` value indicating the image format, corresponding to `VkImageCreateInfo::format`.
- **type** is a `VkImageType` value indicating the image type, corresponding to `VkImageCreateInfo::imageType`.
- **tiling** is a `VkImageTiling` value indicating the image tiling, corresponding to `VkImageCreateInfo::tiling`.
- **usage** is a bitmask of `VkImageUsageFlagBits` indicating the intended usage of the image, corresponding to `VkImageCreateInfo::usage`.
- **flags** is a bitmask of `VkImageCreateFlagBits` indicating additional parameters of the image, corresponding to `VkImageCreateInfo::flags`.

The members of `VkPhysicalDeviceImageFormatInfo2` correspond to the arguments to `vkGetPhysicalDeviceImageFormatProperties`, with **sType** and **pNext** added for extensibility.

Only create flags representable in `VkImageCreateFlagBits` are returned in **flags**. If the **pNext** chain includes a `VkImageCreateFlags2CreateInfoKHR` structure, all create flags are returned in `VkImageCreateFlags2CreateInfoKHR::flags`.

Only usage flags representable in `VkImageUsageFlagBits` are returned in **usage**. If the **pNext** chain includes a `VkImageUsageFlags2CreateInfoKHR` structure, all usage flags are returned in `VkImageUsageFlags2CreateInfoKHR::usage`.

### Valid Usage

- VUID-VkPhysicalDeviceImageFormatInfo2-tiling-02249  
**tiling** **must** be `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` if and only if the **pNext** chain includes `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`
- VUID-VkPhysicalDeviceImageFormatInfo2-tiling-02313  
If **tiling** is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` and **flags** contains `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, then the **pNext** chain **must** include a `VkImageFormatListCreateInfo` structure with non-zero **viewFormatCount**

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageFormatInfo2-sType-sType  
**sType** **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_FORMAT_INFO_2`
- VUID-VkPhysicalDeviceImageFormatInfo2-pNext-pNext  
Each **pNext** member of any structure (including this one) in the **pNext** chain **must** be either `NULL` or a pointer to a valid instance of `VkImageCompressionControlEXT`, `VkImageCreateFlags2CreateInfoKHR`, `VkImageFormatListCreateInfo`, `VkImageStencilUsage2CreateInfoKHR`, `VkImageStencilUsageCreateInfo`, `VkImageUsageFlags2CreateInfoKHR`, `VkPhysicalDeviceExternalImageFormatInfo`, `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`, `VkPhysicalDeviceImageViewImageFormatInfoEXT`, or `VkVideoProfileListInfoKHR`

- VUID-VkPhysicalDeviceImageFormatInfo2-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkPhysicalDeviceImageFormatInfo2-format-parameter  
**format** **must** be a valid **VkFormat** value
- VUID-VkPhysicalDeviceImageFormatInfo2-type-parameter  
**type** **must** be a valid **VkImageType** value
- VUID-VkPhysicalDeviceImageFormatInfo2-tiling-parameter  
**tiling** **must** be a valid **VkImageTiling** value
- VUID-VkPhysicalDeviceImageFormatInfo2-usage-parameter  
**usage** **must** be a valid combination of **VkImageUsageFlagBits** values
- VUID-VkPhysicalDeviceImageFormatInfo2-flags-parameter  
If **flags** is not 0, **flags** **must** be a valid combination of **VkImageCreateFlagBits** values

The **VkImageFormatProperties2** structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkImageFormatProperties2 {
    VkStructureType      sType;
    void*                pNext;
    VkImageFormatProperties imageFormatProperties;
} VkImageFormatProperties2;
```

```
// Provided by VK_KHR_get_physical_device_properties2
// Equivalent to VkImageFormatProperties2
typedef VkImageFormatProperties2 VkImageFormatProperties2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure. The **pNext** chain of **VkImageFormatProperties2** is used to allow the specification of additional capabilities to be returned from **vkGetPhysicalDeviceImageFormatProperties2**.
- **imageFormatProperties** is a **VkImageFormatProperties** structure in which capabilities are returned.

If the combination of parameters to **vkGetPhysicalDeviceImageFormatProperties2** is not supported by the implementation for use in **vkCreateImage**, then all members of **imageFormatProperties** will be filled with zero.

#### NOTE

Filling **imageFormatProperties** with zero for unsupported formats is an exception to the usual rule that output structures have undefined contents on error. This exception was unintentional, but is preserved for backwards compatibility. This exception only applies to **imageFormatProperties**, not **sType**, **pNext**, or any structures chained from **pNext**.

## Valid Usage (Implicit)

- VUID-VkImageFormatProperties2-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_FORMAT_PROPERTIES_2`
- VUID-VkImageFormatProperties2-pNext-pNext  
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkExternalImageFormatProperties`, `VkFilterCubicImageViewImageFormatPropertiesEXT`, `VkHostImageCopyDevicePerformanceQuery`, `VkImageCompressionPropertiesEXT`, `VkSamplerYcbcrConversionImageFormatProperties`, or `VkSubsampledImageFormatPropertiesEXT`
- VUID-VkImageFormatProperties2-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

To determine the image capabilities compatible with an external memory handle type, add a `VkPhysicalDeviceExternalImageFormatInfo` structure to the `pNext` chain of the `VkPhysicalDeviceImageFormatInfo2` structure and a `VkExternalImageFormatProperties` structure to the `pNext` chain of the `VkImageFormatProperties2` structure.

The `VkPhysicalDeviceExternalImageFormatInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalImageFormatInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalImageFormatInfo;
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkPhysicalDeviceExternalImageFormatInfo
typedef VkPhysicalDeviceExternalImageFormatInfo
VkPhysicalDeviceExternalImageFormatInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the memory handle type that will be used with the memory associated with the image.

If `handleType` is 0, `vkGetPhysicalDeviceImageFormatProperties2` will behave as if `VkPhysicalDeviceExternalImageFormatInfo` was not present, and `VkExternalImageFormatProperties` will be ignored.

If `handleType` is not compatible with the `format`, `type`, `tiling`, `usage`, and `flags` specified in `VkPhysicalDeviceImageFormatInfo2`, then `vkGetPhysicalDeviceImageFormatProperties2` returns

VK\_ERROR\_FORMAT\_NOT\_SUPPORTED.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalImageFormatInfo-sType-sType **must** be VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_EXTERNAL\_IMAGE\_FORMAT\_INFO
- VUID-VkPhysicalDeviceExternalImageFormatInfo-handleType-parameter  
If **handleType** is not 0, **handleType** **must** be a valid [VkExternalMemoryHandleTypeFlagBits](#) value

### Structure Chaining

#### Extends the structure

- [VkPhysicalDeviceImageFormatInfo2](#)

Possible values of [VkPhysicalDeviceExternalImageFormatInfo::handleType](#), specifying an external memory handle type, are:

```

// Provided by VK_VERSION_1_1
typedef enum VkExternalMemoryHandleTypeFlagBits {
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT = 0x00000001,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT = 0x00000002,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT = 0x00000004,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT = 0x00000008,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT = 0x00000010,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT = 0x00000020,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT = 0x00000040,
    // Provided by VK_EXT_external_memory_dma_buf
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT = 0x00000200,
    // Provided by VK_EXT_external_memory_host
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT = 0x00000080,
    // Provided by VK_EXT_external_memory_host
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT = 0x00000100,
    // Provided by VK_EXT_external_memory_metal
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT = 0x00010000,
    // Provided by VK_EXT_external_memory_metal
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT = 0x00020000,
    // Provided by VK_EXT_external_memory_metal
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT = 0x00040000,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT_KHR =
VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR =
VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_KHR =
VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT_KHR =
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT_KHR =
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT_KHR =
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT_KHR =
VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT,
} VkExternalMemoryHandleTypeFlagBits;

```

```

// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkExternalMemoryHandleTypeFlagBits
typedef VkExternalMemoryHandleTypeFlagBits VkExternalMemoryHandleTypeFlagBitsKHR;

```

- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT` specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the POSIX system calls `dup`, `dup2`, `close`, and the non-standard system call `dup3`. Additionally, it **must** be transportable over a socket using an `SCM_RIGHTS` control message. It owns a reference to the underlying memory resource represented by its Vulkan memory object.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT` specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the functions `DuplicateHandle`, `CloseHandle`, `CompareObjectHandles`, `GetHandleInformation`, and `SetHandleInformation`. It owns a reference to the underlying memory resource represented by its Vulkan memory object.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT` specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying memory resource represented by its Vulkan memory object, and will therefore become invalid when all Vulkan memory objects associated with it are destroyed.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT` specifies an NT handle returned by `IDXGIResource1::CreateSharedHandle` referring to a Direct3D 10 or 11 texture resource. It owns a reference to the memory used by the Direct3D resource.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT` specifies a global share handle returned by `IDXGIResource::GetSharedHandle` referring to a Direct3D 10 or 11 texture resource. It does not own a reference to the underlying Direct3D resource, and will therefore become invalid when all Vulkan memory objects and Direct3D resources associated with it are destroyed.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT` specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 heap resource. It owns a reference to the resources used by the Direct3D heap.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT` specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 committed resource. It owns a reference to the memory used by the Direct3D resource.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` specifies a host pointer returned by a host memory allocation command. It does not own a reference to the underlying memory resource, and will therefore become invalid if the host memory is freed.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT` specifies a host pointer to *host mapped foreign memory*. It does not own a reference to the underlying memory resource, and will therefore become invalid if the foreign memory is unmapped or otherwise becomes no longer available.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT` is a file descriptor for a Linux `dma_buf`. It owns a reference to the underlying memory resource represented by its Vulkan memory object.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT` is a handle to a `MTLResource` holding a `MTLBuffer`.
- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT` is a handle to a `MTLResource` holding a `MTLTexture`.

- `VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT` is a handle to a `MTLResource` holding a `MTLHeap`.

Some external memory handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

*Table 95. External Memory Handle Types Compatibility*

| Handle type                                                       | VkPhysicalDeviceIDProperties::driverUUID | VkPhysicalDeviceIDProperties::deviceUUID |
|-------------------------------------------------------------------|------------------------------------------|------------------------------------------|
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT                      | Must match                               | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT                   | Must match                               | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT               | Must match                               | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT                  | Must match                               | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT              | Must match                               | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT                     | Must match                               | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT                 | Must match                               | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT            | No restriction                           | No restriction                           |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT | No restriction                           | No restriction                           |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT                    | No restriction                           | No restriction                           |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLBUFFER_BIT_EXT                  | No restriction                           | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLTEXTURE_BIT_EXT                 | No restriction                           | Must match                               |
| VK_EXTERNAL_MEMORY_HANDLE_TYPE_MTLHEAP_BIT_EXT                    | No restriction                           | Must match                               |

**NOTE**

The above table does not restrict the drivers and devices with which

[VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_HOST\\_ALLOCATION\\_BIT\\_EXT](#) and [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_HOST\\_MAPPED\\_FOREIGN\\_MEMORY\\_BIT\\_EXT](#) **may** be shared, as these handle types inherently mean memory that does not come from the same device, as they import memory from the host or a foreign device, respectively.

**NOTE**

Even though the above table does not restrict the drivers and devices with which [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_DMA\\_BUF\\_BIT\\_EXT](#) **may** be shared, query mechanisms exist in the Vulkan API that prevent the import of incompatible dma-bufs (such as [vkGetMemoryFdPropertiesKHR](#)) and that prevent incompatible usage of dma-bufs (such as [VkPhysicalDeviceExternalBufferInfo](#) and [VkPhysicalDeviceExternalImageFormatInfo](#)).

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalMemoryHandleTypeFlags;
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkExternalMemoryHandleTypeFlags
typedef VkExternalMemoryHandleTypeFlags VkExternalMemoryHandleTypeFlagsKHR;
```

[VkExternalMemoryHandleTypeFlags](#) is a bitmask type for setting a mask of zero or more [VkExternalMemoryHandleTypeFlagBits](#).

The [VkExternalImageFormatProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalImageFormatProperties {
    VkStructureType      sType;
    void*                pNext;
    VkExternalMemoryProperties externalMemoryProperties;
} VkExternalImageFormatProperties;
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkExternalImageFormatProperties
typedef VkExternalImageFormatProperties VkExternalImageFormatPropertiesKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is `NULL` or a pointer to a structure extending this structure.
- [externalMemoryProperties](#) is a [VkExternalMemoryProperties](#) structure specifying various capabilities of the external handle type when used with the specified image creation parameters.

## Valid Usage (Implicit)

- VUID-VkExternalImageFormatProperties-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_EXTERNAL\\_IMAGE\\_FORMAT\\_PROPERTIES](#)

## Structure Chaining

### Extends the structure

- [VkImageFormatProperties2](#)

The [VkExternalMemoryProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryProperties {
    VkExternalMemoryFeatureFlags    externalMemoryFeatures;
    VkExternalMemoryHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalMemoryHandleTypeFlags compatibleHandleTypes;
} VkExternalMemoryProperties;
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkExternalMemoryProperties
typedef VkExternalMemoryProperties VkExternalMemoryPropertiesKHR;
```

- **externalMemoryFeatures** is a bitmask of [VkExternalMemoryFeatureFlagBits](#) specifying the features of **handleType**.
- **exportFromImportedHandleTypes** is a bitmask of [VkExternalMemoryHandleTypeFlagBits](#) specifying which types of imported handle **handleType** **can** be exported from.
- **compatibleHandleTypes** is a bitmask of [VkExternalMemoryHandleTypeFlagBits](#) specifying handle types which **can** be specified at the same time as **handleType** when creating an image compatible with external memory.

**compatibleHandleTypes** **must** include at least **handleType**. Inclusion of a handle type in **compatibleHandleTypes** does not imply the values returned in [VkImageFormatProperties2](#) will be the same when [VkPhysicalDeviceExternalImageFormatInfo::handleType](#) is set to that type. The application is responsible for querying the capabilities of all handle types intended for concurrent use in a single image and intersecting them to obtain the compatible set of capabilities.

Bits which **may** be set in [VkExternalMemoryProperties::externalMemoryFeatures](#), specifying features of an external memory handle type, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkExternalMemoryFeatureFlagBits {
    VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT = 0x00000001,
    VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT = 0x00000002,
    VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT = 0x00000004,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT_KHR =
VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT_KHR =
VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT_KHR =
VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT,
} VkExternalMemoryFeatureFlagBits;
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkExternalMemoryFeatureFlagBits
typedef VkExternalMemoryFeatureFlagBits VkExternalMemoryFeatureFlagBitsKHR;
```

- [VK\\_EXTERNAL\\_MEMORY\\_FEATURE\\_DEDICATED\\_ONLY\\_BIT](#) specifies that images or buffers created with the specified parameters and handle type **must** use the mechanisms defined by [VkMemoryDedicatedRequirements](#) and [VkMemoryDedicatedAllocateInfo](#) to create (or import) a dedicated allocation for the image or buffer.
- [VK\\_EXTERNAL\\_MEMORY\\_FEATURE\\_EXPORTABLE\\_BIT](#) specifies that handles of this type **can** be exported from Vulkan memory objects.
- [VK\\_EXTERNAL\\_MEMORY\\_FEATURE\\_IMPORTABLE\\_BIT](#) specifies that handles of this type **can** be imported as Vulkan memory objects.

Because their semantics in external APIs roughly align with that of an image or buffer with a dedicated allocation in Vulkan, implementations are **required** to report [VK\\_EXTERNAL\\_MEMORY\\_FEATURE\\_DEDICATED\\_ONLY\\_BIT](#) for the following external handle types:

- [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_D3D11\\_TEXTURE\\_BIT](#)
- [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_D3D11\\_TEXTURE\\_KMT\\_BIT](#)
- [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_D3D12\\_RESOURCE\\_BIT](#)
- [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_MTLTEXTURE\\_BIT\\_EXT](#)

Implementations **must** not report [VK\\_EXTERNAL\\_MEMORY\\_FEATURE\\_DEDICATED\\_ONLY\\_BIT](#) for images or buffers with external handle type [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_HOST\\_ALLOCATION\\_BIT\\_EXT](#), or [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_HOST\\_MAPPED\\_FOREIGN\\_MEMORY\\_BIT\\_EXT](#).

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalMemoryFeatureFlags;
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkExternalMemoryFeatureFlags
typedef VkExternalMemoryFeatureFlags VkExternalMemoryFeatureFlagsKHR;
```

`VkExternalMemoryFeatureFlags` is a bitmask type for setting a mask of zero or more `VkExternalMemoryFeatureFlagBits`.

To query the image capabilities that are compatible with a [Linux DRM format modifier](#), set `VkPhysicalDeviceImageFormatInfo2::tiling` to `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` and add a `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure to the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2`.

The `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure is defined as:

```
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkPhysicalDeviceImageDrmFormatModifierInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint64_t           drmFormatModifier;
    VkSharingMode       sharingMode;
    uint32_t           queueFamilyIndexCount;
    const uint32_t*     pQueueFamilyIndices;
} VkPhysicalDeviceImageDrmFormatModifierInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifier` is the image's *Linux DRM format modifier*, corresponding to `VkImageDrmFormatModifierExplicitCreateInfoEXT::drmFormatModifier` or to `VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers`.
- `sharingMode` specifies how the image will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a pointer to an array of queue families that will access the image. It is ignored if `sharingMode` is not `VK_SHARING_MODE_CONCURRENT`.

If the `drmFormatModifier` is incompatible with the parameters specified in `VkPhysicalDeviceImageFormatInfo2` and its `pNext` chain, then `vkGetPhysicalDeviceImageFormatProperties2` returns `VK_ERROR_FORMAT_NOT_SUPPORTED`. The implementation **must** support the query of any `drmFormatModifier`, including unknown and invalid modifier values.

## Valid Usage

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02314  
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `pQueueFamilyIndices` **must** be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values
- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-maintenance1-13351  
If the `maintenance1` feature is supported and `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` **must** be greater than 0
- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02315  
If the `maintenance1` feature is not supported and `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` **must** be greater than 1
- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02316  
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` **must** be unique and **must** be less than the `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties2` for the `physicalDevice` that was used to create `device`

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_DRM_FORMAT_MODIFIER_INFO_EXT`
- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-parameter  
`sharingMode` **must** be a valid `VkSharingMode` value

## Structure Chaining

### Extends the structure

- `VkPhysicalDeviceImageFormatInfo2`

To determine the number of `descriptors` required to support an image format for sampled images with `Y'CBCR` conversion, add `VkSamplerYcbcrConversionImageFormatProperties` to the `pNext` chain of the `VkImageFormatProperties2` structure in a call to `vkGetPhysicalDeviceImageFormatProperties2`.

The `VkSamplerYcbcrConversionImageFormatProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionImageFormatProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           combinedImageSamplerDescriptorCount;
} VkSamplerYcbcrConversionImageFormatProperties;
```

```
// Provided by VK_KHR_sampler_ycbcr_conversion
// Equivalent to VkSamplerYcbcrConversionImageFormatProperties
typedef VkSamplerYcbcrConversionImageFormatProperties
VkSamplerYcbcrConversionImageFormatPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `combinedImageSamplerDescriptorCount` is the number of `descriptors` that the implementation uses to access a sampled image with `Y'CBCR conversion`

`combinedImageSamplerDescriptorCount` is a number between 1 and the number of planes in the format.

The size an image descriptor with a `VkSamplerYcbcrConversionInfo` structure consumes in the resource heap is multiplied by the `combinedImageSamplerDescriptorCount` of its format. These images are sampled with embedded samplers and therefore do not consume space in the sampler heap.

For descriptor buffers or descriptor sets, each combined image sampler descriptor binding with a layout that includes at least one immutable Y'C<sub>B</sub>C<sub>R</sub> conversion sampler will internally use a number of descriptors equal to the maximum `combinedImageSamplerDescriptorCount` of the formats of all the immutable Y'C<sub>B</sub>C<sub>R</sub> conversion samplers in that binding.

This expanded number of descriptors will be consumed from the descriptor pool when a descriptor set is allocated, and counts towards the `maxDescriptorSetSamplers`, `maxDescriptorSetSampledImages`, `maxPerStageDescriptorSamplers`, and `maxPerStageDescriptorSampledImages` limits.

All descriptors in a binding use the same expanded number of descriptors to allow implementations to use a uniform stride for dynamic indexing.

For example, consider a descriptor set layout binding with two immutable Y'C<sub>B</sub>C<sub>R</sub> samplers with formats that have `VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount` values of 2 and 3 respectively. The maximum `combinedImageSamplerDescriptorCount` for this binding layout is therefore 3.

#### NOTE

If there are 3 descriptors in a descriptor set binding with this layout, including one descriptor without an immutable Y'C<sub>B</sub>C<sub>R</sub> sampler, the binding will consume 9 combined image sampler descriptors from the descriptor pool.

For descriptor heaps, the application explicitly maps the descriptor binding to a heap offset with `VkDescriptorSetAndBindingMappingEXT` and **should** make similar calculations as it **must** offset each element in the binding correctly.

Instead of querying all the potential formats that an application might use, it **can** use `VkPhysicalDeviceMaintenance6Properties::maxCombinedImageSamplerDescriptorCount` property to determine the maximum `combinedImageSamplerDescriptorCount` for all formats the implementation supports.

## Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionImageFormatProperties-sType-sType **must** be `VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_IMAGE_FORMAT_PROPERTIES`

## Structure Chaining

### Extends the structure

- `VkImageFormatProperties2`

To determine the number of image descriptors required to support a subsampled image created with `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`, add `VkSubsampledImageFormatPropertiesEXT` to the `pNext` chain of the `VkImageFormatProperties2` structure in a call to `vkGetPhysicalDeviceImageFormatProperties2`.

The `VkSubsampledImageFormatPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_descriptor_heap with VK_EXT_fragment_density_map
typedef struct VkSubsampledImageFormatPropertiesEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           subsampledImageDescriptorCount;
} VkSubsampledImageFormatPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subsampledImageDescriptorCount` is the number of image descriptors that the implementation uses to access the image.

## Valid Usage (Implicit)

- VUID-VkSubsampledImageFormatPropertiesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_SUBSAMPLED_IMAGE_FORMAT_PROPERTIES_EXT`

## Structure Chaining

### Extends the structure

- `VkImageFormatProperties2`

To query if using `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` has a negative impact on device performance when accessing an image, add `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` to

`VkPhysicalDeviceImageFormatInfo2::usage`, and add a `VkHostImageCopyDevicePerformanceQuery` structure to the `pNext` chain of a `VkImageFormatProperties2` structure passed to `vkGetPhysicalDeviceImageFormatProperties2`. This structure is defined as:

```
// Provided by VK_VERSION_1_4
typedef struct VkHostImageCopyDevicePerformanceQuery {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           optimalDeviceAccess;
    VkBool32           identicalMemoryLayout;
} VkHostImageCopyDevicePerformanceQuery;
```

```
// Provided by VK_EXT_host_image_copy
// Equivalent to VkHostImageCopyDevicePerformanceQuery
typedef VkHostImageCopyDevicePerformanceQuery
VkHostImageCopyDevicePerformanceQueryEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `optimalDeviceAccess` returns `VK_TRUE` if use of host image copy has no adverse effect on device access performance, compared to an image that is created with exact same creation parameters, and bound to the same `VkDeviceMemory`, except that the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag is replaced with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` and `VK_IMAGE_USAGE_TRANSFER_DST_BIT`.
- `identicalMemoryLayout` returns `VK_TRUE` if use of host image copy has no impact on memory layout compared to an image that is created with exact same creation parameters, and bound to the same `VkDeviceMemory`, except that the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT` usage flag is replaced with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` and `VK_IMAGE_USAGE_TRANSFER_DST_BIT`.

The implementation **may** return `VK_FALSE` in `optimalDeviceAccess` if `identicalMemoryLayout` is `VK_FALSE`. If `identicalMemoryLayout` is `VK_TRUE`, `optimalDeviceAccess` **must** be `VK_TRUE`.

The implementation **may** return `VK_TRUE` in `optimalDeviceAccess` while `identicalMemoryLayout` is `VK_FALSE`. In this situation, any device performance impact **should** not be measurable.

If `VkPhysicalDeviceImageFormatInfo2::format` is a block-compressed format and `vkGetPhysicalDeviceImageFormatProperties2` returns `VK_SUCCESS`, the implementation **must** return `VK_TRUE` in `optimalDeviceAccess`.

#### NOTE

Applications can make use of `optimalDeviceAccess` to determine their resource copying strategy. If a resource is expected to be accessed more on device than on the host, and the implementation considers the resource sub-optimally accessed, it is likely better to use device copies instead.

#### NOTE

Layout not being identical yet still considered optimal for device access could

happen if the implementation has different memory layout patterns, some of which are easier to access on the host.

#### NOTE

The most practical reason for `optimalDeviceAccess` to be `VK_FALSE` is that host image access may disable framebuffer compression where it would otherwise have been enabled. This represents far more efficient host image access since no compression algorithm is required to read or write to the image, but it would impact device access performance. Some implementations may only set `optimalDeviceAccess` to `VK_FALSE` if certain conditions are met, such as specific image usage flags or creation flags.

### Valid Usage (Implicit)

- `VUID-VkHostImageCopyDevicePerformanceQuery-sType-sType` must be `VK_STRUCTURE_TYPE_HOST_IMAGE_COPY_DEVICE_PERFORMANCE_QUERY`

### Structure Chaining

#### Extends the structure

- `VkImageFormatProperties2`

To determine if cubic filtering can be used with a given image format and a given image view type add a `VkPhysicalDeviceImageViewImageFormatInfoEXT` structure to the `pNext` chain of the `VkPhysicalDeviceImageFormatInfo2` structure, and a `VkFilterCubicImageViewImageFormatPropertiesEXT` structure to the `pNext` chain of the `VkImageFormatProperties2` structure.

The `VkPhysicalDeviceImageViewImageFormatInfoEXT` structure is defined as:

```
// Provided by VK_EXT_filter_cubic
typedef struct VkPhysicalDeviceImageViewImageFormatInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkImageViewType     imageViewType;
} VkPhysicalDeviceImageViewImageFormatInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageViewType` is a `VkImageViewType` value specifying the type of the image view.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceImageViewImageFormatInfoEXT-sType-sType`

`sType` **must** be  
`VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_VIEW_IMAGE_FORMAT_INFO_EXT`

- VUID-VkPhysicalDeviceImageViewImageFormatInfoEXT-imageViewType-parameter `imageViewType` **must** be a valid `VkImageViewType` value

## Structure Chaining

### Extends the structure

- `VkPhysicalDeviceImageFormatInfo2`

The `VkFilterCubicImageViewImageFormatPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_filter_cubic
typedef struct VkFilterCubicImageViewImageFormatPropertiesEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           filterCubic;
    VkBool32           filterCubicMinmax;
} VkFilterCubicImageViewImageFormatPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `filterCubic` tells if image format, image type and image view type **can** be used with cubic filtering. This field is set by the implementation. An application-specified value is ignored.
- `filterCubicMinmax` tells if image format, image type and image view type **can** be used with cubic filtering and minmax filtering. This field is set by the implementation. An application-specified value is ignored.

## Valid Usage (Implicit)

- VUID-VkFilterCubicImageViewImageFormatPropertiesEXT-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_FILTER_CUBIC_IMAGE_VIEW_IMAGE_FORMAT_PROPERTIES_EXT`

## Structure Chaining

### Extends the structure

- `VkImageFormatProperties2`

## Valid Usage

- VUID-VkFilterCubicImageViewImageFormatPropertiesEXT-pNext-02627

If the `pNext` chain of the `VkImageFormatProperties2` structure includes a `VkFilterCubicImageViewImageFormatPropertiesEXT` structure, the `pNext` chain of the `VkPhysicalDeviceImageFormatInfo2` structure **must** include a `VkPhysicalDeviceImageViewImageFormatInfoEXT` structure with an `imageViewType` that is compatible with `imageType`

### 50.1.1. Supported Sample Counts

`vkGetPhysicalDeviceImageFormatProperties` returns a bitmask of `VkSampleCountFlagBits` in `sampleCounts` specifying the supported sample counts for the image parameters.

`sampleCounts` will be `VK_SAMPLE_COUNT_1_BIT` if at least one of the following conditions is true:

- `tiling` is `VK_IMAGE_TILING_LINEAR`
- `type` is not `VK_IMAGE_TYPE_2D`
- `flags` contains `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`
- Neither the `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` flag nor the `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT` flag in `VkFormatProperties::optimalTilingFeatures` returned by `vkGetPhysicalDeviceFormatProperties` is set
- `VkPhysicalDeviceExternalImageFormatInfo::handleType` is an external handle type for which multisampled image support is not required.
- `format` is one of the `formats` that require a sampler  $Y'C_B C_R$  conversion
- `usage` contains `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`
- `usage` contains `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`

Otherwise, the bits set in `sampleCounts` will be the sample counts supported for the specified values of `usage` and `format`. For each bit set in `usage`, the supported sample counts relate to the limits in `VkPhysicalDeviceLimits` as follows:

- If `usage` includes `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT` and `format` is a floating- or fixed-point color format, a superset of `VkPhysicalDeviceLimits::framebufferColorSampleCounts`
- If `usage` includes `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT` and `format` is an integer format, a superset of `VkPhysicalDeviceVulkan12Properties::framebufferIntegerColorSampleCounts`
- If `usage` includes `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and `format` includes a depth component, a superset of `VkPhysicalDeviceLimits::framebufferDepthSampleCounts`
- If `usage` includes `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and `format` includes a stencil component, a superset of `VkPhysicalDeviceLimits::framebufferStencilSampleCounts`
- If `usage` includes `VK_IMAGE_USAGE_SAMPLED_BIT`, and `format` includes a color component, a superset of `VkPhysicalDeviceLimits::sampledImageColorSampleCounts`
- If `usage` includes `VK_IMAGE_USAGE_SAMPLED_BIT`, and `format` includes a depth component, a

superset of `VkPhysicalDeviceLimits::sampledImageDepthSampleCounts`

- If `usage` includes `VK_IMAGE_USAGE_SAMPLED_BIT`, and `format` is an integer format, a superset of `VkPhysicalDeviceLimits::sampledImageIntegerSampleCounts`
- If `usage` includes `VK_IMAGE_USAGE_STORAGE_BIT`, a superset of `VkPhysicalDeviceLimits::storageImageSampleCounts`

If multiple bits are set in `usage`, `sampleCounts` will be the intersection of the per-usage values described above.

If none of the bits described above are set in `usage`, then there is no corresponding limit in `VkPhysicalDeviceLimits`. In this case, `sampleCounts` **must** include at least `VK_SAMPLE_COUNT_1_BIT`.

### 50.1.2. Allowed Extent Values Based on Image Type

Implementations **may** support extent values larger than the [required minimum/maximum values](#) for certain types of images. `VkImageFormatProperties::maxExtent` for each type is subject to the constraints below.

#### NOTE

Implementations **must** support images with dimensions up to the [required minimum/maximum values](#) for all types of images. It follows that the query for additional capabilities **must** return extent values that are at least as large as the required values.

For `VK_IMAGE_TYPE_1D`:

- `maxExtent.width`  $\geq$  `VkPhysicalDeviceLimits::maxImageDimension1D`
- `maxExtent.height` = 1
- `maxExtent.depth` = 1

For `VK_IMAGE_TYPE_2D` when `flags` does not contain `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`:

- `maxExtent.width`  $\geq$  `VkPhysicalDeviceLimits::maxImageDimension2D`
- `maxExtent.height`  $\geq$  `VkPhysicalDeviceLimits::maxImageDimension2D`
- `maxExtent.depth` = 1

For `VK_IMAGE_TYPE_2D` when `flags` contains `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT`:

- `maxExtent.width`  $\geq$  `VkPhysicalDeviceLimits::maxImageDimensionCube`
- `maxExtent.height`  $\geq$  `VkPhysicalDeviceLimits::maxImageDimensionCube`
- `maxExtent.depth` = 1

For `VK_IMAGE_TYPE_3D`:

- `maxExtent.width`  $\geq$  `VkPhysicalDeviceLimits::maxImageDimension3D`
- `maxExtent.height`  $\geq$  `VkPhysicalDeviceLimits::maxImageDimension3D`
- `maxExtent.depth`  $\geq$  `VkPhysicalDeviceLimits::maxImageDimension3D`

## 50.2. Additional Buffer Capabilities

To query the external handle types supported by buffers, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceExternalBufferProperties(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceExternalBufferInfo* pExternalBufferInfo,
    VkExternalBufferProperties* pExternalBufferProperties);
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to vkGetPhysicalDeviceExternalBufferProperties
void vkGetPhysicalDeviceExternalBufferPropertiesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceExternalBufferInfo* pExternalBufferInfo,
    VkExternalBufferProperties* pExternalBufferProperties);
```

- `physicalDevice` is the physical device from which to query the buffer capabilities.
- `pExternalBufferInfo` is a pointer to a `VkPhysicalDeviceExternalBufferInfo` structure describing the parameters that would be consumed by `vkCreateBuffer`.
- `pExternalBufferProperties` is a pointer to a `VkExternalBufferProperties` structure in which capabilities are returned.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalBufferProperties-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceExternalBufferProperties-pExternalBufferInfo-parameter `pExternalBufferInfo` **must** be a valid pointer to a valid `VkPhysicalDeviceExternalBufferInfo` structure
- VUID-vkGetPhysicalDeviceExternalBufferProperties-pExternalBufferProperties-parameter `pExternalBufferProperties` **must** be a valid pointer to a `VkExternalBufferProperties` structure

The `VkPhysicalDeviceExternalBufferInfo` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalBufferInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkBufferCreateFlags       flags;
    VkBufferUsageFlags        usage;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalBufferInfo;
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkPhysicalDeviceExternalBufferInfo
typedef VkPhysicalDeviceExternalBufferInfo VkPhysicalDeviceExternalBufferInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of [VkBufferCreateFlagBits](#) describing additional parameters of the buffer, corresponding to [VkBufferCreateInfo::flags](#).
- **usage** is a bitmask of [VkBufferUsageFlagBits](#) describing the intended usage of the buffer, corresponding to [VkBufferCreateInfo::usage](#).
- **handleType** is a [VkExternalMemoryHandleTypeFlagBits](#) value specifying the memory handle type that will be used with the memory associated with the buffer.

Only usage flags representable in [VkBufferUsageFlagBits](#) are returned in this structure's **usage**. If the **pNext** chain includes a [VkBufferUsageFlags2CreateInfo](#) structure, all usage flags of the buffer are returned in [VkBufferUsageFlags2CreateInfo::usage](#).

### Valid Usage

- VUID-VkPhysicalDeviceExternalBufferInfo-None-09499  
If the **pNext** chain does not include a [VkBufferUsageFlags2CreateInfo](#) structure, **usage** **must** be a valid combination of [VkBufferUsageFlagBits](#) values
- VUID-VkPhysicalDeviceExternalBufferInfo-None-09500  
If the **pNext** chain does not include a [VkBufferUsageFlags2CreateInfo](#) structure, **usage** **must** not be 0

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalBufferInfo-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTERNAL\\_BUFFER\\_INFO](#)
- VUID-VkPhysicalDeviceExternalBufferInfo-pNext-pNext  
**pNext** **must** be **NULL** or a pointer to a valid instance of [VkBufferUsageFlags2CreateInfo](#)
- VUID-VkPhysicalDeviceExternalBufferInfo-sType-unique

The **sType** value of each structure in the **pNext** chain **must** be unique

- VUID-VkPhysicalDeviceExternalBufferInfo-flags-parameter  
If **flags** is not 0, **flags** **must** be a valid combination of **VkBufferCreateFlagBits** values
- VUID-VkPhysicalDeviceExternalBufferInfo-handleType-parameter  
**handleType** **must** be a valid **VkExternalMemoryHandleTypeFlagBits** value

The **VkExternalBufferProperties** structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalBufferProperties {
    VkStructureType      sType;
    void*                pNext;
    VkExternalMemoryProperties externalMemoryProperties;
} VkExternalBufferProperties;
```

```
// Provided by VK_KHR_external_memory_capabilities
// Equivalent to VkExternalBufferProperties
typedef VkExternalBufferProperties VkExternalBufferPropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **externalMemoryProperties** is a **VkExternalMemoryProperties** structure specifying various capabilities of the external handle type when used with the specified buffer creation parameters.

### Valid Usage (Implicit)

- VUID-VkExternalBufferProperties-sType-sType  
**sType** **must** be **VK\_STRUCTURE\_TYPE\_EXTERNAL\_BUFFER\_PROPERTIES**
- VUID-VkExternalBufferProperties-pNext-pNext  
**pNext** **must** be **NULL**

## 50.3. Optional Semaphore Capabilities

Semaphores **may** support import and export of their **payload** to external handles. To query the external handle types supported by semaphores, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceExternalSemaphoreProperties(
    VkPhysicalDevice                physicalDevice,
    const VkPhysicalDeviceExternalSemaphoreInfo* pExternalSemaphoreInfo,
    VkExternalSemaphoreProperties*    pExternalSemaphoreProperties);
```

```
// Provided by VK_KHR_external_semaphore_capabilities
// Equivalent to vkGetPhysicalDeviceExternalSemaphoreProperties
void vkGetPhysicalDeviceExternalSemaphorePropertiesKHR(
    VkPhysicalDevice                physicalDevice,
    const VkPhysicalDeviceExternalSemaphoreInfo* pExternalSemaphoreInfo,
    VkExternalSemaphoreProperties*    pExternalSemaphoreProperties);
```

- **physicalDevice** is the physical device from which to query the semaphore capabilities.
- **pExternalSemaphoreInfo** is a pointer to a [VkPhysicalDeviceExternalSemaphoreInfo](#) structure describing the parameters that would be consumed by [vkCreateSemaphore](#).
- **pExternalSemaphoreProperties** is a pointer to a [VkExternalSemaphoreProperties](#) structure in which capabilities are returned.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-physicalDevice-parameter **physicalDevice** **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-pExternalSemaphoreInfo-parameter **pExternalSemaphoreInfo** **must** be a valid pointer to a valid [VkPhysicalDeviceExternalSemaphoreInfo](#) structure
- VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-pExternalSemaphoreProperties-parameter **pExternalSemaphoreProperties** **must** be a valid pointer to a [VkExternalSemaphoreProperties](#) structure

The [VkPhysicalDeviceExternalSemaphoreInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalSemaphoreInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkExternalSemaphoreHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalSemaphoreInfo;
```

```
// Provided by VK_KHR_external_semaphore_capabilities
// Equivalent to VkPhysicalDeviceExternalSemaphoreInfo
typedef VkPhysicalDeviceExternalSemaphoreInfo
VkPhysicalDeviceExternalSemaphoreInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleType** is a [VkExternalSemaphoreHandleTypeFlagBits](#) value specifying the external semaphore handle type for which capabilities will be returned.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-sType-sType  
**sType must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTERNAL\\_SEMAPHORE\\_INFO](#)
- VUID-VkPhysicalDeviceExternalSemaphoreInfo-pNext-pNext  
**pNext must** be **NULL** or a pointer to a valid instance of [VkSemaphoreCreateInfo](#)
- VUID-VkPhysicalDeviceExternalSemaphoreInfo-sType-unique  
The **sType** value of each structure in the **pNext** chain **must** be unique
- VUID-VkPhysicalDeviceExternalSemaphoreInfo-handleType-parameter  
**handleType must** be a valid [VkExternalSemaphoreHandleTypeFlagBits](#) value

Bits which **may** be set in [VkPhysicalDeviceExternalSemaphoreInfo::handleType](#), specifying an external semaphore handle type, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkExternalSemaphoreHandleTypeFlagBits {
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_FD_BIT = 0x00000001,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT = 0x00000002,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT = 0x00000004,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT = 0x00000008,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT = 0x00000010,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D11_FENCE_BIT =
VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_FD_BIT_KHR =
VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_FD_BIT,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR =
VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_KHR =
VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT_KHR =
VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT_KHR =
VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT,
} VkExternalSemaphoreHandleTypeFlagBits;
```

```
// Provided by VK_KHR_external_semaphore_capabilities
// Equivalent to VkExternalSemaphoreHandleTypeFlagBits
typedef VkExternalSemaphoreHandleTypeFlagBits
VkExternalSemaphoreHandleTypeFlagBitsKHR;
```

- [VK\\_EXTERNAL\\_SEMAPHORE\\_HANDLE\\_TYPE\\_OPAQUE\\_FD\\_BIT](#) specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the POSIX system calls [dup](#), [dup2](#), [close](#), and the non-standard system call [dup3](#). Additionally, it **must** be transportable over a socket using an [SCM\\_RIGHTS](#) control message. It owns a reference to the underlying synchronization primitive represented by its Vulkan semaphore object.
- [VK\\_EXTERNAL\\_SEMAPHORE\\_HANDLE\\_TYPE\\_OPAQUE\\_WIN32\\_BIT](#) specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the functions [DuplicateHandle](#), [CloseHandle](#), [CompareObjectHandles](#), [GetHandleInformation](#), and [SetHandleInformation](#). It owns a reference to the underlying synchronization primitive represented by its Vulkan semaphore object.
- [VK\\_EXTERNAL\\_SEMAPHORE\\_HANDLE\\_TYPE\\_OPAQUE\\_WIN32\\_KMT\\_BIT](#) specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying synchronization primitive represented by its Vulkan semaphore object, and will therefore become invalid when

all Vulkan semaphore objects associated with it are destroyed.

- `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT` specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 fence, or `ID3D11Device5::CreateFence` referring to a Direct3D 11 fence. It owns a reference to the underlying synchronization primitive associated with the Direct3D fence.
- `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D11_FENCE_BIT` is an alias of `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT` with the same meaning. It is provided for convenience and code clarity when interacting with D3D11 fences.
- `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT` specifies a POSIX file descriptor handle to a Linux Sync File or Android Fence object. It can be used with any native API accepting a valid sync file or fence as input. It owns a reference to the underlying synchronization primitive associated with the file descriptor. Implementations which support importing this handle type **must** accept any type of sync or fence FD supported by the native system they are running on.

#### NOTE

Handles of type `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT` generated by the implementation may represent either Linux Sync Files or Android Fences at the implementation's discretion. Applications **should** only use operations defined for both types of file descriptors, unless they know via means external to Vulkan the type of the file descriptor, or are prepared to deal with the system-defined operation failures resulting from using the wrong type.

Some external semaphore handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

Table 96. External Semaphore Handle Types Compatibility

| Handle type                                                            | VkPhysicalDeviceIDProperties::driverUUID | VkPhysicalDeviceIDProperties::deviceUUID |
|------------------------------------------------------------------------|------------------------------------------|------------------------------------------|
| <a href="#">VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_FD_BIT</a>        | Must match                               | Must match                               |
| <a href="#">VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT</a>     | Must match                               | Must match                               |
| <a href="#">VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT</a> | Must match                               | Must match                               |
| <a href="#">VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT</a>      | Must match                               | Must match                               |
| <a href="#">VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT</a>          | No restriction                           | No restriction                           |

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalSemaphoreHandleTypeFlags;
```

```
// Provided by VK_KHR_external_semaphore_capabilities
// Equivalent to VkExternalSemaphoreHandleTypeFlags
typedef VkExternalSemaphoreHandleTypeFlags VkExternalSemaphoreHandleTypeFlagsKHR;
```

[VkExternalSemaphoreHandleTypeFlags](#) is a bitmask type for setting a mask of zero or more [VkExternalSemaphoreHandleTypeFlagBits](#).

The [VkExternalSemaphoreProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalSemaphoreProperties {
    VkStructureType           sType;
    void*                     pNext;
    VkExternalSemaphoreHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalSemaphoreHandleTypeFlags compatibleHandleTypes;
    VkExternalSemaphoreFeatureFlags externalSemaphoreFeatures;
} VkExternalSemaphoreProperties;
```

```
// Provided by VK_KHR_external_semaphore_capabilities
// Equivalent to VkExternalSemaphoreProperties
typedef VkExternalSemaphoreProperties VkExternalSemaphorePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `exportFromImportedHandleTypes` is a bitmask of `VkExternalSemaphoreHandleTypeFlagBits` specifying which types of imported handle `handleType` **can** be exported from.
- `compatibleHandleTypes` is a bitmask of `VkExternalSemaphoreHandleTypeFlagBits` specifying handle types which **can** be specified at the same time as `handleType` when creating a semaphore.
- `externalSemaphoreFeatures` is a bitmask of `VkExternalSemaphoreFeatureFlagBits` describing the features of `handleType`.

If `handleType` is not supported by the implementation, then `VkExternalSemaphoreProperties::externalSemaphoreFeatures` will be zero.

### Valid Usage (Implicit)

- VUID-VkExternalSemaphoreProperties-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_SEMAPHORE_PROPERTIES`
- VUID-VkExternalSemaphoreProperties-pNext-pNext  
`pNext` **must** be `NULL`

Bits which **may** be set in `VkExternalSemaphoreProperties::externalSemaphoreFeatures`, specifying the features of an external semaphore handle type, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkExternalSemaphoreFeatureFlagBits {
    VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT = 0x00000001,
    VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT = 0x00000002,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT_KHR =
VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT_KHR =
VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT,
} VkExternalSemaphoreFeatureFlagBits;
```

```
// Provided by VK_KHR_external_semaphore_capabilities
// Equivalent to VkExternalSemaphoreFeatureFlagBits
typedef VkExternalSemaphoreFeatureFlagBits VkExternalSemaphoreFeatureFlagBitsKHR;
```

- `VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT` specifies that handles of this type **can**

be exported from Vulkan semaphore objects.

- [VK\\_EXTERNAL\\_SEMAPHORE\\_FEATURE\\_IMPORTABLE\\_BIT](#) specifies that handles of this type **can** be imported as Vulkan semaphore objects.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalSemaphoreFeatureFlags;
```

```
// Provided by VK_KHR_external_semaphore_capabilities
// Equivalent to VkExternalSemaphoreFeatureFlags
typedef VkExternalSemaphoreFeatureFlags VkExternalSemaphoreFeatureFlagsKHR;
```

[VkExternalSemaphoreFeatureFlags](#) is a bitmask type for setting a mask of zero or more [VkExternalSemaphoreFeatureFlagBits](#).

## 50.4. Optional Fence Capabilities

Fences **may** support import and export of their [payload](#) to external handles. To query the external handle types supported by fences, call:

```
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceExternalFenceProperties(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceExternalFenceInfo* pExternalFenceInfo,
    VkExternalFenceProperties* pExternalFenceProperties);
```

```
// Provided by VK_KHR_external_fence_capabilities
// Equivalent to vkGetPhysicalDeviceExternalFenceProperties
void vkGetPhysicalDeviceExternalFencePropertiesKHR(
    VkPhysicalDevice          physicalDevice,
    const VkPhysicalDeviceExternalFenceInfo* pExternalFenceInfo,
    VkExternalFenceProperties* pExternalFenceProperties);
```

- [physicalDevice](#) is the physical device from which to query the fence capabilities.
- [pExternalFenceInfo](#) is a pointer to a [VkPhysicalDeviceExternalFenceInfo](#) structure describing the parameters that would be consumed by [vkCreateFence](#).
- [pExternalFenceProperties](#) is a pointer to a [VkExternalFenceProperties](#) structure in which capabilities are returned.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalFenceProperties-physicalDevice-parameter [physicalDevice](#) **must** be a valid [VkPhysicalDevice](#) handle

- VUID-vkGetPhysicalDeviceExternalFenceProperties-pExternalFenceInfo-parameter **pExternalFenceInfo** **must** be a valid pointer to a valid [VkPhysicalDeviceExternalFenceInfo](#) structure
- VUID-vkGetPhysicalDeviceExternalFenceProperties-pExternalFenceProperties-parameter **pExternalFenceProperties** **must** be a valid pointer to a [VkExternalFenceProperties](#) structure

The [VkPhysicalDeviceExternalFenceInfo](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalFenceInfo {
    VkStructureType          sType;
    const void*              pNext;
    VkExternalFenceHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalFenceInfo;
```

```
// Provided by VK_KHR_external_fence_capabilities
// Equivalent to VkPhysicalDeviceExternalFenceInfo
typedef VkPhysicalDeviceExternalFenceInfo VkPhysicalDeviceExternalFenceInfoKHR;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **handleType** is a [VkExternalFenceHandleTypeFlagBits](#) value specifying an external fence handle type for which capabilities will be returned.

#### NOTE

Handles of type [VK\\_EXTERNAL\\_FENCE\\_HANDLE\\_TYPE\\_SYNC\\_FD\\_BIT](#) generated by the implementation may represent either Linux Sync Files or Android Fences at the implementation's discretion. Applications **should** only use operations defined for both types of file descriptors, unless they know via means external to Vulkan the type of the file descriptor, or are prepared to deal with the system-defined operation failures resulting from using the wrong type.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalFenceInfo-sType-sType **sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTERNAL\\_FENCE\\_INFO](#)
- VUID-VkPhysicalDeviceExternalFenceInfo-pNext-pNext **pNext** **must** be **NULL**
- VUID-VkPhysicalDeviceExternalFenceInfo-handleType-parameter **handleType** **must** be a valid [VkExternalFenceHandleTypeFlagBits](#) value

Bits which **may** be set in

- `VkPhysicalDeviceExternalFenceInfo::handleType`
- `VkExternalFenceProperties::exportFromImportedHandleTypes`
- `VkExternalFenceProperties::compatibleHandleTypes`

indicate external fence handle types, and are:

```
// Provided by VK_VERSION_1_1
typedef enum VkExternalFenceHandleTypeFlagBits {
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT = 0x00000001,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT = 0x00000002,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT = 0x00000004,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT = 0x00000008,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT_KHR =
VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR =
VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_KHR =
VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT_KHR =
VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT,
} VkExternalFenceHandleTypeFlagBits;
```

```
// Provided by VK_KHR_external_fence_capabilities
// Equivalent to VkExternalFenceHandleTypeFlagBits
typedef VkExternalFenceHandleTypeFlagBits VkExternalFenceHandleTypeFlagBitsKHR;
```

- `VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT` specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the POSIX system calls `dup`, `dup2`, `close`, and the non-standard system call `dup3`. Additionally, it **must** be transportable over a socket using an `SCM_RIGHTS` control message. It owns a reference to the underlying synchronization primitive represented by its Vulkan fence object.
- `VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT` specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the functions `DuplicateHandle`, `CloseHandle`, `CompareObjectHandles`, `GetHandleInformation`, and `SetHandleInformation`. It owns a reference to the underlying synchronization primitive represented by its Vulkan fence object.
- `VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT` specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying synchronization primitive represented by its Vulkan fence object, and will therefore become invalid when all Vulkan fence objects associated with it are destroyed.

- [VK\\_EXTERNAL\\_FENCE\\_HANDLE\\_TYPE\\_SYNC\\_FD\\_BIT](#) specifies a POSIX file descriptor handle to a Linux Sync File or Android Fence. It can be used with any native API accepting a valid sync file or fence as input. It owns a reference to the underlying synchronization primitive associated with the file descriptor. Implementations which support importing this handle type **must** accept any type of sync or fence FD supported by the native system they are running on.

Some external fence handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

Table 97. External Fence Handle Types Compatibility

| Handle type                                                        | VkPhysicalDeviceIDProperties::driverUUID | VkPhysicalDeviceIDProperties::deviceUUID |
|--------------------------------------------------------------------|------------------------------------------|------------------------------------------|
| <a href="#">VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT</a>        | Must match                               | Must match                               |
| <a href="#">VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT</a>     | Must match                               | Must match                               |
| <a href="#">VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT</a> | Must match                               | Must match                               |
| <a href="#">VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT</a>          | No restriction                           | No restriction                           |

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalFenceHandleTypeFlags;
```

```
// Provided by VK_KHR_external_fence_capabilities
// Equivalent to VkExternalFenceHandleTypeFlags
typedef VkExternalFenceHandleTypeFlags VkExternalFenceHandleTypeFlagsKHR;
```

[VkExternalFenceHandleTypeFlags](#) is a bitmask type for setting a mask of zero or more [VkExternalFenceHandleTypeFlagBits](#).

The [VkExternalFenceProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalFenceProperties {
    VkStructureType      sType;
    void*                pNext;
    VkExternalFenceHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalFenceHandleTypeFlags compatibleHandleTypes;
    VkExternalFenceFeatureFlags externalFenceFeatures;
} VkExternalFenceProperties;
```

```
// Provided by VK_KHR_external_fence_capabilities
// Equivalent to VkExternalFenceProperties
typedef VkExternalFenceProperties VkExternalFencePropertiesKHR;
```

- [exportFromImportedHandleTypes](#) is a bitmask of [VkExternalFenceHandleTypeFlagBits](#) indicating which types of imported handle [handleType](#) can be exported from.

- `compatibleHandleTypes` is a bitmask of `VkExternalFenceHandleTypeFlagBits` specifying handle types which **can** be specified at the same time as `handleType` when creating a fence.
- `externalFenceFeatures` is a bitmask of `VkExternalFenceFeatureFlagBits` indicating the features of `handleType`.

If `handleType` is not supported by the implementation, then `VkExternalFenceProperties::externalFenceFeatures` will be zero.

### Valid Usage (Implicit)

- VUID-VkExternalFenceProperties-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_FENCE_PROPERTIES`
- VUID-VkExternalFenceProperties-pNext-pNext  
`pNext` **must** be `NULL`

Bits which **may** be set in `VkExternalFenceProperties::externalFenceFeatures`, indicating features of a fence external handle type, are:

```
// Provided by VK_VERSION_1_1
typedef enum VkExternalFenceFeatureFlagBits {
    VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT = 0x00000001,
    VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT = 0x00000002,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT_KHR =
VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT_KHR =
VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT,
} VkExternalFenceFeatureFlagBits;
```

```
// Provided by VK_KHR_external_fence_capabilities
// Equivalent to VkExternalFenceFeatureFlagBits
typedef VkExternalFenceFeatureFlagBits VkExternalFenceFeatureFlagBitsKHR;
```

- `VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT` specifies handles of this type **can** be exported from Vulkan fence objects.
- `VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT` specifies handles of this type **can** be imported to Vulkan fence objects.

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalFenceFeatureFlags;
```

```
// Provided by VK_KHR_external_fence_capabilities
// Equivalent to VkExternalFenceFeatureFlags
typedef VkExternalFenceFeatureFlags VkExternalFenceFeatureFlagsKHR;
```

`VkExternalFenceFeatureFlags` is a bitmask type for setting a mask of zero or more `VkExternalFenceFeatureFlagBits`.

## 50.5. Timestamp Calibration Capabilities

To query the set of time domains for which a physical device supports timestamp calibration, call:

```
// Provided by VK_KHR_calibrated_timestamps
VkResult vkGetPhysicalDeviceCalibrateableTimeDomainsKHR(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pTimeDomainCount,
    VkTimeDomainKHR*          pTimeDomains);
```

- `physicalDevice` is the physical device from which to query the set of calibrateable time domains.
- `pTimeDomainCount` is a pointer to an integer related to the number of calibrateable time domains available or queried, as described below.
- `pTimeDomains` is either `NULL` or a pointer to an array of `VkTimeDomainKHR` values, indicating the supported calibrateable time domains.

If `pTimeDomains` is `NULL`, then the number of calibrateable time domains supported for the given `physicalDevice` is returned in `pTimeDomainCount`. Otherwise, `pTimeDomainCount` **must** point to a variable set by the application to the number of elements in the `pTimeDomains` array, and on return the variable is overwritten with the number of values actually written to `pTimeDomains`. If the value of `pTimeDomainCount` is less than the number of calibrateable time domains supported, at most `pTimeDomainCount` values will be written to `pTimeDomains`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available time domains were returned.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsKHR-physicalDevice-parameter `physicalDevice` **must** be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsKHR-pTimeDomainCount-parameter `pTimeDomainCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsKHR-pTimeDomains-parameter If the value referenced by `pTimeDomainCount` is not 0, and `pTimeDomains` is not `NULL`, `pTimeDomains` **must** be a valid pointer to an array of `pTimeDomainCount` `VkTimeDomainKHR` values

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

# Chapter 51. Debugging

To aid developers in tracking down errors in the application's use of Vulkan, particularly in combination with an external debugger or profiler, *debugging extensions* may be available.

The `VkObjectType` enumeration defines values, each of which corresponds to a specific Vulkan handle type. These values **can** be used to associate debug information with a particular type of object through one or more extensions.

```
// Provided by VK_VERSION_1_0
typedef enum VkObjectType {
    VK_OBJECT_TYPE_UNKNOWN = 0,
    VK_OBJECT_TYPE_INSTANCE = 1,
    VK_OBJECT_TYPE_PHYSICAL_DEVICE = 2,
    VK_OBJECT_TYPE_DEVICE = 3,
    VK_OBJECT_TYPE_QUEUE = 4,
    VK_OBJECT_TYPE_SEMAPHORE = 5,
    VK_OBJECT_TYPE_COMMAND_BUFFER = 6,
    VK_OBJECT_TYPE_FENCE = 7,
    VK_OBJECT_TYPE_DEVICE_MEMORY = 8,
    VK_OBJECT_TYPE_BUFFER = 9,
    VK_OBJECT_TYPE_IMAGE = 10,
    VK_OBJECT_TYPE_EVENT = 11,
    VK_OBJECT_TYPE_QUERY_POOL = 12,
    VK_OBJECT_TYPE_BUFFER_VIEW = 13,
    VK_OBJECT_TYPE_IMAGE_VIEW = 14,
    VK_OBJECT_TYPE_SHADER_MODULE = 15,
    VK_OBJECT_TYPE_PIPELINE_CACHE = 16,
    VK_OBJECT_TYPE_PIPELINE_LAYOUT = 17,
    VK_OBJECT_TYPE_RENDER_PASS = 18,
    VK_OBJECT_TYPE_PIPELINE = 19,
    VK_OBJECT_TYPE_DESCRIPTOR_SET_LAYOUT = 20,
    VK_OBJECT_TYPE_SAMPLER = 21,
    VK_OBJECT_TYPE_DESCRIPTOR_POOL = 22,
    VK_OBJECT_TYPE_DESCRIPTOR_SET = 23,
    VK_OBJECT_TYPE_FRAMEBUFFER = 24,
    VK_OBJECT_TYPE_COMMAND_POOL = 25,
// Provided by VK_VERSION_1_1
    VK_OBJECT_TYPE_DESCRIPTOR_UPDATE_TEMPLATE = 1000085000,
// Provided by VK_VERSION_1_1
    VK_OBJECT_TYPE_SAMPLER_YCBCR_CONVERSION = 1000156000,
// Provided by VK_VERSION_1_3
    VK_OBJECT_TYPE_PRIVATE_DATA_SLOT = 1000295000,
// Provided by VK_KHR_surface
    VK_OBJECT_TYPE_SURFACE_KHR = 1000000000,
// Provided by VK_KHR_swapchain
    VK_OBJECT_TYPE_SWAPCHAIN_KHR = 1000001000,
// Provided by VK_KHR_display
    VK_OBJECT_TYPE_DISPLAY_KHR = 1000002000,
// Provided by VK_KHR_display
```

```

    VK_OBJECT_TYPE_DISPLAY_MODE_KHR = 1000002001,
// Provided by VK_KHR_video_queue
    VK_OBJECT_TYPE_VIDEO_SESSION_KHR = 1000023000,
// Provided by VK_KHR_video_queue
    VK_OBJECT_TYPE_VIDEO_SESSION_PARAMETERS_KHR = 1000023001,
// Provided by VK_EXT_debug_utils
    VK_OBJECT_TYPE_DEBUG_UTILS_MESSENGER_EXT = 1000128000,
// Provided by VK_KHR_acceleration_structure
    VK_OBJECT_TYPE_ACCELERATION_STRUCTURE_KHR = 1000150000,
// Provided by VK_EXT_validation_cache
    VK_OBJECT_TYPE_VALIDATION_CACHE_EXT = 1000160000,
// Provided by VK_KHR_deferred_host_operations
    VK_OBJECT_TYPE_DEFERRED_OPERATION_KHR = 1000268000,
// Provided by VK_EXT_opacity_micromap
    VK_OBJECT_TYPE_MICROMAP_EXT = 1000396000,
// Provided by VK_EXT_shader_object
    VK_OBJECT_TYPE_SHADER_EXT = 1000482000,
// Provided by VK_KHR_pipeline_binary
    VK_OBJECT_TYPE_PIPELINE_BINARY_KHR = 1000483000,
// Provided by VK_EXT_device_generated_commands
    VK_OBJECT_TYPE_INDIRECT_COMMANDS_LAYOUT_EXT = 1000572000,
// Provided by VK_EXT_device_generated_commands
    VK_OBJECT_TYPE_INDIRECT_EXECUTION_SET_EXT = 1000572001,
// Provided by VK_KHR_descriptor_update_template
    VK_OBJECT_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_KHR =
VK_OBJECT_TYPE_DESCRIPTOR_UPDATE_TEMPLATE,
// Provided by VK_KHR_sampler_ycbcr_conversion
    VK_OBJECT_TYPE_SAMPLER_YCBCR_CONVERSION_KHR =
VK_OBJECT_TYPE_SAMPLER_YCBCR_CONVERSION,
} VkObjectType;

```

Table 98. **VkObjectType** and Vulkan Handle Relationship

| <b>VkObjectType</b>            | <b>Vulkan Handle Type</b> |
|--------------------------------|---------------------------|
| VK_OBJECT_TYPE_UNKNOWN         | Unknown/Undefined Handle  |
| VK_OBJECT_TYPE_INSTANCE        | VkInstance                |
| VK_OBJECT_TYPE_PHYSICAL_DEVICE | VkPhysicalDevice          |
| VK_OBJECT_TYPE_DEVICE          | VkDevice                  |
| VK_OBJECT_TYPE_QUEUE           | VkQueue                   |
| VK_OBJECT_TYPE_SEMAPHORE       | VkSemaphore               |
| VK_OBJECT_TYPE_COMMAND_BUFFER  | VkCommandBuffer           |
| VK_OBJECT_TYPE_FENCE           | VkFence                   |
| VK_OBJECT_TYPE_DEVICE_MEMORY   | VkDeviceMemory            |
| VK_OBJECT_TYPE_BUFFER          | VkBuffer                  |
| VK_OBJECT_TYPE_IMAGE           | VkImage                   |

| VkObjectType                                | Vulkan Handle Type          |
|---------------------------------------------|-----------------------------|
| VK_OBJECT_TYPE_EVENT                        | VkEvent                     |
| VK_OBJECT_TYPE_QUERY_POOL                   | VkQueryPool                 |
| VK_OBJECT_TYPE_BUFFER_VIEW                  | VkBufferView                |
| VK_OBJECT_TYPE_IMAGE_VIEW                   | VkImageView                 |
| VK_OBJECT_TYPE_SHADER_MODULE                | VkShaderModule              |

| VK_OBJECT_TYPE_DISPLAY_KHR                  | VkDisplayKHR                |
| VK_OBJECT_TYPE_DISPLAY_MODE_KHR             | VkDisplayModeKHR            |
| VK_OBJECT_TYPE_VIDEO_SESSION_KHR            | VkVideoSessionKHR           |
| VK_OBJECT_TYPE_VIDEO_SESSION_PARAMETERS_KHR | VkVideoSessionParametersKHR |
| VK_OBJECT_TYPE_DEBUG_UTILS_MESSENGER_EXT    | VkDebugUtilsMessengerEXT    |
| VK_OBJECT_TYPE_ACCELERATION_STRUCTURE_KHR   | VkAccelerationStructureKHR  |
| VK_OBJECT_TYPE_VALIDATION_CACHE_EXT         | VkValidationCacheEXT        |
| VK_OBJECT_TYPE_DEFERRED_OPERATION_KHR       | VkDeferredOperationKHR      |

| VkObjectType                                | Vulkan Handle Type          |
|---------------------------------------------|-----------------------------|
| VK_OBJECT_TYPE_INDIRECT_COMMANDS_LAYOUT_EXT | VkIndirectCommandsLayoutEXT |
| VK_OBJECT_TYPE_INDIRECT_EXECUTION_SET_EXT   | VkIndirectExecutionSetEXT   |
| VK_OBJECT_TYPE_MICROMAP_EXT                 | VkMicromapEXT               |
| VK_OBJECT_TYPE_SHADER_EXT                   | VkShaderEXT                 |

If this Specification was generated with any such extensions included, they will be described in the remainder of this chapter.

## 51.1. Debug Utilities

Vulkan provides flexible debugging utilities for debugging an application.

The [Object Debug Annotation](#) section describes how to associate either a name or binary data with a specific Vulkan object.

The [Queue Labels](#) section describes how to annotate and group the work submitted to a queue.

The [Command Buffer Labels](#) section describes how to associate logical elements of the scene with commands in a [VkCommandBuffer](#).

The [Debug Messengers](#) section describes how to create debug messenger objects associated with an application supplied callback to capture debug messages from a variety of Vulkan components.

### 51.1.1. Object Debug Annotation

It can be useful for an application to provide its own content relative to a specific Vulkan object.

The following commands allow application developers to associate application-defined information with Vulkan objects. These commands are device-level commands but they **may** reference instance-level objects (such as [VkInstance](#)) and physical device-level objects (such as [VkPhysicalDevice](#)) with a few restrictions:

- The data for the corresponding object **may** still be available after the [VkDevice](#) used in the corresponding API call to set it is destroyed, but access to this data is not guaranteed and should be avoided.
- Subsequent calls to change the data of the same object across multiple [VkDevice](#) objects, **may** result in the data being changed to the most recent version for all [VkDevice](#) objects and not just the [VkDevice](#) used in the most recent API call.

#### Object Naming

An object can be given an application-defined name by calling:

```
// Provided by VK_EXT_debug_utils
VkResult vkSetDebugUtilsObjectNameEXT(
    VkDevice device,
    const VkDebugUtilsObjectNameInfoEXT* pNameInfo);
```

- **device** is the device that is associated with the named object passed in via **objectHandle**.
- **pNameInfo** is a pointer to a **VkDebugUtilsObjectNameInfoEXT** structure specifying parameters of the name to set on the object.

### Valid Usage

- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-02587  
**pNameInfo->objectType** **must** not be **VK\_OBJECT\_TYPE\_UNKNOWN**
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-02588  
**pNameInfo->objectHandle** **must** not be **VK\_NULL\_HANDLE**
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07872  
If **pNameInfo->objectHandle** is the valid handle of an instance-level object, the **VkDevice** identified by **device** **must** be a descendent of the same **VkInstance** as the object identified by **pNameInfo->objectHandle**
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07873  
If **pNameInfo->objectHandle** is the valid handle of a physical-device-level object, the **VkDevice** identified by **device** **must** be a descendant of the same **VkPhysicalDevice** as the object identified by **pNameInfo->objectHandle**
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07874  
If **pNameInfo->objectHandle** is the valid handle of a device-level object, that object **must** be a descendent of the **VkDevice** identified by **device**

### Valid Usage (Implicit)

- VUID-vkSetDebugUtilsObjectNameEXT-device-parameter  
**device** **must** be a valid **VkDevice** handle
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-parameter  
**pNameInfo** **must** be a valid pointer to a valid **VkDebugUtilsObjectNameInfoEXT** structure

### Host Synchronization

- Host access to **pNameInfo->objectHandle** **must** be externally synchronized

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkDebugUtilsObjectNameInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsObjectNameInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkObjectType        objectType;
    uint64_t            objectHandle;
    const char*         pObjectName;
} VkDebugUtilsObjectNameInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [objectType](#) is a [VkObjectType](#) specifying the type of the object to be named.
- [objectHandle](#) is the object to be named.
- [pObjectName](#) is either [NULL](#) or a null-terminated UTF-8 string specifying the name to apply to [objectHandle](#).

Applications **may** change the name associated with an object simply by calling [vkSetDebugUtilsObjectNameEXT](#) again with a new string. If [pObjectName](#) is either [NULL](#) or an empty string, then any previously set name is removed.

The [graphicsPipelineLibrary](#) feature allows the specification of pipelines without the creation of [VkShaderModule](#) objects beforehand. In order to continue to allow naming these shaders independently, [VkDebugUtilsObjectNameInfoEXT](#) **can** be included in the [pNext](#) chain of [VkPipelineShaderStageCreateInfo](#), which associates a static name with that particular shader.

This structure **can** be included in the [pNext](#) chain of [VkResourceDescriptorInfoEXT](#) or [VkSamplerCreateInfo](#) to label a descriptor or embedded sampler. This structure **may** be ignored when included in the [pNext](#) chain of [VkSamplerCreateInfo](#) when creating a sampler object. The label **must** remain valid while the descriptor is valid; it **may** be discarded if it becomes invalid.

## Valid Usage

- VUID-VkDebugUtilsObjectNameInfoEXT-objectType-02589  
If `objectType` is `VK_OBJECT_TYPE_UNKNOWN`, `objectHandle` **must** not be `VK_NULL_HANDLE`
- VUID-VkDebugUtilsObjectNameInfoEXT-objectType-02590  
If `objectType` is not `VK_OBJECT_TYPE_UNKNOWN`, `objectHandle` **must** be `VK_NULL_HANDLE` or a valid Vulkan handle of the type associated with `objectType` as defined in the `VkObjectType` and `Vulkan Handle Relationship` table

## Valid Usage (Implicit)

- VUID-VkDebugUtilsObjectNameInfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DEBUG_UTILS_OBJECT_NAME_INFO_EXT`
- VUID-VkDebugUtilsObjectNameInfoEXT-objectType-parameter  
`objectType` **must** be a valid `VkObjectType` value
- VUID-VkDebugUtilsObjectNameInfoEXT-pObjectName-parameter  
If `pObjectName` is not `NULL`, `pObjectName` **must** be a null-terminated UTF-8 string

## Structure Chaining

### Extends the structures

- `VkPipelineShaderStageCreateInfo`
- `VkResourceDescriptorInfoEXT`
- `VkSamplerCreateInfo`

## Object Data Association

In addition to setting a name for an object, debugging and validation layers **may** have uses for additional binary data on a per-object basis that have no other place in the Vulkan API.

For example, a `VkShaderModule` could have additional debugging data attached to it to aid in offline shader tracing.

Additional data can be attached to an object by calling `vkSetDebugUtilsObjectTagEXT` as defined below.

```
// Provided by VK_EXT_debug_utils
VkResult vkSetDebugUtilsObjectTagEXT(
    VkDevice device,
    const VkDebugUtilsObjectTagInfoEXT* pTagInfo);
```

- **device** is the device that created the object.
- **pTagInfo** is a pointer to a [VkDebugUtilsObjectTagInfoEXT](#) structure specifying parameters of the tag to attach to the object.

### Valid Usage

- VUID-vkSetDebugUtilsObjectTagEXT-pNameInfo-07875  
If **pNameInfo->objectHandle** is the valid handle of an instance-level object, the [VkDevice](#) identified by **device** **must** be a descendent of the same [VkInstance](#) as the object identified by **pNameInfo->objectHandle**
- VUID-vkSetDebugUtilsObjectTagEXT-pNameInfo-07876  
If **pNameInfo->objectHandle** is the valid handle of a physical-device-level object, the [VkDevice](#) identified by **device** **must** be a descendant of the same [VkPhysicalDevice](#) as the object identified by **pNameInfo->objectHandle**
- VUID-vkSetDebugUtilsObjectTagEXT-pNameInfo-07877  
If **pNameInfo->objectHandle** is the valid handle of a device-level object, that object **must** be a descendent of the [VkDevice](#) identified by **device**

### Valid Usage (Implicit)

- VUID-vkSetDebugUtilsObjectTagEXT-device-parameter  
**device** **must** be a valid [VkDevice](#) handle
- VUID-vkSetDebugUtilsObjectTagEXT-pTagInfo-parameter  
**pTagInfo** **must** be a valid pointer to a valid [VkDebugUtilsObjectTagInfoEXT](#) structure

### Return Codes

#### Success

- [VK\\_SUCCESS](#)

#### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_DEVICE\\_MEMORY](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkDebugUtilsObjectTagInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsObjectTagInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    VkObjectType        objectType;
    uint64_t           objectHandle;
    uint64_t           tagName;
    size_t             tagSize;
    const void*        pTag;
} VkDebugUtilsObjectTagInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **objectType** is a [VkObjectType](#) specifying the type of the object to be named.
- **objectHandle** is the object to be tagged.
- **tagName** is a numerical identifier of the tag.
- **tagSize** is the number of bytes of data to attach to the object.
- **pTag** is a pointer to an array of **tagSize** bytes containing the data to be associated with the object.

The **tagName** parameter gives a name or identifier to the type of data being tagged. This can be used by debugging layers to easily filter for only data that can be used by that implementation.

### Valid Usage

- VUID-VkDebugUtilsObjectTagInfoEXT-objectType-01908  
**objectType** **must** not be [VK\\_OBJECT\\_TYPE\\_UNKNOWN](#)
- VUID-VkDebugUtilsObjectTagInfoEXT-objectHandle-01910  
**objectHandle** **must** be a valid Vulkan handle of the type associated with **objectType** as defined in the [VkObjectType](#) and [Vulkan Handle Relationship](#) table

### Valid Usage (Implicit)

- VUID-VkDebugUtilsObjectTagInfoEXT-sType-sType  
**sType** **must** be [VK\\_STRUCTURE\\_TYPE\\_DEBUG\\_UTILS\\_OBJECT\\_TAG\\_INFO\\_EXT](#)
- VUID-VkDebugUtilsObjectTagInfoEXT-pNext-pNext  
**pNext** **must** be `NULL`
- VUID-VkDebugUtilsObjectTagInfoEXT-objectType-parameter  
**objectType** **must** be a valid [VkObjectType](#) value
- VUID-VkDebugUtilsObjectTagInfoEXT-pTag-parameter  
**pTag** **must** be a valid pointer to an array of **tagSize** bytes
- VUID-VkDebugUtilsObjectTagInfoEXT-tagSize-arraylength  
**tagSize** **must** be greater than `0`

## Host Synchronization

- Host access to **objectHandle** **must** be externally synchronized

### 51.1.2. Queue Labels

All Vulkan work is submitted using queues. It is possible for an application to use multiple queues, each containing multiple command buffers, when performing work. It can be useful to identify which queue, or even where in a queue, something has occurred.

To begin identifying a region using a debug label inside a queue, you may use the [vkQueueBeginDebugUtilsLabelEXT](#) command.

Then, when the region of interest has passed, you may end the label region using [vkQueueEndDebugUtilsLabelEXT](#).

Additionally, a single debug label may be inserted at any time using [vkQueueInsertDebugUtilsLabelEXT](#).

A queue debug label region is opened by calling:

```
// Provided by VK_EXT_debug_utils
void vkQueueBeginDebugUtilsLabelEXT(
    VkQueue queue,
    const VkDebugUtilsLabelEXT* pLabelInfo);
```

- **queue** is the queue in which to start a debug label region.
- **pLabelInfo** is a pointer to a [VkDebugUtilsLabelEXT](#) structure specifying parameters of the label region to open.

## Valid Usage (Implicit)

- VUID-vkQueueBeginDebugUtilsLabelEXT-queue-parameter  
**queue** **must** be a valid [VkQueue](#) handle
- VUID-vkQueueBeginDebugUtilsLabelEXT-pLabelInfo-parameter  
**pLabelInfo** **must** be a valid pointer to a valid [VkDebugUtilsLabelEXT](#) structure

## Host Synchronization

- Host access to **queue** **must** be externally synchronized if it was not created with [VK\\_DEVICE\\_QUEUE\\_CREATE INTERNALLY SYNCHRONIZED\\_BIT\\_KHR](#)

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| -                     | -                 | -                  | Any                   | -            |

The `VkDebugUtilsLabelEXT` structure is defined as:

```
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsLabelEXT {
    VkStructureType    sType;
    const void*        pNext;
    const char*        pLabelName;
    float              color[4];
} VkDebugUtilsLabelEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pLabelName` is a pointer to a null-terminated UTF-8 string containing the name of the label.
- `color` is an optional RGBA color value that can be associated with the label. A particular implementation **may** choose to ignore this color value. The values contain RGBA values in order, in the range 0.0 to 1.0. If all elements in `color` are 0.0, then it is ignored.

## Valid Usage (Implicit)

- VUID-VkDebugUtilsLabelEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT`
- VUID-VkDebugUtilsLabelEXT-pNext-pNext  
`pNext` **must** be `NULL`
- VUID-VkDebugUtilsLabelEXT-pLabelName-parameter  
`pLabelName` **must** be a null-terminated UTF-8 string

A queue debug label region is closed by calling:

```
// Provided by VK_EXT_debug_utils
void vkQueueEndDebugUtilsLabelEXT(
    VkQueue queue);
```

- `queue` is the queue in which a debug label region should be closed.

The calls to `vkQueueBeginDebugUtilsLabelEXT` and `vkQueueEndDebugUtilsLabelEXT` **must** be matched and balanced.

## Valid Usage

- VUID-vkQueueEndDebugUtilsLabelEXT-None-01911  
There **must** be an outstanding `vkQueueBeginDebugUtilsLabelEXT` command prior to the `vkQueueEndDebugUtilsLabelEXT` on the queue

## Valid Usage (Implicit)

- VUID-vkQueueEndDebugUtilsLabelEXT-queue-parameter  
`queue` **must** be a valid `VkQueue` handle

## Host Synchronization

- Host access to `queue` **must** be externally synchronized if it was not created with `VK_DEVICE_QUEUE_CREATE INTERNALLY SYNCHRONIZED_BIT_KHR`

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| -                     | -                 | -                  | Any                   | -            |

A single label can be inserted into a queue by calling:

```
// Provided by VK_EXT_debug_utils
void vkQueueInsertDebugUtilsLabelEXT(
    VkQueue queue,
    const VkDebugUtilsLabelEXT* pLabelInfo);
```

- `queue` is the queue into which a debug label will be inserted.
- `pLabelInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label to insert.

## Valid Usage (Implicit)

- VUID-vkQueueInsertDebugUtilsLabelEXT-queue-parameter  
`queue` **must** be a valid `VkQueue` handle
- VUID-vkQueueInsertDebugUtilsLabelEXT-pLabelInfo-parameter  
`pLabelInfo` **must** be a valid pointer to a valid `VkDebugUtilsLabelEXT` structure

## Host Synchronization

- Host access to **queue** **must** be externally synchronized if it was not created with [VK\\_DEVICE\\_QUEUE\\_CREATE INTERNALLY SYNCHRONIZED\\_BIT\\_KHR](#)

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types | Command Type |
|-----------------------|-------------------|--------------------|-----------------------|--------------|
| -                     | -                 | -                  | Any                   | -            |

### 51.1.3. Command Buffer Labels

Typical Vulkan applications will submit many command buffers in each frame, with each command buffer containing a large number of individual commands. Being able to logically annotate regions of command buffers that belong together as well as hierarchically subdivide the frame is important to a developer's ability to navigate the commands viewed holistically.

To identify the beginning of a debug label region in a command buffer, [vkCmdBeginDebugUtilsLabelEXT](#) **can** be used as defined below.

To indicate the end of a debug label region in a command buffer, [vkCmdEndDebugUtilsLabelEXT](#) **can** be used.

To insert a single command buffer debug label inside of a command buffer, [vkCmdInsertDebugUtilsLabelEXT](#) **can** be used as defined below.

A command buffer debug label region can be opened by calling:

```
// Provided by VK_EXT_debug_utils
void vkCmdBeginDebugUtilsLabelEXT(
    VkCommandBuffer                commandBuffer,
    const VkDebugUtilsLabelEXT*    pLabelInfo);
```

- **commandBuffer** is the command buffer into which the command is recorded.
- **pLabelInfo** is a pointer to a [VkDebugUtilsLabelEXT](#) structure specifying parameters of the label region to open.

## Valid Usage (Implicit)

- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-parameter **commandBuffer** **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdBeginDebugUtilsLabelEXT-pLabelInfo-parameter **pLabelInfo** **must** be a valid pointer to a valid [VkDebugUtilsLabelEXT](#) structure

- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-recording  
`commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, `VK_QUEUE_TRANSFER_BIT`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types                                                                                                                    | Command Type |
|-----------------------|-------------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Primary<br>Secondary  | Both              | Both               | VK_QUEUE_COMPUTE_BIT<br>VK_QUEUE_GRAPHICS_BIT<br>VK_QUEUE_TRANSFER_BIT<br>VK_QUEUE_VIDEO_DECODE_BIT_KHR<br>VK_QUEUE_VIDEO_ENCODE_BIT_KHR | State        |

## Conditional Rendering

`vkCmdBeginDebugUtilsLabelEXT` is not affected by [conditional rendering](#)

A command buffer label region can be closed by calling:

```
// Provided by VK_EXT_debug_utils
void vkCmdEndDebugUtilsLabelEXT(
    VkCommandBuffer          commandBuffer);
```

- `commandBuffer` is the command buffer into which the command is recorded.

An application **may** open a debug label region in one command buffer and close it in another, or otherwise split debug label regions across multiple command buffers or multiple queue submissions. When viewed from the linear series of submissions to a single queue, the calls to `vkCmdBeginDebugUtilsLabelEXT` and `vkCmdEndDebugUtilsLabelEXT` **must** be matched and balanced.

There **can** be problems reporting command buffer debug labels during the recording process because command buffers **may** be recorded out of sequence with the resulting execution order. Since the recording order **may** be different, a solitary command buffer **may** have an inconsistent view of the debug label regions by itself. Therefore, if an issue occurs during the recording of a command buffer, and the environment requires returning debug labels, the implementation **may** return only those labels it is aware of. This is true even if the implementation is aware of only the debug labels within the command buffer being actively recorded.

### Valid Usage

- VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-01912  
There **must** be an outstanding `vkCmdBeginDebugUtilsLabelEXT` command prior to the `vkCmdEndDebugUtilsLabelEXT` on the queue that `commandBuffer` is submitted to
- VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-01913  
If `commandBuffer` is a secondary command buffer, there **must** be an outstanding `vkCmdBeginDebugUtilsLabelEXT` command recorded to `commandBuffer` that has not previously been ended by a call to `vkCmdEndDebugUtilsLabelEXT`

### Valid Usage (Implicit)

- VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-parameter  
`commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-recording  
`commandBuffer` **must** be in the `recording state`
- VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support `VK_QUEUE_COMPUTE_BIT`, `VK_QUEUE_GRAPHICS_BIT`, `VK_QUEUE_TRANSFER_BIT`, `VK_QUEUE_VIDEO_DECODE_BIT_KHR`, or `VK_QUEUE_VIDEO_ENCODE_BIT_KHR` operations

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types                                                                                                                    | Command Type |
|-----------------------|-------------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Primary<br>Secondary  | Both              | Both               | VK_QUEUE_COMPUTE_BIT<br>VK_QUEUE_GRAPHICS_BIT<br>VK_QUEUE_TRANSFER_BIT<br>VK_QUEUE_VIDEO_DECODE_BIT_KHR<br>VK_QUEUE_VIDEO_ENCODE_BIT_KHR | State        |

## Conditional Rendering

vkCmdEndDebugUtilsLabelEXT is not affected by [conditional rendering](#)

A single debug label can be inserted into a command buffer by calling:

```
// Provided by VK_EXT_debug_utils
void vkCmdInsertDebugUtilsLabelEXT(
    VkCommandBuffer                commandBuffer,
    const VkDebugUtilsLabelEXT*    pLabelInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pLabelInfo` is a pointer to a [VkDebugUtilsLabelEXT](#) structure specifying parameters of the label to insert.

## Valid Usage (Implicit)

- VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-parameter `commandBuffer` **must** be a valid [VkCommandBuffer](#) handle
- VUID-vkCmdInsertDebugUtilsLabelEXT-pLabelInfo-parameter `pLabelInfo` **must** be a valid pointer to a valid [VkDebugUtilsLabelEXT](#) structure
- VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-recording `commandBuffer` **must** be in the [recording state](#)
- VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-cmdpool  
The `VkCommandPool` that `commandBuffer` was allocated from **must** support

VK\_QUEUE\_COMPUTE\_BIT, VK\_QUEUE\_GRAPHICS\_BIT, VK\_QUEUE\_TRANSFER\_BIT, VK\_QUEUE\_VIDEO\_DECODE\_BIT\_KHR, or VK\_QUEUE\_VIDEO\_ENCODE\_BIT\_KHR operations

## Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

## Command Properties

| Command Buffer Levels | Render Pass Scope | Video Coding Scope | Supported Queue Types                                                                                                                    | Command Type |
|-----------------------|-------------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| Primary<br>Secondary  | Both              | Both               | VK_QUEUE_COMPUTE_BIT<br>VK_QUEUE_GRAPHICS_BIT<br>VK_QUEUE_TRANSFER_BIT<br>VK_QUEUE_VIDEO_DECODE_BIT_KHR<br>VK_QUEUE_VIDEO_ENCODE_BIT_KHR | State        |

## Conditional Rendering

`vkCmdInsertDebugUtilsLabelEXT` is not affected by [conditional rendering](#)

### 51.1.4. Debug Messengers

Vulkan allows an application to register multiple callbacks with any Vulkan component wishing to report debug information. Some callbacks may log the information to a file, others may cause a debug break point or other application-defined behavior. A primary producer of callback messages are the validation layers. An application **can** register callbacks even when no validation layers are enabled, but they will only be called for the Vulkan loader and, if implemented, other layer and driver events.

A `VkDebugUtilsMessengerEXT` is a messenger object which handles passing along debug messages to a provided debug callback.

```
// Provided by VK_EXT_debug_utils
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDebugUtilsMessengerEXT)
```

The debug messenger will provide detailed feedback on the application's use of Vulkan when events of interest occur. When an event of interest does occur, the debug messenger will submit a debug message to the debug callback that was provided during its creation. Additionally, the debug messenger is responsible with filtering out debug messages that the callback is not interested in and will only provide desired debug messages.

A debug messenger triggers a debug callback with a debug message when an event of interest occurs. To create a debug messenger which will trigger a debug callback, call:

```
// Provided by VK_EXT_debug_utils
VkResult vkCreateDebugUtilsMessengerEXT(
    VkInstance                                instance,
    const VkDebugUtilsMessengerCreateInfoEXT* pCreateInfo,
    const VkAllocationCallbacks*             pAllocator,
    VkDebugUtilsMessengerEXT*                 pMessenger);
```

- **instance** is the instance the messenger will be used with.
- **pCreateInfo** is a pointer to a [VkDebugUtilsMessengerCreateInfoEXT](#) structure containing the callback pointer, as well as defining conditions under which this messenger will trigger the callback.
- **pAllocator** controls host memory allocation as described in the [Memory Allocation](#) chapter.
- **pMessenger** is a pointer to a [VkDebugUtilsMessengerEXT](#) handle in which the created object is returned.

### Valid Usage (Implicit)

- VUID-vkCreateDebugUtilsMessengerEXT-instance-parameter  
**instance** **must** be a valid [VkInstance](#) handle
- VUID-vkCreateDebugUtilsMessengerEXT-pCreateInfo-parameter  
**pCreateInfo** **must** be a valid pointer to a valid [VkDebugUtilsMessengerCreateInfoEXT](#) structure
- VUID-vkCreateDebugUtilsMessengerEXT-pAllocator-parameter  
If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid [VkAllocationCallbacks](#) structure
- VUID-vkCreateDebugUtilsMessengerEXT-pMessenger-parameter  
**pMessenger** **must** be a valid pointer to a [VkDebugUtilsMessengerEXT](#) handle

## Return Codes

### Success

- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The application **must** ensure that [vkCreateDebugUtilsMessengerEXT](#) is not executed in parallel with any Vulkan command that is also called with [instance](#) or child of [instance](#) as the dispatchable argument.

The definition of [VkDebugUtilsMessengerCreateInfoEXT](#) is:

```
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsMessengerCreateInfoEXT {
    VkStructureType             sType;
    const void*                 pNext;
    VkDebugUtilsMessengerCreateFlagsEXT flags;
    VkDebugUtilsMessageSeverityFlagsEXT messageSeverity;
    VkDebugUtilsMessageTypeFlagsEXT messageType;
    PFN_vkDebugUtilsMessengerCallbackEXT pfnUserCallback;
    void*                       pUserData;
} VkDebugUtilsMessengerCreateInfoEXT;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is [0](#) and is reserved for future use.
- [messageSeverity](#) is a bitmask of [VkDebugUtilsMessageSeverityFlagBitsEXT](#) specifying which severity of event(s) will cause this callback to be called.
- [messageType](#) is a bitmask of [VkDebugUtilsMessageTypeFlagBitsEXT](#) specifying which type of event(s) will cause this callback to be called.
- [pfnUserCallback](#) is the application callback function to call.
- [pUserData](#) is [NULL](#) or an application-defined user data pointer to be passed to the callback.

For each [VkDebugUtilsMessengerEXT](#) that is created the [VkDebugUtilsMessengerCreateInfoEXT::messageSeverity](#) and [VkDebugUtilsMessengerCreateInfoEXT::messageType](#) determine when that [VkDebugUtilsMessengerCreateInfoEXT::pfnUserCallback](#) is called. The process to determine if the user's [pfnUserCallback](#) is triggered when an event occurs is as follows:

1. The implementation will perform a bitwise AND of the event's [VkDebugUtilsMessageSeverityFlagBitsEXT](#) with the [messageSeverity](#) provided during creation of

the `VkDebugUtilsMessengerEXT` object.

- a. If the value is 0, the message is skipped.
2. The implementation will perform bitwise AND of the event's `VkDebugUtilsMessageTypeFlagBitsEXT` with the `messageType` provided during the creation of the `VkDebugUtilsMessengerEXT` object.
  - a. If the value is 0, the message is skipped.
3. The callback will trigger a debug message for the current event

The callback will come directly from the component that detected the event, unless some other layer intercepts the calls for its own purposes (filter them in a different way, log to a system error log, etc.).

An application **can** receive multiple callbacks if multiple `VkDebugUtilsMessengerEXT` objects are created. A callback will always be executed in the same thread as the originating Vulkan call.

A callback **can** be called from multiple threads simultaneously (if the application is making Vulkan calls from multiple threads).

### Valid Usage (Implicit)

- VUID-VkDebugUtilsMessengerCreateInfoEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CREATE_INFO_EXT`
- VUID-VkDebugUtilsMessengerCreateInfoEXT-flags-zeroBitmask  
`flags` **must** be 0
- VUID-VkDebugUtilsMessengerCreateInfoEXT-messageSeverity-parameter  
`messageSeverity` **must** be a valid combination of `VkDebugUtilsMessageSeverityFlagBitsEXT` values
- VUID-VkDebugUtilsMessengerCreateInfoEXT-messageType-parameter  
`messageType` **must** be a valid combination of `VkDebugUtilsMessageTypeFlagBitsEXT` values
- VUID-VkDebugUtilsMessengerCreateInfoEXT-pfnUserCallback-parameter  
`pfnUserCallback` **must** be a valid `PFN_vkDebugUtilsMessengerCallbackEXT` value

### Structure Chaining

#### Extends the structure

- `VkInstanceCreateInfo`

```
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessengerCreateFlagsEXT;
```

`VkDebugUtilsMessengerCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

Bits which **can** be set in `VkDebugUtilsMessengerCreateInfoEXT::messageSeverity`, specifying event severities which cause a debug messenger to call the callback, are:

```
// Provided by VK_EXT_debug_utils
typedef enum VkDebugUtilsMessageSeverityFlagBitsEXT {
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_VERBOSE_BIT_EXT = 0x00000001,
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_INFO_BIT_EXT = 0x00000010,
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT = 0x00000100,
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT = 0x00001000,
} VkDebugUtilsMessageSeverityFlagBitsEXT;
```

- `VK_DEBUG_UTILS_MESSAGE_SEVERITY_VERBOSE_BIT_EXT` specifies the most verbose output indicating all diagnostic messages from the Vulkan loader, layers, and drivers should be captured.
- `VK_DEBUG_UTILS_MESSAGE_SEVERITY_INFO_BIT_EXT` specifies an informational message such as resource details that may be handy when debugging an application.
- `VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT` specifies use of Vulkan that **may** expose an application bug. Such cases may not be immediately harmful, such as a fragment shader outputting to a location with no attachment. Other cases **may** point to behavior that is almost certainly bad when unintended such as using an image whose memory has not been filled. In general if you see a warning but you know that the behavior is intended/desired, then simply ignore the warning.
- `VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT` specifies that the application has violated a valid usage condition of the specification.

The values of `VkDebugUtilsMessageSeverityFlagBitsEXT` are sorted based on severity. The higher the flag value, the more severe the message. This allows for simple boolean operation comparisons when looking at `VkDebugUtilsMessageSeverityFlagBitsEXT` values.

For example:

#### NOTE

```
if (messageSeverity >=
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT) {
    // Do something for warnings and errors
}
```

In addition, space has been left between the enums to allow for later addition of new severities in between the existing values.

```
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessageSeverityFlagsEXT;
```

`VkDebugUtilsMessageSeverityFlagsEXT` is a bitmask type for setting a mask of zero or more `VkDebugUtilsMessageSeverityFlagBitsEXT`.

Bits which **can** be set in `VkDebugUtilsMessengerCreateInfoEXT::messageType`, specifying event types which cause a debug messenger to call the callback, are:

```
// Provided by VK_EXT_debug_utils
typedef enum VkDebugUtilsMessageTypeFlagBitsEXT {
    VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT = 0x00000001,
    VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT = 0x00000002,
    VK_DEBUG_UTILS_MESSAGE_TYPE_PERFORMANCE_BIT_EXT = 0x00000004,
    // Provided by VK_EXT_device_address_binding_report
    VK_DEBUG_UTILS_MESSAGE_TYPE_DEVICE_ADDRESS_BINDING_BIT_EXT = 0x00000008,
} VkDebugUtilsMessageTypeFlagBitsEXT;
```

- `VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT` specifies that some general event has occurred. This is typically a non-specification, non-performance event.
- `VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT` specifies that something has occurred during validation against the Vulkan specification that may indicate invalid behavior.
- `VK_DEBUG_UTILS_MESSAGE_TYPE_PERFORMANCE_BIT_EXT` specifies a potentially non-optimal use of Vulkan, e.g. using `vkCmdClearColorImage` when setting `VkAttachmentDescription::loadOp` to `VK_ATTACHMENT_LOAD_OP_CLEAR` would have worked.
- `VK_DEBUG_UTILS_MESSAGE_TYPE_DEVICE_ADDRESS_BINDING_BIT_EXT` specifies that the implementation has modified the set of GPU-visible virtual addresses associated with a Vulkan object.

```
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessageTypeFlagsEXT;
```

`VkDebugUtilsMessageTypeFlagsEXT` is a bitmask type for setting a mask of zero or more `VkDebugUtilsMessageTypeFlagBitsEXT`.

The prototype for the `VkDebugUtilsMessengerCreateInfoEXT::pfnUserCallback` function implemented by the application is:

```
// Provided by VK_EXT_debug_utils
typedef VkBool32 (*PFN_vkDebugUtilsMessengerCallbackEXT)(
    VkDebugUtilsMessageSeverityFlagBitsEXT    messageSeverity,
    VkDebugUtilsMessageTypeFlagsEXT           messageTypes,
    const VkDebugUtilsMessengerCallbackDataEXT* pCallbackData,
    void*
```

- `messageSeverity` specifies the `VkDebugUtilsMessageSeverityFlagBitsEXT` that triggered this callback.
- `messageTypes` is a bitmask of `VkDebugUtilsMessageTypeFlagBitsEXT` specifying which type of event(s) triggered this callback.
- `pCallbackData` contains all the callback related data in the

[VkDebugUtilsMessengerCallbackDataEXT](#) structure.

- `pUserData` is the application-defined user data pointer, equal to the value of [VkDebugUtilsMessengerCreateInfoEXT::pUserData](#) specified when the [VkDebugUtilsMessengerEXT](#) object was created.

The callback returns a [VkBool32](#), which is interpreted in a layer-specified manner. The application **should** always return [VK\\_FALSE](#). The [VK\\_TRUE](#) value is reserved for use in layer development.

### Valid Usage

- VUID-PFN\_vkDebugUtilsMessengerCallbackEXT-None-04769  
The callback **must** not make calls to any Vulkan commands

The definition of [VkDebugUtilsMessengerCallbackDataEXT](#) is:

```
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsMessengerCallbackDataEXT {
    VkStructureType              sType;
    const void*                  pNext;
    VkDebugUtilsMessengerCallbackDataFlagsEXT flags;
    const char*                  pMessageIdName;
    int32_t                      messageIdNumber;
    const char*                  pMessage;
    uint32_t                     queueLabelCount;
    const VkDebugUtilsLabelEXT*  pQueueLabels;
    uint32_t                     cmdBufLabelCount;
    const VkDebugUtilsLabelEXT*  pCmdBufLabels;
    uint32_t                     objectCount;
    const VkDebugUtilsObjectNameInfoEXT* pObjects;
} VkDebugUtilsMessengerCallbackDataEXT;
```

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is `0` and is reserved for future use.
- `pMessageIdName` is `NULL` or a null-terminated UTF-8 string that identifies the particular message ID that is associated with the provided message. If the message corresponds to a validation layer message, then this string will be the VUID.
- `messageIdNumber` is the ID number of the triggering message. If the message corresponds to a validation layer message, then this number is an internal hash of the VUID.
- `pMessage` is `NULL` if `messageTypes` is equal to [VK\\_DEBUG\\_UTILS\\_MESSAGE\\_TYPE\\_DEVICE\\_ADDRESS\\_BINDING\\_BIT\\_EXT](#), or a null-terminated UTF-8 string detailing the trigger conditions. If the message corresponds to a validation layer message, then this will contain the main message with the specification text and link.
- `queueLabelCount` is a count of items contained in the `pQueueLabels` array.

- `pQueueLabels` is `NULL` or a pointer to an array of `VkDebugUtilsLabelEXT` active in the current `VkQueue` at the time the callback was triggered. Refer to [Queue Labels](#) for more information.
- `cmdBufLabelCount` is a count of items contained in the `pCmdBufLabels` array.
- `pCmdBufLabels` is `NULL` or a pointer to an array of `VkDebugUtilsLabelEXT` active in the current `VkCommandBuffer` at the time the callback was triggered. Refer to [Command Buffer Labels](#) for more information.
- `objectCount` is a count of items contained in the `pObjects` array.
- `pObjects` is a pointer to an array of `VkDebugUtilsObjectNameInfoEXT` objects related to the detected issue. The array is roughly in order of importance, but the 0th element is always guaranteed to be the most important object for this message.

#### NOTE

This structure should only be considered valid during the lifetime of the triggered callback.

Since adding queue and command buffer labels behaves like pushing and popping onto a stack, the order of both `pQueueLabels` and `pCmdBufLabels` is based on the order the labels were defined. The result is that the first label in either `pQueueLabels` or `pCmdBufLabels` will be the first defined (and therefore the oldest) while the last label in each list will be the most recent.

#### NOTE

`pQueueLabels` will only be non-`NULL` if one of the objects in `pObjects` can be related directly to a defined `VkQueue` which has had one or more labels associated with it.

Likewise, `pCmdBufLabels` will only be non-`NULL` if one of the objects in `pObjects` can be related directly to a defined `VkCommandBuffer` which has had one or more labels associated with it. Additionally, while command buffer labels allow for beginning and ending across different command buffers, the debug messaging framework **cannot** guarantee that labels in `pCmdBufLabels` will contain those defined outside of the associated command buffer. This is partially due to the fact that the association of one command buffer with another may not have been defined at the time the debug message is triggered.

### Valid Usage (Implicit)

- VUID-VkDebugUtilsMessengerCallbackDataEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CALLBACK_DATA_EXT`
- VUID-VkDebugUtilsMessengerCallbackDataEXT-pNext-pNext  
`pNext` **must** be `NULL` or a pointer to a valid instance of `VkDeviceAddressBindingCallbackDataEXT`
- VUID-VkDebugUtilsMessengerCallbackDataEXT-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique
- VUID-VkDebugUtilsMessengerCallbackDataEXT-flags-zerobitmask  
`flags` **must** be `0`
- VUID-VkDebugUtilsMessengerCallbackDataEXT-pMessageIdName-parameter  
If `pMessageIdName` is not `NULL`, `pMessageIdName` **must** be a null-terminated UTF-8 string

- VUID-VkDebugUtilsMessengerCallbackDataEXT-pMessage-parameter  
If `pMessage` is not `NULL`, `pMessage` **must** be a null-terminated UTF-8 string
- VUID-VkDebugUtilsMessengerCallbackDataEXT-pQueueLabels-parameter  
If `queueLabelCount` is not `0`, `pQueueLabels` **must** be a valid pointer to an array of `queueLabelCount` valid `VkDebugUtilsLabelEXT` structures
- VUID-VkDebugUtilsMessengerCallbackDataEXT-pCmdBufLabels-parameter  
If `cmdBufLabelCount` is not `0`, `pCmdBufLabels` **must** be a valid pointer to an array of `cmdBufLabelCount` valid `VkDebugUtilsLabelEXT` structures
- VUID-VkDebugUtilsMessengerCallbackDataEXT-pObjects-parameter  
If `objectCount` is not `0`, `pObjects` **must** be a valid pointer to an array of `objectCount` valid `VkDebugUtilsObjectNameInfoEXT` structures

```
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessengerCallbackDataFlagsEXT;
```

`VkDebugUtilsMessengerCallbackDataFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

The definition of `VkDeviceAddressBindingCallbackDataEXT` is:

```
// Provided by VK_EXT_device_address_binding_report
typedef struct VkDeviceAddressBindingCallbackDataEXT {
    VkStructureType      sType;
    void*                pNext;
    VkDeviceAddressBindingFlagsEXT flags;
    VkDeviceAddress      baseAddress;
    VkDeviceSize         size;
    VkDeviceAddressBindingTypeEXT bindingType;
} VkDeviceAddressBindingCallbackDataEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkDeviceAddressBindingFlagBitsEXT` specifying additional information about the binding event that caused the callback to be called.
- `baseAddress` is a GPU-accessible virtual address identifying the start of a region of the virtual address space associated with a Vulkan object, as identified by the `pObjects` member of `VkDebugUtilsMessengerCallbackDataEXT`.
- `size` is the size in bytes of a region of GPU-accessible virtual address space.
- `bindingType` is a `VkDeviceAddressBindingTypeEXT` specifying the type of binding event that caused the callback to be called.

If the `reportAddressBinding` feature is enabled and the implementation binds or unbinds a region of virtual address space associated with a Vulkan object, the implementation **must** submit a debug

message with the following properties:

- `messageSeverity` equal to `VK_DEBUG_UTILS_MESSAGE_SEVERITY_INFO_BIT_EXT`
- `messageTypes` equal to `VK_DEBUG_UTILS_MESSAGE_TYPE_DEVICE_ADDRESS_BINDING_BIT_EXT`
- `VkDebugUtilsMessengerCallbackDataEXT::pObjects` **must** identify the associated Vulkan object
- `VkDeviceAddressBindingCallbackDataEXT` **must** be included in the `pNext` chain of `VkDebugUtilsMessengerCallbackDataEXT`

These debug messages **must** be emitted both for GPU virtual address space regions that are explicitly bound to a Vulkan object via the `vkBind*Memory/vkBind*Memory2` functions, and for those that are implicitly generated via memory allocation or importing external memory.

An implementation **may** report binding events associated with a Vulkan object via `VkDebugUtilsMessengerEXT` prior to the object becoming visible to an application via other Vulkan commands. For example, object creation functions **may** report binding events that occur during an object's creation. In such cases, `VkDeviceAddressBindingCallbackDataEXT::flags` **must** include `VK_DEVICE_ADDRESS_BINDING_INTERNAL_OBJECT_BIT_EXT`.

Object handles reported in this manner are not **valid object handles**, and **must** not be used as an input parameter to any Vulkan command.

Any valid object handle returned by an object creation function **must** match the handle specified via any previously reported binding events associated with the object's creation.

### Valid Usage (Implicit)

- VUID-VkDeviceAddressBindingCallbackDataEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_ADDRESS_BINDING_CALLBACK_DATA_EXT`
- VUID-VkDeviceAddressBindingCallbackDataEXT-flags-parameter  
If `flags` is not `0`, `flags` **must** be a valid combination of `VkDeviceAddressBindingFlagBitsEXT` values
- VUID-VkDeviceAddressBindingCallbackDataEXT-baseAddress-parameter  
`baseAddress` **must** be a valid `VkDeviceAddress` value
- VUID-VkDeviceAddressBindingCallbackDataEXT-bindingType-parameter  
`bindingType` **must** be a valid `VkDeviceAddressBindingTypeEXT` value

### Structure Chaining

#### Extends the structure

- `VkDebugUtilsMessengerCallbackDataEXT`

Bits which **can** be set in `VkDeviceAddressBindingCallbackDataEXT::flags` specifying additional information about a binding event are:

```
// Provided by VK_EXT_device_address_binding_report
typedef enum VkDeviceAddressBindingFlagBitsEXT {
    VK_DEVICE_ADDRESS_BINDING_INTERNAL_OBJECT_BIT_EXT = 0x00000001,
} VkDeviceAddressBindingFlagBitsEXT;
```

- [VK\\_DEVICE\\_ADDRESS\\_BINDING\\_INTERNAL\\_OBJECT\\_BIT\\_EXT](#) specifies that [VkDeviceAddressBindingCallbackDataEXT](#) describes a Vulkan object that has not been made visible to the application via a Vulkan command.

```
// Provided by VK_EXT_device_address_binding_report
typedef VkFlags VkDeviceAddressBindingFlagsEXT;
```

[VkDeviceAddressBindingFlagsEXT](#) is a bitmask type for setting a mask of zero or more [VkDeviceAddressBindingFlagBitsEXT](#).

The [VkDeviceAddressBindingTypeEXT](#) enum is defined as:

```
// Provided by VK_EXT_device_address_binding_report
typedef enum VkDeviceAddressBindingTypeEXT {
    VK_DEVICE_ADDRESS_BINDING_TYPE_BIND_EXT = 0,
    VK_DEVICE_ADDRESS_BINDING_TYPE_UNBIND_EXT = 1,
} VkDeviceAddressBindingTypeEXT;
```

- [VK\\_DEVICE\\_ADDRESS\\_BINDING\\_TYPE\\_BIND\\_EXT](#) specifies that a new GPU-accessible virtual address range has been bound.
- [VK\\_DEVICE\\_ADDRESS\\_BINDING\\_TYPE\\_UNBIND\\_EXT](#) specifies that a GPU-accessible virtual address range has been unbound.

To intentionally submit a debug message, call:

```
// Provided by VK_EXT_debug_utils
void vkSubmitDebugUtilsMessageEXT(
    VkInstance instance,
    VkDebugUtilsMessageSeverityFlagBitsEXT messageSeverity,
    VkDebugUtilsMessageTypeFlagsEXT messageTypes,
    const VkDebugUtilsMessengerCallbackDataEXT* pCallbackData);
```

- `instance` is the debug stream's [VkInstance](#).
- `messageSeverity` is a [VkDebugUtilsMessageSeverityFlagBitsEXT](#) value specifying the severity of this event/message.
- `messageTypes` is a bitmask of [VkDebugUtilsMessageTypeFlagBitsEXT](#) specifying which type of event(s) to identify with this message.
- `pCallbackData` contains all the callback related data in the [VkDebugUtilsMessengerCallbackDataEXT](#) structure.

The call will propagate through the layers and generate callback(s) as indicated by the message's flags. The parameters are passed on to the callback in addition to the `pUserData` value that was defined at the time the messenger was registered.

### Valid Usage

- VUID-vkSubmitDebugUtilsMessageEXT-objectType-02591  
The `objectType` member of each element of `pCallbackData->pObjects` **must** not be `VK_OBJECT_TYPE_UNKNOWN`

### Valid Usage (Implicit)

- VUID-vkSubmitDebugUtilsMessageEXT-instance-parameter  
`instance` **must** be a valid `VkInstance` handle
- VUID-vkSubmitDebugUtilsMessageEXT-messageSeverity-parameter  
`messageSeverity` **must** be a valid `VkDebugUtilsMessageSeverityFlagBitsEXT` value
- VUID-vkSubmitDebugUtilsMessageEXT-messageTypes-parameter  
`messageTypes` **must** be a valid combination of `VkDebugUtilsMessageTypeFlagBitsEXT` values
- VUID-vkSubmitDebugUtilsMessageEXT-pCallbackData-parameter  
`pCallbackData` **must** be a valid pointer to a valid `VkDebugUtilsMessengerCallbackDataEXT` structure

To destroy a `VkDebugUtilsMessengerEXT` object, call:

```
// Provided by VK_EXT_debug_utils
void vkDestroyDebugUtilsMessengerEXT(
    VkInstance          instance,
    VkDebugUtilsMessengerEXT messenger,
    const VkAllocationCallbacks* pAllocator);
```

- `instance` is the instance where the callback was created.
- `messenger` is the `VkDebugUtilsMessengerEXT` object to destroy. `messenger` is an externally synchronized object and **must** not be used on more than one thread at a time. This means that `vkDestroyDebugUtilsMessengerEXT` **must** not be called when a callback is active.
- `pAllocator` controls host memory allocation as described in the [Memory Allocation](#) chapter.

### Valid Usage

- VUID-vkDestroyDebugUtilsMessengerEXT-messenger-01915  
If `VkAllocationCallbacks` were provided when `messenger` was created, a compatible set of callbacks **must** be provided here

- VUID-vkDestroyDebugUtilsMessengerEXT-messenger-01916  
If no `VkAllocationCallbacks` were provided when `messenger` was created, `pAllocator` **must** be `NULL`

### Valid Usage (Implicit)

- VUID-vkDestroyDebugUtilsMessengerEXT-instance-parameter  
`instance` **must** be a valid `VkInstance` handle
- VUID-vkDestroyDebugUtilsMessengerEXT-messenger-parameter  
If `messenger` is not `VK_NULL_HANDLE`, `messenger` **must** be a valid `VkDebugUtilsMessengerEXT` handle
- VUID-vkDestroyDebugUtilsMessengerEXT-pAllocator-parameter  
If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkDestroyDebugUtilsMessengerEXT-messenger-parent  
If `messenger` is a valid handle, it **must** have been created, allocated, or retrieved from `instance`

### Host Synchronization

- Host access to `messenger` **must** be externally synchronized

The application **must** ensure that `vkDestroyDebugUtilsMessengerEXT` is not executed in parallel with any Vulkan command that is also called with `instance` or child of `instance` as the dispatchable argument.

## 51.2. Device Loss Debugging

### 51.2.1. Device Fault Diagnosis

To retrieve diagnostic information about faults call:

```
// Provided by VK_KHR_device_fault
VkResult vkGetDeviceFaultReportsKHR(
    VkDevice          device,
    uint64_t          timeout,
    uint32_t*         pFaultCounts,
    VkDeviceFaultInfoKHR* pFaultInfo);
```

- `device` is the logical device from which to query the diagnostic fault information.
- `timeout` is the timeout period in units of nanoseconds. `timeout` is adjusted to the closest value allowed by the implementation-dependent timeout accuracy, which **may** be substantially longer

than one nanosecond, and **may** be longer than the requested period.

- **pFaultCount** is a pointer to an integer related to the number of fault reports available or queried, as described below.
- **pFaultInfo** is **NULL** or a pointer to an array of **VkDeviceFaultInfoKHR** structures in which fault information is returned.

If at least one fault report is available when **vkGetDeviceFaultReportsKHR** is called, then **vkGetDeviceFaultReportsKHR** returns immediately. If no faults have occurred at the time **vkGetDeviceFaultReportsKHR** is called, then **vkGetDeviceFaultReportsKHR** will block and wait until a fault occurs and a report becomes available or until the **timeout** has expired, whichever is sooner.

If **timeout** is zero, then **vkGetDeviceFaultReportsKHR** does not wait, but simply returns the current fault count and reports. **VK\_TIMEOUT** will be returned in this case if no faults have occurred, even though no actual wait was performed.

If a fault has occurred before the **timeout** has expired, **vkGetDeviceFaultReportsKHR** returns **VK\_SUCCESS**. Otherwise, **vkGetDeviceFaultReportsKHR** returns **VK\_TIMEOUT** after the **timeout** has expired.

If **pFaultInfo** is **NULL**, then the number of fault reports available is returned in **pFaultCount**. Otherwise, **pFaultCount** **must** point to a variable set by the application to the number of elements in the **pFaultInfo** array, and on return the variable is overwritten with the number of handles actually written to **pFaultInfo**. If **pFaultCount** is less than the number of fault reports available, at most **pFaultCount** structures will be written, and **VK\_INCOMPLETE** will be returned instead of **VK\_SUCCESS**, to indicate that not all the available fault reports were returned.

If more than one fault report is available, they will be returned in order of occurrence via **pFaultInfo**.

Each individual fault report is returned exactly once.

**vkGetDeviceFaultReportsKHR()** **may** be invoked in parallel on different threads, in which case each invocation for a given **device** will return a unique set of reports. No fault report being returned to more than one invocation.

### Valid Usage (Implicit)

- VUID-vkGetDeviceFaultReportsKHR-device-parameter  
**device** **must** be a valid **VkDevice** handle
- VUID-vkGetDeviceFaultReportsKHR-pFaultCounts-parameter  
**pFaultCounts** **must** be a valid pointer to a **uint32\_t** value
- VUID-vkGetDeviceFaultReportsKHR-pFaultInfo-parameter  
If **pFaultInfo** is not **NULL**, **pFaultInfo** **must** be a valid pointer to an array of **pFaultCounts** **VkDeviceFaultInfoKHR** structures
- VUID-vkGetDeviceFaultReportsKHR-pFaultCounts-arraylength  
If **pFaultInfo** is not **NULL**, the value referenced by **pFaultCounts** **must** be greater than 0

## Return Codes

### Success

- [VK\\_INCOMPLETE](#)
- [VK\\_SUCCESS](#)
- [VK\\_TIMEOUT](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkDeviceFaultInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_device_fault
typedef struct VkDeviceFaultInfoKHR {
    VkStructureType      sType;
    void*                pNext;
    VkDeviceFaultFlagsKHR flags;
    uint64_t             groupId;
    char                 description[VK_MAX_DESCRIPTION_SIZE];
    VkDeviceFaultAddressInfoKHR faultAddressInfo;
    VkDeviceFaultAddressInfoKHR instructionAddressInfo;
    VkDeviceFaultVendorInfoKHR vendorInfo;
} VkDeviceFaultInfoKHR;
```

- [sType](#) is a [VkStructureType](#) value identifying this structure.
- [pNext](#) is [NULL](#) or a pointer to a structure extending this structure.
- [flags](#) is a bitmask of [VkDeviceFaultFlagBitsKHR](#) values giving information as to the type of fault and which additional fields have been populated by the driver provide further information.
- [groupId](#) is a monotonically increasing value for associating multiple entries with a single fault.
- [description](#) is an array of [VK\\_MAX\\_DESCRIPTION\\_SIZE](#) [char](#) containing a null-terminated UTF-8 string which is a human readable description of the fault.
- [faultAddressInfo](#) is a [VkDeviceFaultAddressInfoKHR](#) structure providing details of the memory access which caused a fault.
- [instructionAddressInfo](#) is a [VkDeviceFaultAddressInfoKHR](#) structure providing details of the GPU instruction which cause a fault.
- [vendorInfo](#) is a [VkDeviceFaultVendorInfoKHR](#) structure providing vendor specific fault information.

An implementation **should** populate as many members of [VkDeviceFaultInfoKHR](#) as possible, given the information available at the time of the fault and the constraints of the implementation itself.

A single error **may** generate multiple instances of `VkDeviceFaultInfoKHR`. For example, multiple page faults **may** be generated, with the `faultAddress` member of each instance identifying a different memory address. In this case, all instances of `VkDeviceFaultInfoKHR` **should** share the same `groupID` where the implementation can reasonably ascertain this association.

Due to hardware limitations, `faultAddressInfo` and `instructionAddressInfo` describe ranges of GPU virtual address space, rather than precise addresses. The precise memory address accessed or the precise value of the instruction pointer **must** lie within the region described.

#### NOTE

Each `VkDeviceFaultInfoKHR` reported may (depending on the `flags` set) provide:

- A memory access which may have triggered a page fault and may have contributed to device loss
- The value of an active instruction pointer at the time a fault occurred. This value may be indicative of the active pipeline or shader at the time of device loss

Comparison of the GPU virtual addresses described by `faultAddressInfo` or `instructionAddressInfo` to GPU virtual address ranges reported by the `VK_EXT_device_address_binding_report` extension may allow applications to correlate between these addresses and Vulkan objects. Applications should be aware that these addresses may also correspond to resources internal to an implementation, which will not be reported via the `VK_EXT_device_address_binding_report` extension.

### Valid Usage (Implicit)

- VUID-VkDeviceFaultInfoKHR-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_DEVICE_FAULT_INFO_KHR`
- VUID-VkDeviceFaultInfoKHR-pNext-pNext  
`pNext` **must** be `NULL`

```
// Provided by VK_KHR_device_fault
typedef VkFlags VkDeviceFaultFlagsKHR;
```

`VkDeviceFaultFlagsKHR` is a bitmask type for receiving a mask of zero or more `VkDeviceFaultFlagBitsKHR`.

Bits which **can** be set in `VkDeviceFaultInfoKHR::flags` providing information of the status of the fault reported and which additional fields have been populated by the driver, are:

```
// Provided by VK_KHR_device_fault
typedef enum VkDeviceFaultFlagBitsKHR {
    VK_DEVICE_FAULT_FLAG_DEVICE_LOST_KHR = 0x00000001,
    VK_DEVICE_FAULT_FLAG_MEMORY_ADDRESS_KHR = 0x00000002,
    VK_DEVICE_FAULT_FLAG_INSTRUCTION_ADDRESS_KHR = 0x00000004,
    VK_DEVICE_FAULT_FLAG_VENDOR_KHR = 0x00000008,
    VK_DEVICE_FAULT_FLAG_WATCHDOG_TIMEOUT_KHR = 0x00000010,
    VK_DEVICE_FAULT_FLAG_OVERFLOW_KHR = 0x00000020,
} VkDeviceFaultFlagBitsKHR;
```

- [VK\\_DEVICE\\_FAULT\\_FLAG\\_DEVICE\\_LOST\\_KHR](#) specifies that the fault has resulted in a device lost condition. No subsequent entries will be returned for this device.
- [VK\\_DEVICE\\_FAULT\\_FLAG\\_MEMORY\\_ADDRESS\\_KHR](#) specifies that the fault has associated memory access address information which is stored in the `faultAddressInfo` field (see [VkDeviceFaultAddressInfoKHR](#)).
- [VK\\_DEVICE\\_FAULT\\_FLAG\\_INSTRUCTION\\_ADDRESS\\_KHR](#) specifies that the fault has an associated instruction address which is stored in the `instructionAddressInfo` field (see [VkDeviceFaultAddressInfoKHR](#)).
- [VK\\_DEVICE\\_FAULT\\_FLAG\\_VENDOR\\_KHR](#) specifies that the fault has associated vendor information stored in the `vendorInfo` field (see [VkDeviceFaultVendorInfoKHR](#)).
- [VK\\_DEVICE\\_FAULT\\_FLAG\\_WATCHDOG\\_TIMEOUT\\_KHR](#) specifies that the fault was the result of a GPU timeout. Further information **may** be made available using other platform specific extensions via the pNext chain of the [VkDeviceFaultInfoKHR](#) structure.
- [VK\\_DEVICE\\_FAULT\\_FLAG\\_OVERFLOW\\_KHR](#) specifies that prior faults have occurred, but information about them is no longer available. This typically indicates that faults are occurring more rapidly than the calling application is able to read them back.

To retrieve diagnostic information about faults that **may** have caused device loss, call:

```
// Provided by VK_EXT_device_fault
VkResult vkGetDeviceFaultInfoEXT(
    VkDevice                device,
    VkDeviceFaultCountsEXT* pFaultCounts,
    VkDeviceFaultInfoEXT*  pFaultInfo);
```

- `device` is the logical device from which to query the diagnostic fault information.
- `pFaultCounts` is a pointer to a [VkDeviceFaultCountsEXT](#) structure in which counts for structures describing additional fault information are returned.
- `pFaultInfo` is `NULL` or a pointer to a [VkDeviceFaultInfoEXT](#) structure in which fault information is returned.

If `pFaultInfo` is `NULL`, then the counts of corresponding additional fault information structures available are returned in the `addressInfoCount` and `vendorInfoCount` members of `pFaultCounts`. Additionally, the size of any vendor-specific binary crash dump is returned in the `vendorBinarySize`

member of `pFaultCounts`.

If `pFaultInfo` is not `NULL`, `pFaultCounts` **must** point to a `VkDeviceFaultCountsEXT` structure with each structure count or size member (`addressInfoCount`, `vendorInfoCount`, `vendorBinarySize`) set by the application to the number of elements in the corresponding output array member of `pFaultInfo` (`pAddressInfos` and `pVendorInfos`), or to the size of the output buffer in bytes (`pVendorBinaryData`). On return, each structure count member is overwritten with the number of structures actually written to the corresponding output array member of `pFaultInfo`. Similarly, `vendorBinarySize` is overwritten with the number of bytes actually written to the `pVendorBinaryData` member of `pFaultInfo`.

If the `vendor-specific crash dumps` feature is not enabled, then implementations **must** set `pFaultCounts->vendorBinarySize` to zero and **must** not modify `pFaultInfo->pVendorBinaryData`.

If any `pFaultCounts` structure count member is less than the number of corresponding fault properties available, at most structure count (`addressInfoCount`, `vendorInfoCount`) elements will be written to the associated `pFaultInfo` output array. Similarly, if `vendorBinarySize` is less than the size in bytes of the available crash dump data, at most `vendorBinarySize` elements will be written to `pVendorBinaryData`.

If `pFaultInfo` is `NULL`, then subsequent calls to `vkGetDeviceFaultInfoEXT` for the same `device` **must** return identical values in the `addressInfoCount`, `vendorInfoCount` and `vendorBinarySize` members of `pFaultCounts`.

If `pFaultInfo` is not `NULL`, then subsequent calls to `vkGetDeviceFaultInfoEXT` for the same `device` **must** return identical values in the output members of `pFaultInfo` (`pAddressInfos`, `pVendorInfos`, `pVendorBinaryData`), up to the limits described by the structure count and buffer size members of `pFaultCounts` (`addressInfoCount`, `vendorInfoCount`, `vendorBinarySize`). If the sizes of the output members of `pFaultInfo` increase for a subsequent call to `vkGetDeviceFaultInfoEXT`, then supplementary information **may** be returned in the additional available space.

If any `pFaultCounts` structure count member is smaller than the number of corresponding fault properties available, or if `pFaultCounts->vendorBinarySize` is smaller than the size in bytes of the generated binary crash dump data, `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

If `pFaultCounts->vendorBinarySize` is less than what is necessary to store the `binary crash dump header`, nothing will be written to `pFaultInfo->pVendorBinaryData` and zero will be written to `pFaultCounts->vendorBinarySize`.

### Valid Usage

- VUID-vkGetDeviceFaultInfoEXT-device-07336  
`device` **must** be in the *lost* state
- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07337  
If the value referenced by `pFaultCounts->addressInfoCount` is not 0, and `pFaultInfo->pAddressInfos` is not `NULL`, `pFaultInfo->pAddressInfos` **must** be a valid pointer to an array of `pFaultCounts->addressInfoCount` `VkDeviceFaultAddressInfoEXT` structures
- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07338

If the value referenced by `pFaultCounts->vendorInfoCount` is not 0, and `pFaultInfo->pVendorInfos` is not NULL, `pFaultInfo->pVendorInfos` **must** be a valid pointer to an array of `pFaultCounts->vendorInfoCount` `VkDeviceFaultVendorInfoEXT` structures

- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07339

If the value referenced by `pFaultCounts->vendorBinarySize` is not 0, and `pFaultInfo->pVendorBinaryData` is not NULL, `pFaultInfo->pVendorBinaryData` **must** be a valid pointer to an array of `pFaultCounts->vendorBinarySize` bytes

## Valid Usage (Implicit)

- VUID-vkGetDeviceFaultInfoEXT-device-parameter  
`device` **must** be a valid `VkDevice` handle
- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-parameter  
`pFaultCounts` **must** be a valid pointer to a `VkDeviceFaultCountsEXT` structure
- VUID-vkGetDeviceFaultInfoEXT-pFaultInfo-parameter  
If `pFaultInfo` is not NULL, `pFaultInfo` **must** be a valid pointer to a `VkDeviceFaultInfoEXT` structure

## Return Codes

### Success

- `VK_INCOMPLETE`
- `VK_SUCCESS`

### Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`
- `VK_ERROR_VALIDATION_FAILED`

The `VkDeviceFaultCountsEXT` structure is defined as:

```
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultCountsEXT {
    VkStructureType    sType;
    void*              pNext;
    uint32_t            addressInfoCount;
    uint32_t            vendorInfoCount;
    VkDeviceSize        vendorBinarySize;
} VkDeviceFaultCountsEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.

- **addressInfoCount** is the number of [VkDeviceFaultAddressInfoEXT](#) structures describing either memory accesses which **may** have caused a page fault, or the addresses of active instructions at the time of the fault.
- **vendorInfoCount** is the number of [VkDeviceFaultVendorInfoEXT](#) structures describing vendor-specific fault information.
- **vendorBinarySize** is the size in bytes of a vendor-specific binary crash dump, which may provide additional information when imported into external tools.

### Valid Usage (Implicit)

- VUID-VkDeviceFaultCountsEXT-sType-sType  
**sType** must be [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_FAULT\\_COUNTS\\_EXT](#)
- VUID-VkDeviceFaultCountsEXT-pNext-pNext  
**pNext** must be [NULL](#)

The [VkDeviceFaultInfoEXT](#) structure is defined as:

```
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultInfoEXT {
    VkStructureType      sType;
    void*                pNext;
    char                 description[VK_MAX_DESCRIPTION_SIZE];
    VkDeviceFaultAddressInfoKHR* pAddressInfos;
    VkDeviceFaultVendorInfoKHR* pVendorInfos;
    void*                pVendorBinaryData;
} VkDeviceFaultInfoEXT;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is [NULL](#) or a pointer to a structure extending this structure.
- **description** is an array of [VK\\_MAX\\_DESCRIPTION\\_SIZE](#) [char](#) containing a null-terminated UTF-8 string which is a human readable description of the fault.
- **pAddressInfos** is [NULL](#) or a pointer to an array of [VkDeviceFaultAddressInfoEXT](#) structures describing either memory accesses which **may** have caused a page fault, or describing active instruction pointers at the time of the fault. The length of **pAddressInfos** is specified by the [VkDeviceFaultCountsEXT::addressInfoCount](#) value passed to [vkGetDeviceFaultInfoEXT](#). If not [NULL](#), each element of **pAddressInfos** describes a bounded region of GPU virtual address space containing either the GPU virtual address accessed, or the value of an active instruction pointer.
- **pVendorInfos** is [NULL](#) or a pointer to an array of [VkDeviceFaultVendorInfoEXT](#) structures describing vendor-specific fault information. The length of **pVendorInfos** is specified by the [VkDeviceFaultCountsEXT::vendorInfoCount](#) value passed to [vkGetDeviceFaultInfoEXT](#).
- **pVendorBinaryData** is [NULL](#) or a pointer to memory which will be populated with a vendor-specific binary crash dump, as described in [Vendor Binary Crash Dumps](#). The size of **pVendorBinaryData** is specified by the [VkDeviceFaultCountsEXT::vendorBinarySize](#) value passed to

[vkGetDeviceFaultInfoEXT](#).

An implementation **should** populate as many members of [VkDeviceFaultInfoEXT](#) as possible, given the information available at the time of the fault and the constraints of the implementation itself.

Due to hardware limitations, [pAddressInfos](#) describes ranges of GPU virtual address space, rather than precise addresses. The precise memory address accessed or the precise value of the instruction pointer **must** lie within the region described.

**NOTE**

Each element of [pAddressInfos](#) describes either:

- A memory access which may have triggered a page fault and may have contributed to device loss
- The value of an active instruction pointer at the time a fault occurred. This value may be indicative of the active pipeline or shader at the time of device loss

Comparison of the GPU virtual addresses described by [pAddressInfos](#) to GPU virtual address ranges reported by the [VK\\_EXT\\_device\\_address\\_binding\\_report](#) extension may allow applications to correlate between these addresses and Vulkan objects. Applications should be aware that these addresses may also correspond to resources internal to an implementation, which will not be reported via the [VK\\_EXT\\_device\\_address\\_binding\\_report](#) extension.

### Valid Usage (Implicit)

- VUID-VkDeviceFaultInfoEXT-sType-sType  
[sType](#) **must** be [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_FAULT\\_INFO\\_EXT](#)
- VUID-VkDeviceFaultInfoEXT-pNext-pNext  
[pNext](#) **must** be [NULL](#)

The [VkDeviceFaultAddressInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_device_fault
typedef struct VkDeviceFaultAddressInfoKHR {
    VkDeviceFaultAddressTypeKHR    addressType;
    VkDeviceAddress                reportedAddress;
    VkDeviceSize                  addressPrecision;
} VkDeviceFaultAddressInfoKHR;
```

```
// Provided by VK_EXT_device_fault
// Equivalent to VkDeviceFaultAddressInfoKHR
typedef VkDeviceFaultAddressInfoKHR VkDeviceFaultAddressInfoEXT;
```

- [addressType](#) is either the type of memory operation that triggered a page fault, or the type of association between an instruction pointer and a fault.

- **reportedAddress** is the GPU virtual address recorded by the device.
- **addressPrecision** is a power of two value that specifies how precisely the device can report the address.

The combination of **reportedAddress** and **addressPrecision** allow the possible range of addresses to be calculated, such that:

```
lower_address = (pInfo->reportedAddress & ~(pInfo->addressPrecision-1))
upper_address = (pInfo->reportedAddress | (pInfo->addressPrecision-1))
```

#### NOTE

It is valid for the **reportedAddress** to contain a more precise address than indicated by **addressPrecision**. In this case, the value of **reportedAddress** should be treated as an additional hint as to the value of the address that triggered the page fault, or to the value of an instruction pointer.

Possible values of **VkDeviceFaultAddressInfoKHR::addressType** are:

```
// Provided by VK_KHR_device_fault
typedef enum VkDeviceFaultAddressTypeKHR {
    VK_DEVICE_FAULT_ADDRESS_TYPE_NONE_KHR = 0,
    VK_DEVICE_FAULT_ADDRESS_TYPE_READ_INVALID_KHR = 1,
    VK_DEVICE_FAULT_ADDRESS_TYPE_WRITE_INVALID_KHR = 2,
    VK_DEVICE_FAULT_ADDRESS_TYPE_EXECUTE_INVALID_KHR = 3,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_UNKNOWN_KHR = 4,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_INVALID_KHR = 5,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_FAULT_KHR = 6,
    // Provided by VK_EXT_device_fault
    VK_DEVICE_FAULT_ADDRESS_TYPE_NONE_EXT = VK_DEVICE_FAULT_ADDRESS_TYPE_NONE_KHR,
    // Provided by VK_EXT_device_fault
    VK_DEVICE_FAULT_ADDRESS_TYPE_READ_INVALID_EXT =
VK_DEVICE_FAULT_ADDRESS_TYPE_READ_INVALID_KHR,
    // Provided by VK_EXT_device_fault
    VK_DEVICE_FAULT_ADDRESS_TYPE_WRITE_INVALID_EXT =
VK_DEVICE_FAULT_ADDRESS_TYPE_WRITE_INVALID_KHR,
    // Provided by VK_EXT_device_fault
    VK_DEVICE_FAULT_ADDRESS_TYPE_EXECUTE_INVALID_EXT =
VK_DEVICE_FAULT_ADDRESS_TYPE_EXECUTE_INVALID_KHR,
    // Provided by VK_EXT_device_fault
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_UNKNOWN_EXT =
VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_UNKNOWN_KHR,
    // Provided by VK_EXT_device_fault
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_INVALID_EXT =
VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_INVALID_KHR,
    // Provided by VK_EXT_device_fault
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_FAULT_EXT =
VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_FAULT_KHR,
} VkDeviceFaultAddressTypeKHR;
```

```
// Provided by VK_EXT_device_fault
// Equivalent to VkDeviceFaultAddressTypeKHR
typedef VkDeviceFaultAddressTypeKHR VkDeviceFaultAddressTypeEXT;
```

- [VK\\_DEVICE\\_FAULT\\_ADDRESS\\_TYPE\\_NONE\\_KHR](#) specifies that [VkDeviceFaultAddressInfoKHR](#) does not describe a page fault, or an instruction address.
- [VK\\_DEVICE\\_FAULT\\_ADDRESS\\_TYPE\\_READ\\_INVALID\\_KHR](#) specifies that [VkDeviceFaultAddressInfoKHR](#) describes a page fault triggered by an invalid read operation.
- [VK\\_DEVICE\\_FAULT\\_ADDRESS\\_TYPE\\_WRITE\\_INVALID\\_KHR](#) specifies that [VkDeviceFaultAddressInfoKHR](#) describes a page fault triggered by an invalid write operation.
- [VK\\_DEVICE\\_FAULT\\_ADDRESS\\_TYPE\\_EXECUTE\\_INVALID\\_KHR](#) specifies that [VkDeviceFaultAddressInfoKHR](#) describes a page fault triggered by an attempt to execute non-executable memory.
- [VK\\_DEVICE\\_FAULT\\_ADDRESS\\_TYPE\\_INSTRUCTION\\_POINTER\\_UNKNOWN\\_KHR](#) specifies an instruction pointer value at the time the fault occurred. This may or may not be related to a fault.
- [VK\\_DEVICE\\_FAULT\\_ADDRESS\\_TYPE\\_INSTRUCTION\\_POINTER\\_INVALID\\_KHR](#) specifies an instruction pointer value associated with an invalid instruction fault.
- [VK\\_DEVICE\\_FAULT\\_ADDRESS\\_TYPE\\_INSTRUCTION\\_POINTER\\_FAULT\\_KHR](#) specifies an instruction pointer value associated with a fault.

#### NOTE

The instruction pointer values recorded may not identify the specific instruction(s) that triggered the fault. The relationship between the instruction pointer reported and triggering instruction will be vendor-specific.

The [VkDeviceFaultVendorInfoKHR](#) structure is defined as:

```
// Provided by VK_KHR_device_fault
typedef struct VkDeviceFaultVendorInfoKHR {
    char        description[VK_MAX_DESCRIPTION_SIZE];
    uint64_t    vendorFaultCode;
    uint64_t    vendorFaultData;
} VkDeviceFaultVendorInfoKHR;
```

```
// Provided by VK_EXT_device_fault
// Equivalent to VkDeviceFaultVendorInfoKHR
typedef VkDeviceFaultVendorInfoKHR VkDeviceFaultVendorInfoEXT;
```

- [description](#) is an array of [VK\\_MAX\\_DESCRIPTION\\_SIZE](#) [char](#) containing a null-terminated UTF-8 string which is a human readable description of the fault.
- [vendorFaultCode](#) is the vendor-specific fault code for this fault.
- [vendorFaultData](#) is the vendor-specific fault data associated with this fault.

## Vendor Binary Crash Dumps

Applications **can** retrieve extended vendor-specific binary crash dump data for later analysis using external tools.

When `VK_KHR_device_fault` is enabled, crash dump data can be retrieved by calling [vkGetDeviceFaultDebugInfoKHR](#).

When `VK_EXT_device_fault` is enabled, crash dump data can be retrieved by calling [vkGetDeviceFaultInfoEXT](#).

To retrieve a vendor-specific binary crash dump call:

```
// Provided by VK_KHR_device_fault
VkResult vkGetDeviceFaultDebugInfoKHR(
    VkDevice device,
    VkDeviceFaultDebugInfoKHR* pDebugInfo);
```

- `device` is the logical device from which to query the crash dump.
- `pDebugInfo` is a pointer to a `VkDeviceFaultDebugInfoKHR` structure which will be populated with the vendor binary data crash dump binary, as described below.

If `pDebugInfo->pVendorBinaryData` is `NULL`, then the size of any vendor-specific binary crash dump is returned in `pDebugInfo->vendorBinarySize`.

If the `pDebugInfo->pVendorBinaryData` is not `NULL` then it **must** point to a buffer of size `pDebugInfo->vendorBinarySize` bytes.

On return, `pDebugInfo->vendorBinarySize` will be overwritten with the number of bytes actually written to the `pDebugInfo->pVendorBinaryData`.

If `pDebugInfo->vendorBinaryData` is not `NULL`, then subsequent calls to [vkGetDeviceFaultDebugInfoKHR](#) for the same `device` **must** return identical binary values in the `pDebugInfo->pVendorBinaryData` buffer up to the limit defined by `pDebugInfo->vendorBinarySize`.

If the [vendor-specific crash dumps](#) feature is not enabled, then implementations **must** set `pDebugInfo->vendorBinarySize` to zero and **must** not modify `pDebugInfo->pVendorBinaryData`.

### Valid Usage

- VUID-vkGetDeviceFaultDebugInfoKHR-device-12383  
`device` **must** be [lost](#)

### Valid Usage (Implicit)

- VUID-vkGetDeviceFaultDebugInfoKHR-device-parameter  
`device` **must** be a valid [VkDevice](#) handle

- VUID-vkGetDeviceFaultDebugInfoKHR-pDebugInfo-parameter  
`pDebugInfo` **must** be a valid pointer to a [VkDeviceFaultDebugInfoKHR](#) structure

## Return Codes

### Success

- [VK\\_INCOMPLETE](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_NOT\\_ENOUGH\\_SPACE\\_KHR](#)
- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkDeviceFaultDebugInfoKHR](#) structure is defined as:

- `sType` is a [VkStructureType](#) value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vendorBinarySize` is the size in bytes of a vendor-specific binary crash dump, which **may** provide additional information when imported into external tools.
- `pVendorBinaryData` is `NULL` or a pointer to `vendorBinarySize` number of bytes of data, which will be populated with a vendor-specific binary crash dump, as described in [Vendor Binary Crash Dumps](#).

```
// Provided by VK_KHR_device_fault
typedef struct VkDeviceFaultDebugInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           vendorBinarySize;
    void*              pVendorBinaryData;
} VkDeviceFaultDebugInfoKHR;
```

## Valid Usage (Implicit)

- VUID-VkDeviceFaultDebugInfoKHR-sType-sType  
`sType` **must** be [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_FAULT\\_DEBUG\\_INFO\\_KHR](#)
- VUID-VkDeviceFaultDebugInfoKHR-pNext-pNext  
`pNext` **must** be `NULL` or a pointer to a valid instance of [VkDeviceFaultShaderAbortMessageInfoKHR](#)
- VUID-VkDeviceFaultDebugInfoKHR-sType-unique  
The `sType` value of each structure in the `pNext` chain **must** be unique

The format of this crash dump data **may** depend on the vendor ID, device ID, driver version, and other details of the device. To enable external applications to identify the original device from which a crash dump was generated, the initial bytes written to `VkDeviceFaultInfoEXT::pVendorBinaryData`, or to `VkDeviceFaultDebugInfoKHR::pVendorBinaryData` **must** begin with a valid crash dump header.

Version one of the crash dump header is defined as:

```
// Provided by VK_KHR_device_fault
typedef struct VkDeviceFaultVendorBinaryHeaderVersionOneKHR {
    uint32_t headerSize;
    VkDeviceFaultVendorBinaryHeaderVersionKHR headerVersion;
    uint32_t vendorID;
    uint32_t deviceID;
    uint32_t driverVersion;
    uint8_t pipelineCacheUUID[VK_UUID_SIZE];
    uint32_t applicationNameOffset;
    uint32_t applicationVersion;
    uint32_t engineNameOffset;
    uint32_t engineVersion;
    uint32_t apiVersion;
} VkDeviceFaultVendorBinaryHeaderVersionOneKHR;
```

```
// Provided by VK_EXT_device_fault
// Equivalent to VkDeviceFaultVendorBinaryHeaderVersionOneKHR
typedef VkDeviceFaultVendorBinaryHeaderVersionOneKHR
VkDeviceFaultVendorBinaryHeaderVersionOneEXT;
```

- `headerSize` is the length in bytes of the crash dump header.
- `headerVersion` is a `VkDeviceFaultVendorBinaryHeaderVersionKHR` enum value specifying the version of the header. A consumer of the crash dump **should** use the header version to interpret the remainder of the header. `headerVersion` **must** be written as exactly 4 bytes.
- `vendorID` is the `VkPhysicalDeviceProperties::vendorID` of the implementation.
- `deviceID` is the `VkPhysicalDeviceProperties::deviceID` of the implementation.
- `driverVersion` is the `VkPhysicalDeviceProperties::driverVersion` of the implementation.
- `pipelineCacheUUID` is an array of `VK_UUID_SIZE` `uint8_t` values matching the `VkPhysicalDeviceProperties::pipelineCacheUUID` property of the implementation.
- `applicationNameOffset` is zero, or an offset from the base address of the crash dump header to a null-terminated UTF-8 string containing the name of the application. If `applicationNameOffset` is non-zero, this string **must** match the application name specified via `VkApplicationInfo::pApplicationName` during instance creation.
- `applicationVersion` **must** be zero or the value specified by `VkApplicationInfo::applicationVersion` during instance creation.
- `engineNameOffset` is zero, or an offset from the base address of the crash dump header to a null-

terminated UTF-8 string containing the name of the engine (if any) used to create the application. If `engineNameOffset` is non-zero, this string **must** match the engine name specified via `VkApplicationInfo::pEngineName` during instance creation.

- `engineVersion` **must** be zero or the value specified by `VkApplicationInfo::engineVersion` during instance creation.
- `apiVersion` **must** be zero or the value specified by `VkApplicationInfo::apiVersion` during instance creation.

Unlike most structures declared by the Vulkan API, all fields of this structure are written with the least significant byte first, regardless of host byte-order.

The C language specification does not define the packing of structure members. This layout assumes tight structure member packing, with members laid out in the order listed in the structure, and the intended size of the structure is 56 bytes. If a compiler produces code that diverges from that pattern, applications **must** employ another method to set values at the correct offsets.

### Valid Usage

- VUID-VkDeviceFaultVendorBinaryHeaderVersionOneEXT-headerSize-07340  
`headerSize` **must** be 56
- VUID-VkDeviceFaultVendorBinaryHeaderVersionOneEXT-headerVersion-07341  
`headerVersion` **must** be `VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_KHR`

### Valid Usage (Implicit)

- VUID-VkDeviceFaultVendorBinaryHeaderVersionOneKHR-headerVersion-parameter  
`headerVersion` **must** be a valid `VkDeviceFaultVendorBinaryHeaderVersionKHR` value

Possible values of the `headerVersion` value of the crash dump header are:

```
// Provided by VK_KHR_device_fault
typedef enum VkDeviceFaultVendorBinaryHeaderVersionKHR {
    VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_KHR = 1,
    VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_EXT =
VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_KHR,
} VkDeviceFaultVendorBinaryHeaderVersionKHR;
```

```
// Provided by VK_EXT_device_fault
// Equivalent to VkDeviceFaultVendorBinaryHeaderVersionKHR
typedef VkDeviceFaultVendorBinaryHeaderVersionKHR
VkDeviceFaultVendorBinaryHeaderVersionEXT;
```

- `VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_KHR` specifies version one of the

binary crash dump header.

## Shader Abort Messages

Applications making use of the `OpAbortKHR` instruction in their shaders **can** retrieve the messages passed through those instructions with the following structures:

The `VkDeviceFaultShaderAbortMessageInfoKHR` structure is defined as:

```
// Provided by VK_KHR_shader_abort
typedef struct VkDeviceFaultShaderAbortMessageInfoKHR {
    VkStructureType    sType;
    void*              pNext;
    uint64_t           messageDataSize;
    void*              pMessageData;
} VkDeviceFaultShaderAbortMessageInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `messageDataSize` is the size of `pMessageData` in bytes. If `pMessageData` is `NULL`, this value is populated by the implementation.
- `pMessageData` is `NULL` or a pointer to `messageDataSize` bytes of data, which will be populated with data for messages reported via `OpAbortKHR`. If `pMessageData` is `NULL` then `messageDataSize` will be populated with the required size.

This structure **can** be included in the `pNext` chain of `VkDeviceFaultDebugInfoKHR` to retrieve messages returned by `OpAbortKHR` instructions.

`pMessageData` is populated with a series of (size,payload) pairs, each aligned to 8-byte boundaries. The size in each pair is a 64-bit integer indicating the number of bytes in the subsequent payload. The data in payload is laid out in the exact manner specified in the `OpAbortKHR` instruction by the message type, with no modifications. If multiple messages are present, the next message size will always be at the following 8-byte aligned offset after the payload ends.

Implementations **must** report the message reported by the first `OpAbortKHR` instruction executed in an invocation for this device. They **may** report additional messages if other invocations continued to execute after the abort instruction was executed.

### NOTE

Even though shading languages may provide definitions for printf-style abort commands, no formatting is performed by the Vulkan implementation. Applications should consult documentation for the shader language they are using on how abort messages are packed, so that they can unpack them after they are queried.

## Valid Usage (Implicit)

- VUID-VkDeviceFaultShaderAbortMessageInfoKHR-sType-sType  
`sType` **must**

be

## Structure Chaining

### Extends the structure

- [VkDeviceFaultDebugInfoKHR](#)

## 51.3. Active Tooling Information

Information about tools providing debugging, profiling, or similar services, active for a given physical device, can be obtained by calling:

```
// Provided by VK_VERSION_1_3
VkResult vkGetPhysicalDeviceToolProperties(
    VkPhysicalDevice          physicalDevice,
    uint32_t*                 pToolCount,
    VkPhysicalDeviceToolProperties* pToolProperties);
```

- `physicalDevice` is the handle to the physical device to query for active tools.
- `pToolCount` is a pointer to an integer describing the number of tools active on `physicalDevice`.
- `pToolProperties` is either `NULL` or a pointer to an array of [VkPhysicalDeviceToolProperties](#) structures.

If `pToolProperties` is `NULL`, then the number of tools currently active on `physicalDevice` is returned in `pToolCount`. Otherwise, `pToolCount` **must** point to a variable set by the application to the number of elements in the `pToolProperties` array, and on return the variable is overwritten with the number of structures actually written to `pToolProperties`. If `pToolCount` is less than the number of currently active tools, at most `pToolCount` structures will be written.

The count and properties of active tools **may** change in response to events outside the scope of the specification. An application **should** assume these properties might change at any given time.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceToolProperties-physicalDevice-parameter `physicalDevice` **must** be a valid [VkPhysicalDevice](#) handle
- VUID-vkGetPhysicalDeviceToolProperties-pToolCount-parameter `pToolCount` **must** be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceToolProperties-pToolProperties-parameter  
If the value referenced by `pToolCount` is not `0`, and `pToolProperties` is not `NULL`, `pToolProperties` **must** be a valid pointer to an array of `pToolCount` [VkPhysicalDeviceToolProperties](#) structures

## Return Codes

### Success

- [VK\\_INCOMPLETE](#)
- [VK\\_SUCCESS](#)

### Failure

- [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#)
- [VK\\_ERROR\\_UNKNOWN](#)
- [VK\\_ERROR\\_VALIDATION\\_FAILED](#)

The [VkPhysicalDeviceToolProperties](#) structure is defined as:

```
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceToolProperties {
    VkStructureType    sType;
    void*              pNext;
    char               name[VK_MAX_EXTENSION_NAME_SIZE];
    char               version[VK_MAX_EXTENSION_NAME_SIZE];
    VkToolPurposeFlags purposes;
    char               description[VK_MAX_DESCRIPTION_SIZE];
    char               layer[VK_MAX_EXTENSION_NAME_SIZE];
} VkPhysicalDeviceToolProperties;
```

- **sType** is a [VkStructureType](#) value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **name** is a null-terminated UTF-8 string containing the name of the tool.
- **version** is a null-terminated UTF-8 string containing the version of the tool.
- **purposes** is a bitmask of [VkToolPurposeFlagBits](#) which is populated with purposes supported by the tool.
- **description** is a null-terminated UTF-8 string containing a description of the tool.
- **layer** is a null-terminated UTF-8 string containing the name of the layer implementing the tool, if the tool is implemented in a layer - otherwise it **may** be an empty string.

## Valid Usage (Implicit)

- VUID-VkPhysicalDeviceToolProperties-sType-sType  
**sType must** be [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_TOOL\\_PROPERTIES](#)
- VUID-VkPhysicalDeviceToolProperties-pNext-pNext  
**pNext must** be **NULL**

Bits which **can** be set in [VkPhysicalDeviceToolProperties::purposes](#), specifying the purposes of an

active tool, are:

```
// Provided by VK_VERSION_1_3
typedef enum VkToolPurposeFlagBits {
    VK_TOOL_PURPOSE_VALIDATION_BIT = 0x00000001,
    VK_TOOL_PURPOSE_PROFILING_BIT = 0x00000002,
    VK_TOOL_PURPOSE_TRACING_BIT = 0x00000004,
    VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT = 0x00000008,
    VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT = 0x00000010,
} VkToolPurposeFlagBits;
```

- [VK\\_TOOL\\_PURPOSE\\_VALIDATION\\_BIT](#) specifies that the tool provides validation of API usage.
- [VK\\_TOOL\\_PURPOSE\\_PROFILING\\_BIT](#) specifies that the tool provides profiling of API usage.
- [VK\\_TOOL\\_PURPOSE\\_TRACING\\_BIT](#) specifies that the tool is capturing data about the application's API usage, including anything from simple logging to capturing data for later replay.
- [VK\\_TOOL\\_PURPOSE\\_ADDITIONAL\\_FEATURES\\_BIT](#) specifies that the tool provides additional API features/extensions on top of the underlying implementation.
- [VK\\_TOOL\\_PURPOSE\\_MODIFYING\\_FEATURES\\_BIT](#) specifies that the tool modifies the API features/limits/extensions presented to the application.
- [VK\\_TOOL\\_PURPOSE\\_DEBUG\\_REPORTING\\_BIT\\_EXT](#) specifies that the tool reports additional information to the application via callbacks specified by [vkCreateDebugUtilsMessengerEXT](#)
- [VK\\_TOOL\\_PURPOSE\\_DEBUG\\_MARKERS\\_BIT\\_EXT](#) specifies that the tool consumes [object debug annotation](#), [queue labels](#), or [command buffer labels](#)

```
// Provided by VK_VERSION_1_3
typedef VkFlags VkToolPurposeFlags;
```

[VkToolPurposeFlags](#) is a bitmask type for setting a mask of zero or more [VkToolPurposeFlagBits](#).

## 51.4. Frame Boundary

The [VkFrameBoundaryEXT](#) structure is defined as:

```
// Provided by VK_EXT_frame_boundary
typedef struct VkFrameBoundaryEXT {
    VkStructureType      sType;
    const void*          pNext;
    VkFrameBoundaryFlagsEXT flags;
    uint64_t             frameID;
    uint32_t             imageCount;
    const VkImage*        pImages;
    uint32_t             bufferCount;
    const VkBuffer*       pBuffer;
    uint64_t             tagName;
    size_t               tagSize;
    const void*          pTag;
} VkFrameBoundaryEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkFrameBoundaryFlagBitsEXT` that can flag the last submission of a frame identifier.
- `frameID` is the frame identifier.
- `imageCount` is the number of images that store frame results.
- `pImages` is a pointer to an array of `VkImage` objects with `imageCount` entries.
- `bufferCount` is the number of buffers the store the frame results.
- `pBuffer` is a pointer to an array of `VkBuffer` objects with `bufferCount` entries.
- `tagName` is a numerical identifier for tag data.
- `tagSize` is the number of bytes of tag data.
- `pTag` is a pointer to an array of `tagSize` bytes containing tag data.

The application **can** associate frame boundary information to a queue submission call by adding a `VkFrameBoundaryEXT` structure to the `pNext` chain of `queue submission`, `VkPresentInfoKHR`, or `VkBindSparseInfo`.

#### NOTE

The frame identifier is used to associate one or more queue submissions to a frame. It is meant to be unique within a frame lifetime, i.e. it is possible (though not recommended) to reuse frame identifiers, as long as any two frames that may have overlapping queue submissions (as in the example above) use different frame identifiers.

Since the concept of frame is application-dependent, there is no way to validate the use of frame identifier. It is good practice to use a monotonically increasing counter as the frame identifier and not reuse identifiers between frames.

The `pImages` and `pBuffer` arrays contain a list of images and buffers which store the “end result” of the frame. As the concept of frame is application-dependent, not all frames **may** produce their

results in images or buffers, yet this is a sufficiently common case to be handled by `VkFrameBoundaryEXT`. Note that no extra information, such as image layout is being provided, since the images are meant to be used by tools which would already be tracking this required information. Having the possibility of passing a list of end-result images makes `VkFrameBoundaryEXT` as expressive as `vkQueuePresentKHR`, which is often the default frame boundary delimiter.

The application **can** also associate arbitrary extra information via tag data using `tagName`, `tagSize` and `pTag`. This extra information is typically tool-specific.

### Valid Usage (Implicit)

- VUID-VkFrameBoundaryEXT-sType-sType  
`sType` **must** be `VK_STRUCTURE_TYPE_FRAME_BOUNDARY_EXT`
- VUID-VkFrameBoundaryEXT-flags-parameter  
If `flags` is not `0`, `flags` **must** be a valid combination of `VkFrameBoundaryFlagBitsEXT` values
- VUID-VkFrameBoundaryEXT-pImages-parameter  
If `imageCount` is not `0`, and `pImages` is not `NULL`, `pImages` **must** be a valid pointer to an array of `imageCount` valid `VkImage` handles
- VUID-VkFrameBoundaryEXT-pBuffers-parameter  
If `bufferCount` is not `0`, and `pBuffers` is not `NULL`, `pBuffers` **must** be a valid pointer to an array of `bufferCount` valid `VkBuffer` handles
- VUID-VkFrameBoundaryEXT-pTag-parameter  
If `tagSize` is not `0`, and `pTag` is not `NULL`, `pTag` **must** be a valid pointer to an array of `tagSize` bytes
- VUID-VkFrameBoundaryEXT-commonparent  
Both of the elements of `pBuffers`, and the elements of `pImages` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`

### Structure Chaining

#### Extends the structures

- `VkBindSparseInfo`
- `VkPresentInfoKHR`
- `VkSubmitInfo`
- `VkSubmitInfo2`

The bit which **can** be set in `VkFrameBoundaryEXT::flags` is:

```
// Provided by VK_EXT_frame_boundary
typedef enum VkFrameBoundaryFlagBitsEXT {
    VK_FRAME_BOUNDARY_FRAME_END_BIT_EXT = 0x00000001,
} VkFrameBoundaryFlagBitsEXT;
```

- [VK\\_FRAME\\_BOUNDARY\\_FRAME\\_END\\_BIT\\_EXT](#) specifies that this queue submission is the last one for this frame, i.e. once this queue submission has terminated, then the work for this frame is completed.

Note that in the presence of timeline semaphores, the last queue submission might not be the last one to be submitted, as timeline semaphores allow for wait-before-signal submissions. In the context of frame boundary, the queue submission that should be done flagged as the last one is the one that is meant to be executed last, even if it **may** not be the last one to be submitted.

```
// Provided by VK_EXT_frame_boundary
typedef VkFlags VkFrameBoundaryFlagsEXT;
```

[VkFrameBoundaryFlagsEXT](#) is a bitmask type for setting a mask of zero or more [VkFrameBoundaryFlagBitsEXT](#).

# Appendix A: Vulkan Environment for SPIR-V

Shaders for Vulkan are defined by the [Khronos SPIR-V Specification](#) as well as the [Khronos SPIR-V Extended Instructions for GLSL](#) Specification. This appendix defines additional SPIR-V requirements applying to Vulkan shaders.

## Versions and Formats

A Vulkan 1.4 implementation **must** support the 1.0, 1.1, 1.2, 1.3, 1.4, 1.5, and 1.6 versions of SPIR-V and the 1.0 version of the SPIR-V Extended Instructions for GLSL.

A SPIR-V module passed into [vkCreateShaderModule](#) is interpreted as a series of 32-bit words in host endianness, with literal strings packed as described in section 2.2 of the SPIR-V Specification. The first few words of the SPIR-V module **must** be a magic number and a SPIR-V version number, as described in section 2.3 of the SPIR-V Specification.

## Capabilities

The [table below](#) lists the set of SPIR-V capabilities that **may** be supported in Vulkan implementations. The application **must** not use any of these capabilities in SPIR-V passed to [vkCreateShaderModule](#) unless one of the following conditions is met for the [VkDevice](#) specified in the [device](#) parameter of [vkCreateShaderModule](#):

- The corresponding field in the table is blank.
- Any corresponding Vulkan feature is enabled.
- Any corresponding Vulkan extension is enabled.
- Any corresponding Vulkan property is supported.
- The corresponding core version is supported (as returned by [VkPhysicalDeviceProperties::apiVersion](#)).

Table 99. List of SPIR-V Capabilities and Corresponding Vulkan Features, Extensions, or Core Version

| SPIR-V <a href="#">OpCapability</a> | Vulkan feature, extension, or core version |
|-------------------------------------|--------------------------------------------|
| <a href="#">Matrix</a>              | <a href="#">VK_VERSION_1_0</a>             |
| <a href="#">Shader</a>              | <a href="#">VK_VERSION_1_0</a>             |
| <a href="#">InputAttachment</a>     | <a href="#">VK_VERSION_1_0</a>             |

The application **must** not pass a SPIR-V module containing any of the following to `vkCreateShaderModule`:

- any `OpCapability` not listed above,
- an unsupported capability, or
- a capability which corresponds to a Vulkan feature or extension which has not been enabled.

## SPIR-V Extensions

The following table lists SPIR-V extensions that implementations **may** support. The application **must** not pass a SPIR-V module to `vkCreateShaderModule` that uses the following SPIR-V extensions unless one of the following conditions is met for the `VkDevice` specified in the `device` parameter of `vkCreateShaderModule`:

- Any corresponding Vulkan extension is enabled.
- The corresponding core version is supported (as returned by `VkPhysicalDeviceProperties::apiVersion`).

Table 100. List of SPIR-V Extensions and Corresponding Vulkan Extensions or Core Version

| <b>SPIR-V OpExtension</b>                                                         |

## Validation Rules Within a Module

A SPIR-V module passed to `vkCreateShaderModule` **must** conform to the following rules:

### Standalone SPIR-V Validation

The following rules **can** be validated with only the SPIR-V module itself. They do not depend on knowledge of the implementation and its capabilities or knowledge of runtime information, such as enabled features.

#### Valid Usage

- VUID-StandaloneSpirv-None-04633  
Every entry point **must** have no return value and accept no arguments
- VUID-StandaloneSpirv-None-04634  
The static function-call graph for an entry point **must** not contain cycles; that is, static recursion is not allowed
- VUID-StandaloneSpirv-None-04635  
The `Logical` or `PhysicalStorageBuffer64` addressing model **must** be selected
- VUID-StandaloneSpirv-None-04636  
`Scope` for execution **must** be limited to `Workgroup` or `Subgroup`
- VUID-StandaloneSpirv-Scope-12243  
The `Scope` operand of `OpTypeCooperativeMatrixKHR` **must** be limited to `Workgroup` or `Subgroup`
- VUID-StandaloneSpirv-None-04637  
If the `Scope` for execution is `Workgroup`, then it **must** only be used in the task, mesh,

tessellation control, or compute **Execution Model**

- VUID-StandaloneSpirv-None-04638

**Scope** for memory **must** be limited to **Device**, **QueueFamily**, **Workgroup**, **ShaderCallKHR**, **Subgroup**, or **Invocation**

- VUID-StandaloneSpirv-ExecutionModel-07320

If the **Execution Model** is **TessellationControl**, and the **MemoryModel** is **GLSL450**, the **Scope** for memory **must** not be **Workgroup**

- VUID-StandaloneSpirv-None-07321

If the **Scope** for memory is **Workgroup**, then it **must** only be used in the task, mesh, tessellation control, or compute **Execution Model**

- VUID-StandaloneSpirv-None-04640

If the **Scope** for memory is **ShaderCallKHR**, then it **must** only be used in ray generation, intersection, closest hit, any-hit, miss, and callable **Execution Model**

- VUID-StandaloneSpirv-None-04641

If the **Scope** for memory is **Invocation**, then **MemorySemantics** **must** use **Relaxed** memory order

- VUID-StandaloneSpirv-None-04642

**Scope** for **group operations** **must** be limited to **Subgroup**

- VUID-StandaloneSpirv-SubgroupVoteKHR-07951

If none of the **SubgroupVoteKHR**, **GroupNonUniform**, or **SubgroupBallotKHR** capabilities are declared, **Scope** for memory **must** not be **Subgroup**

- VUID-StandaloneSpirv-None-04643

**Storage Class** **must** be limited to **UniformConstant**, **Input**, **Uniform**, **Output**, **Workgroup**, **Private**, **Function**, **PushConstant**, **Image**, **StorageBuffer**, **RayPayloadKHR**, **IncomingRayPayloadKHR**, **HitAttributeKHR**, **CallableDataKHR**, **IncomingCallableDataKHR**, **ShaderRecordBufferKHR**, **PhysicalStorageBuffer**, or **TileImageEXT**

- VUID-StandaloneSpirv-None-04644

If the **Storage Class** is **Output**, then it **must** not be used in the **GLCompute**, **RayGenerationKHR**, **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, **MissKHR**, or **CallableKHR** **Execution Model**

- VUID-StandaloneSpirv-None-04645

If the **Storage Class** is **Workgroup**, then it **must** only be used in the task, mesh, or compute **Execution Model**

- VUID-StandaloneSpirv-None-08720

If the **Storage Class** is **TileImageEXT**, then it **must** only be used in the fragment execution model

- VUID-StandaloneSpirv-MemorySemantics-10865

**MemorySemantics** **must** have at most one non-relaxed memory order bit set (**Acquire**, **Release**, or **AcquireRelease**)

- VUID-StandaloneSpirv-MemorySemantics-10866

**MemorySemantics** with **SequentiallyConsistent** memory order **must** not be used in the Vulkan API

- VUID-StandaloneSpirv-MemorySemantics-10867

- **MemorySemantics** **must** not use **Acquire** or **AcquireRelease** memory order with **OpAtomicStore**
- VUID-StandaloneSpirv-MemorySemantics-10868  
**MemorySemantics** **must** not use **Release** or **AcquireRelease** memory order with **OpAtomicLoad**
- VUID-StandaloneSpirv-MemorySemantics-10869  
**MemorySemantics** **must** not use **Relaxed** memory order with **OpMemoryBarrier**
- VUID-StandaloneSpirv-MemorySemantics-10870  
**MemorySemantics** with a non-relaxed memory order (**Acquire**, **Release**, or **AcquireRelease**) **must** have at least one Vulkan-supported storage class semantics bit set (**UniformMemory**, **WorkgroupMemory**, **ImageMemory**, or **OutputMemory**)
- VUID-StandaloneSpirv-MemorySemantics-10871  
**MemorySemantics** with at least one Vulkan-supported storage class semantics bit set (**UniformMemory**, **WorkgroupMemory**, **ImageMemory**, or **OutputMemory**) **must** use a non-relaxed memory order (**Acquire**, **Release**, or **AcquireRelease**)
- VUID-StandaloneSpirv-MemorySemantics-10872  
**MemorySemantics** with **MakeAvailable** bit set **must** use **Release** or **AcquireRelease** memory order
- VUID-StandaloneSpirv-MemorySemantics-10873  
**MemorySemantics** with **MakeVisible** bit set **must** use **Acquire** or **AcquireRelease** memory order
- VUID-StandaloneSpirv-MemorySemantics-13551  
**MemorySemantics** with **Volatile** bit set **must** not be used with barrier instructions (**OpControlBarrier**, **OpControlBarrierArriveEXT**, **OpControlBarrierWaitEXT**, or **OpMemoryBarrier**)
- VUID-StandaloneSpirv-UnequalMemorySemantics-10875  
**UnequalMemorySemantics** of **OpAtomicCompareExchange** **must** not use **Release** or **AcquireRelease** memory order
- VUID-StandaloneSpirv-UnequalMemorySemantics-10876  
**UnequalMemorySemantics** of **OpAtomicCompareExchange** **must** not use a stronger memory order than the corresponding **EqualMemorySemantics**
- VUID-StandaloneSpirv-UnequalMemorySemantics-10877  
**UnequalMemorySemantics** of **OpAtomicCompareExchange** **must** not have any Vulkan-supported storage class semantics bit set (**UniformMemory**, **WorkgroupMemory**, **ImageMemory**, or **OutputMemory**) unless this bit is also set in the corresponding **EqualMemorySemantics**
- VUID-StandaloneSpirv-UnequalMemorySemantics-10878  
**UnequalMemorySemantics** of **OpAtomicCompareExchange** **must** not have **MakeVisible** bit set unless this bit is also set in the corresponding **EqualMemorySemantics**
- VUID-StandaloneSpirv-UnequalMemorySemantics-10879  
**UnequalMemorySemantics** of **OpAtomicCompareExchange** **must** have **Volatile** bit set if and only if this bit is also set in the corresponding **EqualMemorySemantics**
- VUID-StandaloneSpirv-OpVariable-04651  
Any variable with an **Initializer** operand **must** have **Output**, **Private**, **Function**, or **Workgroup** as its **Storage Class** operand

- VUID-StandaloneSpirv-OpVariable-04734  
Any variable with an **Initializer** operand and **Workgroup** as its **Storage Class** operand **must** use **OpConstantNull** as the initializer
- VUID-StandaloneSpirv-OpReadClockKHR-04652  
**Scope** for **OpReadClockKHR** **must** be limited to **Subgroup** or **Device**
- VUID-StandaloneSpirv-OriginLowerLeft-04653  
The **OriginLowerLeft Execution Mode** **must** not be used; fragment entry points **must** declare **OriginUpperLeft**
- VUID-StandaloneSpirv-PixelCenterInteger-04654  
The **PixelCenterInteger Execution Mode** **must** not be used (pixels are always centered at half-integer coordinates)
- VUID-StandaloneSpirv-UniformConstant-04655  
Any variable in the **UniformConstant Storage Class** **must** be typed as either **OpTypeImage**, **OpTypeSampler**, **OpTypeSampledImage**, **OpTypeAccelerationStructureKHR**, **OpTypeTensorARM** or an array of one of these types
- VUID-StandaloneSpirv-Uniform-06807  
Any variable in the **Uniform** or **StorageBuffer Storage Class** **must** be typed as **OpTypeStruct** or an array of this type
- VUID-StandaloneSpirv-PushConstant-06808  
Any variable in the **PushConstant Storage Class** **must** be typed as **OpTypeStruct**
- VUID-StandaloneSpirv-OpTypeImage-04656  
**OpTypeImage** **must** declare a scalar 32-bit float, 64-bit integer, or 32-bit integer type for the “Sampled Type” (**RelaxedPrecision** **can** be applied to a sampling instruction and to the variable holding the result of a sampling instruction)
- VUID-StandaloneSpirv-OpTypeImage-04657  
**OpTypeImage** **must** have a “Sampled” operand of 1 (sampled image) or 2 (storage image)
- VUID-StandaloneSpirv-OpTypeSampledImage-06671  
**OpTypeSampledImage** **must** have a **OpTypeImage** with a “Sampled” operand of 1 (sampled image)
- VUID-StandaloneSpirv-Image-04965  
The **SPIR-V Type** of the **Image Format** operand of an **OpTypeImage** **must** match the **Sampled Type**, as defined in **Image Format and Type Matching**
- VUID-StandaloneSpirv-OpImageTexelPointer-04658  
If an **OpImageTexelPointer** is used in an atomic operation, the image type of the **image** parameter to **OpImageTexelPointer** **must** have an image format of **R64i**, **R64ui**, **R32f**, **R32i**, or **R32ui**
- VUID-StandaloneSpirv-OpUntypedImageTexelPointerEXT-11416  
If an **OpUntypedImageTexelPointerEXT** instruction is used in an atomic operation, the image type operand **must** have an image format of **R64i**, **R64ui**, **R32f**, **R32i**, or **R32ui**
- VUID-StandaloneSpirv-OpImageQuerySizeLod-04659  
**OpImageQuerySizeLod**, **OpImageQueryLod**, and **OpImageQueryLevels** **must** only consume an “Image” operand whose type has its “Sampled” operand set to 1

- VUID-StandaloneSpirv-OpTypeImage-09638  
An **OpTypeImage** **must** not have a “Dim” operand of **Rect**
- VUID-StandaloneSpirv-OpTypeImage-06214  
An **OpTypeImage** with a “Dim” operand of **SubpassData** **must** have an “Arrayed” operand of 0 (non-arrayed) and a “Sampled” operand of 2 (storage image)
- VUID-StandaloneSpirv-SubpassData-04660  
The (u,v) coordinates used for a **SubpassData** **must** be the <id> of a constant vector (0,0)
- VUID-StandaloneSpirv-OpTypeImage-06924  
Objects of types **OpTypeImage**, **OpTypeSampler**, **OpTypeSampledImage**, **OpTypeAccelerationStructureKHR**, **OpTypeTensorARM**, and arrays of these types **must** not be stored to or modified
- VUID-StandaloneSpirv-Uniform-06925  
Any variable in the **Uniform Storage Class** decorated as **Block** **must** not be stored to or modified
- VUID-StandaloneSpirv-Offset-04865  
Any image instruction which uses an **Offset**, **ConstOffset**, or **ConstOffsets** image operand, **must** only consume a “Sampled Image” operand whose type has its “Sampled” operand set to 1
- VUID-StandaloneSpirv-OpImageGather-04664  
The “Component” operand of **OpImageGather**, and **OpImageSparseGather** **must** be the <id> of a constant instruction
- VUID-StandaloneSpirv-OpImage-04777  
**OpImage\*Dref\*** instructions **must** not consume an image whose **Dim** is 3D
- VUID-StandaloneSpirv-None-04667  
If the **DescriptorHeapEXT** capability is not declared, structure types **must** not contain opaque types
- VUID-StandaloneSpirv-DescriptorHeapEXT-11482  
If the **DescriptorHeapEXT** capability is declared, structure types **must** not contain opaque types other than descriptors
- VUID-StandaloneSpirv-BuiltIn-04668  
Any **BuiltIn** decoration not listed in **Built-In Variables** **must** not be used
- VUID-StandaloneSpirv-OpEntryPoint-09658  
For a given **OpEntryPoint**, any **BuiltIn** decoration **must** not be used more than once by the **Input** interface
- VUID-StandaloneSpirv-OpEntryPoint-09659  
For a given **OpEntryPoint**, any **BuiltIn** decoration **must** not be used more than once by the **Output** interface
- VUID-StandaloneSpirv-Location-06672  
The **Location** or **Component** decorations **must** only be used with the **Input**, **Output**, **RayPayloadKHR**, **IncomingRayPayloadKHR**, **HitAttributeKHR**, **HitObjectAttributeNV**, **CallableDataKHR**, **IncomingCallableDataKHR**, or **ShaderRecordBufferKHR** storage classes
- VUID-StandaloneSpirv-Location-04915

The **Location** or **Component** decorations **must** not be used with **BuiltIn**

- VUID-StandaloneSpirv-Location-04916

The **Location** decorations **must** be used on **user-defined variables**

- VUID-StandaloneSpirv-Location-04917

If a **user-defined variable** is not a pointer to a **Block** decorated **OpTypeStruct**, then the variable **must** have a **Location** decoration

- VUID-StandaloneSpirv-Location-04918

If a **user-defined variable** has a **Location** decoration, and the variable is a pointer to a **OpTypeStruct**, then the members of that structure **must** not have **Location** decorations

- VUID-StandaloneSpirv-Location-04919

If a **user-defined variable** does not have a **Location** decoration, and the variable is a pointer to a **Block** decorated **OpTypeStruct**, then each member of the struct **must** have a **Location** decoration

- VUID-StandaloneSpirv-Component-04920

The **Component** decoration value **must** not be greater than 3

- VUID-StandaloneSpirv-Component-04921

If the **Component** decoration is used on a variable that has a vector type with a **Component Type** with a **Width** that is less than or equal to 32, the sum of its **Component Count** and the **Component** decoration value **must** be less than or equal to 4

- VUID-StandaloneSpirv-Component-04922

If the **Component** decoration is used on a variable that has a vector type with a **Component Type** with a **Width** that is equal to 64, the sum of two times its **Component Count** and the **Component** decoration value **must** be less than or equal to 4

- VUID-StandaloneSpirv-Component-04923

The **Component** decorations value **must** not be 1 or 3 for scalar or two-component 64-bit data types

- VUID-StandaloneSpirv-Component-07703

The **Component** decorations **must** not be used for a 64-bit vector type with more than two components

- VUID-StandaloneSpirv-Component-10583

The **Component** decorations **must** not be used with any type that is not a scalar, vector, array of scalars or vectors, or an array of arrays of scalars or vectors

- VUID-StandaloneSpirv-Execution-10584

If the **Execution Model** of an entry point is not **TessellationControl** or **Geometry**, its interface definition **must** not include any variables in the **Input** storage class decorated with **Component** that are arrays of arrays of scalars or vectors

- VUID-StandaloneSpirv-Execution-10585

If the **Execution Model** of an entry point is not **MeshNV**, its interface definition **must** not include any variables in the **Output** storage class decorated with **Component** that are arrays of arrays of scalars or vectors

- VUID-StandaloneSpirv-Output-10586

Variables in the **Output** storage class in the **Vertex**, **TessellationControl**, **TessellationEvaluation**, or **Geometry** execution model **must** not have overlapping

**Component** and **Location** decorations as defined by [Location and Component Assignment](#)

- VUID-StandaloneSpirv-Output-10587  
Variables in the **Output** storage class in the **Fragment** execution model **must** not have both identical **Index** decorations and overlapping **Component** and **Location** decorations as defined by [Location and Component Assignment](#)
- VUID-StandaloneSpirv-Input-10588  
Variables in the **Input** storage class in the **TessellationControl**, **TessellationEvaluation**, **Geometry**, or **Fragment** execution model **must** not have overlapping **Component** and **Location** decorations as defined by [Location and Component Assignment](#)
- VUID-StandaloneSpirv-Input-10604  
Any variable in the **Input** storage class in the **Fragment** execution model **must** not have an assigned **Location** shared with another variable with different decorations for **PerVertexKHR**, **Flat**, **NoPerspective**, **Sample**, or **Centroid**
- VUID-StandaloneSpirv-Input-09557  
The pointers of any **Input** or **Output** [Interface user-defined variables](#) **must** not contain any **PhysicalStorageBuffer Storage Class** pointers
- VUID-StandaloneSpirv-None-10684  
All variables **must** have valid explicit layout decorations [as described in Shader Interfaces](#)
- VUID-StandaloneSpirv-GLSLShared-04669  
The **GLSLShared** and **GLSLPacked** decorations **must** not be used
- VUID-StandaloneSpirv-TessLevelInner-10880  
Any variable decorated with **TessLevelInner** or **TessLevelOuter** **must** also be decorated with **Patch**
- VUID-StandaloneSpirv-Flat-04670  
The **Flat**, **NoPerspective**, **Sample**, and **Centroid** decorations **must** only be used on variables with the **Output** or **Input Storage Class**
- VUID-StandaloneSpirv-Flat-06201  
The **Flat**, **NoPerspective**, **Sample**, and **Centroid** decorations **must** not be used on variables with the **Output** storage class in a fragment shader
- VUID-StandaloneSpirv-Flat-06202  
The **Flat**, **NoPerspective**, **Sample**, and **Centroid** decorations **must** not be used on variables with the **Input** storage class in a vertex shader
- VUID-StandaloneSpirv-PerVertexKHR-06777  
The **PerVertexKHR** decoration **must** only be used on variables with the **Input Storage Class** in a fragment shader
- VUID-StandaloneSpirv-Flat-04744  
Any variable with integer or double-precision floating-point type and with **Input Storage Class** in a fragment shader, **must** be decorated **Flat**
- VUID-StandaloneSpirv-ViewportRelativeNV-04672  
The **ViewportRelativeNV** decoration **must** only be used on a variable decorated with **Layer** in the vertex, tessellation evaluation, or geometry shader stages
- VUID-StandaloneSpirv-ViewportRelativeNV-04673

The **ViewportRelativeNV** decoration **must** not be used unless a variable decorated with one of **ViewportIndex** or **ViewportMaskNV** is also statically used by the same **OpEntryPoint**

- VUID-StandaloneSpirv-ViewportMaskNV-04674

The **ViewportMaskNV** and **ViewportIndex** decorations **must** not both be statically used by one or more **OpEntryPoint**'s that form the **pre-rasterization shader stages** of a graphics pipeline

- VUID-StandaloneSpirv-FPRoundingMode-04675

Rounding modes other than round-to-nearest-even and round-towards-zero **must** not be used for the **FPRoundingMode** decoration

- VUID-StandaloneSpirv-Invariant-04677

Variables decorated with **Invariant** and variables with structure types that have any members decorated with **Invariant** **must** be in the **Output** or **Input Storage Class**, **Invariant** used on an **Input Storage Class** variable or structure member has no effect

- VUID-StandaloneSpirv-VulkanMemoryModel-04678

If the **VulkanMemoryModel** capability is not declared, the **Volatile** decoration **must** be used on any variable declaration that includes one of the **SMIDNV**, **WarpIDNV**, **SubgroupSize**, **SubgroupLocalInvocationId**, **SubgroupEqMask**, **SubgroupGeMask**, **SubgroupGtMask**, **SubgroupLeMask**, or **SubgroupLtMask BuiltIn** decorations when used in the ray generation, closest hit, miss, intersection, or callable shaders, or with the **RayTmaxKHR BuiltIn** decoration when used in an intersection shader

- VUID-StandaloneSpirv-VulkanMemoryModel-04679

If the **VulkanMemoryModel** capability is declared, the **OpLoad** instruction **must** use **MemorySemantics** with the **Volatile** flag when it accesses into any variable that includes one of the **SMIDNV**, **WarpIDNV**, **SubgroupSize**, **SubgroupLocalInvocationId**, **SubgroupEqMask**, **SubgroupGeMask**, **SubgroupGtMask**, **SubgroupLeMask**, or **SubgroupLtMask BuiltIn** decorations when used in the ray generation, closest hit, miss, intersection, or callable shaders, or with the **RayTmaxKHR BuiltIn** decoration when used in an intersection shader

- VUID-StandaloneSpirv-OpTypeRuntimeArray-04680

**OpTypeRuntimeArray** **must** only be instantiated by a variable as:

- the last member of a **Block**-decorated **OpTypeStruct** in **StorageBuffer** or **PhysicalStorageBuffer** storage **Storage Class**
- **BufferBlock**-decorated **OpTypeStruct** in the **Uniform** storage **Storage Class**
- the last member of a **Block**-decorated **OpTypeStruct** in the **Uniform** storage **Storage Class**
- the outermost dimension of an arrayed variable in the **StorageBuffer**, **Uniform**, or **UniformConstant** storage **Storage Class**
- the **NodePayloadAMD** storage **Storage Class** when the **CoalescingAMD** Execution Mode is specified

- VUID-StandaloneSpirv-OpArrayLength-11805

**OpArrayLength** and **OpUntypedArrayLengthKHR** **must** not be used with an **OpTypeRuntimeArray** that is the last member of a **Block**-decorated **OpTypeStruct** in the **Uniform** storage **Storage Class**

- VUID-StandaloneSpirv-Function-04681

A type *T* that is an array sized with a specialization constant **must** neither be, nor be contained in, the type *T2* of a variable *V*, unless either: a) *T* is equal to *T2*, b) *V* is declared

in the **Function**, or **Private Storage Class**, c)  $V$  is a non-Block variable in the **Workgroup Storage Class**, or d)  $V$  is an interface variable with an additional level of arrayness, as described in interface matching, and  $T$  is the member type of the array type  $T2$

- VUID-StandaloneSpirv-Function-12294

A type  $T$  that is a vector sized with a specialization constant **must** neither be, nor be contained in, the type  $T2$  of a variable  $V$ , unless either: a)  $T$  is equal to  $T2$ , b)  $V$  is declared in the **Function**, or **Private Storage Class**, c)  $V$  is a non-Block variable in the **Workgroup Storage Class**, or d)  $V$  is an interface variable with an additional level of arrayness, as described in interface matching, and  $T$  is the member type of the array type  $T2$

- VUID-StandaloneSpirv-OpControlBarrier-04682

If **OpControlBarrier** is used in ray generation, intersection, any-hit, closest hit, miss, fragment, vertex, tessellation evaluation, or geometry shaders, the execution Scope **must** be **Subgroup**

- VUID-StandaloneSpirv-SplitBarrierEXT-13552

The **SplitBarrierEXT** capability **must** not be enabled in any stage other than compute

- VUID-StandaloneSpirv-OpControlBarrierArriveEXT-13553

The execution Scope for **OpControlBarrierArriveEXT** and **OpControlBarrierWaitEXT** **must** be **Workgroup** or **Subgroup**

- VUID-StandaloneSpirv-MemorySemantics-13556

The **MemorySemantics** for **OpControlBarrierArriveEXT** **must** not have any non-relaxed memory order set other than **Release**

- VUID-StandaloneSpirv-MemorySemantics-13557

The **MemorySemantics** for **OpControlBarrierWaitEXT** **must** not have any non-relaxed memory order set other than **Acquire**

- VUID-StandaloneSpirv-None-10685

Either a **TileShadingRateQCOM**, **LocalSize**, or **LocalSizeId Execution Mode**, or an object decorated with the **WorkgroupSize** decoration **must** be specified for each entry point with a task, mesh, or compute **Execution Model**

- VUID-StandaloneSpirv-DerivativeGroupQuadsNV-04684

For compute shaders using the **DerivativeGroupQuadsNV** execution mode, the first two dimensions of the local workgroup size **must** be a multiple of two

- VUID-StandaloneSpirv-DerivativeGroupLinearNV-04778

For compute shaders using the **DerivativeGroupLinearNV** execution mode, the product of the dimensions of the local workgroup size **must** be a multiple of four

- VUID-StandaloneSpirv-DerivativeGroupQuadsKHR-10151

For compute, mesh, or task shaders using the **DerivativeGroupQuadsKHR** execution mode, the first two dimensions of the local workgroup size **must** be a multiple of two

- VUID-StandaloneSpirv-DerivativeGroupLinearKHR-10152

For compute, mesh, or task shaders using the **DerivativeGroupLinearKHR** execution mode, the product of the dimensions of the local workgroup size **must** be a multiple of four

- VUID-StandaloneSpirv-OpGroupNonUniformBallotBitCount-04685

If **OpGroupNonUniformBallotBitCount** is used, the group operation **must** be limited to **Reduce**, **InclusiveScan**, or **ExclusiveScan**

- VUID-StandaloneSpirv-None-04686  
The *Pointer* operand of all atomic instructions **must** have a *Storage Class* limited to *Uniform*, *Workgroup*, *Image*, *StorageBuffer*, *PhysicalStorageBuffer*, or *TaskPayloadWorkgroupEXT*
- VUID-StandaloneSpirv-Offset-04687  
Output variables or block members decorated with *Offset* that have a 64-bit type, or a composite type containing a 64-bit type, **must** specify an *Offset* value aligned to a 8 byte boundary
- VUID-StandaloneSpirv-Offset-04689  
The size of any output block containing any member decorated with *Offset* that is a 64-bit type **must** be a multiple of 8
- VUID-StandaloneSpirv-Offset-04690  
The first member of an output block specifying a *Offset* decoration **must** specify a *Offset* value that is aligned to an 8 byte boundary if that block contains any member decorated with *Offset* and is a 64-bit type
- VUID-StandaloneSpirv-Offset-04691  
Output variables or block members decorated with *Offset* that have a 32-bit type, or a composite type contains a 32-bit type, **must** specify an *Offset* value aligned to a 4 byte boundary
- VUID-StandaloneSpirv-Offset-04692  
Output variables, blocks, or block members decorated with *Offset* **must** only contain base types that have components that are either 32-bit or 64-bit in size
- VUID-StandaloneSpirv-Offset-12509  
Variables or block members in the input interface decorated with *Offset* **must** also be decorated with *PerTaskNV*
- VUID-StandaloneSpirv-Offset-04716  
Variables or block members in the output interface decorated with *Offset* **must** also be decorated with *XfbBuffer* and *XfbStride*, inherit *XfbBuffer* and *XfbStride* decorations from a block containing them, or be decorated with *PerTaskNV*
- VUID-StandaloneSpirv-XfbBuffer-04693  
All variables or block members in the output interface of the entry point being compiled decorated with a specific *XfbBuffer* value **must** all be decorated with identical *XfbStride* values
- VUID-StandaloneSpirv-Stream-04694  
If any variables or block members in the output interface of the entry point being compiled are decorated with *Stream*, then all variables belonging to the same *XfbBuffer* **must** specify the same *Stream* value
- VUID-StandaloneSpirv-XfbBuffer-04696  
For any two variables or block members in the output interface of the entry point being compiled with the same *XfbBuffer* value, the ranges determined by the *Offset* decoration and the size of the type **must** not overlap
- VUID-StandaloneSpirv-XfbBuffer-04697  
All block members in the output interface of the entry point being compiled that are in the same block and have a declared or inherited *XfbBuffer* decoration **must** specify the

same `XfbBuffer` value

- VUID-StandaloneSpirv-RayPayloadKHR-04698  
`RayPayloadKHR Storage Class` **must** only be used in ray generation, closest hit or miss shaders
- VUID-StandaloneSpirv-IncomingRayPayloadKHR-04699  
`IncomingRayPayloadKHR Storage Class` **must** only be used in closest hit, any-hit, or miss shaders
- VUID-StandaloneSpirv-IncomingRayPayloadKHR-04700  
There **must** be at most one variable with the `IncomingRayPayloadKHR Storage Class` in the input interface of an entry point
- VUID-StandaloneSpirv-HitAttributeKHR-04701  
`HitAttributeKHR Storage Class` **must** only be used in intersection, any-hit, or closest hit shaders
- VUID-StandaloneSpirv-HitAttributeKHR-04702  
There **must** be at most one variable with the `HitAttributeKHR Storage Class` in the input interface of an entry point
- VUID-StandaloneSpirv-HitAttributeKHR-04703  
A variable with `HitAttributeKHR Storage Class` **must** only be written to in an intersection shader
- VUID-StandaloneSpirv-CallableDataKHR-04704  
`CallableDataKHR Storage Class` **must** only be used in ray generation, closest hit, miss, and callable shaders
- VUID-StandaloneSpirv-IncomingCallableDataKHR-04705  
`IncomingCallableDataKHR Storage Class` **must** only be used in callable shaders
- VUID-StandaloneSpirv-IncomingCallableDataKHR-04706  
There **must** be at most one variable with the `IncomingCallableDataKHR Storage Class` in the input interface of an entry point
- VUID-StandaloneSpirv-ShaderRecordBufferKHR-07119  
`ShaderRecordBufferKHR Storage Class` **must** only be used in ray generation, intersection, any-hit, closest hit, callable, or miss shaders
- VUID-StandaloneSpirv-Base-07650  
The `Base` operand of `OpPtrAccessChain` or `OpUntypedPtrAccessChainKHR` **must** have a storage class of `Workgroup`, `StorageBuffer`, or `PhysicalStorageBuffer`
- VUID-StandaloneSpirv-Base-07651  
If the `Base` operand of `OpPtrAccessChain` or `OpUntypedPtrAccessChainKHR` has a `Workgroup Storage Class`, then the `VariablePointers` capability **must** be declared
- VUID-StandaloneSpirv-Base-07652  
If the `Base` operand of `OpPtrAccessChain` or `OpUntypedPtrAccessChainKHR` has a `StorageBuffer Storage Class`, then the `VariablePointers` or `VariablePointersStorageBuffer` capability **must** be declared
- VUID-StandaloneSpirv-OpUntypedVariableKHR-11167  
Any `OpUntypedVariableKHR` with a `Storage Class` other than `UniformConstant` **must** have a

**Data Type** operand specified

- VUID-StandaloneSpirv-OpUntypedVariableKHR-11347  
Any **OpUntypedVariableKHR** in the **UniformConstant** storage class without a **Data Type** **must** be decorated with **SamplerHeapEXT** or **ResourceHeapEXT**
- VUID-StandaloneSpirv-PhysicalStorageBuffer64-04708  
If the **PhysicalStorageBuffer64** addressing model is enabled, all instructions that support memory access operands and that use a physical pointer **must** include the **Aligned** operand
- VUID-StandaloneSpirv-PhysicalStorageBuffer64-04709  
If the **PhysicalStorageBuffer64** addressing model is enabled, any access chain instruction that accesses into a **RowMajor** matrix **must** only be used as the **Pointer** operand to **OpLoad** or **OpStore**
- VUID-StandaloneSpirv-PhysicalStorageBuffer64-04710  
If the **PhysicalStorageBuffer64** addressing model is enabled, **OpConvertUToPtr** and **OpConvertPtrToU** **must** use an integer type whose **Width** is 64
- VUID-StandaloneSpirv-PhysicalStorageBuffer64-06314  
If the **PhysicalStorageBuffer64** addressing model is enabled any load or store through a physical pointer type **must** have an **Aligned** operand which is a multiple of the size of the largest scalar type in the pointed-to type
- VUID-StandaloneSpirv-OpTypeForwardPointer-04711  
**OpTypeForwardPointer** **must** have a **Storage Class** of **PhysicalStorageBuffer**
- VUID-StandaloneSpirv-OpVariable-06673  
There **must** be at most one variable in the **PushConstant Storage Class** listed in the **Interface** for each **OpEntryPoint** unless the **PushConstantBanksNV** capability is declared
- VUID-StandaloneSpirv-OpEntryPoint-06674  
Each **OpEntryPoint** **must** statically use at most one variable in the **PushConstant Storage Class** unless the **PushConstantBanksNV** capability is declared
- VUID-StandaloneSpirv-OpEntryPoint-08721  
Each **OpEntryPoint** **must** not have more than one **Input** variable assigned the same **Component** word inside a **Location** slot, either explicitly or implicitly
- VUID-StandaloneSpirv-OpEntryPoint-08722  
Each **OpEntryPoint** **must** not have more than one **Output** variable assigned the same **Component** word inside a **Location** slot, either explicitly or implicitly
- VUID-StandaloneSpirv-Result-04780  
The **Result Type** operand of any **OpImageRead** or **OpImageSparseRead** instruction **must** be a vector of four components
- VUID-StandaloneSpirv-PushConstant-06675  
Any variable in the **PushConstant** or **StorageBuffer** storage class **must** be decorated as **Block**
- VUID-StandaloneSpirv-Uniform-06676  
Any variable in the **Uniform Storage Class** **must** be decorated as **Block** or **BufferBlock**
- VUID-StandaloneSpirv-UniformConstant-06677  
Any variable in the **UniformConstant**, **StorageBuffer**, or **Uniform Storage Class** **must** be

decorated with either `DescriptorSet` and `Binding`, or `BuiltIn` with `SamplerHeapEXT` or `ResourceHeapEXT`

- VUID-StandaloneSpirv-InputAttachmentIndex-06678  
Variables decorated with `InputAttachmentIndex` **must** be in the `UniformConstant Storage Class`
- VUID-StandaloneSpirv-DescriptorSet-06491  
If a variable is decorated by `DescriptorSet` or `Binding`, the `Storage Class` **must** correspond to an entry in [Shader Resource and Storage Class Correspondence](#)
- VUID-StandaloneSpirv-Input-06778  
Variables with a `Storage Class` of `Input` in a fragment shader stage that are decorated with `PerVertexKHR` **must** be declared as arrays
- VUID-StandaloneSpirv-MeshEXT-07102  
The module **must** not contain both an entry point that uses the `TaskEXT` or `MeshEXT Execution Model` and an entry point that uses the `TaskNV` or `MeshNV Execution Model`
- VUID-StandaloneSpirv-MeshEXT-07106  
In mesh shaders using the `MeshEXT Execution Model` `OpSetMeshOutputsEXT` **must** be called before any outputs are written
- VUID-StandaloneSpirv-MeshEXT-07107  
In mesh shaders using the `MeshEXT Execution Model` all variables declared in the `Output Storage Class` **must** not be read
- VUID-StandaloneSpirv-MeshEXT-07108  
In mesh shaders using the `MeshEXT Execution Model` for `OpSetMeshOutputsEXT` instructions, the “Vertex Count” and “Primitive Count” operands **must** not depend on `ViewIndex`
- VUID-StandaloneSpirv-MeshEXT-07109  
In mesh shaders using the `MeshEXT Execution Model` variables decorated with `PrimitivePointIndicesEXT`, `PrimitiveLineIndicesEXT`, or `PrimitiveTriangleIndicesEXT` declared as an array **must** not be accessed by indices that depend on `ViewIndex`
- VUID-StandaloneSpirv-MeshEXT-07110  
In mesh shaders using the `MeshEXT Execution Model` any values stored in variables decorated with `PrimitivePointIndicesEXT`, `PrimitiveLineIndicesEXT`, or `PrimitiveTriangleIndicesEXT` **must** not depend on `ViewIndex`
- VUID-StandaloneSpirv-MeshEXT-07111  
In mesh shaders using the `MeshEXT Execution Model` variables in workgroup or private `Storage Class` declared as or containing a composite type **must** not be accessed by indices that depend on `ViewIndex`
- VUID-StandaloneSpirv-MeshEXT-07330  
In mesh shaders using the `MeshEXT Execution Model` the `OutputVertices Execution Mode` **must** be greater than 0
- VUID-StandaloneSpirv-MeshEXT-07331  
In mesh shaders using the `MeshEXT Execution Model` the `OutputPrimitivesEXT Execution Mode` **must** be greater than 0
- VUID-StandaloneSpirv-Input-07290  
Variables with a `Storage Class` of `Input` or `Output` and a type of `OpTypeBool` **must** be

decorated with the **BuiltIn** decoration

- VUID-StandaloneSpirv-TileImageEXT-08723

The tile image variable declarations **must** obey the constraints on the **TileImageEXT Storage Class** and the **Location** decoration described in **Fragment Tile Image Interface**

- VUID-StandaloneSpirv-None-08724

The **TileImageEXT Storage Class** **must** only be used for declaring tile image variables

- VUID-StandaloneSpirv-Pointer-08973

The **Storage Class** of the **Pointer** operand to **OpCooperativeMatrixLoadKHR** or **OpCooperativeMatrixStoreKHR** **must** be limited to **Workgroup**, **StorageBuffer**, or **PhysicalStorageBuffer**

- VUID-StandaloneSpirv-OpTypeFloat-10370

Variables with a type of **OpTypeFloat** and an encoding of **BFloat16KHR** **must** not be declared with a **Storage Class** of **Input** or **Output**

- VUID-StandaloneSpirv-UniformBufferArrayDynamicIndexing-10127

If the **UniformBufferArrayDynamicIndexing** capability is not declared, and an instruction accesses memory through a uniform buffer, the uniform buffer through which that memory is accessed **must** be determined by **constant integral expressions**

- VUID-StandaloneSpirv-SampledImageArrayDynamicIndexing-10128

If the **SampledImageArrayDynamicIndexing** capability is not declared, and an instruction accesses memory through a sampled image or sampler, the sampled image or sampler through which that memory is accessed **must** be determined by **constant integral expressions**

- VUID-StandaloneSpirv-StorageBufferArrayDynamicIndexing-10129

If the **StorageBufferArrayDynamicIndexing** capability is not declared, and an instruction accesses memory through a storage buffer, the storage buffer through which that memory is accessed **must** be determined by **constant integral expressions**

- VUID-StandaloneSpirv-StorageImageArrayDynamicIndexing-10130

If the **StorageImageArrayDynamicIndexing** capability is not declared, and an instruction accesses memory through a storage image, the storage image through which that memory is accessed **must** be determined by **constant integral expressions**

- VUID-StandaloneSpirv-InputAttachmentArrayDynamicIndexing-10131

If the **InputAttachmentArrayDynamicIndexing** capability is not declared, and an instruction accesses memory through an input attachment, the input attachment through which that memory is accessed **must** be determined by **constant integral expressions**

- VUID-StandaloneSpirv-UniformTexelBufferArrayDynamicIndexing-10132

If the **UniformTexelBufferArrayDynamicIndexing** capability is not declared, and an instruction accesses memory through a uniform texel buffer, the uniform texel buffer through which that memory is accessed **must** be determined by **constant integral expressions**

- VUID-StandaloneSpirv-StorageTexelBufferArrayDynamicIndexing-10133

If the **StorageTexelBufferArrayDynamicIndexing** capability is not declared, and an instruction accesses memory through a storage texel buffer, the storage texel buffer through which that memory is accessed **must** be determined by **constant integral**

## expressions

- VUID-StandaloneSpirv-MaximallyReconvergesKHR-09565  
The **MaximallyReconvergesKHR Execution Mode** **must** not be applied to an entry point if an *invocation repack instruction* is statically used
- VUID-StandaloneSpirv-TileShadingQCOM-10686  
**TileShadingQCOM** capability **must** not be enabled in any stage other than compute or fragment
- VUID-StandaloneSpirv-Execution-10687  
**Execution Mode NonCoherentTileAttachmentReadQCOM** **must** not be used in any stage other than fragment
- VUID-StandaloneSpirv-Execution-10688  
**Execution Mode TileShadingRateQCOM** **must** not be used in any stage other than compute
- VUID-StandaloneSpirv-TileAttachmentQCOM-10689  
If the **TileAttachmentQCOM Storage Class** is used, the **TileShadingQCOM** capability **must** be enabled
- VUID-StandaloneSpirv-NonCoherentTileAttachmentReadQCOM-10690  
If the **NonCoherentTileAttachmentReadQCOM Execution Mode** is used, the **TileShadingQCOM** capability **must** be enabled
- VUID-StandaloneSpirv-TileShadingRateQCOM-10691  
If the **TileShadingRateQCOM Execution Mode** is used, the **TileShadingQCOM** capability **must** be enabled
- VUID-StandaloneSpirv-TileShadingRateQCOM-10692  
If the **TileShadingRateQCOM Execution Mode** is used, **LocalSize** and **LocalSizeId Execution Mode** **must** not be specified
- VUID-StandaloneSpirv-OpTypeImage-10693  
**OpTypeImage** variables in the **TileAttachmentQCOM Storage Class** **must** have **Dim** equal to 2D
- VUID-StandaloneSpirv-OpTypeImage-10694  
**OpTypeImage** variables in the **TileAttachmentQCOM Storage Class** **must** **Sampled** equal to 1 or 2
- VUID-StandaloneSpirv-TileAttachmentQCOM-10695  
Any variable in the **TileAttachmentQCOM Storage Class** **must** be decorated with **DescriptorSet** and **Binding**
- VUID-StandaloneSpirv-TileAttachmentQCOM-10696  
Any variable in the **TileAttachmentQCOM Storage Class** **must** not be decorated with **Component** decoration
- VUID-StandaloneSpirv-TileAttachmentQCOM-10697  
An **OpTypeImage** variables in the **TileAttachmentQCOM Storage Class** **must** not be consumed by an **OpImageQuery\*** instruction
- VUID-StandaloneSpirv-OpTypeFloat-10823  
Variables with a type of **OpTypeFloat** and an encoding of **Float8E4M3EXT** or **Float8E5M2EXT** **must** not be declared with a **Storage Class** of **Input** or **Output**
- VUID-StandaloneSpirv-OpGraphInputARM-09931  
The **InputIndex** and **ElementIndex** operands to **OpGraphInputARM** **must** be the <id> of a

constant instruction

- VUID-StandaloneSpirv-OpGraphSetOutputARM-09932

The **OutputIndex** and **ElementIndex** operands to **OpGraphSetOutputARM** **must** be the <id> of a constant instruction

- VUID-StandaloneSpirv-Result-11336

If the **Result Type** operand of **OpLoad** is **OpTypeSampler**, **Pointer** **must** be derived from a variable decorated with **Binding** and **DescriptorSet**, or decorated with **BuiltIn** and **SamplerHeapEXT**

- VUID-StandaloneSpirv-Result-11337

If the **Result Type** operand of **OpLoad** is **OpTypeImage**, **Pointer** **must** be derived from a variable decorated with **Binding** and **DescriptorSet**, or decorated with **BuiltIn** and **ResourceHeapEXT**

- VUID-StandaloneSpirv-Result-11339

If the **Result Type** operand of **OpLoad** is **OpTypeAccelerationStructureKHR**, and **Pointer** is not in the **Private** or **Function Storage Class**, **Pointer** **must** be derived from a variable decorated with **Binding** and **DescriptorSet**, or decorated with **BuiltIn** and **ResourceHeapEXT**

- VUID-StandaloneSpirv-OpTypeUntypedPointerKHR-11417

The **Storage Class** of **OpTypeUntypedPointerKHR** **must** be **Image**, **UniformConstant**, **Workgroup**, **StorageBuffer**, **Uniform**, **PushConstant**, or **PhysicalStorageBuffer**

- VUID-StandaloneSpirv-None-12295

If the **LongVectorEXT** capability is not declared, the **Component Count** of any vector type **must** be less than or equal to **4** and greater than **1**

- VUID-StandaloneSpirv-Type-12297

Any pointer type whose **Type** parameter is a vector type with more than four components (or an aggregate containing such a type) **must** have **Storage Class** of **Function**, **Private**, **Uniform**, **Workgroup**, **StorageBuffer**, **PhysicalStorageBuffer**, **PushConstant**, or **ShaderRecordBufferKHR**

- VUID-StandaloneSpirv-OpUndef-12464

Any **OpUndef** instruction **must** not have a **Result Type** of **OpTypeImage**, **OpTypeSampler**, **OpTypeSampledImage**, **OpTypeAccelerationStructureKHR**, or **OpTypeTensorARM**

- VUID-StandaloneSpirv-OpConvertFToU-12465

Floating-point objects consumed or produced by **OpConvertFToU**, **OpConvertFToS**, **OpConvertSToF**, or **OpConvertUToF** **must** not have a **Float6E2M3EXT**, **Float6E3M2EXT**, **Float4E2M1EXT**, **Float8UnsignedE8M0EXT**, or **MXInt8EXT** encoding

- VUID-StandaloneSpirv-OpFConvert-12466

Floating-point objects produced by **OpFConvert** **must** not have a **Float6E2M3EXT**, **Float6E3M2EXT**, **Float4E2M1EXT**, **Float8UnsignedE8M0EXT**, or **MXInt8EXT** encoding

- VUID-StandaloneSpirv-OpFConvert-12467

If the object consumed by **OpFConvert** has a **Float6E2M3EXT**, **Float6E3M2EXT**, **Float4E2M1EXT**, **Float8UnsignedE8M0EXT**, or **MXInt8EXT** encoding, then the **Result Type** **must** have an **IEEE 754**, **Float8E4M3EXT**, **Float8E5M2EXT**, or **BFloat16KHR** encoding

- VUID-StandaloneSpirv-Result-12468

The **Result Type** operand of **OpBitcastExtractEXT** **must** be **OpTypeFloat** with a **Float6E2M3EXT**,

Float6E3M2EXT, or Float4E2M1EXT encoding

- VUID-StandaloneSpirv-Base-12469

The **Base** operand of **OpBitcastExtractEXT** **must** be a scalar or vector integer type

## Runtime SPIR-V Validation

The following rules **must** be validated at runtime. These rules depend on knowledge of the implementation and its capabilities and knowledge of runtime information, such as enabled features.

### Valid Usage

- VUID-RuntimeSpirv-vulkanMemoryModel-06265  
If the **vulkanMemoryModel** feature is enabled and the **vulkanMemoryModelDeviceScope** feature is not enabled, **Device** memory scope **must** not be used
- VUID-RuntimeSpirv-vulkanMemoryModel-06266  
If the **vulkanMemoryModel** feature is not enabled, **QueueFamily** memory scope **must** not be used
- VUID-RuntimeSpirv-shaderSubgroupClock-06267  
If the **shaderSubgroupClock** feature is not enabled, the **Subgroup** scope **must** not be used for **OpReadClockKHR**
- VUID-RuntimeSpirv-shaderDeviceClock-06268  
If the **shaderDeviceClock** feature is not enabled, the **Device** scope **must** not be used for **OpReadClockKHR**
- VUID-RuntimeSpirv-shaderRelaxedExtendedInstruction-10773  
If the **shaderRelaxedExtendedInstruction** feature is not enabled, the **OpExtInstWithForwardRefsKHR** **must** not be used
- VUID-RuntimeSpirv-None-09558  
If the **dynamicRenderingLocalRead** feature is not enabled, any variable created with a “Type” of **OpTypeImage** that has a “Dim” operand of **SubpassData** **must** be decorated with **InputAttachmentIndex**
- VUID-RuntimeSpirv-OpTypeImage-09644  
Any variable declared as an **OpTypeArray** where the **Element Type** is an **OpTypeImage** with a “Dim” operand of **SubpassData** **must** be decorated with **InputAttachmentIndex**
- VUID-RuntimeSpirv-apiVersion-07954  
If **VkPhysicalDeviceProperties::apiVersion** is less than Vulkan 1.3, the **VK\_KHR\_format\_feature\_flags2** extension is not supported, and the **shaderStorageImageWriteWithoutFormat** feature is not enabled, any variable created with a “Type” of **OpTypeImage** that has a “Sampled” operand of 2 and an “Image Format” operand of **Unknown** **must** be decorated with **NonWritable**
- VUID-RuntimeSpirv-apiVersion-07955  
If **VkPhysicalDeviceProperties::apiVersion** is less than Vulkan 1.3, the **VK\_KHR\_format\_feature\_flags2** extension is not supported, and the

`shaderStorageImageReadWithoutFormat` feature is not enabled, any variable created with a “Type” of `OpTypeImage` that has a “Sampled” operand of 2 and an “Image Format” operand of `Unknown` **must** be decorated with `NonReadable`

- VUID-RuntimeSpirv-OpImageWrite-07112  
`OpImageWrite` to any `Image` whose `Image Format` is not `Unknown` **must** have the `Texel` operand contain at least as many components as the corresponding `VkFormat` as given in the [SPIR-V Image Format compatibility table](#)
- VUID-RuntimeSpirv-Location-06272  
The sum of `Location` and the number of locations the variable it decorates consumes **must** be less than or equal to the value for the matching `Execution Model` defined in [Shader Input and Output Locations](#)
- VUID-RuntimeSpirv-Location-06428  
The maximum number of storage buffers, storage images, and output `Location` decorated color attachments written to in the `Fragment Execution Model` **must** be less than or equal to `maxFragmentCombinedOutputResources`
- VUID-RuntimeSpirv-UniformBufferArrayNonUniformIndexing-10134  
If the `UniformBufferArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a uniform buffer, the uniform buffer through which that memory is accessed **must** be dynamically uniform within the invocation group or subgroup
- VUID-RuntimeSpirv-SampledImageArrayNonUniformIndexing-10135  
If the `SampledImageArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a sampled image or sampler, the sampled image or sampler through which that memory is accessed **must** be dynamically uniform within the invocation group or subgroup
- VUID-RuntimeSpirv-StorageBufferArrayNonUniformIndexing-10136  
If the `StorageBufferArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a storage buffer, the storage buffer through which that memory is accessed **must** be dynamically uniform within the invocation group or subgroup
- VUID-RuntimeSpirv-StorageImageArrayNonUniformIndexing-10137  
If the `StorageImageArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a storage image, the storage image through which that memory is accessed **must** be dynamically uniform within the invocation group or subgroup
- VUID-RuntimeSpirv-InputAttachmentArrayNonUniformIndexing-10138  
If the `InputAttachmentArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through an input attachment, the input attachment through which that memory is accessed **must** be dynamically uniform within the invocation group or subgroup
- VUID-RuntimeSpirv-UniformTexelBufferArrayNonUniformIndexing-10139  
If the `UniformTexelBufferArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a uniform texel buffer, the uniform texel buffer through which that memory is accessed **must** be dynamically uniform within the invocation group or subgroup
- VUID-RuntimeSpirv-StorageTexelBufferArrayNonUniformIndexing-10140

If the `StorageTexelBufferArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a storage texel buffer, the storage texel buffer through which that memory is accessed **must** be dynamically uniform within the invocation group or subgroup

- VUID-RuntimeSpirv-subgroupSize-10141

If the `effective subgroup size` is 1, the `UniformBufferArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a uniform buffer, the uniform buffer through which that memory is accessed **must** be dynamically uniform within the invocation group

- VUID-RuntimeSpirv-subgroupSize-10142

If the `effective subgroup size` is 1, the `SampledImageArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a sampled image or sampler, the sampled image or sampler through which that memory is accessed **must** be dynamically uniform within the invocation group

- VUID-RuntimeSpirv-subgroupSize-10143

If the `effective subgroup size` is 1, the `StorageBufferArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a storage buffer, the storage buffer through which that memory is accessed **must** be dynamically uniform within the invocation group

- VUID-RuntimeSpirv-subgroupSize-10144

If the `effective subgroup size` is 1, the `StorageImageArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a storage image, the storage image through which that memory is accessed **must** be dynamically uniform within the invocation group

- VUID-RuntimeSpirv-subgroupSize-10145

If the `effective subgroup size` is 1, the `InputAttachmentArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through an input attachment, the input attachment through which that memory is accessed **must** be dynamically uniform within the invocation group

- VUID-RuntimeSpirv-subgroupSize-10146

If the `effective subgroup size` is 1, the `UniformTexelBufferArrayNonUniformIndexing` capability is not declared, and an instruction accesses memory through a uniform texel buffer, the uniform texel buffer through which that memory is accessed **must** be dynamically uniform within the invocation group

- VUID-RuntimeSpirv-subgroupSize-10147

If the `effective subgroup size` is 1, the `StorageTexelBufferArrayNonUniformIndexing` capability is not is not declared, and an instruction accesses memory through a storage texel buffer, the storage texel buffer through which that memory is accessed **must** be dynamically uniform within the invocation group

- VUID-RuntimeSpirv-maxClipDistances-00708

If `VkPhysicalDeviceLimits::maxClipDistances` is not zero, then any entry point interface variable declared with the `ClipDistance BuiltIn` decoration, **must** not have an array size greater than `VkPhysicalDeviceLimits::maxClipDistances`

- VUID-RuntimeSpirv-maxCullDistances-00709

If `VkPhysicalDeviceLimits::maxCullDistances` is not zero, then any entry point interface variable declared with the `CullDistance BuiltIn` decoration, **must** not have an array size greater than `VkPhysicalDeviceLimits::maxCullDistances`

- VUID-RuntimeSpirv-maxCombinedClipAndCullDistances-00710

If `VkPhysicalDeviceLimits::maxCombinedClipAndCullDistances` is not zero, then any entry point interface variable declared with the `ClipDistance BuiltIn` and `CullDistance BuiltIn` decoration **must** not have array sizes which sum to more than `VkPhysicalDeviceLimits::maxCombinedClipAndCullDistances`

- VUID-RuntimeSpirv-maxClipDistances-08448

If `VkPhysicalDeviceLimits::maxClipDistances` is zero, then entry point interface variables declared with the `ClipDistance BuiltIn` decoration **must** not be statically accessed

- VUID-RuntimeSpirv-maxCullDistances-08449

If `VkPhysicalDeviceLimits::maxCullDistances` is zero, then entry point interface variables declared with the `CullDistance BuiltIn` decoration **must** not be statically accessed

- VUID-RuntimeSpirv-None-04745

All block members in a variable with a `Storage Class` of `PushConstant` declared as an array **must** only be accessed by dynamically uniform indices

- VUID-RuntimeSpirv-None-10148

If an instruction accesses memory through any resource, the `effective subgroup size` is 1, the `DescriptorHeapEXT` capability is not declared, and the resource through which that memory is accessed is not uniform within the invocation group, then the operand corresponding to that resource (e.g. the pointer or sampled image operand) **must** be decorated with `NonUniform`

- VUID-RuntimeSpirv-subgroupSize-10149

If an instruction accesses memory through any resource, the `effective subgroup size` is greater than 1, the `DescriptorHeapEXT` capability is not declared, and the resource through which that memory is accessed is not uniform within the invocation group, and not uniform within the subgroup, then the operand corresponding to that resource (e.g. the pointer or sampled image operand) **must** be decorated with `NonUniform`

- VUID-RuntimeSpirv-None-06275

`shaderSubgroupExtendedTypes` **must** be enabled for `group operations` to use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types

- VUID-RuntimeSpirv-subgroupBroadcastDynamicId-06276

If `subgroupBroadcastDynamicId` is `VK_TRUE`, and the shader module version is 1.5 or higher, the “Index” for `OpGroupNonUniformQuadBroadcast` **must** be dynamically uniform within the derivative group. Otherwise, “Index” **must** be a constant

- VUID-RuntimeSpirv-subgroupBroadcastDynamicId-06277

If `subgroupBroadcastDynamicId` is `VK_TRUE`, and the shader module version is 1.5 or higher, the “Id” for `OpGroupNonUniformBroadcast` **must** be dynamically uniform within the subgroup. Otherwise, “Id” **must** be a constant

- VUID-RuntimeSpirv-None-06278

`shaderBufferInt64Atomics` **must** be enabled for 64-bit integer atomic operations to be supported on a *Pointer* with a `Storage Class` of `StorageBuffer` or `Uniform`

- VUID-RuntimeSpirv-None-06279  
`shaderSharedInt64Atomics` **must** be enabled for 64-bit integer atomic operations to be supported on a *Pointer* with a *Storage Class* of *Workgroup*
- VUID-RuntimeSpirv-None-06284  
`shaderBufferFloat32Atomics`, or `shaderBufferFloat32AtomicAdd`, or  
`shaderBufferFloat64Atomics`, or `shaderBufferFloat64AtomicAdd`, or  
`shaderBufferFloat16Atomics`, or `shaderBufferFloat16AtomicAdd`, or  
`shaderBufferFloat16AtomicMinMax`, or `shaderBufferFloat32AtomicMinMax`, or  
`shaderBufferFloat64AtomicMinMax`, **must** be enabled for floating-point atomic operations to be supported on a *Pointer* with a *Storage Class* of *StorageBuffer*
- VUID-RuntimeSpirv-None-06285  
`shaderSharedFloat32Atomics`, or `shaderSharedFloat32AtomicAdd`, or  
`shaderSharedFloat64Atomics`, or `shaderSharedFloat64AtomicAdd`, or  
`shaderSharedFloat16Atomics`, or `shaderSharedFloat16AtomicAdd`, or  
`shaderSharedFloat16AtomicMinMax`, or `shaderSharedFloat32AtomicMinMax`, or  
`shaderSharedFloat64AtomicMinMax`, **must** be enabled for floating-point atomic operations to be supported on a *Pointer* with a *Storage Class* of *Workgroup*
- VUID-RuntimeSpirv-None-06286  
`shaderImageFloat32Atomics`, or `shaderImageFloat32AtomicAdd`, or  
`shaderImageFloat32AtomicMinMax`, **must** be enabled for 32-bit floating-point atomic operations to be supported on a *Pointer* with a *Storage Class* of *Image*
- VUID-RuntimeSpirv-None-06287  
`sparseImageFloat32Atomics`, or `sparseImageFloat32AtomicAdd`, or  
`sparseImageFloat32AtomicMinMax`, **must** be enabled for 32-bit floating-point atomics to be supported on sparse images
- VUID-RuntimeSpirv-None-06288  
`shaderImageInt64Atomics` **must** be enabled for 64-bit integer atomic operations to be supported on a *Pointer* with a *Storage Class* of *Image*
- VUID-RuntimeSpirv-denormBehaviorIndependence-06289  
If `denormBehaviorIndependence` is `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY`, then the entry point **must** use the same denormals *Execution Mode* for both 16-bit and 64-bit floating-point types
- VUID-RuntimeSpirv-denormBehaviorIndependence-06290  
If `denormBehaviorIndependence` is `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE`, then the entry point **must** use the same denormals *Execution Mode* for all floating-point types
- VUID-RuntimeSpirv-roundingModeIndependence-06291  
If `roundingModeIndependence` is `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY`, then the entry point **must** use the same rounding *Execution Mode* for both 16-bit and 64-bit floating-point types
- VUID-RuntimeSpirv-roundingModeIndependence-06292  
If `roundingModeIndependence` is `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE`, then the entry point **must** use the same rounding *Execution Mode* for all floating-point

types

- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat16-06293  
If `shaderSignedZeroInfNanPreserveFloat16` is `VK_FALSE`, then `SignedZeroInfNanPreserve` for 16-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat32-06294  
If `shaderSignedZeroInfNanPreserveFloat32` is `VK_FALSE`, then `SignedZeroInfNanPreserve` for 32-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat64-06295  
If `shaderSignedZeroInfNanPreserveFloat64` is `VK_FALSE`, then `SignedZeroInfNanPreserve` for 64-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderDenormPreserveFloat16-06296  
If `shaderDenormPreserveFloat16` is `VK_FALSE`, then `DenormPreserve` for 16-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderDenormPreserveFloat32-06297  
If `shaderDenormPreserveFloat32` is `VK_FALSE`, then `DenormPreserve` for 32-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderDenormPreserveFloat64-06298  
If `shaderDenormPreserveFloat64` is `VK_FALSE`, then `DenormPreserve` for 64-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat16-06299  
If `shaderDenormFlushToZeroFloat16` is `VK_FALSE`, then `DenormFlushToZero` for 16-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat32-06300  
If `shaderDenormFlushToZeroFloat32` is `VK_FALSE`, then `DenormFlushToZero` for 32-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat64-06301  
If `shaderDenormFlushToZeroFloat64` is `VK_FALSE`, then `DenormFlushToZero` for 64-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderRoundingModeRTEFloat16-06302  
If `shaderRoundingModeRTEFloat16` is `VK_FALSE`, then `RoundingModeRTE` for 16-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderRoundingModeRTEFloat32-06303  
If `shaderRoundingModeRTEFloat32` is `VK_FALSE`, then `RoundingModeRTE` for 32-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderRoundingModeRTEFloat64-06304  
If `shaderRoundingModeRTEFloat64` is `VK_FALSE`, then `RoundingModeRTE` for 64-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderRoundingModeRTZFloat16-06305  
If `shaderRoundingModeRTZFloat16` is `VK_FALSE`, then `RoundingModeRTZ` for 16-bit floating-point type **must** not be used
- VUID-RuntimeSpirv-shaderRoundingModeRTZFloat32-06306  
If `shaderRoundingModeRTZFloat32` is `VK_FALSE`, then `RoundingModeRTZ` for 32-bit floating-

point type **must** not be used

- VUID-RuntimeSpirv-shaderRoundingModeRTZFloat64-06307

If `shaderRoundingModeRTZFloat64` is `VK_FALSE`, then `RoundingModeRTZ` for 64-bit floating-point type **must** not be used

- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat16-09559

If `shaderSignedZeroInfNanPreserveFloat16` is `VK_FALSE` then any `FPFastMathDefault` execution mode with a type of 16-bit float **must** include the `NSZ`, `NotInf`, and `NotNaN` flags

- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat16-09560

If `shaderSignedZeroInfNanPreserveFloat16` is `VK_FALSE` then any `FPFastMathMode` decoration on an instruction with result type or any operand type that includes a 16-bit float **must** include the `NSZ`, `NotInf`, and `NotNaN` flags

- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat32-09561

If `shaderSignedZeroInfNanPreserveFloat32` is `VK_FALSE` then any `FPFastMathDefault` execution mode with a type of 32-bit float **must** include the `NSZ`, `NotInf`, and `NotNaN` flags

- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat32-09562

If `shaderSignedZeroInfNanPreserveFloat32` is `VK_FALSE` then any `FPFastMathMode` decoration on an instruction with result type or any operand type that includes a 32-bit float **must** include the `NSZ`, `NotInf`, and `NotNaN` flags

- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat64-09563

If `shaderSignedZeroInfNanPreserveFloat64` is `VK_FALSE` then any `FPFastMathDefault` execution mode with a type of 64-bit float **must** include the `NSZ`, `NotInf`, and `NotNaN` flags

- VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat64-09564

If `shaderSignedZeroInfNanPreserveFloat64` is `VK_FALSE` then any `FPFastMathMode` decoration on an instruction with result type or any operand type that includes a 64-bit float **must** include the `NSZ`, `NotInf`, and `NotNaN` flags

- VUID-RuntimeSpirv-shaderFmaFloat16-10977

`shaderFmaFloat16` **must** be enabled for `OpFmaKHR` to be supported with a result type that includes a 16-bit float

- VUID-RuntimeSpirv-shaderFmaFloat32-10978

`shaderFmaFloat32` **must** be enabled for `OpFmaKHR` to be supported with a result type that includes a 32-bit float

- VUID-RuntimeSpirv-shaderFmaFloat64-10979

`shaderFmaFloat64` **must** be enabled for `OpFmaKHR` to be supported with a result type that includes a 64-bit float

- VUID-RuntimeSpirv-Offset-06308

The `Offset` plus size of the type of each variable, in the output interface of the entry point being compiled, decorated with `XfbBuffer` **must** not be greater than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBufferDataSize`

- VUID-RuntimeSpirv-XfbBuffer-06309

For any given `XfbBuffer` value, define the buffer data size to be smallest number of bytes such that, for all outputs decorated with the same `XfbBuffer` value, the size of the output interface variable plus the `Offset` is less than or equal to the buffer data size. For a given `Stream`, the sum of all the buffer data sizes for all buffers writing to that stream the **must**

not exceed `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreamDataSize`

- VUID-RuntimeSpirv-OpEmitStreamVertex-06310

The Stream value to `OpEmitStreamVertex` and `OpEndStreamPrimitive` **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams`

- VUID-RuntimeSpirv-transformFeedbackStreamsLinesTriangles-06311

If the geometry shader emits to more than one vertex stream and `VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackStreamsLinesTriangles` is `VK_FALSE`, then Execution Mode **must** be `OutputPoints`

- VUID-RuntimeSpirv-Stream-06312

The stream number value to `Stream` **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams`

- VUID-RuntimeSpirv-XfbStride-06313

The XFB Stride value to `XfbStride` **must** be less than or equal to `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBufferDataStride`

- VUID-RuntimeSpirv-PhysicalStorageBuffer64-06315

If the `PhysicalStorageBuffer64` addressing model is enabled the pointer value of a memory access instruction **must** be at least as aligned as specified by the `Aligned` memory access operand

- VUID-RuntimeSpirv-PhysicalStorageBuffer64-11819

If the `PhysicalStorageBuffer64` addressing model is enabled the pointer value of a memory access instruction in the `PhysicalStorageBuffer Storage Class` **must** reference a buffer created with the `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` usage flag set

- VUID-RuntimeSpirv-OpTypeCooperativeMatrixKHR-10163

For `OpTypeCooperativeMatrixKHR`, if the `VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT::cooperativeMatrixProperties2` feature is not enabled, the type **must** match one of the supported `VkCooperativeMatrixPropertiesKHR` structures as defined in `VkCooperativeMatrixPropertiesKHR Type Matching`

- VUID-RuntimeSpirv-OpCooperativeMatrixMulAddKHR-10060

For `OpCooperativeMatrixMulAddKHR`, if the `VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT::cooperativeMatrixProperties2` feature is not enabled, the operands **must** match a supported `VkCooperativeMatrixPropertiesKHR` structure as defined in `VkCooperativeMatrixPropertiesKHR Multiply-Add Matching`

- VUID-RuntimeSpirv-cooperativeMatrixWorkgroupScope-10164

The scope of all `OpTypeCooperativeMatrixKHR` **must** not be `VkScopeKHR::VK_SCOPE_WORKGROUP_KHR`

- VUID-RuntimeSpirv-cooperativeMatrixProperties2-13382

For `OpTypeCooperativeMatrixKHR`, if the `VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT::cooperativeMatrixProperties2` feature is enabled then the type **must** either match one of the supported `VkCooperativeMatrixPropertiesKHR` structures as defined in

[VkCooperativeMatrixPropertiesKHR Type Matching](#), or match one of the supported [VkCooperativeMatrixProperties2EXT](#) structures as defined in [VkCooperativeMatrixProperties2EXT Type Matching](#)

- VUID-RuntimeSpirv-cooperativeMatrixProperties2-13383  
For [OpCooperativeMatrixMulAddKHR](#), if the [VkPhysicalDeviceCooperativeMatrixMaintenance1FeaturesEXT::cooperativeMatrixProperties2](#) feature is enabled then the operands **must** either match one of the supported [VkCooperativeMatrixPropertiesKHR](#) structures as defined in [VkCooperativeMatrixPropertiesKHR Multiply-Add Matching](#), or match one of the supported [VkCooperativeMatrixProperties2EXT](#) structures as defined in [VkCooperativeMatrixProperties2EXT Multiply-Add Matching](#)
- VUID-RuntimeSpirv-cooperativeMatrixSupportedStages-08985  
[OpTypeCooperativeMatrixKHR](#) and [OpCooperativeMatrix\\*](#) instructions **must** not be used in shader stages not included in [VkPhysicalDeviceCooperativeMatrixPropertiesKHR::cooperativeMatrixSupportedStages](#)
- VUID-RuntimeSpirv-OpTypeCooperativeMatrixKHR-10770  
Any pipeline containing a shader with [OpTypeCooperativeMatrixKHR](#) or [OpCooperativeMatrix\\*KHR](#) instructions **must** be created with the [VK\\_PIPELINE\\_SHADER\\_STAGE\\_CREATE\\_REQUIRE\\_FULL\\_SUBGROUPS\\_BIT](#) flag or the shader module must be version 1.6 or greater
- VUID-RuntimeSpirv-OpTypeCooperativeMatrixKHR-10771  
Any shader object containing [OpTypeCooperativeMatrixKHR](#) or [OpCooperativeMatrix\\*KHR](#) instructions **must** be created with the [VK\\_SHADER\\_CREATE\\_REQUIRE\\_FULL\\_SUBGROUPS\\_BIT\\_EXT](#) flag or the shader module must be version 1.6 or greater
- VUID-RuntimeSpirv-OpCooperativeMatrix-12379  
If any [OpCooperativeMatrix\\*](#) instructions accesses a descriptor, it **must** not be a null descriptor
- VUID-RuntimeSpirv-MeshEXT-07115  
For mesh shaders using the [MeshEXT Execution Model](#) the [OutputVertices OpExecutionMode](#) **must** be less than or equal to [VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshOutputVertices](#)
- VUID-RuntimeSpirv-MeshEXT-07332  
For mesh shaders using the [MeshEXT Execution Model](#) the “Vertex Count” operand of [OpSetMeshOutputsEXT](#) **must** be less than or equal to [OutputVertices OpExecutionMode](#)
- VUID-RuntimeSpirv-MeshEXT-07116  
For mesh shaders using the [MeshEXT Execution Model](#) the [OutputPrimitivesEXT OpExecutionMode](#) **must** be less than or equal to [VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshOutputPrimitives](#)
- VUID-RuntimeSpirv-MeshEXT-07333  
For mesh shaders using the [MeshEXT Execution Model](#) the “Primitive Count” operand of [OpSetMeshOutputsEXT](#) **must** be less than or equal to [OutputPrimitivesEXT OpExecutionMode](#)
- VUID-RuntimeSpirv-MeshEXT-12333  
For mesh shaders using the [MeshEXT Execution Model](#) the index into the array of any

variable decorated with the `PerPrimitiveEXT` decoration **must** be less than the “Primitive Count” operand of `OpSetMeshOutputsEXT`

- VUID-RuntimeSpirv-TaskEXT-07117  
In task shaders using the `TaskEXT Execution Model` `OpEmitMeshTasksEXT` **must** be called exactly once under dynamically uniform conditions
- VUID-RuntimeSpirv-MeshEXT-07118  
In mesh shaders using the `MeshEXT Execution Model` `OpSetMeshOutputsEXT` **must** be called at most once under dynamically uniform conditions
- VUID-RuntimeSpirv-TaskEXT-07291  
In task shaders using the `TaskEXT Execution Model` the `x` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxTaskWorkGroupSize[0]`
- VUID-RuntimeSpirv-TaskEXT-07292  
In task shaders using the `TaskEXT Execution Model` the `y` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxTaskWorkGroupSize[1]`
- VUID-RuntimeSpirv-TaskEXT-07293  
In task shaders using the `TaskEXT Execution Model` the `z` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxTaskWorkGroupSize[2]`
- VUID-RuntimeSpirv-TaskEXT-07294  
In task shaders using the `TaskEXT Execution Model` the product of `x` size, `y` size, and `z` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxTaskWorkGroupInvocations`
- VUID-RuntimeSpirv-MeshEXT-07295  
For mesh shaders using the `MeshEXT Execution Model` the `x` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupSize[0]`
- VUID-RuntimeSpirv-MeshEXT-07296  
For mesh shaders using the `MeshEXT Execution Model` the `y` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupSize[1]`
- VUID-RuntimeSpirv-MeshEXT-07297  
For mesh shaders using the `MeshEXT Execution Model` the `z` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupSize[2]`
- VUID-RuntimeSpirv-MeshEXT-07298  
For mesh shaders using the `MeshEXT Execution Model` the product of `x` size, `y` size, and `z` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupInvocations`
- VUID-RuntimeSpirv-TaskEXT-07299  
In task shaders using the `TaskEXT Execution Model` the value of the “Group Count X” operand of `OpEmitMeshTasksEXT` **must** be less than or equal to

[VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount\[0\]](#)

- VUID-RuntimeSpirv-TaskEXT-07300

In task shaders using the [TaskEXT Execution Model](#) the value of the “Group Count Y” operand of [OpEmitMeshTasksEXT](#) **must** be less than or equal to [VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount\[1\]](#)

- VUID-RuntimeSpirv-TaskEXT-07301

In task shaders using the [TaskEXT Execution Model](#) the value of the “Group Count Z” operand of [OpEmitMeshTasksEXT](#) **must** be less than or equal to [VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount\[2\]](#)

- VUID-RuntimeSpirv-TaskEXT-07302

In task shaders using the [TaskEXT Execution Model](#) the product of the “Group Count” operands of [OpEmitMeshTasksEXT](#) **must** be less than or equal to [VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupTotalCount](#)

- VUID-RuntimeSpirv-maxMeshSharedMemorySize-08754

The sum of size in bytes for variables and [padding](#) in the [Workgroup Storage Class](#) in the [MeshEXT Execution Model](#) **must** be less than or equal to [maxMeshSharedMemorySize](#)

- VUID-RuntimeSpirv-maxMeshPayloadAndSharedMemorySize-08755

The sum of size in bytes for variables and [padding](#) in the [TaskPayloadWorkgroupEXT](#) or [Workgroup Storage Class](#) in the [MeshEXT Execution Model](#) **must** be less than or equal to [maxMeshPayloadAndSharedMemorySize](#)

- VUID-RuntimeSpirv-maxMeshOutputMemorySize-08756

The sum of size in bytes for variables in the [Output Storage Class](#) in the [MeshEXT Execution Model](#) **must** be less than or equal to [maxMeshOutputMemorySize](#) according to the formula in [Mesh Shader Output](#)

- VUID-RuntimeSpirv-maxMeshPayloadAndOutputMemorySize-08757

The sum of size in bytes for variables and in the [TaskPayloadWorkgroupEXT](#) or [Output Storage Class](#) in the [MeshEXT Execution Model](#) **must** be less than or equal to [maxMeshPayloadAndOutputMemorySize](#) according to the formula in [Mesh Shader Output](#)

- VUID-RuntimeSpirv-maxTaskPayloadSize-08758

The sum of size in bytes for variables and in the [TaskPayloadWorkgroupEXT Storage Class](#) in the [TaskEXT Execution Model](#) **must** be less than or equal to [maxTaskPayloadSize](#)

- VUID-RuntimeSpirv-maxTaskSharedMemorySize-08759

The sum of size in bytes for variables and [padding](#) in the [Workgroup Storage Class](#) in the [TaskEXT Execution Model](#) **must** be less than or equal to [maxTaskSharedMemorySize](#)

- VUID-RuntimeSpirv-maxTaskPayloadAndSharedMemorySize-08760

The sum of size in bytes for variables and [padding](#) in the [TaskPayloadWorkgroupEXT](#) or [Workgroup Storage Class](#) in the [TaskEXT Execution Model](#) **must** be less than or equal to [maxTaskPayloadAndSharedMemorySize](#)

- VUID-RuntimeSpirv-MeshEXT-12380

If the [MeshEXT Execution Model](#) dynamically accesses a variable with the [TaskPayloadWorkgroupEXT Storage Class](#), there must be a matching [TaskPayloadWorkgroupEXT Storage Class](#) variable in the [TaskEXT Execution Model](#) passed as an argument to [OpEmitMeshTasksEXT](#)

- VUID-RuntimeSpirv-OpCooperativeMatrixLoadKHR-08986  
For `OpCooperativeMatrixLoadKHR` and `OpCooperativeMatrixStoreKHR` instructions, the `Pointer` and `Stride` operands **must** be aligned to at least the lesser of 16 bytes or the natural alignment of a row or column (depending on `ColumnMajor`) of the matrix (where the natural alignment is the number of columns/rows multiplied by the component size)
- VUID-RuntimeSpirv-shaderSampleRateInterpolationFunctions-06325  
If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::shaderSampleRateInterpolationFunctions` is `VK_FALSE`, then `GLSL.std.450` fragment interpolation functions are not supported by the implementation and `OpCapability` **must** not be `InterpolationFunction`
- VUID-RuntimeSpirv-tessellationShader-06326  
If the `tessellationShader` feature is enabled, and the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::tessellationIsolines` is `VK_FALSE`, then `OpExecutionMode` **must** not be `IsoLines`
- VUID-RuntimeSpirv-tessellationShader-06327  
If the `tessellationShader` feature is enabled, and the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::tessellationPointMode` is `VK_FALSE`, then `OpExecutionMode` **must** not be `PointMode`
- VUID-RuntimeSpirv-storageBuffer8BitAccess-06328  
If `storageBuffer8BitAccess` is `VK_FALSE`, then objects containing an 8-bit integer element **must** not have `Storage Class` of `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` unless `shaderUntypedPointers` is `VK_TRUE` and they are accessed in:
  - 32-bit multiples, or
  - 16-bit multiples if `storageBuffer16BitAccess` is `VK_TRUE`.
- VUID-RuntimeSpirv-uniformAndStorageBuffer8BitAccess-06329  
If `uniformAndStorageBuffer8BitAccess` is `VK_FALSE`, then objects in the `Uniform Storage Class` with the `Block` decoration **must** not have an 8-bit integer member unless `shaderUntypedPointers` is `VK_TRUE` and they are accessed in:
  - 32-bit multiples, or
  - 16-bit multiples if `uniformAndStorageBuffer16BitAccess` is `VK_TRUE`.
- VUID-RuntimeSpirv-storagePushConstant8-06330  
If `storagePushConstant8` is `VK_FALSE`, then objects containing an 8-bit integer element **must** not have `Storage Class` of `PushConstant` unless `shaderUntypedPointers` is `VK_TRUE` and they are accessed in:
  - 32-bit multiples, or
  - 16-bit multiples if `storagePushConstant16` is `VK_TRUE`.
- VUID-RuntimeSpirv-workgroupMemoryExplicitLayout8BitAccess-10756  
If `workgroupMemoryExplicitLayout8BitAccess` is `VK_FALSE`, then objects in the `Workgroup Storage Class` with the `Block` decoration **must** not have an 8-bit integer element unless `shaderUntypedPointers` is `VK_TRUE` and they are accessed in:
  - 32-bit multiples, or
  - 16-bit multiples if `workgroupMemoryExplicitLayout16BitAccess` is `VK_TRUE`

- VUID-RuntimeSpirv-storageBuffer16BitAccess-11161

If `storageBuffer16BitAccess` is `VK_FALSE`, then objects containing 16-bit integer or 16-bit floating-point elements **must** not have `Storage Class` of `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` unless:

- `storageBuffer8BitAccess` is `VK_TRUE`, or
- the elements are accessed in 32-bit multiples if `shaderUntypedPointers` is `VK_TRUE`.

- VUID-RuntimeSpirv-uniformAndStorageBuffer16BitAccess-06332

If `uniformAndStorageBuffer16BitAccess` is `VK_FALSE`, then objects in the `Uniform Storage Class` with the `Block` decoration **must** not have 16-bit integer or 16-bit floating-point members unless:

- `uniformAndStorageBuffer8BitAccess` is `VK_TRUE`, or
- members are accessed in 32-bit multiples and `shaderUntypedPointers` is `VK_TRUE`

- VUID-RuntimeSpirv-storagePushConstant16-06333

If `storagePushConstant16` is `VK_FALSE`, then objects containing 16-bit integer or 16-bit floating-point elements **must** not have `Storage Class` of `PushConstant` unless:

- `StoragePushConstant8` is `VK_TRUE`, or
- elements are accessed in 32-bit multiples if `shaderUntypedPointers` is `VK_TRUE`

- VUID-RuntimeSpirv-storageInputOutput16-11162

If `storageInputOutput16` is `VK_FALSE`, then objects containing 16-bit integer or 16-bit floating-point elements **must** not have storage class of `Input` or `Output`

- VUID-RuntimeSpirv-None-10980

Objects containing 8-bit integer or 8-bit floating-point elements **must** not have storage class of `Input` or `Output`

- VUID-RuntimeSpirv-workgroupMemoryExplicitLayout16BitAccess-10757

If `workgroupMemoryExplicitLayout16BitAccess` is `VK_FALSE`, then objects in the `Workgroup Storage Class` with the `Block` decoration **must** not have an 16-bit integer or 16-bit floating-point elements unless:

- `workgroupMemoryExplicitLayout8BitAccess` is `VK_TRUE`, or
- elements are accessed in 32-bit multiples if `shaderUntypedPointers` is `VK_TRUE`

- VUID-RuntimeSpirv-None-06337

`shaderBufferFloat16Atomics`, or `shaderBufferFloat16AtomicAdd`, or `shaderBufferFloat16AtomicMinMax`, or `shaderSharedFloat16Atomics`, or `shaderSharedFloat16AtomicAdd`, or `shaderSharedFloat16AtomicMinMax` **must** be enabled for 16-bit floating-point atomic operations

- VUID-RuntimeSpirv-None-06338

`shaderBufferFloat32Atomics`, or `shaderBufferFloat32AtomicAdd`, or `shaderSharedFloat32Atomics`, or `shaderSharedFloat32AtomicAdd`, or `shaderImageFloat32Atomics`, or `shaderImageFloat32AtomicAdd`, or `shaderBufferFloat32AtomicMinMax`, or `shaderSharedFloat32AtomicMinMax`, or `shaderImageFloat32AtomicMinMax` **must** be enabled for 32-bit floating-point atomic operations

- VUID-RuntimeSpirv-None-06339  
`shaderBufferFloat64Atomics`, or `shaderBufferFloat64AtomicAdd`, or  
`shaderSharedFloat64Atomics`, or `shaderSharedFloat64AtomicAdd`, or  
`shaderBufferFloat64AtomicMinMax`, or `shaderSharedFloat64AtomicMinMax`, **must** be enabled  
for 64-bit floating-point atomic operations
- VUID-RuntimeSpirv-NonWritable-06340  
If the `fragmentStoresAndAtomics` feature is not enabled, then all storage image, storage  
texel buffer, and storage buffer variables in the fragment stage **must** be decorated with  
the `NonWritable` decoration
- VUID-RuntimeSpirv-NonWritable-06341  
If the `vertexPipelineStoresAndAtomics` feature is not enabled, then all storage image,  
storage texel buffer, and storage buffer variables in the vertex, tessellation, and geometry  
stages **must** be decorated with the `NonWritable` decoration
- VUID-RuntimeSpirv-None-06342  
If `subgroupQuadOperationsInAllStages` is `VK_FALSE`, then `quad subgroup operations` **must**  
not be used except for in fragment and compute stages
- VUID-RuntimeSpirv-None-06343  
`Group operations` with `subgroup scope` **must** not be used if the shader stage is not in  
`subgroupSupportedStages`
- VUID-RuntimeSpirv-Offset-06344  
The first element of the `Offset` operand of `InterpolateAtOffset` **must** be greater than or  
equal to:  

$$\text{frag}_{\text{width}} \times \text{minInterpolationOffset}$$
where  $\text{frag}_{\text{width}}$  is the width of the current fragment in pixels
- VUID-RuntimeSpirv-Offset-06345  
The first element of the `Offset` operand of `InterpolateAtOffset` **must** be less than or equal  
to  

$$\text{frag}_{\text{width}} \times (\text{maxInterpolationOffset} + \text{ULP}) - \text{ULP}$$
where  $\text{frag}_{\text{width}}$  is the width of the current fragment in pixels and  $\text{ULP} = 1 / 2^{\text{subPixelInterpolationOffsetBits}}$
- VUID-RuntimeSpirv-Offset-06346  
The second element of the `Offset` operand of `InterpolateAtOffset` **must** be greater than or  
equal to  

$$\text{frag}_{\text{height}} \times \text{minInterpolationOffset}$$
where  $\text{frag}_{\text{height}}$  is the height of the current fragment in pixels
- VUID-RuntimeSpirv-Offset-06347  
The second element of the `Offset` operand of `InterpolateAtOffset` **must** be less than or  
equal to  

$$\text{frag}_{\text{height}} \times (\text{maxInterpolationOffset} + \text{ULP}) - \text{ULP}$$
where  $\text{frag}_{\text{height}}$  is the height of the current fragment in pixels and  $\text{ULP} = 1 / 2^{\text{subPixelInterpolationOffsetBits}}$
- VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06348  
For `OpRayQueryInitializeKHR` instructions, all components of the `RayOrigin` and  
`RayDirection` operands **must** be finite floating-point values

- VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06349  
For `OpRayQueryInitializeKHR` instructions, the `RayTmin` and `RayTmax` operands **must** be non-negative floating-point values
- VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06350  
For `OpRayQueryInitializeKHR` instructions, the `RayTmin` operand **must** be less than or equal to the `RayTmax` operand
- VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06351  
For `OpRayQueryInitializeKHR` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands **must** not contain NaNs
- VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06352  
For `OpRayQueryInitializeKHR` instructions, `Acceleration Structure` **must** be an acceleration structure built as a `top-level acceleration structure`
- VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06889  
For `OpRayQueryInitializeKHR` instructions, the `Rayflags` operand **must** not contain both `SkipTrianglesKHR` and `SkipAABBsKHR`
- VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06890  
For `OpRayQueryInitializeKHR` instructions, the `Rayflags` operand **must** not contain more than one of `SkipTrianglesKHR`, `CullBackFacingTrianglesKHR`, and `CullFrontFacingTrianglesKHR`
- VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06891  
For `OpRayQueryInitializeKHR` instructions, the `Rayflags` operand **must** not contain more than one of `OpaqueKHR`, `NoOpaqueKHR`, `CullOpaqueKHR`, and `CullNoOpaqueKHR`
- VUID-RuntimeSpirv-OpRayQueryGenerateIntersectionKHR-06353  
For `OpRayQueryGenerateIntersectionKHR` instructions, `Hit T` **must** satisfy the condition  $RayTmin \leq Hit\ T \leq RayTmax$ , where `RayTmin` is equal to the value returned by `OpRayQueryGetRayTMinKHR` with the same ray query object, and `RayTmax` is equal to the value of `OpRayQueryGetIntersectionTKHR` for the current committed intersection with the same ray query object
- VUID-RuntimeSpirv-RayTracingOpacityMicromapKHR-11542  
If the `RayTracingOpacityMicromapKHR` capability is not enabled, any `Rayflags` operand provided to an instruction **must** not contain `ForceOpacityMicromap2StateKHR`
- VUID-RuntimeSpirv-flags-08761  
For `OpRayQueryGetIntersectionTriangleVertexPositionsKHR` instructions, `Acceleration Structure` **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_BIT_KHR` in `flags`
- VUID-RuntimeSpirv-OpTraceRayKHR-06355  
For `OpTraceRayKHR` instructions, all components of the `RayOrigin` and `RayDirection` operands **must** be finite floating-point values
- VUID-RuntimeSpirv-OpTraceRayKHR-06356  
For `OpTraceRayKHR` instructions, the `RayTmin` and `RayTmax` operands **must** be non-negative floating-point values
- VUID-RuntimeSpirv-OpTraceRayKHR-06552  
For `OpTraceRayKHR` instructions, the `Rayflags` operand **must** not contain both

## SkipTrianglesKHR and SkipAABBsKHR

- VUID-RuntimeSpirv-OpTraceRayKHR-06892  
For `OpTraceRayKHR` instructions, the `RayFlags` operand **must** not contain more than one of `SkipTrianglesKHR`, `CullBackFacingTrianglesKHR`, and `CullFrontFacingTrianglesKHR`
- VUID-RuntimeSpirv-OpTraceRayKHR-06893  
For `OpTraceRayKHR` instructions, the `RayFlags` operand **must** not contain more than one of `OpaqueKHR`, `NoOpaqueKHR`, `CullOpaqueKHR`, and `CullNoOpaqueKHR`
- VUID-RuntimeSpirv-OpTraceRayKHR-06553  
For `OpTraceRayKHR` instructions, if the `RayFlags` operand contains `SkipTrianglesKHR`, the pipeline **must** not have been created with `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR` set
- VUID-RuntimeSpirv-OpTraceRayKHR-06554  
For `OpTraceRayKHR` instructions, if the `RayFlags` operand contains `SkipAABBsKHR`, the pipeline **must** not have been created with `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` set
- VUID-RuntimeSpirv-OpTraceRayKHR-06357  
For `OpTraceRayKHR` instructions, the `RayTmin` operand **must** be less than or equal to the `RayTmax` operand
- VUID-RuntimeSpirv-OpTraceRayKHR-06358  
For `OpTraceRayKHR` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands **must** not contain NaNs
- VUID-RuntimeSpirv-OpTraceRayKHR-06359  
For `OpTraceRayKHR` instructions, `Acceleration Structure` **must** be an acceleration structure built as a `top-level acceleration structure`
- VUID-RuntimeSpirv-OpReportIntersectionKHR-06998  
The value of the “Hit Kind” operand of `OpReportIntersectionKHR` **must** be in the range [0,127]
- VUID-RuntimeSpirv-OpTraceRayKHR-11855  
For modules which contain `OpHitObjectTraceRayEXT`, `OpHitObjectTraceReorderExecuteEXT`, `OpHitObjectExecuteShaderEXT`, `OpHitObjectReorderExecuteShaderEXT`, or `OpTraceRayKHR` instructions that declare a variable in the `RayPayloadKHR Storage Class`, all shaders which may be invoked as part of that *shader call* **must** declare an identical variable in the `IncomingRayPayloadKHR Storage Class`
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11878  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, all components of the `RayOrigin` and `RayDirection` operands **must** be finite floating-point values
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11879  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, the `RayTmin` and `RayTmax` operands **must** be non-negative floating-point values
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11880  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, the `RayTmin` operand **must** be less than or equal to the `RayTmax` operand

- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11881  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands **must** not contain NaNs
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11882  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions the `time` operand **must** be between 0.0 and 1.0
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11883  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, the `Rayflags` operand **must** not contain both `SkipTrianglesKHR` and `SkipAABBsKHR`
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11884  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, the `Rayflags` operand **must** not contain more than one of `SkipTrianglesKHR`, `CullBackFacingTrianglesKHR`, and `CullFrontFacingTrianglesKHR`
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11885  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, the `Rayflags` operand **must** not contain more than one of `OpaqueKHR`, `NoOpaqueKHR`, `CullOpaqueKHR`, and `CullNoOpaqueKHR`
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11886  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, if the `Rayflags` operand contains `SkipTrianglesKHR`, the pipeline **must** not have been created with `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR` set
- VUID-RuntimeSpirv-OpHitObjectTraceRayEXT-11887  
For `OpHitObjectTraceRayEXT`, and `OpHitObjectTraceReorderExecuteEXT` instructions, if the `Rayflags` operand contains `SkipAABBsKHR`, the pipeline **must** not have been created with `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` set
- VUID-RuntimeSpirv-x-06429  
In compute shaders using the `GLCompute Execution Model` the `x` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]`
- VUID-RuntimeSpirv-y-06430  
In compute shaders using the `GLCompute Execution Model` the `y` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]`
- VUID-RuntimeSpirv-z-06431  
In compute shaders using the `GLCompute Execution Model` the `z` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]`
- VUID-RuntimeSpirv-x-06432  
In compute shaders using the `GLCompute Execution Model` the product of `x` size, `y` size, and `z` size in `LocalSize` or `LocalSizeId` **must** be less than or equal to `VkPhysicalDeviceLimits::maxComputeWorkGroupInvocations`
- VUID-RuntimeSpirv-LocalSizeId-06434  
If `Execution Mode LocalSizeId` is used, `maintenance4` **must** be enabled

- VUID-RuntimeSpirv-maintenance4-06817  
If the **maintenance4** feature is not enabled, any vector type output interface variables **must** not have a higher **Component Count** than a matching vector type input interface variable
- VUID-RuntimeSpirv-OpEntryPoint-08743  
Any **user-defined variables** shared between the **OpEntryPoint** of two shader stages, and declared with **Input** as its **Storage Class** for the subsequent shader stage, **must** have all **Location** slots and **Component** words declared in the preceding shader stage's **OpEntryPoint** with **Output** as the **Storage Class**
- VUID-RuntimeSpirv-OpEntryPoint-07754  
Any **user-defined variables** between the **OpEntryPoint** of two shader stages **must** have the same type and width for each **Component**
- VUID-RuntimeSpirv-OpVariable-08746  
Any variable, **Block**-decorated **OpTypeStruct**, or **Block**-decorated **OpTypeStruct** members shared between the **OpEntryPoint** of two shader stages **must** have matching decorations as defined in **interface matching**
- VUID-RuntimeSpirv-Workgroup-06530  
The sum of size in bytes for variables and **padding** in the **Workgroup Storage Class** in the **GLCompute Execution Model** **must** be less than or equal to **maxComputeSharedMemorySize**
- VUID-RuntimeSpirv-shaderZeroInitializeWorkgroupMemory-06372  
If the **shaderZeroInitializeWorkgroupMemory** feature is not enabled, any variable with **Workgroup** as its **Storage Class** **must** not have an **Initializer** operand
- VUID-RuntimeSpirv-Offset-10213  
If the **maintenance8** feature is not enabled, image operand **Offset** **must** only be used with **OpImage\*Gather** instructions
- VUID-RuntimeSpirv-Size-11165  
The **Size** operand of **OpCopyMemorySized** **must** be a multiple of 4
  - If 16-bit storage is enabled for the storage classes of both the **Target** and **Source** operands the **Size** operand may instead be a multiple of 2
  - If 8-bit storage is enabled for the storage classes of both the **Target** and **Source** operands the **Size** operand may instead be any value
- VUID-RuntimeSpirv-OpTypeUntypedPointerKHR-11166  
Any memory access made using an **OpTypeUntypedPointerKHR** must have an alignment that satisfies **Offset and Stride Assignment**
- VUID-RuntimeSpirv-OpImage-06376  
If an **OpImage\*Gather** operation has an image operand of **Offset**, **ConstOffset**, or **ConstOffsets** the offset value **must** be greater than or equal to **minTexelGatherOffset**
- VUID-RuntimeSpirv-OpImage-06377  
If an **OpImage\*Gather** operation has an image operand of **Offset**, **ConstOffset**, or **ConstOffsets** the offset value **must** be less than or equal to **maxTexelGatherOffset**
- VUID-RuntimeSpirv-OpImageSample-06435  
If an **OpImageSample\*** or **OpImageFetch\*** operation has an image operand of **Offset** or **ConstOffset** then the offset value **must** be greater than or equal to **minTexelOffset**

- VUID-RuntimeSpirv-OpImageSample-06436  
If an `OpImageSample*` or `OpImageFetch*` operation has an image operand of `Offset` or `ConstOffset` then the offset value **must** be less than or equal to `maxTexelOffset`
- VUID-RuntimeSpirv-samples-08725  
If an `OpTypeImage` has an `MS` operand 0, its bound image **must** have been created with `VkImageCreateInfo::samples` as `VK_SAMPLE_COUNT_1_BIT`
- VUID-RuntimeSpirv-samples-08726  
If an `OpTypeImage` has an `MS` operand 1, its bound image **must** not have been created with `VkImageCreateInfo::samples` as `VK_SAMPLE_COUNT_1_BIT`
- VUID-RuntimeSpirv-SampleRateShading-06378  
If the subpass description contains `VK_SUBPASS_DESCRIPTION_FRAGMENT_REGION_BIT_EXT`, then the SPIR-V fragment shader Capability `SampleRateShading` **must** not be enabled
- VUID-RuntimeSpirv-SubgroupUniformControlFlowKHR-06379  
The `Execution Mode SubgroupUniformControlFlowKHR` **must** not be applied to an entry point unless the `shaderSubgroupUniformControlFlow` feature is enabled, the corresponding shader stage bit is set in `subgroupSupportedStages`, and the entry point does not execute any *invocation repack instructions*
- VUID-RuntimeSpirv-OpEntryPoint-08727  
Each `OpEntryPoint` **must** not have more than one variable decorated with `InputAttachmentIndex` per image aspect of the attachment image bound to it, either explicitly or implicitly as described by *input attachment interface*
- VUID-RuntimeSpirv-minSampleShading-08731  
If *sample shading* is enabled and `minSampleShading` is 1.0, the `sample` operand of any `OpColorAttachmentReadEXT`, `OpDepthAttachmentReadEXT`, or `OpStencilAttachmentReadEXT` operation **must** evaluate to the value of the *coverage index* for any given fragment invocation
- VUID-RuntimeSpirv-minSampleShading-08732  
If *sample shading* is enabled and any of the `OpColorAttachmentReadEXT`, `OpDepthAttachmentReadEXT`, or `OpStencilAttachmentReadEXT` operations are used, then `minSampleShading` **must** be 1.0
- VUID-RuntimeSpirv-MeshEXT-09218  
In mesh shaders using the `MeshEXT` or `MeshNV Execution Model` and the `OutputPoints Execution Mode`, if the `maintenance5` feature is not enabled, and if the number of output points is greater than 0, a `PointSize` decorated variable **must** be written to for each output point
- VUID-RuntimeSpirv-maintenance5-09190  
If the `maintenance5` feature is enabled and a `PointSize` decorated variable is written to, all execution paths **must** write to a `PointSize` decorated variable
- VUID-RuntimeSpirv-maintenance5-10934  
If the `maintenance5` feature is enabled and a `PointSize` decorated variable is written to for any output vertex in the `Geometry Execution Model`, all execution paths for all output vertices **must** write to a `PointSize` decorated variable

- VUID-RuntimeSpirv-OpControlBarrierArriveEXT-13558  
If a `OpControlBarrierArriveEXT` or `OpControlBarrierWaitEXT` instruction is executed with an execution scope equal to `Workgroup`, its execution **must** be inside *uniform control flow* within the invocation group
- VUID-RuntimeSpirv-OpControlBarrierWaitEXT-13559  
If a `OpControlBarrierWaitEXT` instruction is executed, a `OpControlBarrierArriveEXT` instruction with the same execution scope **must** have been executed previously
- VUID-RuntimeSpirv-OpControlBarrierWaitEXT-13560  
If a `OpControlBarrierWaitEXT` instruction is executed, another `OpControlBarrierWaitEXT` instruction with the same execution scope **must** not have been previously executed prior to the last executed `OpControlBarrierArriveEXT` instruction with the same execution scope
- VUID-RuntimeSpirv-OpControlBarrierArriveEXT-13561  
If a `OpControlBarrierArriveEXT` instruction is executed, another `OpControlBarrierArriveEXT` instruction with the same execution scope **must** not have been previously executed unless a `OpControlBarrierWaitEXT` instruction with the same execution scope has been executed after it
- VUID-RuntimeSpirv-OpControlBarrierArriveEXT-13562  
If the module uses `OpControlBarrierArriveEXT` or `OpControlBarrierWaitEXT`, the sum of size in bytes for variables and `padding` in the `Workgroup Storage Class` in the `GLCompute Execution Model` **must** be less than or equal to `maxComputeSharedMemorySize` minus `splitBarrierReservedSharedMemory`
- VUID-RuntimeSpirv-shaderSubgroupRotateClustered-09566  
If `shaderSubgroupRotateClustered` is `VK_FALSE`, then the `ClusterSize` operand to `OpGroupNonUniformRotateKHR` **must** not be used
- VUID-RuntimeSpirv-protectedNoFault-09645  
If `protectedNoFault` is not supported, the `Storage Class` of the `PhysicalStorageBuffer` **must** not be used if the buffer being accessed is `protected`
- VUID-RuntimeSpirv-meshAndTaskShaderDerivatives-10153  
If `meshAndTaskShaderDerivatives` is `VK_FALSE`, the `DerivativeGroupLinearKHR` and `DerivativeGroupQuadsKHR` execution modes **must** not be used in the `MeshEXT`, `MeshNV`, `TaskEXT`, or `TaskNV Execution Model`
- VUID-RuntimeSpirv-OpTypeSampler-12203  
If a variable with type `OpTypeSampler` is declared in the `Shader Resource Interface`, it **must** not be backed by a `sampler` that requires `sampler Y'CBCR` conversion
- VUID-RuntimeSpirv-OpTypeImage-12204  
If a variable with type `OpTypeImage` is declared in the `Shader Resource Interface`, it **must** not be backed by an `image view` that requires `sampler Y'CBCR` conversion
- VUID-RuntimeSpirv-None-12205  
If an `image view` or `sampler` that requires `sampler Y'CBCR` conversion is accessed in a shader, it **must** be determined by `constant integral expressions`
- VUID-RuntimeSpirv-OpTypeSampledImage-12206  
If an `OpTypeSampledImage` variable backed by an `image view` and `sampler` that require `sampler Y'CBCR` conversion is statically used in a shader, it **must** only be used with

OpImageSample\*, OpImageSparseSample\*, or OpImage instructions

- VUID-RuntimeSpirv-OpTypeImage-12207

If a **OpTypeImage** variable backed by an **image view** that requires **sampler Y'C<sub>B</sub>C<sub>R</sub> conversion** is statically used in a shader, it **must** only be used with **OpImageQueryLevels** or **OpImageQuerySizeLod** instructions

- VUID-RuntimeSpirv-ConstOffset-10718

If an **OpTypeSampledImage** variable backed by an **image view** and **sampler** that require **sampler Y'C<sub>B</sub>C<sub>R</sub> conversion** is statically used in a shader with a sampling instruction, it **must** not use the **ConstOffset** or **Offset** operands

- VUID-RuntimeSpirv-OpTypeSampledImage-12208

If an **OpTypeSampledImage** variable backed by an **image view** and **sampler** that require **sampler Y'C<sub>B</sub>C<sub>R</sub> conversion** is statically used in a shader, the image view and sampler **must** have been created with an *identically defined* **VkSamplerYcbcrConversion** set via **VkSamplerYcbcrConversionInfo**

- VUID-RuntimeSpirv-shaderUniformBufferUnsizedArray-11806

If the **shaderUniformBufferUnsizedArray** feature is not enabled, **OpTypeRuntimeArray** **must** not be used for the last member of a **Block**-decorated **OpTypeStruct** in the **Uniform storage Storage Class**

- VUID-RuntimeSpirv-None-10824

If the **maintenance9** feature is not enabled, the **Base** operand of any **OpBitCount**, **OpBitReverse**, **OpBitFieldInsert**, **OpBitFieldSExtract**, or **OpBitFieldUExtract** instruction **must** be a 32-bit integer scalar or a vector of 32-bit integers

- VUID-RuntimeSpirv-maxShaderBindingTableRecordIndex-11888

The SBT Index passed in to **OpHitObjectSetShaderBindingTableRecordIndexEXT** **must** be less than or equal to **VkPhysicalDeviceRayTracingInvocationReorderPropertiesEXT::maxShaderBindingTableRecordIndex**

- VUID-RuntimeSpirv-None-10834

**Buffer indexing calculations** **must** not wrap 32 bits if the pipeline or shader was not created with the **VK\_PIPELINE\_CREATE\_2\_64\_BIT\_INDEXING\_BIT\_EXT** or **VK\_SHADER\_CREATE\_64\_BIT\_INDEXING\_BIT\_EXT** flags and the entry point does not set the **Shader64BitIndexingEXT** execution mode

- VUID-RuntimeSpirv-OpArrayLength-11807

**OpArrayLength** and **OpUntypedArrayLengthKHR** result type **must** be a 32-bit integer type if the pipeline or shader was not compiled with the **VK\_PIPELINE\_CREATE\_2\_64\_BIT\_INDEXING\_BIT\_EXT** or **VK\_SHADER\_CREATE\_64\_BIT\_INDEXING\_BIT\_EXT** flags and the entry point does not set the **Shader64BitIndexingEXT** execution mode

- VUID-RuntimeSpirv-OpConstantSizeOfEXT-11475

The result type of **OpConstantSizeOfEXT** **must** not be a 64-bit integer type if the pipeline or shader was not compiled with the **VK\_PIPELINE\_CREATE\_2\_64\_BIT\_INDEXING\_BIT\_EXT** or **VK\_SHADER\_CREATE\_64\_BIT\_INDEXING\_BIT\_EXT** flags and the entry point does not set the **Shader64BitIndexingEXT** execution mode

- VUID-RuntimeSpirv-longVector-12296

If the **longVector** feature is enabled, the **Component Count** of any vector type **must** be less

than or equal to `maxVectorComponents`

- VUID-RuntimeSpirv-samplerDescriptorAlignment-11348

If the `Result Type` operand of `OpLoad` is `OpTypeSampler`, and `Pointer` is derived from a variable decorated with `SamplerHeapEXT`, it **must** be at an offset from the base that is a multiple of `samplerDescriptorAlignment`

- VUID-RuntimeSpirv-imageDescriptorAlignment-11349

If the `Result Type` operand of `OpLoad` is `OpTypeImage`, and `Pointer` is derived from a variable decorated with `ResourceHeapEXT`, it **must** be at an offset from the base that is a multiple of `imageDescriptorAlignment`

- VUID-RuntimeSpirv-imageDescriptorAlignment-11383

If the `Image` operand of `OpImageTexelPointer` or `OpUntypedImageTexelPointerEXT` is derived from a variable decorated with `ResourceHeapEXT`, it **must** be at an offset from the base that is a multiple of `imageDescriptorAlignment`

- VUID-RuntimeSpirv-Result-11350

If the `Result Type` operand of `OpLoad` is `OpTypeAccelerationStructureKHR` and `Pointer` is derived from a variable decorated with `ResourceHeapEXT`, it **must** be at an offset from the base that is a multiple of `bufferDescriptorAlignment`

- VUID-RuntimeSpirv-bufferDescriptorAlignment-11384

The `Buffer` operand of `OpBufferPointerEXT` **must** be at an offset from the base of the `ResourceHeapEXT` that is a multiple of `bufferDescriptorAlignment`

- VUID-RuntimeSpirv-samplerDescriptorAlignment-11476

If a `OpTypeSampler` member of a struct is decorated with `Offset` or `OffsetIdEXT`, the `Byte Offset` value must be a multiple of `samplerDescriptorAlignment`

- VUID-RuntimeSpirv-imageDescriptorAlignment-11477

If a `OpTypeImage` member of a struct is decorated with `Offset` or `OffsetIdEXT`, the `Byte Offset` value must be a multiple of `imageDescriptorAlignment`

- VUID-RuntimeSpirv-bufferDescriptorAlignment-11478

If a `OpTypeBufferEXT` member of a struct is decorated with `Offset` or `OffsetIdEXT`, the `Byte Offset` value must be a multiple of `bufferDescriptorAlignment`

- VUID-RuntimeSpirv-bufferDescriptorAlignment-11479

If a `OpTypeAccelerationStructureKHR` member of a struct is decorated with `Offset` or `OffsetIdEXT`, the `Byte Offset` value must be a multiple of `bufferDescriptorAlignment`

- VUID-RuntimeSpirv-DescriptorSet-11385

If an instruction accesses memory through any resource with a `DescriptorSet` and `Binding` that are `mapped` using `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_PUSH_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_DATA_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_SHADER_RECORD_ADDRESS_EXT`, `VK_DESCRIPTOR_MAPPING_SOURCE_INDIRECT_ADDRESS_EXT`, or `VK_DESCRIPTOR_MAPPING_SOURCE_RESOURCE_HEAP_DATA_EXT`, the resource through which that memory is accessed **must** be determined by `constant integral expressions`

- VUID-RuntimeSpirv-source-11387

All possible values of a variable pointer to a resource that are not `OpConstantNull` **must**

either all be pointers to resources with **DescriptorSet** and **Binding** decorations with the same **mapping types** as specified by **VkDescriptorSetAndBindingMappingEXT::source**, or all be pointers to resources without **DescriptorSet** and **Binding** decorations

- VUID-RuntimeSpirv-DescriptorSet-11388

All possible values of a variable pointer to a resource **must** not be resources with a **DescriptorSet** and **Binding** that are **mapped** using **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_DATA\_EXT**, **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_PUSH\_ADDRESS\_EXT**, **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_DATA\_EXT**, **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_SHADER\_RECORD\_ADDRESS\_EXT**, **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_INDIRECT\_ADDRESS\_EXT**, or **VK\_DESCRIPTOR\_MAPPING\_SOURCE\_RESOURCE\_HEAP\_DATA\_EXT**

- VUID-RuntimeSpirv-Result-11340

If the **Result Type** operand of **OpLoad** is **OpTypeSampler**, and **Pointer** is derived from a variable decorated with **SamplerHeapEXT**, it **must** correspond to loading a descriptor matching one of the descriptor types listed in **Heap Resource Type Correspondence** for **OpTypeSampler**

- VUID-RuntimeSpirv-Result-11341

If the **Result Type** operand of **OpLoad** is **OpTypeImage**, and **Pointer** is derived from a variable decorated with **ResourceHeapEXT**, it **must** correspond to loading a descriptor matching one of the descriptor types listed in **Heap Resource Type Correspondence** for **OpTypeImage**

- VUID-RuntimeSpirv-Result-11342

The **Buffer** operand of **OpBufferPointerEXT** **must** correspond to accessing a descriptor matching one of the descriptor types listed in **Heap Resource Type Correspondence** for **OpTypePointer**

- VUID-RuntimeSpirv-Result-11343

If the **Result Type** operand of **OpLoad** is **OpTypeImage**, and **Pointer** is derived from a variable decorated with **ResourceHeapEXT**, the **Image Format** and **Sampled Type** of that **OpTypeImage** **must** correspond to a descriptor with a **VkFormat** that matches as described by **Compatibility Between SPIR-V Image Formats and Vulkan Formats** and **Image Format and Type Matching Between SPIR-V Image Formats and Vulkan Formats**

- VUID-RuntimeSpirv-Result-11345

If the **Result Type** operand of **OpLoad** is **OpTypeImage**, and **Pointer** is derived from a variable decorated with **ResourceHeapEXT**, the operands of that **OpTypeImage** **must** correspond to a descriptor with operands that match as described by **Heap Image Operand Correspondence** and **Heap Image View Type Dimensionality**

- VUID-RuntimeSpirv-Image-11379

If the **Image** operand of **OpImageTexelPointer** or **OpUntypedImageTexelPointerEXT** is derived from a variable decorated with **ResourceHeapEXT**, it **must** correspond to accessing a descriptor matching one of the descriptor types listed in **Heap Resource Type Correspondence** for the **OpTypeImage** pointed to

- VUID-RuntimeSpirv-Image-11380

If the **Image** operand of **OpImageTexelPointer** or **OpUntypedImageTexelPointerEXT** is derived from a variable decorated with **ResourceHeapEXT**, the **Image Format** and **Sampled Type** of the **OpTypeImage** pointed to **must** correspond to a descriptor with a **VkFormat** that matches as

described by [Compatibility Between SPIR-V Image Formats and Vulkan Formats and Image Format and Type Matching](#)

- VUID-RuntimeSpirv-Image-11382

If the **Image** operand of **OpImageTexelPointer** or **OpUntypedImageTexelPointerEXT** is derived from a variable decorated with **ResourceHeapEXT**, the operands of that **OpTypeImage** **must** correspond to a descriptor with operands that match as described by [Heap Image Operand Correspondence](#) and [Heap Image View Type Dimensionality](#)

- VUID-RuntimeSpirv-maxPushDataSize-12455

The size of the **PushConstant Storage Class** block **must** be less than or equal to **maxPushDataSize**

## Precision and Operation of SPIR-V Instructions

The following rules apply to operations on all floating-point values:

- Positive and negative infinities and positive and negative zeros are generated as dictated by [IEEE 754](#) for the specified encoding, but subject to the precisions allowed by each operation for a given encoding, as specified in [Precision of Individual Operations](#).
- Signaling NaNs are not required to be generated and exceptions are never raised. Signaling NaN **may** be converted to quiet NaNs values by any floating-point instruction.
- The set of operations **OpPhi**, **OpSelect**, **OpFunctionCall**, **OpReturnValue**, **OpVectorExtractDynamic**, **OpVectorInsertDynamic**, **OpVectorShuffle**, **OpCompositeConstruct**, **OpCompositeExtract**, **OpCompositeInsert**, **OpTranspose**, **OpCopyObject**, **OpCopyLogical**, **OpCopyMemory**, **OpGroupNonUniformBroadcast**, **OpGroupNonUniformBroadcastFirst**, **OpGroupNonUniformShuffle**, **OpGroupNonUniformShuffleXor**, **OpGroupNonUniformShuffleUp**, **OpGroupNonUniformShuffleDown**, **OpGroupNonUniformQuadBroadcast**, **OpGroupNonUniformQuadSwap**, **OpGroupNonUniformRotateKHR**, **OpCooperativeMatrixLoadKHR**, **OpCooperativeMatrixStoreKHR**, **OpAtomicLoad**, **OpAtomicStore**, **OpAtomicExchange**, **OpStore**, and **OpLoad** are referred to as *bit-preserving operations*.
- The floating-point environment used for an instruction can be determined as follows:
  - If the SPIR-V specifies it explicitly using the **FPFastMath** decoration or **FPFastMathDefault Execution Mode** then that is used.
  - If the environment is not specified in the SPIR-V then it is determined as follows:
    - If the operation is not decorated **NoContraction** then the flags **AllowContract**, **AllowReassoc**, **AllowRecip**, and **AllowTransform** are assumed.
    - If any of the following conditions are true then the flags **NSZ**, **NotInf**, and **NotNaN** are assumed:
      - The entry point does not use the **Execution Mode SignedZeroInfNanPreserve** with a bit-width corresponding to one of the operands or to the result type.
      - The operation is not a bit-preserving operation and is not one of **OpFConvert**, **OpFNegate**, **OpFAdd**, **OpFSub**, **OpFMul**, **OpFDiv**, **OpIsNan**, **OpIsInf**, **OpVectorTimesScalar**, **OpMatrixTimesScalar**, **OpVectorTimesMatrix**, **OpMatrixTimesVector**, **OpMatrixTimesMatrix**, **OpOuterProduct**, **OpDot**, **OpFOrdEqual**, **OpFUnordEqual**, **OpFOrdNotEqual**, **OpFUnordNotEqual**, **OpFOrdLessThan**, **OpFUnordLessThan**, **OpFOrdGreaterThan**, **OpFUnordGreaterThan**,

OpFOrdLessThanEqual, OpFUnordLessThanEqual, OpFOrdGreaterThanEqual,  
OpFUnordGreaterThanEqual, OpGroupNonUniformAllEqual, OpGroupNonUniformFMin,  
OpGroupNonUniformFMax, OpAtomicCompareExchange, OpAtomicCompareExchangeWeak, OpDPdx,  
OpDPdy, OpFwidth, OpDPdxFine, OpDPdyFine, OpFwidthFine, OpDPdxCoarse, OpDPdyCoarse, or  
OpFwidthCoarse.

- The operation is an **OpLoad** from the **Input Storage Class** in the fragment shader stage.
- All bit-preserving operations and the following instructions **must** not flush denormalized values: **OpConstant**, **OpConstantComposite**, **OpSpecConstant**, **OpSpecConstantComposite**, and **OpBitcast**.
- Denormalized values are supported.
  - By default any denormalized floating-point value input into a shader or potentially generated by any instruction (except those listed above) or any extended instructions for GLSL in a shader **may** be flushed to zero.
  - Denormalized floating-point values whose type use the **Float8E4M3EXT** or **Float8E5M2EXT** FP Encoding **must** be preserved during conversions to IEEE 754 binary 16 floating-point values.
  - If the entry point is declared with the **DenormFlushToZero Execution Mode** then for the affected instructions the denormalized result **must** be flushed to zero and the denormalized operands **may** be flushed to zero. Denormalized values obtained via unpacking an integer into a vector of values with smaller bit width and interpreting those values as floating-point numbers **must** be flushed to zero.
  - If the entry point is declared with the **DenormPreserve Execution Mode** then for the affected instructions the denormalized result and any denormalized operands **must** be preserved. Denormalized values obtained via unpacking an integer into a vector of values with smaller bit width and interpreting those values as floating-point numbers **must** be preserved.
  - When denormal values are being flushed, the result of an operation **may** be considered denormal whenever the infinitely precise result is non-zero and of smaller magnitude than the smallest normal value, even if rounding would otherwise give a normal result.
  - The following core SPIR-V instructions **must** respect the **DenormFlushToZero Execution Mode**: **OpSpecConstantOp** (with opcode **OpFConvert**), **OpFConvert**, **OpFNegate**, **OpFAdd**, **OpFSub**, **OpFMul**, **OpFmaKHR**, **OpFDiv**, **OpFRem**, **OpFMod**, **OpVectorTimesScalar**, **OpMatrixTimesScalar**, **OpVectorTimesMatrix**, **OpMatrixTimesVector**, **OpMatrixTimesMatrix**, **OpOuterProduct**, **OpDot**, **OpGroupNonUniformFMin**, **OpGroupNonUniformFMax**, **OpAtomicFAddEXT**, **OpAtomicFMinEXT**, **OpAtomicFMaxEXT**, **OpDPdx**, **OpDPdy**, **OpFwidth**, **OpDPdxFine**, **OpDPdyFine**, **OpFwidthFine**, **OpDPdxCoarse**, **OpDPdyCoarse**, **OpFwidthCoarse**; and the following extended instructions for GLSL: **Round**, **RoundEven**, **Trunc**, **FAbs**, **Floor**, **Ceil**, **Fract**, **Radians**, **Degrees**, **Sin**, **Cos**, **Tan**, **Asin**, **Acos**, **Atan**, **Sinh**, **Cosh**, **Tanh**, **Asinh**, **Acosh**, **Atanh**, **Atan2**, **Pow**, **Exp**, **Log**, **Exp2**, **Log2**, **Sqrt**, **InverseSqrt**, **Determinant**, **MatrixInverse**, **Modf**, **ModfStruct**, **FMin**, **FMax**, **FClamp**, **FMix**, **Step**, **SmoothStep**, **Fma**, **UnpackHalf2x16**, **Length**, **Distance**, **Cross**, **Normalize**, **FaceForward**, **Reflect**, **Refract**, **NMin**, **NMax**, and **NClamp**.
  - The following core SPIR-V instructions **must** respect the **DenormPreserve Execution Mode** for floating-point values with an **IEEE 754** encoding: **OpSpecConstantOp**, **OpFConvert**, **OpFNegate**, **OpFAdd**, **OpFSub**, **OpFMul**, **OpFmaKHR**, **OpVectorTimesScalar**, **OpMatrixTimesScalar**, **OpVectorTimesMatrix**, **OpMatrixTimesVector**, **OpMatrixTimesMatrix**, **OpOuterProduct**, **OpDot**, **OpFOrdEqual**, **OpFUnordEqual**, **OpFOrdNotEqual**, **OpFUnordNotEqual**, **OpFOrdLessThan**, **OpFUnordLessThan**, **OpFOrdGreaterThan**, **OpFUnordGreaterThan**, **OpFOrdLessThanEqual**, **OpFUnordLessThanEqual**, **OpFOrdGreaterThanEqual**, and **OpFUnordGreaterThanEqual**.

OpGroupNonUniformAllEqual, OpGroupNonUniformFMin, OpGroupNonUniformFMax, OpAtomicCompareExchange, OpAtomicCompareExchangeWeak, OpAtomicFAddEXT, OpAtomicFMinEXT, OpAtomicFMaxEXT, OpDPdx, OpDPdy, OpFwidth, OpDPdxFine, OpDPdyFine, OpFwidthFine, OpDPdxCoarse, OpDPdyCoarse, OpFwidthCoarse; and the following extended instructions for GLSL: FAbs, FSign, Radians, Degrees, FMin, FMax, FClamp, FMix, Fma, PackHalf2x16, PackDouble2x32, UnpackHalf2x16, UnpackDouble2x32, NMin, NMax, and NClamp.

The precision of double-precision instructions is at least that of single precision.

The precision of individual operations is defined in [Precision of Individual Operations](#). Subject to the constraints below, however, implementations **may** reorder or combine operations, resulting in expressions exhibiting different precisions than might be expected from the constituent operations.

#### NOTE

The interpretation of objects with a `OpTypeFloat` type with `MXInt8EXT` encoding that have the bit pattern 0x80 is undefined.

## Evaluation of Expressions

Implementations **may** rearrange floating-point operations using any of the mathematical properties governing the expressions in precise arithmetic, even where the floating-point operations do not share these properties. This includes, but is not limited to associativity and distributivity, and **may** involve a different number of rounding steps than would occur if the operations were not rearranged. In shaders that use the `SignedZeroInfNanPreserve Execution Mode` the values **must** be preserved if they are generated after any rearrangement but the `Execution Mode` does not change which rearrangements are valid. This rearrangement **can** be prevented for particular operations by using the `NoContraction` decoration.

For example, in the absence of the `NoContraction` decoration implementations are allowed to implement  $a + b - a$  and  $\frac{a \times b}{a}$  as  $b$ . The `SignedZeroInfNanPreserve` does not prevent these transformations, even though they may overflow to infinity or NaN when evaluated in floating-point.

#### NOTE

If the `NoContraction` decoration is applied then operations may not be rearranged, so, for example,  $a + a - a$  must account for possible overflow to infinity. If infinities are not preserved then the expression may be replaced with  $a$  despite the `NoContraction` decoration, since the replacement is exact when overflow does not occur. If both `NoContraction` and `SignedZeroInfNanPreserve` are used then the result must be infinity for sufficiently large  $a$ .

## Precision of Individual Operations

The precision of individual operations is defined either in terms of rounding (correctly rounded), as an error bound in ULP, or as inherited from a formula as follows:

### Correct Result

Operations that are described as returning the “correct result” will return the infinitely precise result which, due to the nature of the operation, will not need rounding.

## Correctly Rounded

Operations described as “correctly rounded” will return the infinitely precise result,  $x$ , rounded so as to be representable in floating-point. If the entry point is declared with the `RoundingModeRTE` or the `RoundingModeRTZ Execution Mode` then this is done according to [IEEE 754](#) “roundTiesToEven” or “roundTowardZero” rounding directions, respectively. These execution modes do not affect operations on floating-point values with the following encodings:

- `BFloat16KHR`
- `Float8E4M3EXT`
- `Float8E5M2EXT`
- `Float6E2M3EXT`
- `Float6E3M2EXT`
- `Float4E2M1EXT`
- `Float8UnsignedE8M0EXT`
- `MXInt8EXT`

Otherwise, they are rounded with [implementation-defined rounding mode](#).

## Correctly Rounded with Implementation-Defined Rounding Mode

Operations described as “correctly rounded with implementation-defined rounding mode” will return the infinitely precise result,  $x$ , rounded so as to be representable in floating-point. If  $x$  is exactly representable then  $x$  will be returned. Otherwise, either the floating-point value closest to and no less than  $x$  or the value closest to and no greater than  $x$  will be returned. Which value is chosen is implementation-defined.

## ULP

Where an error bound of  $n$  ULP (units in the last place) is given, for an operation with infinitely precise result  $x$  the value returned **must** be in the range  $[x - n \times \text{ulp}(x), x + n \times \text{ulp}(x)]$ . The function  $\text{ulp}(x)$  is defined as follows:

If there exist non-equal, finite floating-point numbers  $a$  and  $b$  such that  $a \leq x \leq b$  then  $\text{ulp}(x)$  is the minimum possible distance between such numbers,  $\text{ulp}(x) = \min_{a, b} |b - a|$ . If such numbers do not exist then  $\text{ulp}(x)$  is defined to be the difference between the two non-equal, finite floating-point numbers nearest to  $x$ .

Where the range of allowed return values includes any value of magnitude larger than that of the largest representable finite floating-point number, operations **may**, additionally, return either an infinity of the appropriate sign or the finite number with the largest magnitude of the appropriate sign. If the infinitely precise result of the operation is not mathematically defined then the value returned is poison.

## Inherited From ...

Where an operation's precision is described as being inherited from a formula, the result returned **must** be at least as accurate as the result of computing an approximation to  $x$  using a formula equivalent to the given formula applied to the supplied inputs. Specifically, the formula given may be transformed using the mathematical associativity, commutativity, and distributivity of the operators involved to yield an equivalent formula. The SPIR-V precision rules, when applied to each such formula and the given input values, define a range of permitted values. If NaN is one of the permitted values then the operation may return any result, otherwise let the largest permitted value in any of the ranges be  $F_{\max}$  and the smallest be  $F_{\min}$ . The operation **must** return a value in the range  $[x - E, x + E]$  where  $E = \max(|x - F_{\min}|, |x - F_{\max}|)$ . If the entry point is declared with the **DenormPreserve Execution Mode**, then denormals **must** be preserved throughout the formula. Otherwise, any intermediate denormal value(s) while evaluating the formula **may** be flushed to zero. If the entry point is declared with the **DenormFlushToZero** execution mode, then denormal final results **must** be flushed to zero.

The precision of all instructions on float values with the **BFloat16KHR** encoding is required to be **correctly rounded with implementation defined rounding mode**.

For IEEE754 half- (16 bit) and single- (32 bit) precision instructions, precisions are **required** to be at least as follows:

Table 101. Precision of Core SPIR-V Instructions

| Instruction                                                             | Single precision, unless decorated with <b>RelaxedPrecision</b> | Half precision |
|-------------------------------------------------------------------------|-----------------------------------------------------------------|----------------|
| <b>OpFNegate</b>                                                        | Correct result.                                                 |                |
| <b>OpFAdd</b>                                                           | Correctly rounded.                                              |                |
| <b>OpFSub</b>                                                           | Correctly rounded.                                              |                |
| <b>OpFMul</b> , <b>OpVectorTimesScalar</b> , <b>OpMatrixTimesScalar</b> | Correctly rounded.                                              |                |
| <b>OpMatrixTimesVector</b>                                              | Inherited from $\sum_{j=0}^{n-1} M_{ij} \times v_j$ .           |                |
| <b>OpVectorTimesMatrix</b>                                              | Inherited from $\sum_{j=0}^{n-1} v_j \times M_{ji}$ .           |                |
| <b>OpMatrixTimesMatrix</b>                                              | Inherited from $\sum_{k=0}^{n-1} M_{ik} \times N_{kj}$ .        |                |
| <b>OpOuterProduct</b>                                                   | Correctly rounded.                                              |                |
| <b>OpFmaKHR</b>                                                         | Correctly rounded.                                              |                |
| <b>OpDot(x, y)</b>                                                      | Inherited from $\sum_{i=0}^{n-1} x_i \times y_i$ .              |                |

| OpAtomicFMinEXT, OpAtomicFMaxEXT                     | Correct result.                                                     |                                                                   |
| OpDPdx, OpDPdy, OpFwidth                             | Correctly rounded.                                                  |                                                                   |
| OpDPdxCoarse, OpDPdyCoarse, OpFwidthCoarse           | Correctly rounded.                                                  |                                                                   |
| OpDPdxFine, OpDPdyFine, OpFwidthFine                 | Correctly rounded.                                                  |                                                                   |

#### NOTE

The **OpFRem** and **OpFMod** instructions use cheap approximations of remainder, and the error can be large due to the discontinuity in `trunc()` and `floor()`. This can produce mathematically unexpected results in some cases, such as `FMod(x,x)` computing `x` rather than `0`, and can also cause the result to have a different sign than the infinitely precise result.

Table 102. Precision of GLSL.std.450 Instructions

| Instruction     | Single precision, unless decorated with RelaxedPrecision | Half precision          |
|-----------------|----------------------------------------------------------|-------------------------|
| fma()           | Inherited from <b>OpFMul</b> followed by <b>OpFAdd</b> . |                         |

| fclamp                      | Correct result.                                                                                                                                      |                |
| fmix(x, y, a)               | Inherited from $x \times (1.0 - a) + y \times a$ .                                                                                                   |                |
| step                        | Correctly rounded.                                                                                                                                   |                |
| smoothStep(edge0, edge1, x) | Inherited from $t \times t \times (3.0 - 2.0 \times t)$ , where $t = \text{clamp}(\frac{x - \text{edge0}}{\text{edge1} - \text{edge0}}, 0.0, 1.0)$ . |                |
| nmin                        | Correct result.                                                                                                                                      |                |
| nmax                        | Correct result.                                                                                                                                      |                |
| nclamp                      | Correct result.                                                                                                                                      |                |
| packHalf2x16                | Correctly rounded with implementation defined rounding mode.                                                                                         |                |

GLSL.std.450 extended instructions specifically defined in terms of the above instructions inherit the above errors. GLSL.std.450 extended instructions not listed above and not defined in terms of the above have implementation-defined precision.

If the **maintenance8** feature is not enabled and if either operand to **OpSRem** and **OpSMod** instructions is negative the result is poison.

#### NOTE

While the **OpSRem** and **OpSMod** instructions are supported by the Vulkan environment, If the **maintenance8** feature is not enabled, they require non-negative values and thus do not enable additional functionality beyond what **OpUMod** provides.

**OpCooperativeMatrixMulAddKHR** performs its operations in an implementation-dependent order and internal precision.

# Buffer Indexing Calculations

Pipelines and shaders **may** be compiled to use 32-bit integer arithmetic to compute byte offsets (e.g. based on `OpAccessChain` instructions) within a physical storage buffer or buffer, limiting the accessible range to 4GB. For physical storage buffers, the base address is a 64-bit value and the implicit base plus offset calculation uses 64-bit addition.

## NOTE

Note that `OpAccessChain` indices are always treated as signed, so a 32-bit index can only address 2GB if the `ArrayStride` is 1.

The offset calculations that have the 4GB limit include:

- `OpAccessChain` and `OpPtrAccessChain` - the total offset summed over all indices multiplied by strides, including spanning multiple access chain instructions that lead to a given memory access.
- `OpCooperativeMatrixLoadKHR` and `OpCooperativeMatrixStoreKHR` instructions computing an offset based on element, row, and stride parameters.

## 64-Bit Indexing

The application **can** enable 64-bit indexing either by setting the flags `VK_PIPELINE_CREATE_2_64_BIT_INDEXING_BIT_EXT` or `VK_SHADER_CREATE_64_BIT_INDEXING_BIT_EXT` or by setting the `Execution Mode Shader64BitIndexingEXT` on the entry point, which will cause the implementation to use 64 bits of range for those addressing calculations.

If 64-bit indexing is enabled, the calculation of index multiplied by `ArrayStride` for a runtime-sized array when evaluating an access chain in `StorageBuffer` or `PhysicalStorageBuffer` will have 64 bits of range. Similarly, the `Element` times `ArrayStride` calculation for `OpPtrAccessChain` and `OpUntypedPtrAccessChainKHR` will have 64 bits of range.

## NOTE

The size of a structure type or sized array type in a storage buffer is still limited to 32 bits for various practical reasons, such as that Offset and ArrayStride decorations use 32-bit literals. Only runtime-sized arrays can access beyond the 32-bit limit.

## NOTE

Enabling 64-bit indexing may incur a runtime cost.

If 64-bit indexing is enabled, `OpArrayLength` and `OpUntypedArrayLengthKHR` **can** have a 64-bit result type.

If 64-bit indexing is enabled, the row/col times stride calculations in `OpCooperativeMatrixLoadKHR`, and `OpCooperativeMatrixStoreKHR` are changed to have 64 bits of range. i.e. `Pointer[row*(uint64_t)Stride]` and `Pointer[col*(uint64_t)Stride]`. The stride itself is still limited to 32 bits.

# Signedness of SPIR-V Image Accesses

SPIR-V associates a signedness with all integer image accesses. This is required in certain parts of the SPIR-V and the Vulkan image access pipeline to ensure defined results. The signedness is determined from a combination of the access instruction's **Image Operands** and the underlying image's **Sampled Type** as follows:

1. If the instruction's **Image Operands** contains the **SignExtend** operand then the access is signed.
2. If the instruction's **Image Operands** contains the **ZeroExtend** operand then the access is unsigned.
3. Otherwise, the image accesses signedness matches that of the **Sampled Type** of the **OpTypeImage** being accessed.

## Image Format and Type Matching

When specifying the **Image Format** of an **OpTypeImage**, the converted bit width and type, as shown in the table below, **must** match the **Sampled Type**. The signedness **must** match the **signedness of any access** to the image.

### NOTE

Formatted accesses are always converted from a shader readable type to the resource's format or vice versa via **Texel Decode** for reads and **Texel Encode** for writes. As such, the bit width and format below do not necessarily match 1:1 with what might be expected for some formats.

For a given **Image Format**, the **Sampled Type** **must** be the type described in the *Type* column of the below table, with its **Literal Width** set to that in the *Bit Width* column. Every access that is made to the image **must** have a signedness equal to that in the *Signedness* column (where applicable).

| Image Format | Type-Declaration instructions | Bit Width | Signedness |
|--------------|-------------------------------|-----------|------------|
| Unknown      | Any                           | Any       | Any        |

The *SPIR-V Type* is defined by an instruction in SPIR-V, declared with the Type-Declaration Instruction, Bit Width, and Signedness from above.

## Compatibility Between SPIR-V Image Dimensions and Vulkan ImageView Types

SPIR-V **Image Dim** values are compatible with **VkImageView viewType** values as defined below:

Table 103. SPIR-V and Vulkan ImageView Dimension Compatibility

| SPIR-V Image Dim | Compatible Vulkan ImageView viewType                      |
|------------------|-----------------------------------------------------------|
| 1D               | VK_IMAGE_VIEW_TYPE_1D,<br>VK_IMAGE_VIEW_TYPE_1D_ARRAY     |
| 2D               | VK_IMAGE_VIEW_TYPE_2D,<br>VK_IMAGE_VIEW_TYPE_2D_ARRAY     |
| 3D               | VK_IMAGE_VIEW_TYPE_3D                                     |
| Cube             | VK_IMAGE_VIEW_TYPE_CUBE,<br>VK_IMAGE_VIEW_TYPE_CUBE_ARRAY |

# Compatibility Between SPIR-V Image Formats and Vulkan Formats

SPIR-V **Image Format** values are compatible with **VkFormat** values as defined below:

Table 104. SPIR-V and Vulkan Image Format Compatibility

| SPIR-V Image Format | Compatible Vulkan Format           |
|---------------------|------------------------------------|
| Unknown             | Any                                |
| R8                  | VK_FORMAT_R8_UNORM                 |

## Ray Query Precision and Operation

The values returned by `OpRayQueryGetIntersectionTriangleVertexPositionsKHR` are transformed by the geometry transform, which is performed at standard [floating-point](#) precision, but without a specifically defined order of floating-point operations to perform the matrix multiplication.

# Appendix B: Memory Model

## NOTE

This memory model describes synchronizations provided by all implementations; however, some of the synchronizations defined require extra features to be supported by the implementation. See [VkPhysicalDeviceVulkanMemoryModelFeatures](#).

## Agent

*Operation* is a general term for any task that is executed on the system.

## NOTE

An operation is by definition something that is executed. Thus if an instruction is skipped due to control flow, it does not constitute an operation.

Each operation is executed by a particular *agent*. Possible agents include each:

- fixed-function stage of the pipeline,
- shader invocation, or
- host thread.

## Memory Location

A *memory location* identifies unique storage for 8 bits of data. Memory operations access a *set of memory locations* consisting of one or more memory locations at a time, e.g. an operation accessing a 32-bit integer in memory would read/write a set of four memory locations. Memory operations that access whole aggregates **may** access any padding bytes between elements or members, but no padding bytes at the end of the aggregate. Two sets of memory locations *overlap* if the intersection of their sets of memory locations is non-empty. A memory operation **must** not affect memory at a memory location not within its set of memory locations.

Memory locations are implicitly allocated for SPIR-V variables by the implementation. Buffers and [images](#) are explicitly mapped to memory locations allocated in [VkDeviceMemory](#) objects.

Variables with [Workgroup](#) storage class that are decorated with [Aliased](#) and that point to a block-decorated type share a set of memory locations.

## Allocation

The values stored in memory locations newly allocated by the API are set to 0 if allocated with the [VK\\_MEMORY\\_ALLOCATE\\_ZERO\\_INITIALIZE\\_BIT\\_EXT](#) flag, otherwise they are undefined. For SPIR-V variables, the values are determined according to the [SPIR-V specification](#).

At the time an allocation is created there have been no [memory operations](#) to any of its memory locations. Using an initializer for a SPIR-V variable is not considered to be a memory operation.

## NOTE

For tessellation control shader output variables, a consequence of initialization not

being considered a memory operation is that some implementations may need to insert a barrier between the initialization of the output variables and any reads of those variables.

## Memory Operation

For an operation A and memory location M:

- A *reads* M if and only if the data stored in M is an input to A.
- A *writes* M if and only if the data output from A is stored to M.
- A *accesses* M if and only if it either reads or writes (or both) M.

### NOTE

A write whose value is the same as what was already in those memory locations is still considered to be a write and has all the same effects.

## Reference

A *reference* is an object that a particular agent **can** use to access a set of memory locations. On the host, a reference is a host virtual address. On the device, a reference is:

- The descriptor that a variable is bound to, for variables in Image, Uniform, or StorageBuffer storage classes. If the variable is an array (or array of arrays, etc.) then each element of the array **may** be a unique reference.
- The address range for a buffer in **PhysicalStorageBuffer** storage class, where the base of the address range is queried with **vkGetBufferDeviceAddress** and the length of the range is the size of the buffer.
- A single common reference for all variables with **Workgroup** storage class that are decorated with **Aliased** and that point to a block-decorated type.
- The variable itself for all other variables in the **Workgroup** storage class.
- A single common reference for all variables with **Workgroup** storage class that point to a block-decorated type.
- The variable itself for non-block-decorated type variables in **Workgroup** storage class.
- The variable itself for variables in other storage classes.

Two memory accesses through distinct references **may** require availability and visibility operations as defined [below](#).

## Program-Order

A *dynamic instance* of an instruction is defined in SPIR-V (<https://registry.khronos.org/spir-v/specs/unified1/SPIRV.html#DynamicInstance>) as a way of referring to a particular execution of a static instruction. Program-order is an ordering on dynamic instances of instructions executed by a single shader invocation:

- (Basic block): If instructions A and B are in the same basic block, and A is listed in the module before B, then the n'th dynamic instance of A is program-ordered before the n'th dynamic instance of B.
- (Branch): The dynamic instance of a branch or switch instruction is program-ordered before the dynamic instance of the OpLabel instruction to which it transfers control.
- (Call entry): The dynamic instance of an OpFunctionCall instruction is program-ordered before the dynamic instances of the OpFunctionParameter instructions and the body of the called function.
- (Call exit): The dynamic instance of the instruction following an OpFunctionCall instruction is program-ordered after the dynamic instance of the return instruction executed by the called function.
- (Transitive Closure): If dynamic instance A of any instruction is program-ordered before dynamic instance B of any instruction and B is program-ordered before dynamic instance C of any instruction then A is program-ordered before C.
- (Complete definition): No other dynamic instances are program-ordered.

For instructions executed on the host, the source language defines the program-order relation (e.g. as “sequenced-before”).

## Shader Call Related

Shader-call-related is an equivalence relation on invocations defined as the symmetric and transitive closure of:

- A is shader-call-related to B if A is created by an shader call instruction executed by B.

## Shader Call Order

Shader-call-order is a partial order on dynamic instances of instructions executed by invocations that are shader-call-related:

- (Program order): If dynamic instance A is program-ordered before B, then A is shader-call-ordered before B.
- (Shader call entry): If A is a dynamic instance of an shader call instruction and B is a dynamic instance executed by an invocation that is created by A, then A is shader-call-ordered before B.
- (Shader call exit): If A is a dynamic instance of an shader call instruction, B is the next dynamic instance executed by the same invocation, and C is a dynamic instance executed by an invocation that is created by A, then C is shader-call-ordered before B.
- (Transitive closure): If A is shader-call-ordered-before B and B is shader-call-ordered-before C, then A is shader-call-ordered-before C.
- (Complete definition): No other dynamic instances are shader-call-ordered.

# Scope

Atomic and barrier instructions include scopes which identify sets of shader invocations that **must** obey the requested ordering and atomicity rules of the operation, as defined below.

The various scopes are described in detail in [the Shaders chapter](#).

## Atomic Operation

An *atomic operation* on the device is any SPIR-V operation whose name begins with **OpAtomic**. An atomic operation on the host is any operation performed with an `std::atomic` typed object.

Each atomic operation has a memory [scope](#) and a [semantics](#). Informally, the scope determines which other agents it is atomic with respect to, and the [semantics](#) constrains its ordering against other memory accesses.

Device atomic operations have explicit scopes and semantics. Each host atomic operation implicitly uses the **CrossDevice** scope, and uses a memory semantics equivalent to a C++ `std::memory_order` value of relaxed, acquire, release, `acq_rel`, or `seq_cst`.

Two atomic operations A and B are *potentially-mutually-ordered* if and only if all of the following are true:

- They access the same set of memory locations.
- They use the same reference.
- A is in the instance of B's memory scope.
- B is in the instance of A's memory scope.
- A and B are not the same operation (irreflexive).

Two atomic operations A and B are *mutually-ordered* if and only if they are potentially-mutually-ordered and any of the following are true:

- A and B are both device operations.
- A and B are both host operations.

### NOTE

If two atomic operations are not mutually-ordered, and if their sets of memory locations overlap, then each **must** be synchronized against the other as if they were non-atomic operations.

## Scoped Modification Order

For a given atomic write A, all atomic writes that are mutually-ordered with A occur in an order known as A's *scoped modification order*. A's scoped modification order relates no other operations.

### NOTE

Invocations outside the instance of A's memory scope **may** observe the values at A's set of memory locations becoming visible to it in an order that disagrees with the

scoped modification order.

#### NOTE

It is valid to have non-atomic operations or atomics in a different scope instance to the same set of memory locations, as long as they are synchronized against each other as if they were non-atomic (if they are not, it is treated as a [data race](#)). That means this definition of A's scoped modification order could include atomic operations that occur much later, after intervening non-atomics. That is a bit non-intuitive, but it helps to keep this definition simple and non-circular.

## Memory Semantics

Non-atomic memory operations, by default, **may** be observed by one agent in a different order than they were written by another agent.

Atomics and some synchronization operations include *memory semantics*, which are flags that constrain the order in which other memory accesses (including non-atomic memory accesses and [availability and visibility operations](#)) performed by the same agent **can** be observed by other agents, or **can** observe accesses by other agents.

Host instructions that include semantics are some `std::atomic` methods and memory fences. Device instructions that include semantics are `OpAtomic*`, `OpControlBarrier`, `OpControlBarrierArriveEXT`, `OpControlBarrierWaitEXT`, `OpMemoryBarrier`, and `OpMemoryNamedBarrier`.

Vulkan supports the following memory semantics:

- Relaxed: No constraints on order of other memory accesses.
- Acquire: A memory read with this semantic performs an *acquire operation*. A memory barrier with this semantic is an *acquire barrier*.
- Release: A memory write with this semantic performs a *release operation*. A memory barrier with this semantic is a *release barrier*.
- AcquireRelease: A memory read-modify-write operation with this semantic performs both an acquire operation and a release operation, and inherits the limitations on ordering from both of those operations. A memory barrier with this semantic is both a release and acquire barrier.

SequentiallyConsistent memory semantics is not supported and **must** not be used.

#### NOTE

SPIR-V does not support “consume” semantics on the device.

The memory semantics operand **can** also include *storage class semantics* flags which indicate the storage classes constrained by the synchronization. Vulkan supports the following SPIR-V storage class semantics flags:

- UniformMemory
- WorkgroupMemory
- ImageMemory
- OutputMemory

The remaining storage class semantics flags (SubgroupMemory, CrossWorkgroupMemory, and AtomicCounterMemory) are ignored.

Each SPIR-V memory operation accesses a single storage class. Semantics in synchronization operations can include a combination of storage classes.

The UniformMemory storage class semantic applies to accesses to memory in the PhysicalStorageBuffer, [ShaderRecordBufferKHR](#), Uniform and StorageBuffer storage classes. The WorkgroupMemory storage class semantic applies to accesses to memory in the Workgroup storage class. The ImageMemory storage class semantic applies to accesses to memory in the Image storage class. The OutputMemory storage class semantic applies to accesses to memory in the Output storage class.

|      |                                                                                                                                                                                                                                                                                                                                          |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOTE | Informally, these constraints limit how memory operations can be reordered, and these limits apply not only to the order of accesses as performed in the agent that executes the instruction, but also to the order the effects of writes become visible to all other agents within the same instance of the instruction's memory scope. |
| NOTE | Release and acquire operations in different threads <b>can</b> act as synchronization operations, to guarantee that writes that happened before the release are visible after the acquire. (This is not a formal definition, just an Informative forward reference.)                                                                     |
| NOTE | The OutputMemory storage class semantic is only useful in tessellation control shaders, which is the only execution model where output variables are shared between invocations.                                                                                                                                                         |

The memory semantics operand **can** also include availability and visibility flags, which apply availability and visibility operations as described in [availability and visibility](#). The availability/visibility flags are:

- MakeAvailable: Semantics **must** be Release or AcquireRelease. Performs an availability operation before the release operation or barrier.
- MakeVisible: Semantics **must** be Acquire or AcquireRelease. Performs a visibility operation after the acquire operation or barrier.

The specifics of these operations are defined in [Availability and Visibility Semantics](#).

Host atomic operations **may** support a different list of memory semantics and synchronization operations, depending on the host architecture and source language.

## Release Sequence

After an atomic operation A performs a release operation on a set of memory locations M, the *release sequence headed by A* is the longest continuous subsequence of A's scoped modification order that consists of:

- the atomic operation A as its first element

- atomic read-modify-write operations on M by any agent

**NOTE** The atomics in the last bullet **must** be mutually-ordered with A by virtue of being in A's scoped modification order.

**NOTE** This intentionally omits “atomic writes to M performed by the same agent that performed A”, which is present in the corresponding C++ definition.

## Synchronizes-With

*Synchronizes-with* is a relation between operations, where each operation is either an atomic operation or a memory barrier (aka fence on the host).

If A and B are atomic operations, then A synchronizes-with B if and only if all of the following are true:

- A performs a release operation
- B performs an acquire operation
- A and B are mutually-ordered
- B reads a value written by A or by an operation in the release sequence headed by A

`OpControlBarrier`, `OpControlBarrierArriveEXT`, `OpControlBarrierWaitEXT`, `OpMemoryBarrier`, and `OpMemoryNamedBarrier` are *memory barrier* instructions in SPIR-V. `OpControlBarrierArriveEXT` is a *control barrier arrival* and `OpControlBarrierWaitEXT` is a *control barrier wait*.

If A is a release barrier and B is an atomic operation that performs an acquire operation, then A synchronizes-with B if and only if all of the following are true:

- there exists an atomic write X (with any memory semantics)
- A is program-ordered before X
- X and B are mutually-ordered
- B reads a value written by X or by an operation in the release sequence headed by X
  - If X is relaxed, it is still considered to head a hypothetical release sequence for this rule
- A and B are in the instance of each other's memory scopes
- X's storage class is in A's semantics.

If A is an atomic operation that performs a release operation and B is an acquire barrier, then A synchronizes-with B if and only if all of the following are true:

- there exists an atomic read X (with any memory semantics)
- X is program-ordered before B
- X and A are mutually-ordered
- X reads a value written by A or by an operation in the release sequence headed by A

- A and B are in the instance of each other's memory scopes
- X's storage class is in B's semantics.

If A is a release barrier and B is an acquire barrier, then A synchronizes-with B if all of the following are true:

- there exists an atomic write X (with any memory semantics)
- A is program-ordered before X
- there exists an atomic read Y (with any memory semantics)
- Y is program-ordered before B
- X and Y are mutually-ordered
- Y reads the value written by X or by an operation in the release sequence headed by X
  - If X is relaxed, it is still considered to head a hypothetical release sequence for this rule
- A and B are in the instance of each other's memory scopes
- X's and Y's storage class is in A's and B's semantics.
  - NOTE: X and Y **must** have the same storage class, because they are mutually ordered.

If A is a release barrier, B is an acquire barrier, and C is a control barrier (where A **can** equal C, and B **can** equal C), then A synchronizes-with B if all of the following are true:

- A is program-ordered before (or equals) C
- C is program-ordered before (or equals) B
- A and B are in the instance of each other's memory scopes
- A and B are in the instance of C's execution scope

#### NOTE

This is similar to the barrier-barrier synchronization above, but with a control barrier filling the role of the relaxed atomics.

If A is a release barrier, B is an acquire barrier, C is a control barrier arrival, and D is a control barrier wait (where A **can** equal C, and B **can** equal D), then A synchronizes-with B if all of the following are true:

- A is program-ordered before (or equals) C
- D is program-ordered before (or equals) B
- C and D have the same execution scope
- A and B are in the instance of each other's memory scopes
- A and B are in the instance of C's execution scope

Let F be an ordering of fragment shader invocations, such that invocation  $F_1$  is ordered before invocation  $F_2$  if and only if  $F_1$  and  $F_2$  overlap as described in [Fragment Shader Interlock](#) and  $F_1$  executes the interlocked code before  $F_2$ .

If A is an `OpEndInvocationInterlockEXT` instruction and B is an `OpBeginInvocationInterlockEXT`

instruction, then A synchronizes-with B if the agent that executes A is ordered before the agent that executes B in F. A and B are both considered to have **FragmentInterlock** memory scope and semantics of UniformMemory and ImageMemory, and A is considered to have Release semantics and B is considered to have Acquire semantics.

#### NOTE

**OpBeginInvocationInterlockEXT** and **OpBeginInvocationInterlockEXT** do not perform implicit availability or visibility operations. Usually, shaders using fragment shader interlock will declare the relevant resources as **coherent** to get implicit **per-instruction availability and visibility operations**.

If A is a release barrier and B is an acquire barrier, then A synchronizes-with B if all of the following are true:

- A is shader-call-ordered-before B
- A and B are in the instance of each other's memory scopes

No other release and acquire barriers synchronize-with each other.

## System-Synchronizes-With

*System-synchronizes-with* is a relation between arbitrary operations on the device or host. Certain operations system-synchronize-with each other, which informally means the first operation occurs before the second and that the synchronization is performed without using application-visible memory accesses.

If there is an **execution dependency** between two operations A and B, then the operation in the first synchronization scope system-synchronizes-with the operation in the second synchronization scope.

#### NOTE

This covers all Vulkan synchronization primitives, including device operations executing before a synchronization primitive is signaled, wait operations happening before subsequent device operations, signal operations happening before host operations that wait on them, and host operations happening before **vkQueueSubmit**. The list is spread throughout the synchronization chapter, and is not repeated here.

System-synchronizes-with implicitly includes all storage class semantics and has **CrossDevice** scope.

If A system-synchronizes-with B, we also say A is *system-synchronized-before* B and B is *system-synchronized-after* A.

## Private vs. Non-Private

By default, non-atomic memory operations are treated as *private*, meaning such a memory operation is not intended to be used for communication with other agents.

*Non-private* memory operations are intended to be used for communication with other agents. Atomic operations are always considered *non-private*.

Memory operations with the `NonPrivatePointer`, `NonPrivateTexel` bit set are treated as *non-private*

More precisely, for private memory operations to be `Location-Ordered` between distinct agents requires using `system-synchronizes-with` rather than `shader-based` synchronization. Private memory operations still obey program-order.

## Inter-Thread-Happens-Before

Let SC be a non-empty set of storage class semantics. Then (using template syntax) operation A *inter-thread-happens-before*<SC> operation B if and only if any of the following is true:

- A `system-synchronizes-with` B
- A `synchronizes-with` B, and both A and B have all of SC in their semantics
- A is an operation on memory in a storage class in SC or that has all of SC in its semantics, B is a release barrier or release atomic with all of SC in its semantics, and A is program-ordered before B
- A is an acquire barrier or acquire atomic with all of SC in its semantics, B is an operation on memory in a storage class in SC or that has all of SC in its semantics, and A is program-ordered before B
- A and B are both host operations and A *inter-thread-happens-before* B as defined in the host language specification
- A *inter-thread-happens-before*<SC> some X and X *inter-thread-happens-before*<SC> B

## Happens-Before

Operation A *happens-before* operation B if and only if any of the following is true:

- A is program-ordered before B
- A *inter-thread-happens-before*<SC> B for some set of storage classes SC

*Happens-after* is defined similarly.

### NOTE

Unlike C++, happens-before is not always sufficient for a write to be visible to a read. Additional `availability` and `visibility` operations **may** be required for writes to be `visible-to` other memory accesses.

### NOTE

Happens-before is not transitive, but each of `program-order` and `inter-thread-happens-before`<SC> are transitive. These can be thought of as covering the “single-threaded” case and the “multi-threaded” case, and it is not necessary (and not valid) to form chains between the two.

## Availability and Visibility

*Availability* and *visibility* are states of a write operation, which (informally) track how far the write has permeated the system, i.e. which agents and references are able to observe the write.

Availability state is per *memory domain*. Visibility state is per (agent,reference) pair. Availability and visibility states are per-memory location for each write.

Memory domains are named according to the agents whose memory accesses use the domain. Domains used by shader invocations are organized hierarchically into multiple smaller memory domains which correspond to the different [scopes](#). Each memory domain is considered the *dual* of a scope, and vice versa. The memory domains defined in Vulkan include:

- *host* - accessible by host agents
- *device* - accessible by all device agents for a particular device
- *shader* - accessible by shader agents for a particular device, corresponding to the **Device** scope
- *queue family instance* - accessible by shader agents in a single queue family, corresponding to the **QueueFamily** scope.
- *fragment interlock instance* - accessible by fragment shader agents that [overlap](#), corresponding to the **FragmentInterlock** scope.
- *shader call instance* - accessible by shader agents that are [shader-call-related](#), corresponding to the **ShaderCallKHR** scope.
- *workgroup instance* - accessible by shader agents in the same workgroup, corresponding to the **Workgroup** scope.
- *subgroup instance* - accessible by shader agents in the same subgroup, corresponding to the **Subgroup** scope.

The memory domains are nested in the order listed above, except for shader call instance domain, with memory domains later in the list nested in the domains earlier in the list. The shader call instance domain is at an implementation-dependent location in the list, and is nested according to that location. The shader call instance domain is not broader than the queue family instance domain.

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>NOTE</b> | Memory domains do not correspond to storage classes or device-local and host-local <a href="#">VkDeviceMemory</a> allocations, rather they indicate whether a write can be made visible only to agents in the same subgroup, same workgroup, in overlapping fragment shader invocation, in shader-call-related ray tracing invocation, in any shader invocation, or anywhere on the device, or host. The shader, queue family instance, fragment interlock instance, shader call instance, workgroup instance, and subgroup instance domains are only used for shader-based availability/visibility operations, in other cases writes can be made available from/visible to the shader via the device domain. |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

*Availability operations*, *visibility operations*, and *memory domain operations* alter the state of the write operations that happen-before them, and which are included in their *source scope* to be available or visible to their *destination scope*.

- For an availability operation, the source scope is a set of (agent,reference,memory location) tuples, and the destination scope is a set of memory domains.
- For a memory domain operation, the source scope is a memory domain and the destination

scope is a memory domain.

- For a visibility operation, the source scope is a set of memory domains and the destination scope is a set of (agent,reference,memory location) tuples.

How the scopes are determined depends on the specific operation. Availability and memory domain operations expand the set of memory domains to which the write is available. Visibility operations expand the set of (agent,reference,memory location) tuples to which the write is visible.

Recall that availability and visibility states are per-memory location, and let  $W$  be a write operation to one or more locations performed by agent  $A$  via reference  $R$ . Let  $L$  be one of the locations written.  $(W,L)$  (the write  $W$  to  $L$ ), is initially not available to any memory domain and only visible to  $(A,R,L)$ . An availability operation  $AV$  that happens-after  $W$  and that includes  $(A,R,L)$  in its source scope makes  $(W,L)$  *available* to the memory domains in its destination scope.

A memory domain operation  $DOM$  that happens-after  $AV$  and for which  $(W,L)$  is available in the source scope makes  $(W,L)$  available in the destination memory domain.

A visibility operation  $VIS$  that happens-after  $AV$  (or  $DOM$ ) and for which  $(W,L)$  is available in any domain in the source scope makes  $(W,L)$  *visible* to all (agent,reference, $L$ ) tuples included in its destination scope.

If write  $W_2$  happens-after  $W$ , and their sets of memory locations overlap, then  $W$  will not be available/visible to all agents/references for those memory locations that overlap (and future  $AV/DOM/VIS$  ops cannot revive  $W$ 's write to those locations).

Availability, memory domain, and visibility operations are treated like other non-atomic memory accesses for the purpose of [memory semantics](#), meaning they can be ordered by release-acquire sequences or memory barriers.

An *availability chain* is a sequence of availability operations to increasingly broad memory domains, where element  $N+1$  of the chain is performed in the dual scope instance of the destination memory domain of element  $N$  and element  $N$  happens-before element  $N+1$ . An example is an availability operation with destination scope of the workgroup instance domain that happens-before an availability operation to the shader domain performed by an invocation in the same workgroup. An availability chain  $AVC$  that happens-after  $W$  and that includes  $(A,R,L)$  in the source scope makes  $(W,L)$  *available* to the memory domains in its final destination scope. An availability chain with a single element is just the availability operation.

Similarly, a *visibility chain* is a sequence of visibility operations from increasingly narrow memory domains, where element  $N$  of the chain is performed in the dual scope instance of the source memory domain of element  $N+1$  and element  $N$  happens-before element  $N+1$ . An example is a visibility operation with source scope of the shader domain that happens-before a visibility operation with source scope of the workgroup instance domain performed by an invocation in the same workgroup. A visibility chain  $VISC$  that happens-after  $AVC$  (or  $DOM$ ) and for which  $(W,L)$  is available in any domain in the source scope makes  $(W,L)$  *visible* to all (agent,reference, $L$ ) tuples included in its final destination scope. A visibility chain with a single element is just the visibility operation.

# Availability, Visibility, and Domain Operations

The following operations generate availability, visibility, and domain operations. When multiple availability/visibility/domain operations are described, they are system-synchronized-with each other in the order listed.

An operation that performs a [memory dependency](#) generates:

- If the source access mask includes [VK\\_ACCESS\\_HOST\\_WRITE\\_BIT](#), then the dependency includes a memory domain operation from host domain to device domain.
- An availability operation with source scope of all writes in the first [access scope](#) of the dependency and a destination scope of the device domain.
- A visibility operation with source scope of the device domain and destination scope of the second access scope of the dependency.
- If the destination access mask includes [VK\\_ACCESS\\_HOST\\_READ\\_BIT](#) or [VK\\_ACCESS\\_HOST\\_WRITE\\_BIT](#), then the dependency includes a memory domain operation from device domain to host domain.

[vkFlushMappedMemoryRanges](#) performs an availability operation, with a source scope of (agents,references) = (all host threads, all mapped memory ranges passed to the command), and destination scope of the host domain.

[vkInvalidateMappedMemoryRanges](#) performs a visibility operation, with a source scope of the host domain and a destination scope of (agents,references) = (all host threads, all mapped memory ranges passed to the command).

[vkQueueSubmit](#) performs a memory domain operation from host to device, and a visibility operation with source scope of the device domain and destination scope of all agents and references on the device.

## Availability and Visibility Semantics

A memory barrier or atomic operation via agent A that includes MakeAvailable in its semantics performs an availability operation whose source scope includes agent A and all references in the storage classes in that instruction's storage class semantics, and all memory locations, and whose destination scope is a set of memory domains selected as specified below. The implicit availability operation is program-ordered between the barrier or atomic and all other operations program-ordered before the barrier or atomic.

A memory barrier or atomic operation via agent A that includes MakeVisible in its semantics performs a visibility operation whose source scope is a set of memory domains selected as specified below, and whose destination scope includes agent A and all references in the storage classes in that instruction's storage class semantics, and all memory locations. The implicit visibility operation is program-ordered between the barrier or atomic and all other operations program-ordered after the barrier or atomic.

The memory domains are selected based on the memory scope of the instruction as follows:

- **Device** scope uses the shader domain
- **QueueFamily** scope uses the queue family instance domain
- **FragmentInterlock** scope uses the fragment interlock instance domain
- **ShaderCallKHR** scope uses the shader call instance domain
- **Workgroup** scope uses the workgroup instance domain
- **Subgroup** uses the subgroup instance domain
- **Invocation** perform no availability/visibility operations.

When an availability operation performed by an agent A includes a memory domain D in its destination scope, where D corresponds to scope instance S, it also includes the memory domains that correspond to each smaller scope instance S' that is a subset of S and that includes A. Similarly for visibility operations.

## Per-Instruction Availability and Visibility Semantics

A memory write instruction that includes **MakePointerAvailable**, or an image write instruction that includes **MakeTexelAvailable**, performs an availability operation whose source scope includes the agent and reference used to perform the write and the memory locations written by the instruction, and whose destination scope is a set of memory domains selected by the Scope operand specified in [Availability and Visibility Semantics](#). The implicit availability operation is program-ordered between the write and all other operations program-ordered after the write.

A memory read instruction that includes **MakePointerVisible**, or an image read instruction that includes **MakeTexelVisible**, performs a visibility operation whose source scope is a set of memory domains selected by the Scope operand as specified in [Availability and Visibility Semantics](#), and whose destination scope includes the agent and reference used to perform the read and the memory locations read by the instruction. The implicit visibility operation is program-ordered between read and all other operations program-ordered before the read.

### NOTE

Although reads with per-instruction visibility only perform visibility ops from the shader or fragment interlock instance or shader call instance or workgroup instance or subgroup instance domain, they will also see writes that were made visible via the device domain, i.e. those writes previously performed by non-shader agents and made visible via API commands.

### NOTE

It is expected that all invocations in a subgroup execute on the same processor with the same path to memory, and thus availability and visibility operations with subgroup scope can be expected to be “free”.

## Location-Ordered

Let X and Y be memory accesses to overlapping sets of memory locations M, where  $X \neq Y$ . Let  $(A_X, R_X)$  be the agent and reference used for X, and  $(A_Y, R_Y)$  be the agent and reference used for Y. For now, let “ $\rightarrow$ ” denote happens-before and “ $\rightarrow^{\text{rpo}}$ ” denote the reflexive closure of program-ordered before.

If  $D_1$  and  $D_2$  are different memory domains, then let  $\text{DOM}(D_1, D_2)$  be a memory domain operation from  $D_1$  to  $D_2$ . Otherwise, let  $\text{DOM}(D, D)$  be a placeholder such that  $X \rightarrow \text{DOM}(D, D) \rightarrow Y$  if and only if  $X \rightarrow Y$ .

$X$  is *location-ordered* before  $Y$  for a location  $L$  in  $M$  if and only if any of the following is true:

- $A_X == A_Y$  and  $R_X == R_Y$  and  $X \rightarrow Y$ 
  - NOTE: this case means no availability/visibility ops are required when it is the same (agent, reference).
- $X$  is a read, both  $X$  and  $Y$  are non-private, and  $X \rightarrow Y$
- $X$  is a read, and  $X$  (transitively) system-synchronizes with  $Y$
- If  $R_X == R_Y$  and  $A_X$  and  $A_Y$  access a common memory domain  $D$  (e.g. are in the same workgroup instance if  $D$  is the workgroup instance domain), and both  $X$  and  $Y$  are non-private:
  - $X$  is a write,  $Y$  is a write,  $\text{AVC}(A_X, R_X, D, L)$  is an availability chain making  $(X, L)$  available to domain  $D$ , and  $X \rightarrow^{\text{rcpo}} \text{AVC}(A_X, R_X, D, L) \rightarrow Y$
  - $X$  is a write,  $Y$  is a read,  $\text{AVC}(A_X, R_X, D, L)$  is an availability chain making  $(X, L)$  available to domain  $D$ ,  $\text{VISC}(A_Y, R_Y, D, L)$  is a visibility chain making writes to  $L$  available in domain  $D$  visible to  $Y$ , and  $X \rightarrow^{\text{rcpo}} \text{AVC}(A_X, R_X, D, L) \rightarrow \text{VISC}(A_Y, R_Y, D, L) \rightarrow^{\text{rcpo}} Y$
  - If [VkPhysicalDeviceVulkanMemoryModelFeatures::vulkanMemoryModelAvailabilityVisibilityChains](#) is [VK\\_FALSE](#), then **AVC** and **VISC** **must** each only have a single element in the chain, in each sub-bullet above.
- Let  $D_X$  and  $D_Y$  each be either the device domain or the host domain, depending on whether  $A_X$  and  $A_Y$  execute on the device or host:
  - $X$  is a write and  $Y$  is a write, and  $X \rightarrow \text{AV}(A_X, R_X, D_X, L) \rightarrow \text{DOM}(D_X, D_Y) \rightarrow Y$
  - $X$  is a write and  $Y$  is a read, and  $X \rightarrow \text{AV}(A_X, R_X, D_X, L) \rightarrow \text{DOM}(D_X, D_Y) \rightarrow \text{VIS}(A_Y, R_Y, D_Y, L) \rightarrow Y$

#### NOTE

The final bullet (synchronization through device/host domain) requires API-level synchronization operations, since the device/host domains are not accessible via shader instructions. And “device domain” is not to be confused with “device scope”, which synchronizes through the “shader domain”.

## Data Race

Let  $X$  and  $Y$  be operations that access overlapping sets of memory locations  $M$ , where  $X \neq Y$ , and at least one of  $X$  and  $Y$  is a write, and  $X$  and  $Y$  are not mutually-ordered atomic operations. If there does not exist a location-ordered relation between  $X$  and  $Y$  for each location in  $M$ , then there is a *data race*.

Applications **must** ensure that no data races occur during the execution of their application.

#### NOTE

Data races can only occur due to instructions that are actually executed. For example, an instruction skipped due to control flow must not contribute to a data race.

# Visible-To

Let  $X$  be a write and  $Y$  be a read whose sets of memory locations overlap, and let  $M$  be the set of memory locations that overlap. Let  $M_2$  be a non-empty subset of  $M$ . Then  $X$  is *visible-to*  $Y$  for memory locations  $M_2$  if and only if all of the following are true:

- $X$  is location-ordered before  $Y$  for each location  $L$  in  $M_2$ .
- There does not exist another write  $Z$  to any location  $L$  in  $M_2$  such that  $X$  is location-ordered before  $Z$  for location  $L$  and  $Z$  is location-ordered before  $Y$  for location  $L$ .

If  $X$  is visible-to  $Y$ , then  $Y$  reads the value written by  $X$  for locations  $M_2$ .

## NOTE

It is possible for there to be a write between  $X$  and  $Y$  that overwrites a subset of the memory locations, but the remaining memory locations ( $M_2$ ) will still be visible-to  $Y$ .

# Acyclicity

*Reads-from* is a relation between operations, where the first operation is a write, the second operation is a read, and the second operation reads the value written by the first operation. *From-reads* is a relation between operations, where the first operation is a read, the second operation is a write, and the first operation reads a value written earlier than the second operation in the second operation's scoped modification order or location order (or the first operation reads from the initial value, and the second operation is any write to the same locations).

Then the implementation **must** guarantee that no cycles exist in the union of the following relations:

- location-ordered
- scoped modification order (over all atomic writes)
- reads-from
- from-reads

## NOTE

This is a “consistency” axiom, which informally guarantees that sequences of operations cannot violate causality.

# Scoped Modification Order Coherence

Let  $A$  and  $B$  be mutually-ordered atomic operations, where  $A$  is location-ordered before  $B$ . Then the following rules are a consequence of acyclicity:

- If  $A$  and  $B$  are both reads and  $A$  does not read the initial value, then the write that  $A$  takes its value from **must** be earlier in its own scoped modification order than (or the same as) the write that  $B$  takes its value from (no cycles between location-order, reads-from, and from-reads).
- If  $A$  is a read and  $B$  is a write and  $A$  does not read the initial value, then  $A$  **must** take its value from a write earlier than  $B$  in  $B$ 's scoped modification order (no cycles between location-order, scope modification order, and reads-from).

- If A is a write and B is a read, then B **must** take its value from A or a write later than A in A's scoped modification order (no cycles between location-order, scoped modification order, and from-reads).
- If A and B are both writes, then A **must** be earlier than B in A's scoped modification order (no cycles between location-order and scoped modification order).
- If A is a write and B is a read-modify-write and B reads the value written by A, then B comes immediately after A in A's scoped modification order (no cycles between scoped modification order and from-reads).

## Shader I/O

If a shader invocation A in a shader stage other than **Vertex** performs a memory read operation X from an object in storage class **CallableDataKHR**, **IncomingCallableDataKHR**, **RayPayloadKHR**, **HitAttributeKHR**, **IncomingRayPayloadKHR**, or **Input**, then X is system-synchronized-after all writes to the corresponding **CallableDataKHR**, **IncomingCallableDataKHR**, **RayPayloadKHR**, **HitAttributeKHR**, **IncomingRayPayloadKHR**, or **Output** storage variable(s) in the shader invocation(s) that contribute to generating invocation A, and those writes are all visible-to X.

### NOTE

It is not necessary for the upstream shader invocations to have completed execution, they only need to have generated the output that is being read.

## Deallocation

A call to **vkFreeMemory** **must** happen-after all memory operations on all memory locations in that **VkDeviceMemory** object.

### NOTE

Normally, device memory operations in a given queue are synchronized with **vkFreeMemory** by having a host thread wait on a fence signaled by that queue, and the wait happens-before the call to **vkFreeMemory** on the host.

The deallocation of SPIR-V variables is managed by the system and happens-after all operations on those variables.

## Descriptions (Informative)

This subsection offers more easily understandable consequences of the memory model for app/compiler developers.

Let SC be the storage class(es) specified by a release or acquire operation or barrier.

- An atomic write with release semantics must not be reordered against any read or write to SC that is program-ordered before it (regardless of the storage class the atomic is in).
- An atomic read with acquire semantics must not be reordered against any read or write to SC that is program-ordered after it (regardless of the storage class the atomic is in).
- Any write to SC program-ordered after a release barrier must not be reordered against any read

or write to SC program-ordered before that barrier.

- Any read from SC program-ordered before an acquire barrier must not be reordered against any read or write to SC program-ordered after the barrier.

A control barrier (even if it has no memory semantics) must not be reordered against any memory barriers.

This memory model allows memory accesses with and without availability and visibility operations, as well as atomic operations, all to be performed on the same memory location. This is critical to allow it to reason about memory that is reused in multiple ways, e.g. across the lifetime of different shader invocations or draw calls. While GLSL (and legacy SPIR-V) applies the “coherent” decoration to variables (for historical reasons), this model treats each memory access instruction as having optional implicit availability/visibility operations. GLSL to SPIR-V compilers should map all (non-atomic) operations on a coherent variable to `Make{Pointer, Texel}{Available}{Visible}` flags in this model.

Atomic operations implicitly have availability/visibility operations, and the scope of those operations is taken from the atomic operation’s scope.

## Tessellation Output Ordering

For SPIR-V that uses the Vulkan Memory Model, the `OutputMemory` storage class is used to synchronize accesses to tessellation control output variables. For legacy SPIR-V that does not enable the Vulkan Memory Model via `OpMemoryModel`, tessellation outputs can be ordered using a control barrier with no particular memory scope or semantics, as defined below.

Let  $X$  and  $Y$  be memory operations performed by shader invocations  $A_x$  and  $A_y$ . Operation  $X$  is *tessellation-output-ordered* before operation  $Y$  if and only if all of the following are true:

- There is a dynamic instance of an `OpControlBarrier` instruction  $C$  such that  $X$  is program-ordered before  $C$  in  $A_x$  and  $C$  is program-ordered before  $Y$  in  $A_y$ .
- $A_x$  and  $A_y$  are in the same instance of  $C$ ’s execution scope.

If shader invocations  $A_x$  and  $A_y$  in the `TessellationControl` execution model execute memory operations  $X$  and  $Y$ , respectively, on the `Output` storage class, and  $X$  is tessellation-output-ordered before  $Y$  with a scope of `Workgroup`, then  $X$  is location-ordered before  $Y$ , and if  $X$  is a write and  $Y$  is a read then  $X$  is visible-to  $Y$ .

## Cooperative Matrix Memory Access

For each dynamic instance of a cooperative matrix load instruction (`OpCooperativeMatrixLoadKHR`), some implementation-dependent invocation(s) within the instance of the matrix’s scope perform a non-atomic load from each memory location that is defined to be accessed by the instruction.

For each memory location accessed by a dynamic instance of a cooperative matrix store instruction (`OpCooperativeMatrixStoreKHR`), a single implementation-dependent invocation within the instance of the matrix’s scope performs a non-atomic store to that memory location.

# Appendix C: Compressed Image Formats

The compressed texture formats used by Vulkan are described in the specifically identified sections of the [Khronos Data Format Specification](#), version 1.3.

Unless otherwise described, the quantities encoded in these compressed formats are treated as normalized, unsigned values.

Those formats listed as sRGB-encoded have in-memory representations of R, G and B components which are nonlinearly-encoded as R', G', and B'; any alpha component is unchanged. As part of filtering, the nonlinear R', G', and B' values are converted to linear R, G, and B components; any alpha component is unchanged. The conversion between linear and nonlinear encoding is performed as described in the “KHR\_DF\_TRANSFER\_SRGB” section of the Khronos Data Format Specification.

# Block-Compressed Image Formats

BC1, BC2, and BC3 formats are described in “S3TC Compressed Texture Image Formats” chapter of the [Khronos Data Format Specification](#). BC4 and BC5 are described in the “RGTC Compressed Texture Image Formats” chapter. BC6H and BC7 are described in the “BPTC Compressed Texture Image Formats” chapter.

Table 105. Mapping of Vulkan BC Formats to Descriptions

| VkFormat                                                                 | Khronos Data Format Specification description |
|--------------------------------------------------------------------------|-----------------------------------------------|
| Formats described in the “S3TC Compressed Texture Image Formats” chapter |                                               |
| VK_FORMAT_BC1_RGB_UNORM_BLOCK                                            | BC1 with no alpha                             |
| VK_FORMAT_BC1_RGB_SRGB_BLOCK                                             | BC1 with no alpha, sRGB-encoded               |
| VK_FORMAT_BC1_RGBA_UNORM_BLOCK                                           | BC1 with alpha                                |
| VK_FORMAT_BC1_RGBA_SRGB_BLOCK                                            | BC1 with alpha, sRGB-encoded                  |
| VK_FORMAT_BC2_UNORM_BLOCK                                                | BC2                                           |
| VK_FORMAT_BC2_SRGB_BLOCK                                                 | BC2, sRGB-encoded                             |

| VK_FORMAT_BC5_UNORM_BLOCK                                                | BC5 unsigned                                  |
| VK_FORMAT_BC5_SNORM_BLOCK                                                | BC5 signed                                    |
| Formats described in the “BPTC Compressed Texture Image Formats” chapter |                                               |
| VK_FORMAT_BC6H_UFLOAT_BLOCK                                              | BC6H (unsigned version)                       |
| VK_FORMAT_BC6H_SFLOAT_BLOCK                                              | BC6H (signed version)                         |
| VK_FORMAT_BC7_UNORM_BLOCK                                                | BC7                                           |
| VK_FORMAT_BC7_SRGB_BLOCK                                                 | BC7, sRGB-encoded                             |

# ETC Compressed Image Formats

The following formats are described in the “ETC2 Compressed Texture Image Formats” chapter of the [Khronos Data Format Specification](#).

Table 106. Mapping of Vulkan ETC Formats to Descriptions

| VkFormat                            | Khronos Data Format Specification description |
|-------------------------------------|-----------------------------------------------|
| VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK   | RGB ETC2                                      |
| VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK    | RGB ETC2 with sRGB encoding                   |
| VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK | RGB ETC2 with punch-through alpha             |
| VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK  | RGB ETC2 with punch-through alpha and sRGB    |
| VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK | RGBA ETC2                                     |
| VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK  | RGBA ETC2 with sRGB encoding                  |
| VK_FORMAT_EAC_R11_UNORM_BLOCK       | Unsigned R11 EAC                              |
| VK_FORMAT_EAC_R11_SNORM_BLOCK       | Signed R11 EAC                                |
| VK_FORMAT_EAC_R11G11_UNORM_BLOCK    | Unsigned RG11 EAC                             |
| VK_FORMAT_EAC_R11G11_SNORM_BLOCK    | Signed RG11 EAC                               |

# ASTC Compressed Image Formats

ASTC formats are described in the “ASTC Compressed Texture Image Formats” chapter of the [Khronos Data Format Specification](#).

Table 107. Mapping of Vulkan ASTC Formats to Descriptions

| VkFormat                         | Compressed texel block dimensions | Requested mode |
|----------------------------------|-----------------------------------|----------------|
| VK_FORMAT_ASTC_4x4_UNORM_BLOCK   | 4 × 4                             | Linear LDR     |
| VK_FORMAT_ASTC_4x4_SRGB_BLOCK    | 4 × 4                             | sRGB           |
| VK_FORMAT_ASTC_5x4_UNORM_BLOCK   | 5 × 4                             | Linear LDR     |
| VK_FORMAT_ASTC_5x4_SRGB_BLOCK    | 5 × 4                             | sRGB           |
| VK_FORMAT_ASTC_5x5_UNORM_BLOCK   | 5 × 5                             | Linear LDR     |
| VK_FORMAT_ASTC_5x5_SRGB_BLOCK    | 5 × 5                             | sRGB           |
| VK_FORMAT_ASTC_6x5_UNORM_BLOCK   | 6 × 5                             | Linear LDR     |
| VK_FORMAT_ASTC_6x5_SRGB_BLOCK    | 6 × 5                             | sRGB           |
| VK_FORMAT_ASTC_6x6_UNORM_BLOCK   | 6 × 6                             | Linear LDR     |
| VK_FORMAT_ASTC_6x6_SRGB_BLOCK    | 6 × 6                             | sRGB           |
| VK_FORMAT_ASTC_8x5_UNORM_BLOCK   | 8 × 5                             | Linear LDR     |
| VK_FORMAT_ASTC_8x5_SRGB_BLOCK    | 8 × 5                             | sRGB           |
| VK_FORMAT_ASTC_8x6_UNORM_BLOCK   | 8 × 6                             | Linear LDR     |
| VK_FORMAT_ASTC_8x6_SRGB_BLOCK    | 8 × 6                             | sRGB           |
| VK_FORMAT_ASTC_8x8_UNORM_BLOCK   | 8 × 8                             | Linear LDR     |
| VK_FORMAT_ASTC_8x8_SRGB_BLOCK    | 8 × 8                             | sRGB           |
| VK_FORMAT_ASTC_10x5_UNORM_BLOCK  | 10 × 5                            | Linear LDR     |
| VK_FORMAT_ASTC_10x5_SRGB_BLOCK   | 10 × 5                            | sRGB           |
| VK_FORMAT_ASTC_10x6_UNORM_BLOCK  | 10 × 6                            | Linear LDR     |
| VK_FORMAT_ASTC_10x6_SRGB_BLOCK   | 10 × 6                            | sRGB           |
| VK_FORMAT_ASTC_10x8_UNORM_BLOCK  | 10 × 8                            | Linear LDR     |
| VK_FORMAT_ASTC_10x8_SRGB_BLOCK   | 10 × 8                            | sRGB           |
| VK_FORMAT_ASTC_10x10_UNORM_BLOCK | 10 × 10                           | Linear LDR     |
| VK_FORMAT_ASTC_10x10_SRGB_BLOCK  | 10 × 10                           | sRGB           |
| VK_FORMAT_ASTC_12x10_UNORM_BLOCK | 12 × 10                           | Linear LDR     |
| VK_FORMAT_ASTC_12x10_SRGB_BLOCK  | 12 × 10                           | sRGB           |
| VK_FORMAT_ASTC_12x12_UNORM_BLOCK | 12 × 12                           | Linear LDR     |

| VkFormat                              | Compressed texel block dimensions | Requested mode |
|---------------------------------------|-----------------------------------|----------------|
| VK_FORMAT_ASTC_12x12_SRGB_BLOCK       | $12 \times 12$                    | sRGB           |
| VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK       | $4 \times 4$                      | HDR            |
| VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK       | $5 \times 4$                      | HDR            |
| VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK       | $5 \times 5$                      | HDR            |
| VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK       | $6 \times 5$                      | HDR            |
| VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK       | $6 \times 6$                      | HDR            |
| VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK       | $8 \times 5$                      | HDR            |
| VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK       | $8 \times 6$                      | HDR            |
| VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK       | $8 \times 8$                      | HDR            |
| VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK      | $10 \times 5$                     | HDR            |
| VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK      | $10 \times 6$                     | HDR            |
| VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK      | $10 \times 8$                     | HDR            |
| VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK     | $10 \times 10$                    | HDR            |
| VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK     | $12 \times 10$                    | HDR            |
| VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK     | $12 \times 12$                    | HDR            |
| VK_FORMAT_ASTC_3x3x3_UNORM_BLOCK_EXT  | $3 \times 3 \times 3$             | Linear LDR     |
| VK_FORMAT_ASTC_3x3x3_SRGB_BLOCK_EXT   | $3 \times 3 \times 3$             | sRGB           |
| VK_FORMAT_ASTC_3x3x3_SFLOAT_BLOCK_EXT | $3 \times 3 \times 3$             | HDR            |

| VK_FORMAT_ASTC_4x4x3_SRGB_BLOCK_EXT   | $4 \times 4 \times 3$             | sRGB           |
| VK_FORMAT_ASTC_4x4x3_SFLOAT_BLOCK_EXT | $4 \times 4 \times 3$             | HDR            |
| VK_FORMAT_ASTC_4x4x4_UNORM_BLOCK_EXT  | $4 \times 4 \times 4$             | Linear LDR     |
| VK_FORMAT_ASTC_4x4x4_SRGB_BLOCK_EXT   | $4 \times 4 \times 4$             | sRGB           |
| VK_FORMAT_ASTC_4x4x4_SFLOAT_BLOCK_EXT | $4 \times 4 \times 4$             | HDR            |
| VK_FORMAT_ASTC_5x4x4_UNORM_BLOCK_EXT  | $5 \times 4 \times 4$             | Linear LDR     |
| VK_FORMAT_ASTC_5x4x4_SRGB_BLOCK_EXT   | $5 \times 4 \times 4$             | sRGB           |
| VK_FORMAT_ASTC_5x4x4_SFLOAT_BLOCK_EXT | $5 \times 4 \times 4$             | HDR            |
| VK_FORMAT_ASTC_5x5x4_UNORM_BLOCK_EXT  | $5 \times 5 \times 4$             | Linear LDR     |
| VK_FORMAT_ASTC_5x5x4_SRGB_BLOCK_EXT   | $5 \times 5 \times 4$             | sRGB           |

| VkFormat                              | Compressed texel block dimensions | Requested mode |
|---------------------------------------|-----------------------------------|----------------|
| VK_FORMAT_ASTC_5x5x4_SFLOAT_BLOCK_EXT | $5 \times 5 \times 4$             | HDR            |
| VK_FORMAT_ASTC_5x5x5_UNORM_BLOCK_EXT  | $5 \times 5 \times 5$             | Linear LDR     |
| VK_FORMAT_ASTC_5x5x5_SRGB_BLOCK_EXT   | $5 \times 5 \times 5$             | sRGB           |
| VK_FORMAT_ASTC_5x5x5_SFLOAT_BLOCK_EXT | $5 \times 5 \times 5$             | HDR            |
| VK_FORMAT_ASTC_6x5x5_UNORM_BLOCK_EXT  | $6 \times 5 \times 5$             | Linear LDR     |
| VK_FORMAT_ASTC_6x5x5_SRGB_BLOCK_EXT   | $6 \times 5 \times 5$             | sRGB           |
| VK_FORMAT_ASTC_6x5x5_SFLOAT_BLOCK_EXT | $6 \times 5 \times 5$             | HDR            |
| VK_FORMAT_ASTC_6x6x5_UNORM_BLOCK_EXT  | $6 \times 6 \times 5$             | Linear LDR     |
| VK_FORMAT_ASTC_6x6x5_SRGB_BLOCK_EXT   | $6 \times 6 \times 5$             | sRGB           |
| VK_FORMAT_ASTC_6x6x5_SFLOAT_BLOCK_EXT | $6 \times 6 \times 5$             | HDR            |
| VK_FORMAT_ASTC_6x6x6_UNORM_BLOCK_EXT  | $6 \times 6 \times 6$             | Linear LDR     |
| VK_FORMAT_ASTC_6x6x6_SRGB_BLOCK_EXT   | $6 \times 6 \times 6$             | sRGB           |
| VK_FORMAT_ASTC_6x6x6_SFLOAT_BLOCK_EXT | $6 \times 6 \times 6$             | HDR            |

ASTC textures containing HDR block encodings **should** be passed to the API using an ASTC SFLOAT texture format.

#### NOTE

An HDR block in a texture passed using a LDR UNORM format will return the appropriate ASTC error color if the implementation supports only the ASTC LDR profile, but may result in either the error color or a decompressed HDR color if the implementation supports HDR decoding.

## ASTC Decode Mode

If the `VK_EXT_astc_decode_mode` extension is enabled, the decode mode is determined as follows:

Table 108. Mapping of Vulkan ASTC Decoding Format to ASTC Decoding Modes

| VkFormat                         | Decoding mode  |
|----------------------------------|----------------|
| VK_FORMAT_R16G16B16A16_SFLOAT    | decode_float16 |
| VK_FORMAT_R8G8B8A8_UNORM         | decode_unorm8  |
| VK_FORMAT_E5B9G9R9_UFLOAT_PACK32 | decode_rgb9e5  |

Otherwise, the ASTC decode mode is `decode_float16`.

Note that an implementation **may** use HDR mode when linear LDR mode is requested unless the decode mode is `decode_unorm8`.

# Appendix D: Core Revisions (Informative)

New minor versions of the Vulkan API are defined periodically by the Khronos Vulkan Working Group. These consist of some amount of additional functionality added to the core API, potentially including both new functionality and functionality [promoted](#) from extensions.

It is possible to build the specification for earlier versions, but to aid readability of the latest versions, this appendix gives an overview of the changes as compared to earlier versions.

## Vulkan Version 1.4

Vulkan Version 1.4 [promoted](#) a number of key extensions into the core API:

- [VK\\_KHR\\_dynamic\\_rendering\\_local\\_read](#)
- [VK\\_KHR\\_global\\_priority](#)
- [VK\\_KHR\\_index\\_type\\_uint8](#)
- [VK\\_KHR\\_line\\_rasterization](#)
- [VK\\_KHR\\_load\\_store\\_op\\_none](#)
- [VK\\_KHR\\_maintenance5](#)
- [VK\\_KHR\\_maintenance6](#)
- [VK\\_KHR\\_map\\_memory2](#)
- [VK\\_KHR\\_push\\_descriptor](#)
- [VK\\_KHR\\_shader\\_expect\\_assume](#)
- [VK\\_KHR\\_shader\\_float\\_controls2](#)
- [VK\\_KHR\\_shader\\_subgroup\\_rotate](#)
- [VK\\_KHR\\_vertex\\_attribute\\_divisor](#)
- [VK\\_EXT\\_host\\_image\\_copy](#)
- [VK\\_EXT\\_pipeline\\_protected\\_access](#)
- [VK\\_EXT\\_pipeline\\_robustness](#)

All differences in behavior between these extensions and the corresponding Vulkan 1.4 functionality are summarized below.

### Differences Relative to [VK\\_KHR\\_dynamic\\_rendering\\_local\\_read](#)

If the [VK\\_KHR\\_dynamic\\_rendering\\_local\\_read](#) extension is not supported, Vulkan 1.4 implementations **must** support local read only for storage resources and single sampled color

attachments.

Support for reading depth/stencil attachments and multi-sampled attachments are respectively gated behind the new boolean `dynamicRenderingLocalReadDepthStencilAttachments` and `dynamicRenderingLocalReadMultisampledAttachments` properties.

- If `dynamicRenderingLocalReadDepthStencilAttachments` is `VK_FALSE`, implementations do not support depth/stencil attachment access within dynamic rendering.
- If `dynamicRenderingLocalReadMultisampledAttachments` is `VK_FALSE`, implementations do not support multisampled attachment access within dynamic rendering.
- If both properties are `VK_TRUE`, the full functionality of the extension is supported.

### Differences Relative to `VK_EXT_host_image_copy`

If the `VK_EXT_host_image_copy` extension is not supported, support for it is optional in Vulkan 1.4.

- An implementation that has a `VK_QUEUE_GRAPHICS_BIT` queue must support either:
  - the `hostImageCopy` feature; or
  - an additional queue that supports `VK_QUEUE_TRANSFER_BIT`.

### Differences Relative to `VK_KHR_push_descriptor`

`VK_KHR_push_descriptor` did not include a feature bit, so a new feature bit has been added to `VkPhysicalDeviceVulkan14Features` to gate its functionality: `pushDescriptor`. Enabling this new feature has the same effect as enabling the extension.

### Differences Relative to `VK_EXT_pipeline_protected_access`

`VK_EXT_pipeline_protected_access` is only useful when the `protectedMemory` feature is supported. As the `protectedMemory` feature is optional in core Vulkan, the `pipelineProtectedAccess` feature is only required when the `protectedMemory` feature is supported.

### Differences Relative to `VK_KHR_line_rasterization`

The `bresenhamLines` feature is required, rather than just any one of the line style features.

### Differences Relative to `VK_KHR_shader_subgroup_rotate`

The `shaderSubgroupRotateClustered` feature is required in addition to `shaderSubgroupRotate`.

### Additional Vulkan 1.4 Feature Support

In addition to the promoted extensions described above, Vulkan 1.4 added required support for:

- All queues supporting `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT` **must** also advertise `VK_QUEUE_TRANSFER_BIT`.
- Clustered subgroup operations **must** be advertised in Vulkan 1.4 via setting both `VK_SUBGROUP_FEATURE_CLUSTERED_BIT` and `VK_SUBGROUP_FEATURE_ROTATE_CLUSTERED_BIT` (as an interaction with the promoted `VK_KHR_shader_subgroup_rotate` functionality) in `supportedOperations`.
- The following features that were optional in earlier versions:

- `fullDrawIndexUint32`
- `imageCubeArray`
- `independentBlend`
- `sampleRateShading`
- `drawIndirectFirstInstance`
- `depthClamp`
- `depthBiasClamp`
- `samplerAnisotropy`
- `fragmentStoresAndAtomics`
- `shaderStorageImageExtendedFormats`
- `shaderUniformBufferArrayDynamicIndexing`
- `shaderSampledImageArrayDynamicIndexing`
- `shaderStorageBufferArrayDynamicIndexing`
- `shaderStorageImageArrayDynamicIndexing`
- `shaderImageGatherExtended`
- `shaderInt16`
- `largePoints`
- `samplerYcbcrConversion`
- `storageBuffer16BitAccess`
- `variablePointers`
- `variablePointersStorageBuffer`
- `samplerMirrorClampToEdge`
- `scalarBlockLayout`
- `shaderUniformTexelBufferArrayDynamicIndexing`
- `shaderStorageTexelBufferArrayDynamicIndexing`
- `shaderInt8`
- `storageBuffer8BitAccess`

## Updated Vulkan 1.4 Limit Support

Vulkan 1.4 also requires support for the following updated limits:

- `maxImageDimension1D` is increased from 4096 to 8192
- `maxImageDimension2D` is increased from 4096 to 8192
- `maxImageDimension3D` is increased from 256 to 512
- `maxImageDimensionCube` is increased from 4096 to 8192
- `maxImageArrayLayers` is increased from 256 to 2048

- `maxUniformBufferRange` is increased from 16384 to 65536
- `maxPushConstantsSize` is increased from 128 to 256
- `bufferImageGranularity` is decreased from 131072 to 4096
- `maxBoundDescriptorSets` is increased from 4 to 7
- `maxPerStageDescriptorUniformBuffers` is increased from 12 to 15
- `maxPerStageResources` is increased from 128 to 200
- `maxDescriptorSetUniformBuffers` is increased from 72 to 90
- `maxDescriptorSetStorageBuffers` is increased from 24 to 96
- `maxDescriptorSetStorageImages` is increased from 24 to 144
- `maxFragmentCombinedOutputResources` is increased from 4 to 16
- `maxComputeWorkGroupInvocations` is increased from 128 to 256
- `maxComputeWorkGroupSize` is increased from (128,128,64) to (256,256,64)
- `shaderSignedZeroInfNanPreserveFloat16` is changed from unspecified to `VK_TRUE`
- `shaderSignedZeroInfNanPreserveFloat32` is changed from unspecified to `VK_TRUE`

## Vulkan Version 1.3

Vulkan Version 1.3 [promoted](#) a number of key extensions into the core API:

- [VK\\_KHR\\_copy\\_commands2](#)
- [VK\\_KHR\\_dynamic\\_rendering](#)
- [VK\\_KHR\\_format\\_feature\\_flags2](#)
- [VK\\_KHR\\_maintenance4](#)
- [VK\\_KHR\\_shader\\_integer\\_dot\\_product](#)
- [VK\\_KHR\\_shader\\_non\\_semantic\\_info](#)
- [VK\\_KHR\\_shader\\_terminate\\_invocation](#)
- [VK\\_KHR\\_synchronization2](#)
- [VK\\_KHR\\_zero\\_initialize\\_workgroup\\_memory](#)
- [VK\\_EXT\\_4444\\_formats](#)
- [VK\\_EXT\\_extended\\_dynamic\\_state](#)
- [VK\\_EXT\\_extended\\_dynamic\\_state2](#)
- [VK\\_EXT\\_image\\_robustness](#)
- [VK\\_EXT\\_inline\\_uniform\\_block](#)
- [VK\\_EXT\\_pipeline\\_creation\\_cache\\_control](#)
- [VK\\_EXT\\_pipeline\\_creation\\_feedback](#)
- [VK\\_EXT\\_private\\_data](#)
- [VK\\_EXT\\_shader\\_demote\\_to\\_helper\\_invocation](#)

- `VK_EXT_subgroup_size_control`
- `VK_EXT_texel_buffer_alignment`
- `VK_EXT_texture_compression_astc_hdr`
- `VK_EXT_tooling_info`
- `VK_EXT_ycbcr_2plane_444_formats`

All differences in behavior between these extensions and the corresponding Vulkan 1.3 functionality are summarized below.

#### Differences Relative to `VK_EXT_4444_formats`

If the `VK_EXT_4444_formats` extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. There are no members in the `VkPhysicalDeviceVulkan13Features` structure corresponding to the `VkPhysicalDevice4444FormatsFeaturesEXT` structure.

#### Differences Relative to `VK_EXT_extended_dynamic_state`

All dynamic state enumerants and commands defined by `VK_EXT_extended_dynamic_state` are required in Vulkan 1.3. There are no members in the `VkPhysicalDeviceVulkan13Features` structure corresponding to the `VkPhysicalDeviceExtendedDynamicStateFeaturesEXT` structure.

#### Differences Relative to `VK_EXT_extended_dynamic_state2`

The optional dynamic state enumerants and commands defined by `VK_EXT_extended_dynamic_state2` for patch control points and logic op are not promoted in Vulkan 1.3. There are no members in the `VkPhysicalDeviceVulkan13Features` structure corresponding to the `VkPhysicalDeviceExtendedDynamicState2FeaturesEXT` structure.

#### Differences Relative to `VK_EXT_texel_buffer_alignment`

The more specific alignment requirements defined by `VkPhysicalDeviceTexelBufferAlignmentProperties` are required in Vulkan 1.3. There are no members in the `VkPhysicalDeviceVulkan13Features` structure corresponding to the `VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT` structure. The `texelBufferAlignment` feature is enabled if using a Vulkan 1.3 instance.

#### Differences Relative to `VK_EXT_texture_compression_astc_hdr`

If the `VK_EXT_texture_compression_astc_hdr` extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. The `textureCompressionASTC_HDR` member of `VkPhysicalDeviceVulkan13Features` indicates whether a Vulkan 1.3 implementation supports these formats.

#### Differences Relative to `VK_EXT_ycbcr_2plane_444_formats`

If the `VK_EXT_ycbcr_2plane_444_formats` extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. There are no members in the `VkPhysicalDeviceVulkan13Features` structure corresponding to the `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT` structure.

#### Additional Vulkan 1.3 Feature Support

In addition to the promoted extensions described above, Vulkan 1.3 added required support for:

- SPIR-V version 1.6
  - SPIR-V 1.6 deprecates (but does not remove) the `WorkgroupSize` decoration.
- The `bufferDeviceAddress` feature which indicates support for accessing memory in shaders as storage buffers via `vkGetBufferDeviceAddress`.
- The `vulkanMemoryModel` and `vulkanMemoryModelDeviceScope` features, which indicate support for the corresponding Vulkan Memory Model capabilities.
- The `maxInlineUniformTotalSize` limit is added to provide the total size of all inline uniform block bindings in a pipeline layout.

## New Macros

- `VK_STRUCTURE_TYPE_RENDERING_INFO`
- `VK_STRUCTURE_TYPE_RESOLVE_IMAGE_INFO_2`
- `VK_STRUCTURE_TYPE_SEMAPHORE_SUBMIT_INFO`
- `VK_STRUCTURE_TYPE_SUBMIT_INFO_2`
- `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_INLINE_UNIFORM_BLOCK`

## Vulkan Version 1.2

Vulkan Version 1.2 [promoted](#) a number of key extensions into the core API:

- `VK_KHR_8bit_storage`
- `VK_KHR_buffer_device_address`
- `VK_KHR_create_renderpass2`
- `VK_KHR_depth_stencil_resolve`
- `VK_KHR_draw_indirect_count`
- `VK_KHR_driver_properties`
- `VK_KHR_image_format_list`
- `VK_KHR_imageless_framebuffer`

- `VK_KHR_sampler_mirror_clamp_to_edge`
- `VK_KHR_separate_depth_stencil_layouts`
- `VK_KHR_shader_atomic_int64`
- `VK_KHR_shader_float16_int8`
- `VK_KHR_shader_float_controls`
- `VK_KHR_shader_subgroup_extended_types`
- `VK_KHR_spirv_1_4`
- `VK_KHR_timeline_semaphore`
- `VK_KHR_uniform_buffer_standard_layout`
- `VK_KHR_vulkan_memory_model`
- `VK_EXT_descriptor_indexing`
- `VK_EXT_host_query_reset`
- `VK_EXT_sampler_filter_minmax`
- `VK_EXT_scalar_block_layout`
- `VK_EXT_separate_stencil_usage`
- `VK_EXT_shader_viewport_index_layer`

All differences in behavior between these extensions and the corresponding Vulkan 1.2 functionality are summarized below.

#### Differences Relative to `VK_KHR_8bit_storage`

If the `VK_KHR_8bit_storage` extension is not supported, support for the SPIR-V `storageBuffer8BitAccess` capability in shader modules is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::storageBuffer8BitAccess` when queried via `vkGetPhysicalDeviceFeatures2`.

#### Differences Relative to `VK_KHR_draw_indirect_count`

If the `VK_KHR_draw_indirect_count` extension is not supported, support for the commands `vkCmdDrawIndirectCount` and `vkCmdDrawIndexedIndirectCount` is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::drawIndirectCount` when queried via `vkGetPhysicalDeviceFeatures2`.

#### Differences Relative to `VK_KHR_sampler_mirror_clamp_to_edge`

If the `VK_KHR_sampler_mirror_clamp_to_edge` extension is not supported, support for the `VkSamplerAddressMode` `VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE` is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::samplerMirrorClampToEdge` when queried via `vkGetPhysicalDeviceFeatures2`.

### Differences Relative to `VK_EXT_descriptor_indexing`

If the `VK_EXT_descriptor_indexing` extension is not supported, support for the `descriptorIndexing` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::descriptorIndexing` when queried via `vkGetPhysicalDeviceFeatures2`.

### Differences Relative to `VK_EXT_scalar_block_layout`

If the `VK_EXT_scalar_block_layout` extension is not supported, support for the `scalarBlockLayout` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::scalarBlockLayout` when queried via `vkGetPhysicalDeviceFeatures2`.

### Differences Relative to `VK_EXT_shader_viewport_index_layer`

The `ShaderViewportIndexLayerEXT` SPIR-V capability was replaced with the `ShaderViewportIndex` and `ShaderLayer` capabilities. Declaring both is equivalent to declaring `ShaderViewportIndexLayerEXT`. If the `VK_EXT_shader_viewport_index_layer` extension is not supported, support for the `ShaderViewportIndexLayerEXT` SPIR-V capability is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::shaderOutputViewportIndex` and `VkPhysicalDeviceVulkan12Features::shaderOutputLayer` when queried via `vkGetPhysicalDeviceFeatures2`.

### Differences Relative to `VK_KHR_buffer_device_address`

If the `VK_KHR_buffer_device_address` extension is not supported, support for the `bufferDeviceAddress` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::bufferDeviceAddress` when queried via `vkGetPhysicalDeviceFeatures2`.

### Differences Relative to `VK_KHR_shader_atomic_int64`

If the `VK_KHR_shader_atomic_int64` extension is not supported, support for the `shaderBufferInt64Atomics` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::shaderBufferInt64Atomics` when queried via `vkGetPhysicalDeviceFeatures2`.

### Differences Relative to `VK_KHR_shader_float16_int8`

If the `VK_KHR_shader_float16_int8` extension is not supported, support for the `shaderFloat16` and `shaderInt8` features is optional. Support for these features are defined by `VkPhysicalDeviceVulkan12Features::shaderFloat16` and `VkPhysicalDeviceVulkan12Features::shaderInt8` when queried via `vkGetPhysicalDeviceFeatures2`.

### Differences Relative to `VK_KHR_vulkan_memory_model`

If the `VK_KHR_vulkan_memory_model` extension is not supported, support for the `vulkanMemoryModel` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::vulkanMemoryModel` when queried via `vkGetPhysicalDeviceFeatures2`.

### Additional Vulkan 1.2 Feature Support

In addition to the promoted extensions described above, Vulkan 1.2 added support for:

- SPIR-V version 1.4.
- SPIR-V version 1.5.

- The `samplerMirrorClampToEdge` feature which indicates whether the implementation supports the `VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE` sampler address mode.
- The `ShaderNonUniform` capability in SPIR-V version 1.5.
- The `shaderOutputViewportIndex` feature which indicates that the `ShaderViewportIndex` capability can be used.
- The `shaderOutputLayer` feature which indicates that the `ShaderLayer` capability can be used.
- The `subgroupBroadcastDynamicId` feature which allows the “Id” operand of `OpGroupNonUniformBroadcast` to be dynamically uniform within a subgroup, and the “Index” operand of `OpGroupNonUniformQuadBroadcast` to be dynamically uniform within a derivative group, in shader modules of version 1.5 or higher.
- The `drawIndirectCount` feature which indicates whether the `vkCmdDrawIndirectCount` and `vkCmdDrawIndexedIndirectCount` functions can be used.
- The `descriptorIndexing` feature which indicates the implementation supports the minimum number of descriptor indexing features as defined in the [Feature Requirements](#) section.
- The `samplerFilterMinmax` feature which indicates whether the implementation supports the minimum number of image formats that support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT` feature bit as defined by the `filterMinmaxSingleComponentFormats` property minimum requirements.
- The `framebufferIntegerColorSampleCounts` limit which indicates the color sample counts that are supported for all framebuffer color attachments with integer formats.

## New Macros

## Vulkan Version 1.1

Vulkan Version 1.1 [promoted](#) a number of key extensions into the core API:

- [VK\\_KHR\\_16bit\\_storage](#)
- [VK\\_KHR\\_bind\\_memory2](#)
- [VK\\_KHR\\_dedicated\\_allocation](#)
- [VK\\_KHR\\_descriptor\\_update\\_template](#)
- [VK\\_KHR\\_device\\_group](#)

- [VK\\_KHR\\_device\\_group\\_creation](#)
- [VK\\_KHR\\_external\\_fence](#)
- [VK\\_KHR\\_external\\_fence\\_capabilities](#)
- [VK\\_KHR\\_external\\_memory](#)
- [VK\\_KHR\\_external\\_memory\\_capabilities](#)
- [VK\\_KHR\\_external\\_semaphore](#)
- [VK\\_KHR\\_external\\_semaphore\\_capabilities](#)
- [VK\\_KHR\\_get\\_memory\\_requirements2](#)
- [VK\\_KHR\\_get\\_physical\\_device\\_properties2](#)
- [VK\\_KHR\\_maintenance1](#)
- [VK\\_KHR\\_maintenance2](#)
- [VK\\_KHR\\_maintenance3](#)
- [VK\\_KHR\\_multiview](#)
- [VK\\_KHR\\_relaxed\\_block\\_layout](#)
- [VK\\_KHR\\_sampler\\_ycbcr\\_conversion](#)
- [VK\\_KHR\\_shader\\_draw\\_parameters](#)
- [VK\\_KHR\\_storage\\_buffer\\_storage\\_class](#)
- [VK\\_KHR\\_variable\\_pointers](#)

All differences in behavior between these extensions and the corresponding Vulkan 1.1 functionality are summarized below.

#### **Differences Relative to [VK\\_KHR\\_16bit\\_storage](#)**

If the [VK\\_KHR\\_16bit\\_storage](#) extension is not supported, support for the [storageBuffer16BitAccess](#) feature is optional. Support for this feature is defined by [VkPhysicalDevice16BitStorageFeatures::storageBuffer16BitAccess](#) or [VkPhysicalDeviceVulkan11Features::storageBuffer16BitAccess](#) when queried via [vkGetPhysicalDeviceFeatures2](#).

#### **Differences Relative to [VK\\_KHR\\_sampler\\_ycbcr\\_conversion](#)**

If the [VK\\_KHR\\_sampler\\_ycbcr\\_conversion](#) extension is not supported, support for the [samplerYcbcrConversion](#) feature is optional. Support for this feature is defined by [VkPhysicalDeviceSamplerYcbcrConversionFeatures::samplerYcbcrConversion](#) or [VkPhysicalDeviceVulkan11Features::samplerYcbcrConversion](#) when queried via [vkGetPhysicalDeviceFeatures2](#).

## Differences Relative to [VK\\_KHR\\_shader\\_draw\\_parameters](#)

If the [VK\\_KHR\\_shader\\_draw\\_parameters](#) extension is not supported, support for the [SPV\\_KHR\\_shader\\_draw\\_parameters](#) SPIR-V extension is optional. Support for this feature is defined by [VkPhysicalDeviceShaderDrawParametersFeatures::shaderDrawParameters](#) or [VkPhysicalDeviceVulkan11Features::shaderDrawParameters](#) when queried via [vkGetPhysicalDeviceFeatures2](#).

## Differences Relative to [VK\\_KHR\\_variable\\_pointers](#)

If the [VK\\_KHR\\_variable\\_pointers](#) extension is not supported, support for the [variablePointersStorageBuffer](#) feature is optional. Support for this feature is defined by [VkPhysicalDeviceVariablePointersFeatures::variablePointersStorageBuffer](#) or [VkPhysicalDeviceVulkan11Features::variablePointersStorageBuffer](#) when queried via [vkGetPhysicalDeviceFeatures2](#).

## Additional Vulkan 1.1 Feature Support

In addition to the promoted extensions described above, Vulkan 1.1 added support for:

- SPIR-V version 1.1
- SPIR-V version 1.2
- SPIR-V version 1.3
- The [group operations](#) and [subgroup scope](#).
- The [protected memory](#) feature.
- A new command to enumerate the instance version: [vkEnumerateInstanceVersion](#).
- The [VkPhysicalDeviceShaderDrawParametersFeatures](#) feature query structure (where the [VK\\_KHR\\_shader\\_draw\\_parameters](#) extension did not have one).

- VK\_FORMAT\_R12X4G12X4\_UNORM\_2PACK16
- VK\_FORMAT\_R12X4\_UNORM\_PACK16
- Extending VkFormatFeatureFlagBits:
  - VK\_FORMAT\_FEATURE\_COSITED\_CHROMA\_SAMPLES\_BIT
  - VK\_FORMAT\_FEATURE\_DISJOINT\_BIT
  - VK\_FORMAT\_FEATURE\_MIDPOINT\_CHROMA\_SAMPLES\_BIT
  - VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_YCBCR\_CONVERSION\_CHROMA\_RECONSTRUCTION\_EXPLICIT\_BIT
  - VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_YCBCR\_CONVERSION\_CHROMA\_RECONSTRUCTION\_EXPLICIT\_FORCEABLE\_BIT
  - VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_YCBCR\_CONVERSION\_LINEAR\_FILTER\_BIT
  - VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_YCBCR\_CONVERSION\_SEPARATE\_RECONSTRUCT

ION\_FILTER\_BIT

- VK\_FORMAT\_FEATURE\_TRANSFER\_DST\_BIT
- VK\_FORMAT\_FEATURE\_TRANSFER\_SRC\_BIT

- Extending `VkImageAspectFlagBits`:

- VK\_IMAGE\_ASPECT\_PLANE\_0\_BIT
- VK\_IMAGE\_ASPECT\_PLANE\_1\_BIT
- VK\_IMAGE\_ASPECT\_PLANE\_2\_BIT

- Extending `VkImageCreateFlagBits`:

- VK\_IMAGE\_CREATE\_2D\_ARRAY\_COMPATIBLE\_BIT
- VK\_IMAGE\_CREATE\_ALIAS\_BIT
- VK\_IMAGE\_CREATE\_BLOCK\_TEXEL\_VIEW\_COMPATIBLE\_BIT
- VK\_IMAGE\_CREATE\_DISJOINT\_BIT
- VK\_IMAGE\_CREATE\_EXTENDED\_USAGE\_BIT
- VK\_IMAGE\_CREATE\_PROTECTED\_BIT
- VK\_IMAGE\_CREATE\_SPLIT\_INSTANCE\_BIND\_REGIONS\_BIT

- Extending `VkImageLayout`:

- VK\_IMAGE\_LAYOUT\_DEPTH\_ATTACHMENT\_STENCIL\_READ\_ONLY\_OPTIMAL
- VK\_IMAGE\_LAYOUT\_DEPTH\_READ\_ONLY\_STENCIL\_ATTACHMENT\_OPTIMAL

- Extending `VkMemoryHeapFlagBits`:

- VK\_MEMORY\_HEAP\_MULTI\_INSTANCE\_BIT

- Extending `VkMemoryPropertyFlagBits`:

- VK\_MEMORY\_PROPERTY\_PROTECTED\_BIT

- Extending `VkObjectType`:

- VK\_OBJECT\_TYPE\_DESCRIPTOR\_UPDATE\_TEMPLATE
- VK\_OBJECT\_TYPE\_SAMPLER\_YCBCR\_CONVERSION

- Extending `VkPipelineCreateFlagBits`:

- VK\_PIPELINE\_CREATE\_DISPATCH\_BASE
- VK\_PIPELINE\_CREATE\_DISPATCH\_BASE\_BIT
- VK\_PIPELINE\_CREATE\_VIEW\_INDEX\_FROM\_DEVICE\_INDEX\_BIT

- Extending `VkQueueFlagBits`:

- VK\_QUEUE\_PROTECTED\_BIT

- Extending `VkResult`:

- VK\_ERROR\_INVALID\_EXTERNAL\_HANDLE
- VK\_ERROR\_OUT\_OF\_POOL\_MEMORY

- Extending `VkStructureType`:

- VK\_STRUCTURE\_TYPE\_BIND\_BUFFER\_MEMORY\_DEVICE\_GROUP\_INFO
- VK\_STRUCTURE\_TYPE\_BIND\_BUFFER\_MEMORY\_INFO
- VK\_STRUCTURE\_TYPE\_BIND\_IMAGE\_MEMORY\_DEVICE\_GROUP\_INFO
- VK\_STRUCTURE\_TYPE\_BIND\_IMAGE\_MEMORY\_INFO
- VK\_STRUCTURE\_TYPE\_BIND\_IMAGE\_PLANE\_MEMORY\_INFO
- VK\_STRUCTURE\_TYPE\_BUFFER\_MEMORY\_REQUIREMENTS\_INFO\_2
- VK\_STRUCTURE\_TYPE\_DESCRIPTOR\_SET\_LAYOUT\_SUPPORT
- VK\_STRUCTURE\_TYPE\_DESCRIPTOR\_UPDATE\_TEMPLATE\_CREATE\_INFO
- VK\_STRUCTURE\_TYPE\_DEVICE\_GROUP\_BIND\_SPARSE\_INFO
- VK\_STRUCTURE\_TYPE\_DEVICE\_GROUP\_COMMAND\_BUFFER\_BEGIN\_INFO
- VK\_STRUCTURE\_TYPE\_DEVICE\_GROUP\_DEVICE\_CREATE\_INFO

# Vulkan Version 1.0

Vulkan Version 1.0 was the initial release of the Vulkan API.

## New Macros

- [VK\\_API\\_VERSION](#)
- [VK\\_API\\_VERSION\\_1\\_0](#)
- [VK\\_API\\_VERSION\\_MAJOR](#)
- [VK\\_API\\_VERSION\\_MINOR](#)
- [VK\\_API\\_VERSION\\_PATCH](#)
- [VK\\_API\\_VERSION\\_VARIANT](#)
- [VK\\_DEFINE\\_HANDLE](#)
- [VK\\_DEFINE\\_NON\\_DISPATCHABLE\\_HANDLE](#)
- [VK\\_HEADER\\_VERSION](#)
- [VK\\_HEADER\\_VERSION\\_COMPLETE](#)
- [VK\\_MAKE\\_API\\_VERSION](#)
- [VK\\_MAKE\\_VERSION](#)
- [VK\\_NULL\\_HANDLE](#)
- [VK\\_USE\\_64\\_BIT\\_PTR\\_DEFINES](#)
- [VK\\_VERSION\\_MAJOR](#)
- [VK\\_VERSION\\_MINOR](#)
- [VK\\_VERSION\\_PATCH](#)

## New Base Types

- [VkBool32](#)
- [VkDeviceAddress](#)
- [VkDeviceSize](#)
- [VkFlags](#)
- [VkSampleMask](#)

## New Object Types

- [VkBuffer](#)
- [VkBufferView](#)
- [VkCommandBuffer](#)
- [VkCommandPool](#)
- [VkDescriptorPool](#)

- [VkDescriptorSet](#)
- [VkDescriptorSetLayout](#)
- [VkDevice](#)
- [VkDeviceMemory](#)
- [VkEvent](#)
- [VkFence](#)
- [VkFramebuffer](#)
- [VkImage](#)
- [VkImageView](#)
- [VkInstance](#)
- [VkPhysicalDevice](#)
- [VkPipeline](#)
- [VkPipelineCache](#)
- [VkPipelineLayout](#)
- [VkQueryPool](#)
- [VkQueue](#)
- [VkRenderPass](#)
- [VkSampler](#)
- [VkSemaphore](#)
- [VkShaderModule](#)

## New Commands

- [vkAllocateCommandBuffers](#)
- [vkAllocateDescriptorSets](#)
- [vkAllocateMemory](#)
- [vkBeginCommandBuffer](#)
- [vkBindBufferMemory](#)
- [vkBindImageMemory](#)
- [vkCmdBeginQuery](#)
- [vkCmdBeginRenderPass](#)
- [vkCmdBindDescriptorSets](#)
- [vkCmdBindIndexBuffer](#)
- [vkCmdBindPipeline](#)
- [vkCmdBindVertexBuffers](#)
- [vkCmdBlitImage](#)

- `vkCmdClearAttachments`
- `vkCmdClearColorImage`
- `vkCmdClearDepthStencilImage`
- `vkCmdCopyBuffer`
- `vkCmdCopyBufferToImage`
- `vkCmdCopyImage`
- `vkCmdCopyImageToBuffer`
- `vkCmdCopyQueryPoolResults`
- `vkCmdDispatch`
- `vkCmdDispatchIndirect`
- `vkCmdDraw`
- `vkCmdDrawIndexed`
- `vkCmdDrawIndexedIndirect`
- `vkCmdDrawIndirect`
- `vkCmdEndQuery`
- `vkCmdEndRenderPass`
- `vkCmdExecuteCommands`
- `vkCmdFillBuffer`
- `vkCmdNextSubpass`
- `vkCmdPipelineBarrier`
- `vkCmdPushConstants`
- `vkCmdResetEvent`
- `vkCmdResetQueryPool`
- `vkCmdResolveImage`
- `vkCmdSetBlendConstants`
- `vkCmdSetDepthBias`
- `vkCmdSetDepthBounds`
- `vkCmdSetEvent`
- `vkCmdSetLineWidth`
- `vkCmdSetScissor`
- `vkCmdSetStencilCompareMask`
- `vkCmdSetStencilReference`
- `vkCmdSetStencilWriteMask`
- `vkCmdSetViewport`
- `vkCmdUpdateBuffer`

# Appendix E: Layers & Extensions

## (Informative)

Extensions to the Vulkan API **can** be defined by authors, groups of authors, and the Khronos Vulkan Working Group. The online Registry of extensions is available at URL

<https://registry.khronos.org/vulkan/>

Authors creating extensions and layers **must** follow the mandatory procedures described in the [Vulkan Documentation and Extensions](#) document when creating extensions and layers.

The version of the Vulkan specification published on the [Vulkan Documentation](#) site and in the Registry includes all registered and published extensions. It is also possible to build the specification with an arbitrary set of extensions included, and the specification you are viewing may not include all extensions.

In the remainder of this appendix, extensions are grouped as Khronos **KHR**, multivendor **EXT**, and then alphabetically by author ID. Within each group, extensions are listed in alphabetical order by their name.

## Extension Dependencies

Extensions which have dependencies on specific core versions or on other extensions will list such dependencies.

For core versions, the specified version **must** be supported at runtime. All extensions implicitly require support for Vulkan 1.0.

For a device extension, use of any device-level functionality defined by that extension requires that any extensions that extension depends on be enabled.

For any extension, use of any instance-level functionality defined by that extension requires only that any extensions that extension depends on be supported at runtime.

## Extension Interactions

Some extensions define APIs which are only supported when other extensions or core versions are supported at runtime. Such interactions are noted as “API Interactions”.

# List of Current Extensions

## Description

In order to be efficient, rendering techniques such as ray tracing need a quick way to identify which primitives may be intersected by a ray traversing the geometries. Acceleration structures are the most common way to represent the geometry spatially sorted, in order to quickly identify such potential intersections.

This extension adds new functionalities:

- Acceleration structure objects and build commands
- Structures to describe geometry inputs to acceleration structure builds
- Acceleration structure copy commands

## New Object Types

- [VkAccelerationStructureKHR](#)

## New Commands

- [vkBuildAccelerationStructuresKHR](#)
- [vkCmdBuildAccelerationStructuresIndirectKHR](#)
- [vkCmdBuildAccelerationStructuresKHR](#)

If [VK\\_KHR\\_format\\_feature\\_flags2](#) or Vulkan Version 1.3 is supported:

- Extending [VkFormatFeatureFlagBits2](#):
  - [VK\\_FORMAT\\_FEATURE\\_2\\_ACCELERATION\\_STRUCTURE\\_VERTEX\\_BUFFER\\_BIT\\_KHR](#)

## Issues

(1) How does this extension differ from [VK\\_NV\\_ray\\_tracing](#)?

## DISCUSSION:

The following is a summary of the main functional differences between [VK\\_KHR\\_acceleration\\_structure](#) and [VK\\_NV\\_ray\\_tracing](#):

- added acceleration structure serialization / deserialization ([VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_SERIALIZE\\_KHR](#), [VK\\_COPY\\_ACCELERATION\\_STRUCTURE\\_MODE\\_DESERIALIZE\\_KHR](#), [vkCmdCopyAccelerationStructureToMemoryKHR](#), [vkCmdCopyMemoryToAccelerationStructureKHR](#))
- document [inactive primitives and instances](#)
- added [VkPhysicalDeviceAccelerationStructureFeaturesKHR](#) structure
- added indirect and batched acceleration structure builds

([vkCmdBuildAccelerationStructuresIndirectKHR](#))

- added [host acceleration structure](#) commands
- reworked geometry structures so they could be better shared between device, host, and indirect builds
- explicitly made [VkAccelerationStructureKHR](#) use device addresses
- added [acceleration structure compatibility check function](#) ([vkGetDeviceAccelerationStructureCompatibilityKHR](#))
- add parameter for requesting memory requirements for host and/or device build
- added [format feature for acceleration structure build vertex formats](#) ([VK\\_FORMAT\\_FEATURE\\_ACCELERATION\\_STRUCTURE\\_VERTEX\\_BUFFER\\_BIT\\_KHR](#))

(3) What are the changes between the public provisional (VK\_KHR\_ray\_tracing v8) release and the internal provisional (VK\_KHR\_ray\_tracing v9) release?

- added [geometryFlags](#) to [VkAccelerationStructureCreateGeometryTypeInfoKHR](#) (later reworked to obsolete this)
- added [minAccelerationStructureScratchOffsetAlignment](#) property to [VkPhysicalDeviceRayTracingPropertiesKHR](#)
- fix naming and return enum from [vkGetDeviceAccelerationStructureCompatibilityKHR](#)
  - renamed [VkAccelerationStructureVersionKHR](#) to [VkAccelerationStructureVersionInfoKHR](#)
  - renamed [VK\\_STRUCTURE\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_VERSION\\_KHR](#) to [VK\\_STRUCTURE\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_VERSION\\_INFO\\_KHR](#)
  - removed [VK\\_ERROR\\_INCOMPATIBLE\\_VERSION\\_KHR](#)
  - added [VkAccelerationStructureCompatibilityKHR](#) enum
  - remove return value from [vkGetDeviceAccelerationStructureCompatibilityKHR](#) and added return enum parameter
- Require Vulkan 1.1
- added creation time capture and replay flags
  - added [VkAccelerationStructureCreateFlagBitsKHR](#) and [VkAccelerationStructureCreateFlagsKHR](#)
  - renamed the [flags](#) member of [VkAccelerationStructureCreateInfoKHR](#) to [buildFlags](#) (later removed) and added the [createFlags](#) member
- change [vkCmdBuildAccelerationStructuresIndirectKHR](#) to use buffer device address for indirect parameter
- make [VK\\_KHR\\_deferred\\_host\\_operations](#) an interaction instead of a required extension (later went back on this)
- renamed [VkAccelerationStructureBuildOffsetInfoKHR](#) to [VkAccelerationStructureBuildRangeInfoKHR](#)
  - renamed the [ppOffsetInfos](#) parameter of [vkCmdBuildAccelerationStructuresKHR](#) to [ppBuildRangeInfos](#)

- Re-unify geometry description between build and create
  - remove `VkAccelerationStructureCreateGeometryTypeInfoKHR` and `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_GEOMETRY_TYPE_INFO_KHR`
  - added `VkAccelerationStructureCreateInfoKHR` structure (later removed)
  - change type of the `pGeometryInfos` member of `VkAccelerationStructureCreateInfoKHR` from `VkAccelerationStructureCreateGeometryTypeInfoKHR` to `VkAccelerationStructureGeometryKHR` (later removed)
  - added `pCreateInfoInfos` member to `VkAccelerationStructureCreateInfoKHR` (later removed)
- Fix ppGeometries ambiguity, add pGeometries
  - remove `geometryArrayOfPointers` member of `VkAccelerationStructureBuildGeometryInfoKHR`
  - disambiguate two meanings of `ppGeometries` by explicitly adding `pGeometries` to the `VkAccelerationStructureBuildGeometryInfoKHR` structure and require one of them be `NULL`
- added `nullDescriptor` support for acceleration structures
- changed the `update` member of `VkAccelerationStructureBuildGeometryInfoKHR` from a bool to the `mode` `VkBuildAccelerationStructureModeKHR` enum which allows future extensibility in update types
- Clarify deferred host ops for pipeline creation
  - `VkDeferredOperationKHR` is now a top-level parameter for `vkBuildAccelerationStructuresKHR`, `vkCreateRayTracingPipelinesKHR`, `vkCopyAccelerationStructureToMemoryKHR`, `vkCopyAccelerationStructureKHR`, and `vkCopyMemoryToAccelerationStructureKHR`
  - removed `VkDeferredOperationInfoKHR` structure
  - change deferred host creation/return parameter behavior such that the implementation can modify such parameters until the deferred host operation completes
  - `VK_KHR_deferred_host_operations` is required again
- Change acceleration structure build to always be sized
  - de-alias `VkAccelerationStructureMemoryRequirementsTypeNV` and `VkAccelerationStructureMemoryRequirementsTypeKHR`, and remove `VkAccelerationStructureMemoryRequirementsTypeKHR`
  - add `vkGetAccelerationStructureBuildSizesKHR` command and `VkAccelerationStructureBuildSizesInfoKHR` structure and `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR` enum to query sizes for acceleration structures and scratch storage
  - move size queries for scratch space to `vkGetAccelerationStructureBuildSizesKHR`
  - remove `compactSize`, `buildFlags`, `maxGeometryCount`, `pGeometryInfos`, `pCreateInfoInfos` members of `VkAccelerationStructureCreateInfoKHR` and add the `size` member
  - add `maxVertex` member to `VkAccelerationStructureGeometryTrianglesDataKHR` structure
  - remove `VkAccelerationStructureCreateInfoKHR` structure

(4) What are the changes between the internal provisional (VK\_KHR\_ray\_tracing v9) release and the final (VK\_KHR\_acceleration\_structure v11) release?

- refactor VK\_KHR\_ray\_tracing into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - VK\_KHR\_acceleration\_structure (for acceleration structure operations)
  - VK\_KHR\_ray\_tracing\_pipeline (for ray tracing pipeline and shader stages)
  - VK\_KHR\_ray\_query (for ray queries in existing shader stages)
- clarify buffer usage flags for ray tracing
  - VK\_BUFFER\_USAGE\_RAY\_TRACING\_BIT\_NV is left alone in VK\_NV\_ray\_tracing (required on scratch and instanceData)
  - VK\_BUFFER\_USAGE\_SHADER\_BINDING\_TABLE\_BIT\_KHR is added as an alias of VK\_BUFFER\_USAGE\_RAY\_TRACING\_BIT\_NV in VK\_KHR\_ray\_tracing\_pipeline and is required on shader binding table buffers
  - VK\_BUFFER\_USAGE\_ACCELERATION\_STRUCTURE\_BUILD\_INPUT\_READ\_ONLY\_BIT\_KHR is added in VK\_KHR\_acceleration\_structure for all vertex, index, transform, aabb, and instance buffer data referenced by device build commands
  - VK\_BUFFER\_USAGE\_STORAGE\_BUFFER\_BIT is used for scratchData
- add max primitive counts (ppMaxPrimitiveCounts) to vkCmdBuildAccelerationStructuresIndirectKHR
- Allocate acceleration structures from VkBuffers and add a mode to constrain the device address
  - de-alias VkBindAccelerationStructureMemoryInfoNV and vkBindAccelerationStructureMemoryNV, and remove VkBindAccelerationStructureMemoryInfoKHR, VkAccelerationStructureMemoryRequirementsInfoKHR, and vkGetAccelerationStructureMemoryRequirementsKHR
  - acceleration structures now take a VkBuffer and offset at creation time for memory placement
  - add a new VK\_BUFFER\_USAGE\_ACCELERATION\_STRUCTURE\_STORAGE\_BIT\_KHR buffer usage for such buffers
  - add a new VK\_ACCELERATION\_STRUCTURE\_TYPE\_GENERIC\_KHR acceleration structure type for layering
- move VK\_GEOMETRY\_TYPE\_INSTANCES\_KHR to main enum instead of being added via extension
- make build commands more consistent - all now build multiple acceleration structures and are named plurally (vkCmdBuildAccelerationStructuresIndirectKHR, vkCmdBuildAccelerationStructuresKHR, vkBuildAccelerationStructuresKHR)
- add interactions with VK\_DESCRIPTOR\_SET\_LAYOUT\_CREATE\_UPDATE\_AFTER\_BIND\_POOL\_BIT for acceleration structures, including a new feature (descriptorBindingAccelerationStructureUpdateAfterBind) and 3 new properties (maxPerStageDescriptorAccelerationStructures, maxPerStageDescriptorUpdateAfterBindAccelerationStructures,

`maxDescriptorSetUpdateAfterBindAccelerationStructures)`

- extension is no longer provisional
- define synchronization requirements for builds, traces, and copies
- define synchronization requirements for AS build inputs and indirect build buffer

(5) What is `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR` for?

**RESOLVED:** It is primarily intended for API layering. In DXR, the acceleration structure is basically just a buffer in a special layout, and you do not know at creation time whether it will be used as a top or bottom level acceleration structure. We thus added a generic acceleration structure type whose type is unknown at creation time, but is specified at build time instead. Applications which are written directly for Vulkan should not use it.

## Version History

- Revision 1, 2019-12-05 (Members of the Vulkan Ray Tracing TSG)
  - Internal revisions (forked from `VK_NV_ray_tracing`)
- Revision 2, 2019-12-20 (Daniel Koch, Eric Werness)
  - Add const version of `DeviceOrHostAddress` (!3515)
  - Add VU to clarify that only handles in the current pipeline are valid (!3518)
  - Restore some missing VUs and add in-place update language (#1902, !3522)
  - rename `VkAccelerationStructureInstanceKHR` member from `accelerationStructure` to `accelerationStructureReference` to better match its type (!3523)
  - Allow `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` for pipeline creation if shader group handles cannot be reused (!3523)
  - update documentation for the `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` error code and add missing documentation for new return codes from `VK_KHR_deferred_host_operations` (!3523)
  - list new query types for `VK_KHR_ray_tracing` (!3523)
  - Fix VU statements for `VkAccelerationStructureGeometryKHR` referring to correct union members and update to use more current wording (!3523)
- Revision 3, 2020-01-10 (Daniel Koch, Jon Leech, Christoph Kubisch)
  - Fix 'instance of' and 'that/which contains/defines' markup issues (!3528)
  - factor out `VK_KHR_pipeline_library` as stand-alone extension (!3540)
  - Resolve Vulkan-hpp issues (!3543)
    - add missing require for `VkGeometryInstanceFlagsKHR`
    - de-alias `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_NV` since the KHR structure is no longer equivalent
    - add len to `pDataSize` attribute for `vkWriteAccelerationStructuresPropertiesKHR`
- Revision 4, 2020-01-23 (Daniel Koch, Eric Werness)

- Improve vkWriteAccelerationStructuresPropertiesKHR, add return value and VUs (#1947)
- Clarify language to allow multiple raygen shaders (#1959)
- Various editorial feedback (!3556)
- Add language to help deal with looped self-intersecting fans (#1901)
- Change vkCmdTraceRays{,Indirect}KHR args to pointers (!3559)
- Add scratch address validation language (#1941, !3551)
- Fix definition and add hierarchy information for shader call scope (#1977, !3571)
- Revision 5, 2020-02-04 (Eric Werness, Jeff Bolz, Daniel Koch)
  - remove vestigial accelerationStructureUUID (!3582)
  - update definition of repack instructions and improve memory model interactions (#1910, #1913, !3584)
  - Fix wrong sType for VkPhysicalDeviceRayTracingFeaturesKHR (#1988)
  - Use provisional SPIR-V capabilities (#1987)
  - require rayTraversalPrimitiveCulling if rayQuery is supported (#1927)
  - Miss shaders do not have object parameters (!3592)
  - Fix missing required types in XML (!3592)
  - clarify matching conditions for update (!3592)
  - add goal that host and device builds be similar (!3592)
  - clarify that `maxPrimitiveCount` limit should apply to triangles and AABBs (!3592)
  - Require alignment for instance arrayOfPointers (!3592)
  - Zero is a valid value for instance flags (!3592)
  - Add some alignment VUs that got lost in refactoring (!3592)
  - Recommend TMin epsilon rather than culling (!3592)
  - Get angle from dot product not cross product (!3592)
  - Clarify that AH can access the payload and attributes (!3592)
  - Match DXR behavior for inactive primitive definition (!3592)
  - Use a more generic term than degenerate for inactive to avoid confusion (!3592)
- Revision 6, 2020-02-20 (Daniel Koch)
  - fix some dangling NV references (#1996)
  - rename `VkCmdTraceRaysIndirectCommandKHR` to `VkTraceRaysIndirectCommandKHR` (!3607)
  - update contributor list (!3611)
  - use `uint64_t` instead of `VkAccelerationStructureReferenceKHR` in `VkAccelerationStructureInstanceKHR` (#2004)
- Revision 7, 2020-02-28 (Tobias Hector)

- remove HitTKHR SPIR-V builtin (spirv/spirv-extensions#7)
- Revision 8, 2020-03-06 (Tobias Hector, Dae Kim, Daniel Koch, Jeff Bolz, Eric Werness)
  - explicitly state that Tmax is updated when new closest intersection is accepted (#2020,!3536)
  - Made references to min and max t values consistent (!3644)
  - finish enumerating differences relative to VK\_NV\_ray\_tracing in issues (1) and (2) (#1974,!3642)
  - fix formatting in some math equations (!3642)
  - Restrict the Hit Kind operand of `OpReportIntersectionKHR` to 7-bits (spirv/spirv-extensions#8,!3646)
  - Say ray tracing '**should**' be watertight (#2008,!3631)
  - Clarify memory requirements for ray tracing buffers (#2005,!3649)
  - Add callable size limits (#1997,!3652)
- Revision 9, 2020-04-15 (Eric Werness, Daniel Koch, Tobias Hector, Joshua Barczak)
  - Add geometry flags to acceleration structure creation (!3672)
  - add build scratch memory alignment (minAccelerationStructureScratchOffsetAlignment) (#2065,!3725)
  - fix naming and return enum from vkGetDeviceAccelerationStructureCompatibilityKHR (#2051,!3726)
  - require SPIR-V 1.4 (#2096,!3777)
  - added creation time capture/replay flags (#2104,!3774)
  - require Vulkan 1.1 (#2133,!3806)
  - use device addresses instead of VkBuffers for ray tracing commands (#2074,!3815)
  - add interactions with Vulkan 1.2 and VK\_KHR\_vulkan\_memory\_model (#2133,!3830)
  - make VK\_KHR\_pipeline\_library an interaction instead of required (#2045,#2108,!3830)
  - make VK\_KHR\_deferred\_host\_operations an interaction instead of required (#2045,!3830)
  - removed maxCallableSize and added explicit stack size management for ray pipelines (#1997,!3817,!3772,!3844)
  - improved documentation for VkAccelerationStructureVersionInfoKHR (#2135,3835)
  - rename `VkAccelerationStructureBuildOffsetInfoKHR` to `VkAccelerationStructureBuildRangeInfoKHR` (#2058,!3754)
  - Re-unify geometry description between build and create (!3754)
  - Fix ppGeometries ambiguity, add pGeometries (#2032,!3811)
  - add interactions with VK\_EXT\_robustness2 and allow nullDescriptor support for acceleration structures (#1920,!3848)
  - added future extensibility for AS updates (#2114,!3849)
  - Fix VU for dispatchrays and add a limit on the size of the full grid (#2160,!3851)
  - Add shaderGroupHandleAlignment property (#2180,!3875)

- Clarify deferred host ops for pipeline creation (#2067,!3813)
- Change acceleration structure build to always be sized (#2131,#2197,#2198,!3854,!3883,!3880)
- Revision 10, 2020-07-03 (Mathieu Robart, Daniel Koch, Eric Werness, Tobias Hector)
  - Decomposition of the specification, from VK\_KHR\_ray\_tracing to VK\_KHR\_acceleration\_structure (#1918,!3912)
  - clarify buffer usage flags for ray tracing (#2181,!3939)
  - add max primitive counts to build indirect command (#2233,!3944)
  - Allocate acceleration structures from VkBuffers and add a mode to constrain the device address (#2131,!3936)
  - Move VK\_GEOMETRY\_TYPE\_INSTANCES\_KHR to main enum (#2243,!3952)
  - make build commands more consistent (#2247,!3958)
  - add interactions with UPDATE\_AFTER\_BIND (#2128,!3986)
  - correct and expand build command VUs (!4020)
  - fix copy command VUs (!4018)
  - added various alignment requirements (#2229,!3943)
  - fix valid usage for arrays of geometryCount items (#2198,!4010)
  - define what is allowed to change on RTAS updates and relevant VUs (#2177,!3961)
- Revision 11, 2020-11-12 (Eric Werness, Josh Barczak, Daniel Koch, Tobias Hector)
  - de-alias NV and KHR acceleration structure types and associated commands (#2271,!4035)
  - specify alignment for host copy commands (#2273,!4037)
  - document [VK\\_FORMAT\\_FEATURE\\_ACCELERATION\\_STRUCTURE\\_VERTEX\\_BUFFER\\_BIT\\_KHR](#)
  - specify that acceleration structures are non-linear (#2289,!4068)
  - add several missing VUs for strides, vertexFormat, and indexType (#2315,!4069)
  - restore VUs for VkAccelerationStructureBuildGeometryInfoKHR (#2337,!4098)
  - ban multi-instance memory for host operations (#2324,!4102)
  - allow dstAccelerationStructure to be null for vkGetAccelerationStructureBuildSizesKHR (#2330,!4111)
  - more build VU cleanup (#2138,#4130)
  - specify host endianness for AS serialization (#2261,!4136)
  - add invertible transform matrix VU (#1710,!4140)
  - require geometryCount to be 1 for TLAS builds (!4145)
  - improved validity conditions for build addresses (#4142)
  - add single statement SPIR-V VUs, build limit VUs (!4158)
  - document limits for vertex and aabb strides (#2390,!4184)
  - specify that [VK\\_PIPELINE\\_STAGE\\_ACCELERATION\\_STRUCTURE\\_BUILD\\_BIT\\_KHR](#) applies to

AS copies (#2382,#4173)

- define sync for AS build inputs and indirect buffer (#2407,!4208)

- Revision 12, 2021-08-06 (Samuel Bourasseau)

- rename `VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR` to `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` (keep previous as alias).
- Clarify description and add note.

- Revision 13, 2021-09-30 (Jon Leech)

- Add interaction with `VK_KHR_format_feature_flags2` to `vk.xml`

## Description

The `VK_KHR_android_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to an `ANativeWindow`, Android's native surface type. The `ANativeWindow` represents the producer endpoint of any buffer queue, regardless of consumer endpoint. Common consumer endpoints for `ANativeWindows` are the system window compositor, video encoders, and application-specific compositors importing the images through a `SurfaceTexture`.

## New Base Types

- `ANativeWindow`

## New Commands

- `vkCreateAndroidSurfaceKHR`

## New Structures

- `VkAndroidSurfaceCreateInfoKHR`

## New Bitmasks

- `VkAndroidSurfaceCreateFlagsKHR`

## New Enum Constants

- `VK_KHR_ANDROID_SURFACE_EXTENSION_NAME`
- `VK_KHR_ANDROID_SURFACE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_ANDROID_SURFACE_CREATE_INFO_KHR`

## Issues

1) Does Android need a way to query for compatibility between a particular physical device (and queue family?) and a specific Android display?

**RESOLVED:** No. Currently on Android, any physical device is expected to be able to present to the system compositor, and all queue families must support the necessary image layout transitions and synchronization operations.

## Version History

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft.
- Revision 2, 2015-10-26 (Ian Elliott)
  - Renamed from VK\_EXT\_KHR\_android\_surface to VK\_KHR\_android\_surface.
- Revision 3, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to surface creation function.
- Revision 4, 2015-11-10 (Jesse Hall)
  - Removed VK\_ERROR\_INVALID\_ANDROID\_WINDOW\_KHR.
- Revision 5, 2015-11-28 (Daniel Rakos)
  - Updated the surface create function to take a pCreateInfo structure.
- Revision 6, 2016-01-14 (James Jones)
  - Moved VK\_ERROR\_NATIVE\_WINDOW\_IN\_USE\_KHR from the VK\_KHR\_android\_surface to the VK\_KHR\_surface extension.

## Description

This extension adds Vulkan support for the `SPV_KHR_compute_shader_derivatives` SPIR-V extension.

The SPIR-V extension provides two new execution modes, both of which allow execution models with defined workgroups to use built-ins that evaluate derivatives explicitly or implicitly. Derivatives will be computed via differencing over a 2x2 group of shader invocations. The `DerivativeGroupQuadsKHR` execution mode assembles shader invocations into 2x2 groups, where each group has x and y coordinates of the local invocation ID of the form  $(2m+\{0,1\}, 2n+\{0,1\})$ . The `DerivativeGroupLinearKHR` execution mode assembles shader invocations into 2x2 groups, where each group has local invocation index values of the form  $4m+\{0,1,2,3\}$ .

The new execution modes are supported in compute shaders and optionally (see [meshAndTaskShaderDerivatives](#)) in mesh and task shaders.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceComputeShaderDerivativesFeaturesKHR](#)
- Extending [VkPhysicalDeviceProperties2](#):

## Other Extension Metadata

## Last Modified Date

2023-05-03

## Interactions and External Dependencies

- This extension provides API support for [GLSL\\_KHR\\_cooperative\\_matrix](#)

## Contributors

- Jeff Bolz, NVIDIA
- Markus Tavenrath, NVIDIA
- Daniel Koch, NVIDIA
- Kevin Petit, Arm Ltd.
- Boris Zanin, AMD

## Description

This extension adds support for using cooperative matrix types in SPIR-V. Cooperative matrix types are medium-sized matrices that are primarily supported in compute shaders, where the storage for the matrix is spread across all invocations in some scope (usually a subgroup) and those invocations cooperate to efficiently perform matrix multiplies.

Cooperative matrix types are defined by the [SPV\\_KHR\\_cooperative\\_matrix](#) SPIR-V extension and can be used with the [GLSL\\_KHR\\_cooperative\\_matrix](#) GLSL extension.

This extension includes support for enumerating the matrix types and dimensions that are supported by the implementation.

## New Commands

- [vkGetPhysicalDeviceCooperativeMatrixPropertiesKHR](#)

## New Structures

- [VkCooperativeMatrixPropertiesKHR](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceCooperativeMatrixFeaturesKHR](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceCooperativeMatrixPropertiesKHR](#)

## New Enums

- [VkComponentTypeKHR](#)
- [VkScopeKHR](#)

## New Enum Constants

- [VK\\_KHR\\_COOPERATIVE\\_MATRIX\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_COOPERATIVE\\_MATRIX\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_COOPERATIVE\\_MATRIX\\_PROPERTIES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_COOPERATIVE\\_MATRIX\\_FEATURES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_COOPERATIVE\\_MATRIX\\_PROPERTIES\\_KHR](#)

## New SPIR-V Capabilities

- [CooperativeMatrixKHR](#)

## Issues

- 1.) How does [cooperativeMatrixRobustBufferAccess](#) interact with [nullDescriptor](#)?

**RESOLVED:** nullDescriptor is not allowed here While drivers can handle going OOB into a buffer, if there is not buffer, via nullDescriptor, it is invalid to load/store from the cooperative matrix.

## Description

The [VK\\_KHR\\_deferred\\_host\\_operations](#) extension defines the infrastructure and usage patterns for deferrable commands, but does not specify any commands as deferrable. This is left to additional dependent extensions. Commands **must** not be deferred unless the deferral is specifically allowed by another extension which depends on [VK\\_KHR\\_deferred\\_host\\_operations](#).

## New Object Types

- [VkDeferredOperationKHR](#)

## New Commands

- [vkCreateDeferredOperationKHR](#)
- [vkDeferredOperationJoinKHR](#)
- [vkDestroyDeferredOperationKHR](#)
- [vkGetDeferredOperationMaxConcurrencyKHR](#)
- [vkGetDeferredOperationResultKHR](#)

## New Enum Constants

- [VK\\_KHR\\_DEFERRED\\_HOST\\_OPERATIONS\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_DEFERRED\\_HOST\\_OPERATIONS\\_SPEC\\_VERSION](#)
- Extending [VkObjectType](#):
  - [VK\\_OBJECT\\_TYPE\\_DEFERRED\\_OPERATION\\_KHR](#)
- Extending [VkResult](#):
  - [VK\\_OPERATION\\_DEFERRED\\_KHR](#)
  - [VK\\_OPERATION\\_NOT\\_DEFERRED\\_KHR](#)
  - [VK\\_THREAD\\_DONE\\_KHR](#)
  - [VK\\_THREAD\\_IDLE\\_KHR](#)

## Code Examples

The following examples will illustrate the concept of deferrable operations using a hypothetical example. The command [vkDoSomethingExpensive](#) denotes a deferrable command.

The following example illustrates how a vulkan application might request deferral of an expensive operation:

```
// create a deferred operation
VkDeferredOperationKHR hOp;
VkResult result = vkCreateDeferredOperationKHR(device, pCallbacks, &hOp);
assert(result == VK_SUCCESS);

result = vkDoSomethingExpensive(device, hOp, ...);
```

```

assert( result == VK_OPERATION_DEFERRED_KHR );

// operation was deferred. Execute it asynchronously
std::async::launch(
    [ hOp ] ( )
    {
        vkDeferredOperationJoinKHR(device, hOp);

        result = vkGetDeferredOperationResultKHR(device, hOp);

        // deferred operation is now complete. 'result' indicates success or failure

        vkDestroyDeferredOperationKHR(device, hOp, pCallbacks);
    }
);

```

The following example illustrates extracting concurrency from a single deferred operation:

```

// create a deferred operation
VkDeferredOperationKHR hOp;
VkResult result = vkCreateDeferredOperationKHR(device, pCallbacks, &hOp);
assert(result == VK_SUCCESS);

result = vkDoSomethingExpensive(device, hOp, ...);
assert( result == VK_OPERATION_DEFERRED_KHR );

// Query the maximum amount of concurrency and clamp to the desired maximum
uint32_t numLaunches = std::min(vkGetDeferredOperationMaxConcurrencyKHR(device, hOp),
maxThreads);

std::vector<std::future<void> > joins;

for (uint32_t i = 0; i < numLaunches; i++) {
    joins.emplace_back(std::async::launch(
        [ hOp ] ( )
        {
            vkDeferredOperationJoinKHR(device, hOp);
            // in a job system, a return of VK_THREAD_IDLE_KHR should queue
another
            // job, but it is not functionally required
        }
    ));
}

for (auto &f : joins) {
    f.get();
}

result = vkGetDeferredOperationResultKHR(device, hOp);

```

```
// deferred operation is now complete. 'result' indicates success or failure
```

```
vkDestroyDeferredOperationKHR(device, hOp, pCallbacks);
```

The following example shows a subroutine which guarantees completion of a deferred operation, in the presence of multiple worker threads, and returns the result of the operation.

```
VkResult FinishDeferredOperation(VkDeferredOperationKHR hOp)
{
    // Attempt to join the operation until the implementation indicates that we should
    stop

    VkResult result = vkDeferredOperationJoinKHR(device, hOp);
    while( result == VK_THREAD_IDLE_KHR )
    {
        std::this_thread::yield();
        result = vkDeferredOperationJoinKHR(device, hOp);
    }

    switch( result )
    {
    case VK_SUCCESS:
        {
            // deferred operation has finished. Query its result.
            result = vkGetDeferredOperationResultKHR(device, hOp);
        }
        break;

    case VK_THREAD_DONE_KHR:
        {
            // deferred operation is being wrapped up by another thread
            // wait for that thread to finish
            do
            {
                std::this_thread::yield();
                result = vkGetDeferredOperationResultKHR(device, hOp);
            } while( result == VK_NOT_READY );
        }
        break;

    default:
        assert(false); // other conditions are illegal.
        break;
    }

    return result;
}
```

## Issues

1. Should this extension have a `VkPhysicalDevice*FeaturesKHR` structure?

**RESOLVED:** No. This extension does not add any functionality on its own and requires a dependent extension to actually enable functionality and thus there is no value in adding a feature structure. If necessary, any dependent extension could add a feature boolean if it wanted to indicate that it is adding optional deferral support.

## Version History

- Revision 1, 2019-12-05 (Josh Barczak, Daniel Koch)
  - Initial draft.
- Revision 2, 2020-03-06 (Daniel Koch, Tobias Hector)
  - Add missing `VK_OBJECT_TYPE_DEFERRED_OPERATION_KHR` enum
  - fix sample code
  - Clarified deferred operation parameter lifetimes (#2018,!3647)
- Revision 3, 2020-05-15 (Josh Barczak)
  - Clarify behavior of `vkGetDeferredOperationMaxConcurrencyKHR`, allowing it to return 0 if the operation is complete (#2036,!3850)
- Revision 4, 2020-11-12 (Tobias Hector, Daniel Koch)
  - Remove `VkDeferredOperationInfoKHR` and change return value semantics when deferred host operations are in use (#2067,3813)
  - clarify return value of `vkGetDeferredOperationResultKHR` (#2339,!4110)

## Description

This extension is based on the [VK\\_EXT\\_depth\\_clamp\\_zero\\_one](#) extension. This extension gives defined behavior to fragment depth values which end up outside the conventional [0, 1] range. It can be used to ensure portability in edge cases of features like depthBias. The particular behavior is chosen to match OpenGL to aid porting or emulation.

## New Structures

## Description

This extension enables applications to use device addresses in place of buffer objects for most functionality.

## New Commands

- [vkCmdBindIndexBuffer3KHR](#)
- [vkCmdBindVertexBuffers3KHR](#)
- [vkCmdCopyImageToMemoryKHR](#)
- [vkCmdCopyMemoryKHR](#)
- [vkCmdCopyMemoryToImageKHR](#)
- [vkCmdCopyQueryPoolResultsToMemoryKHR](#)
- [vkCmdDispatchIndirect2KHR](#)
- [vkCmdDrawIndexedIndirect2KHR](#)
- [vkCmdDrawIndirect2KHR](#)
- [vkCmdFillMemoryKHR](#)
- [vkCmdUpdateMemoryKHR](#)

If [VK\\_KHR\\_draw\\_indirect\\_count](#) or Vulkan Version 1.2 and [VK\\_EXT\\_mesh\\_shader](#) is supported:

- [vkCmdDrawMeshTasksIndirectCount2EXT](#)

If [VK\\_EXT\\_conditional\\_rendering](#) is supported:

- [vkCmdBeginConditionalRendering2EXT](#)

If [VK\\_EXT\\_mesh\\_shader](#) is supported:

- [vkCmdDrawMeshTasksIndirect2EXT](#)

If [VK\\_EXT\\_transform\\_feedback](#) is supported:

- [vkCmdBeginTransformFeedback2EXT](#)
- [vkCmdBindTransformFeedbackBuffers2EXT](#)
- [vkCmdDrawIndirectByteCount2EXT](#)
- [vkCmdEndTransformFeedback2EXT](#)

If [VK\\_KHR\\_acceleration\\_structure](#) is supported:

- [vkCreateAccelerationStructure2KHR](#)

If [VK\\_KHR\\_draw\\_indirect\\_count](#) or Vulkan Version 1.2 is supported:

- [vkCmdDrawIndexedIndirectCount2KHR](#)
- [vkCmdDrawIndirectCount2KHR](#)

## New Structures

- [VkBindIndexBuffer3InfoKHR](#)
- [VkBindVertexBuffer3InfoKHR](#)
- [VkCopyDeviceMemoryImageInfoKHR](#)
- [VkCopyDeviceMemoryInfoKHR](#)
- [VkDeviceAddressRangeKHR](#)
- [VkDeviceMemoryCopyKHR](#)
- [VkDeviceMemoryImageCopyKHR](#)
- [VkDispatchIndirect2InfoKHR](#)
- [VkDrawIndirect2InfoKHR](#)
- [VkDrawIndirectCount2InfoKHR](#)
- [VkMemoryRangeBarrierKHR](#)
- [VkStridedDeviceAddressRangeKHR](#)
- Extending [VkDependencyInfo](#):
  - [VkMemoryRangeBarriersInfoKHR](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceDeviceAddressCommandsFeaturesKHR](#)

If [VK\\_EXT\\_conditional\\_rendering](#) is supported:

- [VkConditionalRenderingBeginInfo2EXT](#)

If [VK\\_EXT\\_transform\\_feedback](#) is supported:

- [VkBindTransformFeedbackBuffer2InfoEXT](#)

If [VK\\_KHR\\_acceleration\\_structure](#) is supported:

- [VkAccelerationStructureCreateInfo2KHR](#)

## New Enums

- [VkAddressCommandFlagBitsKHR](#)

## New Bitmasks

- [VkAddressCommandFlagsKHR](#)

## New Enum Constants

- [VK\\_KHR\\_DEVICE\\_ADDRESS\\_COMMANDS\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_DEVICE\\_ADDRESS\\_COMMANDS\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):

- `VK_STRUCTURE_TYPE_BIND_INDEX_BUFFER_3_INFO_KHR`
- `VK_STRUCTURE_TYPE_BIND_VERTEX_BUFFER_3_INFO_KHR`
- `VK_STRUCTURE_TYPE_COPY_DEVICE_MEMORY_IMAGE_INFO_KHR`
- `VK_STRUCTURE_TYPE_COPY_DEVICE_MEMORY_INFO_KHR`
- `VK_STRUCTURE_TYPE_DEVICE_MEMORY_COPY_KHR`
- `VK_STRUCTURE_TYPE_DEVICE_MEMORY_IMAGE_COPY_KHR`
- `VK_STRUCTURE_TYPE_DISPATCH_INDIRECT_2_INFO_KHR`
- `VK_STRUCTURE_TYPE_DRAW_INDIRECT_2_INFO_KHR`
- `VK_STRUCTURE_TYPE_DRAW_INDIRECT_COUNT_2_INFO_KHR`
- `VK_STRUCTURE_TYPE_MEMORY_RANGE_BARRIERS_INFO_KHR`
- `VK_STRUCTURE_TYPE_MEMORY_RANGE_BARRIER_KHR`
- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_ADDRESS_COMMANDS_FEATURES_KHR`

If `VK_EXT_conditional_rendering` is supported:

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_CONDITIONAL_RENDERING_BEGIN_INFO_2_EXT`

If `VK_EXT_transform_feedback` is supported:

- Extending `VkAddressCommandFlagBitsKHR`:
  - `VK_ADDRESS_COMMAND_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`
  - `VK_ADDRESS_COMMAND_UNKNOWN_TRANSFORM_FEEDBACK_BUFFER_USAGE_BIT_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_BIND_TRANSFORM_FEEDBACK_BUFFER_2_INFO_EXT`

If `VK_KHR_acceleration_structure` is supported:

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_2_KHR`

## Description

Device loss can be triggered by a variety of issues, including invalid API usage, implementation errors, or hardware failures. This extension introduces two new commands:

- [vkGetDeviceFaultReportsKHR](#)
- [vkGetDeviceFaultDebugInfoKHR](#)

[vkGetDeviceFaultReportsKHR](#) allows developers to query for additional information on GPU faults which may have caused device loss, and to generate binary crash dumps, which may be loaded into external tools for further diagnosis. Additionally this command allows developers to query for additional information on GPU faults which were internally recovered by the implementation.

[vkGetDeviceFaultReportsKHR](#) differs from [vkGetDeviceFaultInfoEXT](#) in that it can be called at any time, is able to report faults which do not result in [VK\\_ERROR\\_DEVICE\\_LOST](#) and allows the caller to wait for such an error to occur.

[vkGetDeviceFaultDebugInfoKHR](#) provides a separate interface which **must** only be called when a device loss has occurred to provide extended GPU vendor specific crash post-mortem information.

## New Commands

- [vkGetDeviceFaultDebugInfoKHR](#)
- [vkGetDeviceFaultReportsKHR](#)

## New Structures

- [VkDeviceFaultAddressInfoKHR](#)
- [VkDeviceFaultDebugInfoKHR](#)

  - [VK\\_OBJECT\\_TYPE\\_DISPLAY\\_MODE\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_MODE\\_CREATE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_SURFACE\\_CREATE\\_INFO\\_KHR](#)

## Issues

1) Which properties of a mode should be fixed in the mode information vs. settable in some other function when setting the mode? E.g., do we need to double the size of the mode pool to include both stereo and non-stereo modes? YUV and RGB scanout even if they both take RGB input images? BGR vs. RGB input? etc.

**RESOLVED:** Many modern displays support at most a handful of resolutions and timings natively. Other “modes” are expected to be supported using scaling hardware on the display engine or GPU. Other properties, such as rotation and mirroring should not require duplicating hardware modes just to express all combinations. Further, these properties may be implemented on a per-display or per-overlay granularity.

To avoid the exponential growth of modes as mutable properties are added, as was the case with `EGLConfig`/`WGL` pixel formats/`GLXFBConfig`, this specification should separate out hardware properties and configurable state into separate objects. Modes and overlay planes will express capabilities of the hardware, while a separate structure will allow applications to configure scaling, rotation, mirroring, color keys, LUT values, alpha masks, etc. for a given swapchain independent of the mode in use. Constraints on these settings will be established by properties of the immutable objects.

Note the resolution of this issue may affect issue 5 as well.

2) What properties of a display itself are useful?

**RESOLVED:** This issue is too broad. It was meant to prompt general discussion, but resolving this issue amounts to completing this specification. All interesting properties should be included. The issue will remain as a placeholder since removing it would make it hard to parse existing discussion notes that refer to issues by number.

3) How are multiple overlay planes within a display or mode enumerated?

**RESOLVED:** They are referred to by an index. Each display will report the number of overlay planes it contains.

4) Should swapchains be created relative to a mode or a display?

**RESOLVED:** When using this extension, swapchains are created relative to a mode and a plane. The mode implies the display object the swapchain will present to. If the specified mode is not the display’s current mode, the new mode will be applied when the first image is presented to the swapchain, and the default operating system mode, if any, will be restored when the swapchain is destroyed.

5) Should users query generic ranges from displays and construct their own modes explicitly using those constraints rather than querying a fixed set of modes (Most monitors only have one real “mode” these days, even though many support relatively arbitrary scaling, either on the monitor side or in the GPU display engine, making “modes” something of a relic/compatibility construct).

**RESOLVED:** Expose both. Display information structures will expose a set of predefined modes, as well as any attributes necessary to construct a customized mode.

6) Is it fine if we return the display and display mode handles in the structure used to query their properties?

**RESOLVED:** Yes.

7) Is there a possibility that not all displays of a device work with all of the present queues of a device? If yes, how do we determine which displays work with which present queues?

**RESOLVED:** No known hardware has such limitations, but determining such limitations is supported automatically using the existing `VK_KHR_surface` and `VK_KHR_swapchain` query mechanisms.

8) Should all presentation need to be done relative to an overlay plane, or can a display mode + display be used alone to target an output?

**RESOLVED:** Require specifying a plane explicitly.

9) Should displays have an associated window system display, such as an `HDC` or `Display*`?

**RESOLVED:** No. Displays are independent of any windowing system in use on the system. Further, neither `HDC` nor `Display*` refer to a physical display object.

10) Are displays queried from a physical GPU or from a device instance?

**RESOLVED:** Developers prefer to query modes directly from the physical GPU so they can use display information as an input to their device selection algorithms prior to device creation. This avoids the need to create placeholder device instances to enumerate displays.

This preference must be weighed against the extra initialization that must be done by driver vendors prior to device instance creation to support this usage.

11) Should displays and/or modes be dispatchable objects? If functions are to take displays, overlays, or modes as their first parameter, they must be dispatchable objects as defined in Khronos bug 13529. If they are not added to the list of dispatchable objects, functions operating on them must take some higher-level object as their first parameter. There is no performance case against making them dispatchable objects, but they would be the first extension objects to be dispatchable.

**RESOLVED:** Do not make displays or modes dispatchable. They will dispatch based on their associated physical device.

12) Should hardware cursor capabilities be exposed?

**RESOLVED:** Defer. This could be a separate extension on top of the base WSI specs.

13) How many display objects should be enumerated for “tiled” display devices? There are ongoing design discussions among lower-level display API authors regarding how to expose displays if they are one physical display device to an end user, but may internally be implemented as two side-by-side displays using the same display engine (and sometimes cabling) resources as two physically separate display devices.

**RESOLVED:** Tiled displays will appear as a single display object in this API.

14) Should the raw EDID data be included in the display information?

**RESOLVED:** No. A future extension could be added which reports the EDID if necessary. This may be complicated by the outcome of issue 13.

15) Should min and max scaling factor capabilities of overlays be exposed?

**RESOLVED:** Yes. This is exposed indirectly by allowing applications to query the min/max position and extent of the source and destination regions from which image contents are fetched by the display engine when using a particular mode and overlay pair.

16) Should devices be able to expose planes that can be moved between displays? If so, how?

**RESOLVED:** Yes. Applications can determine which displays a given plane supports using [vkGetDisplayPlaneSupportedDisplaysKHR](#).

17) Should there be a way to destroy display modes? If so, does it support destroying “built in” modes?

**RESOLVED:** Not in this extension. A future extension could add this functionality.

18) What should the lifetime of display and built-in display mode objects be?

**RESOLVED:** The lifetime of the instance. These objects cannot be destroyed. A future extension may be added to expose a way to destroy these objects and/or support display hotplug.

19) Should persistent mode for smart panels be enabled/disabled at swapchain creation time, or on a per-present basis.

**RESOLVED:** On a per-present basis.

## Examples

### NOTE

The example code for the [VK\\_KHR\\_display](#) and [VK\\_KHR\\_display\\_swapchain](#) extensions was removed from the appendix after revision 1.0.43. The display enumeration example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: <https://github.com/KhronosGroup/Vulkan-Tools/blob/main/cube/cube.c>).

## Version History

- Revision 1, 2015-02-24 (James Jones)
  - Initial draft
- Revision 2, 2015-03-12 (Norbert Nopper)
  - Added overlay enumeration for a display.
- Revision 3, 2015-03-17 (Norbert Nopper)
  - Fixed typos and namings as discussed in Bugzilla.
  - Reordered and grouped functions.

- Added functions to query count of display, mode, and overlay.
- Added native display handle, which may be needed on some platforms to create a native Window.
- Revision 4, 2015-03-18 (Norbert Nopper)
  - Removed primary and virtualPostion members (see comment of James Jones in Bugzilla).
  - Added native overlay handle to information structure.
  - Replaced , with ; in struct.
- Revision 6, 2015-03-18 (Daniel Rakos)
  - Added WSI extension suffix to all items.
  - Made the whole API more “Vulkanish”.
  - Replaced all functions with a single vkGetDisplayInfoKHR function to better match the rest of the API.
  - Made the display, display mode, and overlay objects be top level objects, not subclasses of VkBaseObject as they do not support the common functions anyways.
  - Renamed \*Info structures to \*Properties.
  - Removed overlayIndex field from VkOverlayProperties as there is an implicit index already as a result of moving to a “Vulkanish” API.
  - Displays are not get through device, but through physical GPU to match the rest of the Vulkan API. Also this is something ISVs explicitly requested.
  - Added issue (6) and (7).
- Revision 7, 2015-03-25 (James Jones)
  - Added an issues section
  - Added rotation and mirroring flags
- Revision 8, 2015-03-25 (James Jones)
  - Combined the duplicate issues sections introduced in last change.
  - Added proposed resolutions to several issues.
- Revision 9, 2015-04-01 (Daniel Rakos)
  - Rebased extension against Vulkan 0.82.0
- Revision 10, 2015-04-01 (James Jones)
  - Added issues (10) and (11).
  - Added more straw-man issue resolutions, and cleaned up the proposed resolution for issue (4).
  - Updated the rotation and mirroring enums to have proper bitmask semantics.
- Revision 11, 2015-04-15 (James Jones)
  - Added proposed resolution for issues (1) and (2).
  - Added issues (12), (13), (14), and (15)

- Removed pNativeHandle field from overlay structure.
- Fixed small compilation errors in example code.
- Revision 12, 2015-07-29 (James Jones)
  - Rewrote the guts of the extension against the latest WSI swapchain specifications and the latest Vulkan API.
  - Address overlay planes by their index rather than an object handle and refer to them as “planes” rather than “overlays” to make it slightly clearer that even a display with no “overlays” still has at least one base “plane” that images can be displayed on.
  - Updated most of the issues.
  - Added an “extension type” section to the specification header.
  - Reused the VK\_EXT\_KHR\_surface surface transform enumerations rather than redefining them here.
  - Updated the example code to use the new semantics.
- Revision 13, 2015-08-21 (Ian Elliott)
  - Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  - Switched from “revision” to “version”, including use of the VK\_MAKE\_VERSION macro in the header file.
- Revision 14, 2015-09-01 (James Jones)
  - Restore single-field revision number.
- Revision 15, 2015-09-08 (James Jones)
  - Added alpha flags enum.
  - Added premultiplied alpha support.
- Revision 16, 2015-09-08 (James Jones)
  - Added description section to the spec.
  - Added issues 16 - 18.
- Revision 17, 2015-10-02 (James Jones)
  - Planes are now a property of the entire device rather than individual displays. This allows planes to be moved between multiple displays on devices that support it.
  - Added a function to create a VkSurfaceKHR object describing a display plane and mode to align with the new per-platform surface creation conventions.
  - Removed detailed mode timing data. It was agreed that the mode extents and refresh rate are sufficient for current use cases. Other information could be added back in as an extension if it is needed in the future.
  - Added support for smart/persistent/buffered display devices.
- Revision 18, 2015-10-26 (Ian Elliott)
  - Renamed from VK\_EXT\_KHR\_display to VK\_KHR\_display.

- Revision 19, 2015-11-02 (James Jones)
  - Updated example code to match revision 17 changes.
- Revision 20, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to creation functions.
- Revision 21, 2015-11-10 (Jesse Hall)
  - Added `VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR`, and use `VkDisplayPlaneAlphaFlagBitsKHR` for `VkDisplayPlanePropertiesKHR::alphaMode` instead of `VkDisplayPlaneAlphaFlagsKHR`, since it only represents one mode.
  - Added reserved flags bitmask to `VkDisplayPlanePropertiesKHR`.
  - Use `VkSurfaceTransformFlagBitsKHR` instead of obsolete `VkSurfaceTransformKHR`.
  - Renamed `vkGetDisplayPlaneSupportedDisplaysKHR` parameters for clarity.
- Revision 22, 2015-12-18 (James Jones)
  - Added missing “planeIndex” parameter to `vkGetDisplayPlaneSupportedDisplaysKHR()`
- Revision 23, 2017-03-13 (James Jones)
  - Closed all remaining issues. The specification and implementations have been shipping with the proposed resolutions for some time now.
  - Removed the sample code and noted it has been integrated into the official Vulkan SDK cube demo.

# VK\_KHR\_display\_swapchain

## Name String

VK\_KHR\_display\_swapchain

## Extension Type

## Description

This extension provides an API to create a swapchain directly on a device's display without any underlying window system.

## New Commands

- [vkCreateSharedSwapchainsKHR](#)

## New Structures

- Extending [VkPresentInfoKHR](#):
  - [VkDisplayPresentInfoKHR](#)

## New Enum Constants

- [VK\\_KHR\\_DISPLAY\\_SWAPCHAIN\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_DISPLAY\\_SWAPCHAIN\\_SPEC\\_VERSION](#)
- Extending [VkResult](#):
  - [VK\\_ERROR\\_INCOMPATIBLE\\_DISPLAY\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_PRESENT\\_INFO\\_KHR](#)

## Issues

1) Should swapchains sharing images each hold a reference to the images, or should it be up to the application to destroy the swapchains and images in an order that avoids the need for reference counting?

**RESOLVED:** Take a reference. The lifetime of presentable images is already complex enough.

2) Should the [srcRect](#) and [dstRect](#) parameters be specified as part of the presentation command, or at swapchain creation time?

**RESOLVED:** As part of the presentation command. This allows moving and scaling the image on the screen without the need to respecify the mode or create a new swapchain and presentable images.

3) Should [srcRect](#) and [dstRect](#) be specified as rects, or separate offset/extent values?

**RESOLVED:** As rects. Specifying them separately might make it easier for hardware to expose support for one but not the other, but in such cases applications must just take care to obey the reported capabilities and not use non-zero offsets or extents that require scaling, as appropriate.

4) How can applications create multiple swapchains that use the same images?

**RESOLVED:** By calling [vkCreateSharedSwapchainsKHR](#).

An earlier resolution used [vkCreateSwapchainKHR](#), chaining multiple [VkSwapchainCreateInfoKHR](#) structures through [pNext](#). In order to allow each swapchain to also allow other extension structs, a level of indirection was used: [VkSwapchainCreateInfoKHR::pNext](#) pointed to a different structure, which had both [sType](#) and [pNext](#) members for additional extensions, and also had a pointer to the next [VkSwapchainCreateInfoKHR](#) structure. The number of swapchains to be created could only be found by walking this linked list of alternating structures, and the [pSwapchains](#) out parameter was reinterpreted to be an array of [VkSwapchainKHR](#) handles.

Another option considered was a method to specify a “shared” swapchain when creating a new swapchain, such that groups of swapchains using the same images could be built up one at a time. This was deemed unusable because drivers need to know all of the displays an image will be used

on when determining which internal formats and layouts to use for that image.

5) Can [VkDisplayPresentInfoKHR](#) be used without calling [vkCreateSharedSwapchainsKHR](#)?

**RESOLVED:** Yes.

The two bits of functionality were meant to be independent. If the extension was created today, there would likely be two feature bits for [VkDisplayPresentInfoKHR](#) and [vkCreateSharedSwapchainsKHR](#).

## Examples

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>NOTE</b> | The example code for the <a href="#">VK_KHR_display</a> and <a href="#">VK_KHR_display_swapchain</a> extensions was removed from the appendix after revision 1.0.43. The display swapchain creation example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: <a href="https://github.com/KhronosGroup/Vulkan-Tools/blob/main/cube/cube.c">https://github.com/KhronosGroup/Vulkan-Tools/blob/main/cube/cube.c</a> ). |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Version History

- Revision 1, 2015-07-29 (James Jones)
  - Initial draft
- Revision 2, 2015-08-21 (Ian Elliott)
  - Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  - Switched from “revision” to “version”, including use of the `VK_MAKE_VERSION` macro in the header file.
- Revision 3, 2015-09-01 (James Jones)
  - Restore single-field revision number.
- Revision 4, 2015-09-08 (James Jones)
  - Allow creating multiple swapchains that share the same images using a single call to `vkCreateSwapchainKHR`.
- Revision 5, 2015-09-10 (Alon Or-bach)
  - Removed underscores from `SWAP_CHAIN` in two enums.
- Revision 6, 2015-10-02 (James Jones)
  - Added support for smart panels/buffered displays.
- Revision 7, 2015-10-26 (Ian Elliott)
  - Renamed from `VK_EXT_KHR_display_swapchain` to `VK_KHR_display_swapchain`.
- Revision 8, 2015-11-03 (Daniel Rakos)
  - Updated sample code based on the changes to `VK_KHR_swapchain`.
- Revision 9, 2015-11-10 (Jesse Hall)
  - Replaced `VkDisplaySwapchainCreateInfoKHR` with `vkCreateSharedSwapchainsKHR`,

changing resolution of issue #4.

- Revision 10, 2017-03-13 (James Jones)
  - Closed all remaining issues. The specification and implementations have been shipping with the proposed resolutions for some time now.
  - Removed the sample code and noted it has been integrated into the official Vulkan SDK cube demo.

## Description

This extension adds a new [VkFormatFeatureFlagBits4KHR](#) format feature flag type, supporting up to 64 additional flags beyond those defined by [VkFormatFeatureFlagBits2](#); and a new [VkFormatProperties4KHR](#) structure to extend [VkFormatProperties2](#). The new structure does not replace format feature flag bits specified by existing commands and structures, unlike [VkFormatProperties3](#). Instead, it adds new flags to the existing APIs. Initially, no new format flag bits are defined.

This extension also adds a new [VkImageCreateFlagBits2KHR](#) image create flag type, supporting up to 32 additional flags, and a new [VkImageCreateFlags2CreateInfoKHR](#) structure to extend [VkImageCreateInfo](#) and other commands that specify image create flag bits. The new structure duplicates image create flag bits specified by existing commands and structures, while also adding up to 32 new flags. All the existing [VkImageCreateFlagBits](#) are given corresponding [VkImageCreateFlagBits2KHR](#) bits with the same meaning. Initially, no new image create flag bits are defined.

This extension also adds a new [VkImageUsageFlagBits2KHR](#) image usage flag type, supporting up to 32 additional flags, and a new [VkImageUsageFlags2CreateInfoKHR](#) structure to extend [VkImageCreateInfo](#) and other commands that specify image usage flag bits. The new structure duplicates image usage flag bits specified by existing commands and structures, while also adding up to 32 new flags. All the existing [VkImageUsageFlagBits](#) are given corresponding [VkImageUsageFlagBits2KHR](#) bits with the same meaning. Initially, no new image usage flag bits are defined.

The extension is infrastructure used because the API is running out of available bits in the [VkFormatFeatureFlagBits2](#) and [VkImageUsageFlagBits](#) types, and will soon thereafter run out of bits in [VkImageCreateFlagBits](#).

Finally, this extension adds all the same 64-bit flag types first introduced by [VK\\_KHR\\_maintenance5](#). This will allow API variants like Vulkan SC to support the extended flags without requiring other, unrelated functionality of [VK\\_KHR\\_maintenance5](#).

## New Structures

- Extending [VkBufferViewCreateInfo](#), [VkBufferCreateInfo](#), [VkPhysicalDeviceExternalBufferInfo](#), [VkDescriptorBufferBindingInfoEXT](#):
  - [VkBufferUsageFlags2CreateInfoKHR](#)

- Extending [VkComputePipelineCreateInfo](#), [VkGraphicsPipelineCreateInfo](#), [VkRayTracingPipelineCreateInfoKHR](#):
  - [VkPipelineCreateFlags2CreateInfoKHR](#)
- Extending [VkFormatProperties2](#):
  - [VkFormatProperties4KHR](#)
- Extending [VkFramebufferAttachmentImageInfo](#), [VkImageCreateInfo](#), [VkPhysicalDeviceImageFormatInfo2](#), [VkPhysicalDeviceSparseImageFormatInfo2](#), [VkPhysicalDeviceVideoFormatInfoKHR](#), [VkSurfaceCapabilities2KHR](#), [VkSwapchainCreateInfoKHR](#), [VkVideoFormatPropertiesKHR](#):
  - [VkImageUsageFlags2CreateInfoKHR](#)
- Extending [VkImageCreateInfo](#), [VkPhysicalDeviceImageFormatInfo2](#), [VkFramebufferAttachmentImageInfo](#), [VkVideoFormatPropertiesKHR](#):
  - [VkImageCreateFlags2CreateInfoKHR](#)
- Extending [VkImageViewCreateInfo](#):
  - [VkImageViewUsage2CreateInfoKHR](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceExtendedFlagsFeaturesKHR](#)

If [VK\\_KHR\\_shared\\_presentable\\_image](#) is supported:

- Extending [VkSurfaceCapabilities2KHR](#):
  - [VkSharedPresentSurfaceCapabilities2KHR](#)

If [Vulkan Version 1.2](#) or [VK\\_EXT\\_separate\\_stencil\\_usage](#) is supported:

- Extending [VkImageCreateInfo](#), [VkPhysicalDeviceImageFormatInfo2](#):
  - [VkImageStencilUsage2CreateInfoKHR](#)

## New Enums

- [VkBufferUsageFlagBits2KHR](#)
- [VkFormatFeatureFlagBits4KHR](#)
- [VkImageCreateFlagBits2KHR](#)
- [VkImageUsageFlagBits2KHR](#)
- [VkPipelineCreateFlagBits2KHR](#)

## New Bitmasks

- [VkBufferUsageFlags2KHR](#)
- [VkFormatFeatureFlags4KHR](#)
- [VkImageCreateFlags2KHR](#)
- [VkImageUsageFlags2KHR](#)

- [VkPipelineCreateFlags2KHR](#)

## New Enum Constants

- [VK\\_KHR\\_EXTENDED\\_FLAGS\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_EXTENDED\\_FLAGS\\_SPEC\\_VERSION](#)
- Extending [VkBufferUsageFlagBits2](#):
  - [VK\\_BUFFER\\_USAGE\\_2\\_INDEX\\_BUFFER\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_INDIRECT\\_BUFFER\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_STORAGE\\_BUFFER\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_STORAGE\\_TEXEL\\_BUFFER\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_TRANSFER\\_DST\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_TRANSFER\\_SRC\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_UNIFORM\\_BUFFER\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_UNIFORM\\_TEXEL\\_BUFFER\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_VERTEX\\_BUFFER\\_BIT\\_KHR](#)
- Extending [VkPipelineCreateFlagBits2](#):
  - [VK\\_PIPELINE\\_CREATE\\_2\\_ALLOW\\_DERIVATIVES\\_BIT\\_KHR](#)
  - [VK\\_PIPELINE\\_CREATE\\_2\\_DERIVATIVE\\_BIT\\_KHR](#)
  - [VK\\_PIPELINE\\_CREATE\\_2\\_DISABLE\\_OPTIMIZATION\\_BIT\\_KHR](#)
  - [VK\\_PIPELINE\\_CREATE\\_2\\_DISPATCH\\_BASE\\_BIT\\_KHR](#)
  - [VK\\_PIPELINE\\_CREATE\\_2\\_VIEW\\_INDEX\\_FROM\\_DEVICE\\_INDEX\\_BIT\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_BUFFER\\_USAGE\\_FLAGS\\_2\\_CREATE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_FORMAT\\_PROPERTIES\\_4\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_IMAGE\\_CREATE\\_FLAGS\\_2\\_CREATE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_IMAGE\\_USAGE\\_FLAGS\\_2\\_CREATE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_IMAGE\\_VIEW\\_USAGE\\_2\\_CREATE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTENDED\\_FLAGS\\_FEATURES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_CREATE\\_FLAGS\\_2\\_CREATE\\_INFO\\_KHR](#)

If [VK\\_KHR\\_dynamic\\_rendering](#) or Vulkan Version 1.3 and [VK\\_EXT\\_fragment\\_density\\_map](#) is supported:

- Extending [VkPipelineCreateFlagBits2](#):
  - [VK\\_PIPELINE\\_CREATE\\_2\\_RENDERING\\_FRAGMENT\\_DENSITY\\_MAP\\_ATTACHMENT\\_BIT\\_EXT](#)

If [VK\\_KHR\\_dynamic\\_rendering](#) or Vulkan Version 1.3 and [VK\\_KHR\\_fragment\\_shading\\_rate](#) is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

If `VK_EXT_attachment_feedback_loop_layout` is supported:

- Extending `VkImageUsageFlagBits2KHR`:
  - `VK_IMAGE_USAGE_2_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT`
- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT`
  - `VK_PIPELINE_CREATE_2_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT`

If `VK_EXT_conditional_rendering` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_CONDITIONAL_RENDERING_BIT_EXT`

If `VK_EXT_descriptor_buffer` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT`
  - `VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`
  - `VK_BUFFER_USAGE_2_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`
- Extending `VkImageCreateFlagBits2KHR`:
  - `VK_IMAGE_CREATE_2_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`
- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_DESCRIPTOR_BUFFER_BIT_EXT`

If `VK_EXT_fragment_density_map` is supported:

- Extending `VkImageCreateFlagBits2KHR`:
  - `VK_IMAGE_CREATE_2_SUBSAMPLED_BIT_EXT`
- Extending `VkImageUsageFlagBits2KHR`:
  - `VK_IMAGE_USAGE_2_FRAGMENT_DENSITY_MAP_BIT_EXT`

If `VK_EXT_fragment_density_map_offset` is supported:

- Extending `VkImageCreateFlagBits2KHR`:
  - `VK_IMAGE_CREATE_2_FRAGMENT_DENSITY_MAP_OFFSET_BIT_EXT`

If `VK_EXT_graphics_pipeline_library` is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_LINK_TIME_OPTIMIZATION_BIT_EXT`

- [VK\\_PIPELINE\\_CREATE\\_2\\_RETAIN\\_LINK\\_TIME\\_OPTIMIZATION\\_INFO\\_BIT\\_EXT](#)

If [VK\\_EXT\\_image\\_2d\\_view\\_of\\_3d](#) is supported:

- Extending [VkImageCreateFlagBits2KHR](#):
  - [VK\\_IMAGE\\_CREATE\\_2\\_2D\\_VIEW\\_COMPATIBLE\\_BIT\\_EXT](#)

If [VK\\_EXT\\_multisampled\\_render\\_to\\_single\\_sampled](#) is supported:

- Extending [VkImageCreateFlagBits2KHR](#):
  - [VK\\_IMAGE\\_CREATE\\_2\\_MULTISAMPLED\\_RENDER\\_TO\\_SINGLE\\_SAMPLED\\_BIT\\_EXT](#)

If [VK\\_EXT\\_opacity\\_micromap](#) is supported:

- Extending [VkBufferUsageFlagBits2](#):
  - [VK\\_BUFFER\\_USAGE\\_2\\_MICROMAP\\_BUILD\\_INPUT\\_READ\\_ONLY\\_BIT\\_EXT](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_MICROMAP\\_STORAGE\\_BIT\\_EXT](#)
- Extending [VkPipelineCreateFlagBits2](#):
  - [VK\\_PIPELINE\\_CREATE\\_2\\_RAY\\_TRACING\\_OPACITY\\_MICROMAP\\_BIT\\_EXT](#)

If [VK\\_EXT\\_sample\\_locations](#) is supported:

- Extending [VkImageCreateFlagBits2KHR](#):
  - [VK\\_IMAGE\\_CREATE\\_2\\_SAMPLE\\_LOCATIONS\\_COMPATIBLE\\_DEPTH\\_BIT\\_EXT](#)

If [VK\\_EXT\\_transform\\_feedback](#) is supported:

- Extending [VkBufferUsageFlagBits2](#):
  - [VK\\_BUFFER\\_USAGE\\_2\\_TRANSFORM\\_FEEDBACK\\_BUFFER\\_BIT\\_EXT](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_TRANSFORM\\_FEEDBACK\\_COUNTER\\_BUFFER\\_BIT\\_EXT](#)

If [VK\\_KHR\\_acceleration\\_structure](#) is supported:

- Extending [VkBufferUsageFlagBits2](#):
  - [VK\\_BUFFER\\_USAGE\\_2\\_ACCELERATION\\_STRUCTURE\\_BUILD\\_INPUT\\_READ\\_ONLY\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_2\\_ACCELERATION\\_STRUCTURE\\_STORAGE\\_BIT\\_KHR](#)

If [VK\\_KHR\\_fragment\\_shading\\_rate](#) is supported:

- Extending [VkImageUsageFlagBits2KHR](#):
  - [VK\\_IMAGE\\_USAGE\\_2\\_FRAGMENT\\_SHADING\\_RATE\\_ATTACHMENT\\_BIT\\_KHR](#)

If [VK\\_KHR\\_pipeline\\_executable\\_properties](#) is supported:

- Extending [VkPipelineCreateFlagBits2](#):
  - [VK\\_PIPELINE\\_CREATE\\_2\\_CAPTURE\\_INTERNAL\\_REPRESENTATIONS\\_BIT\\_KHR](#)

- `VK_PIPELINE_CREATE_2_CAPTURE_STATISTICS_BIT_KHR`

If `VK_KHR_pipeline_library` is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_LIBRARY_BIT_KHR`

If `VK_KHR_ray_tracing_pipeline` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_SHADER_BINDING_TABLE_BIT_KHR`
- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_AABBS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`

If `VK_KHR_shared_presentable_image` is supported:

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_2_KHR`

If `VK_KHR_video_decode_queue` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_VIDEO_DECODE_DST_BIT_KHR`
  - `VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR`
- Extending `VkImageUsageFlagBits2KHR`:
  - `VK_IMAGE_USAGE_2_VIDEO_DECODE_DPB_BIT_KHR`
  - `VK_IMAGE_USAGE_2_VIDEO_DECODE_DST_BIT_KHR`
  - `VK_IMAGE_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR`

If `VK_KHR_video_encode_quantization_map` is supported:

- Extending `VkImageUsageFlagBits2KHR`:
  - `VK_IMAGE_USAGE_2_VIDEO_ENCODE_EMPHASIS_MAP_BIT_KHR`
  - `VK_IMAGE_USAGE_2_VIDEO_ENCODE_QUANTIZATION_DELTA_MAP_BIT_KHR`

If `VK_KHR_video_encode_queue` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR`
  - `VK_BUFFER_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR`
- Extending `VkImageUsageFlagBits2KHR`:
  - `VK_IMAGE_USAGE_2_VIDEO_ENCODE_DPB_BIT_KHR`
  - `VK_IMAGE_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR`
  - `VK_IMAGE_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR`

If `VK_KHR_video_maintenance1` is supported:

- Extending `VkImageCreateFlagBits2KHR`:
  - `VK_IMAGE_CREATE_2_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`

If `Vulkan Version 1.0` is supported:

- Extending `VkImageCreateFlagBits2KHR`:
  - `VK_IMAGE_CREATE_2_2D_ARRAY_COMPATIBLE_BIT_KHR`
  - `VK_IMAGE_CREATE_2_ALIAS_BIT_KHR`
  - `VK_IMAGE_CREATE_2_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT_KHR`
  - `VK_IMAGE_CREATE_2_DISJOINT_BIT_KHR`
  - `VK_IMAGE_CREATE_2_EXTENDED_USAGE_BIT_KHR`
  - `VK_IMAGE_CREATE_2_PROTECTED_BIT_KHR`
  - `VK_IMAGE_CREATE_2_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR`

If `Vulkan Version 1.2` or `VK_EXT_separate_stencil_usage` is supported:

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_IMAGE_STENCIL_USAGE_2_CREATE_INFO_KHR`

If `Vulkan Version 1.2` or `VK_KHR_buffer_device_address` or `VK_EXT_buffer_device_address` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_SHADER_DEVICE_ADDRESS_BIT_KHR`

If `Vulkan Version 1.3` or `VK_EXT_pipeline_creation_cache_control` is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_EARLY_RETURN_ON_FAILURE_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_KHR`

If `Vulkan Version 1.4` is supported:

- Extending `VkImageUsageFlagBits2KHR`:

- [VK\\_IMAGE\\_USAGE\\_2\\_HOST\\_TRANSFER\\_BIT\\_KHR](#)

## Version History

- Revision 0.1, 2025-12-17 (Jon Leech)
  - Initial draft
- Revision 0.2, 2026-01-19 (Jon Leech)
  - Add `VkImageCreateFlags2KHR` and import 64-bit flags types from `VK_KHR_maintenance5`.
- Revision 0.3, 2026-02-14 (Jon Leech)
  - Add a feature structure.

  - [VK\\_STRUCTURE\\_TYPE\\_IMPORT\\_FENCE\\_WIN32\\_HANDLE\\_INFO\\_KHR](#)

## Issues

This extension borrows concepts, semantics, and language from [VK\\_KHR\\_external\\_semaphore\\_win32](#). That extension's issues apply equally to this extension.

1) Should D3D12 fence handle types be supported, like they are for semaphores?

**RESOLVED:** No. Doing so would require extending the fence signal and wait operations to provide values to signal / wait for, like [VkD3D12FenceSubmitInfoKHR](#) does. A D3D12 fence can be signaled by importing it into a [VkSemaphore](#) instead of a [VkFence](#), and applications can check status or wait on the D3D12 fence using non-Vulkan APIs. The convenience of being able to do these operations on [VkFence](#) objects does not justify the extra API complexity.

## Description

An application may wish to reference device memory in multiple Vulkan logical devices or instances, in multiple processes, and/or in multiple APIs. This extension enables an application to export POSIX file descriptor handles from Vulkan memory objects and to import Vulkan memory objects from POSIX file descriptor handles exported from other Vulkan memory objects or from similar resources in other APIs.

## New Commands

- [vkGetMemoryFdKHR](#)

- [vkGetMemoryFdPropertiesKHR](#)

## New Structures

- [VkMemoryFdPropertiesKHR](#)
- [VkMemoryGetFdInfoKHR](#)
- Extending [VkMemoryAllocateInfo](#):
  - [VkImportMemoryFdInfoKHR](#)

## New Enum Constants

- [VK\\_KHR\\_EXTERNAL\\_MEMORY\\_FD\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_EXTERNAL\\_MEMORY\\_FD\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_IMPORT\\_MEMORY\\_FD\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_MEMORY\\_FD\\_PROPERTIES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_MEMORY\\_GET\\_FD\\_INFO\\_KHR](#)

## Issues

1) Does the application need to close the file descriptor returned by [vkGetMemoryFdKHR](#)?

**RESOLVED:** Yes, unless it is passed back in to a driver instance to import the memory. A successful get call transfers ownership of the file descriptor to the application, and a successful import transfers it back to the driver. Destroying the original memory object will not close the file descriptor or remove its reference to the underlying memory resource associated with it.

2) Do drivers ever need to expose multiple file descriptors per memory object?

**RESOLVED:** No. This would indicate there are actually multiple memory objects, rather than a single memory object.

3) How should the valid size and memory type for POSIX file descriptor memory handles created outside of Vulkan be specified?

**RESOLVED:** The valid memory types are queried directly from the external handle. The size will be specified by future extensions that introduce such external memory handle types.

- Extending [VkMemoryAllocateInfo](#):
  - [VkExportMemoryWin32HandleInfoKHR](#)
  - [VkImportMemoryWin32HandleInfoKHR](#)

## New Enum Constants

- [VK\\_KHR\\_EXTERNAL\\_MEMORY\\_WIN32\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_EXTERNAL\\_MEMORY\\_WIN32\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_MEMORY\\_WIN32\\_HANDLE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_IMPORT\\_MEMORY\\_WIN32\\_HANDLE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_MEMORY\\_GET\\_WIN32\\_HANDLE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_MEMORY\\_WIN32\\_HANDLE\\_PROPERTIES\\_KHR](#)

## Issues

1) Do applications need to call [CloseHandle\(\)](#) on the values returned from [vkGetMemoryWin32HandleKHR](#) when [handleType](#) is [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_OPAQUE\\_WIN32\\_BIT\\_KHR](#)?

**RESOLVED:** Yes. A successful get call transfers ownership of the handle to the application. Destroying the memory object will not destroy the handle or the handle's reference to the underlying memory resource. Unlike file descriptor opaque handles, win32 opaque handle ownership can not be transferred back to a driver by an import operation.

2) Should the language regarding KMT/Windows 7 handles be moved to a separate extension so that it can be deprecated over time?

**RESOLVED:** No. Support for them can be deprecated by drivers if they choose, by no longer returning them in the supported handle types of the instance level queries.

3) How should the valid size and memory type for windows memory handles created outside of Vulkan be specified?

**RESOLVED:** The valid memory types are queried directly from the external handle. The size is determined by the associated image or buffer memory requirements for external handle types that require dedicated allocations, and by the size specified when creating the object from which the

handle was exported for other external handle types.

## Issues

1) Do applications need to call [CloseHandle\(\)](#) on the values returned from [vkGetSemaphoreWin32HandleKHR](#) when [handleType](#) is [VK\\_EXTERNAL\\_SEMAPHORE\\_HANDLE\\_TYPE\\_OPAQUE\\_WIN32\\_BIT\\_KHR](#)?

**RESOLVED:** Yes. A successful get call transfers ownership of the handle to the application. Destroying the semaphore object will not destroy the handle or the handle's reference to the underlying semaphore resource. Unlike file descriptor opaque handles, win32 opaque handle ownership can not be transferred back to a driver by an import operation.

2) Should the language regarding KMT/Windows 7 handles be moved to a separate extension so that it can be deprecated over time?

**RESOLVED:** No. Support for them can be deprecated by drivers if they choose, by no longer returning them in the supported handle types of the instance level queries.

3) Should applications be allowed to specify additional object attributes for shared handles?

**RESOLVED:** Yes. Applications will be allowed to provide similar attributes to those they would to any other handle creation API.

4) How do applications communicate the desired fence values to use with [D3D12\\_FENCE](#)-based Vulkan semaphores?

**RESOLVED:** There are a couple of options. The values for the signaled and reset states could be communicated up front when creating the object and remain static for the life of the Vulkan

semaphore, or they could be specified using auxiliary structures when submitting semaphore signal and wait operations, similar to what is done with the keyed mutex extensions. The latter is more flexible and consistent with the keyed mutex usage, but the former is a much simpler API.

Since Vulkan tends to favor flexibility and consistency over simplicity, a new structure specifying D3D12 fence acquire and release values is added to the [vkQueueSubmit](#) function.

## Interactions and External Dependencies

- This extension provides API support for [GL\\_EXT\\_fragment\\_shader\\_barycentric](#)

## Contributors

- Stu Smith, AMD
- Tobias Hector, AMD
- Graeme Leese, Broadcom

- Jan-Harald Fredriksen, Arm
- Slawek Grajewski, Intel
- Pat Brown, NVIDIA
- Hans-Kristian Arntzen, Valve
- Contributors to the `VK_NV_fragment_shader_barycentric` specification

## Description

This extension is based on the `VK_NV_fragment_shader_barycentric` extension, and adds support for the following SPIR-V extension in Vulkan:

- `SPV_KHR_fragment_shader_barycentric`

The extension provides access to three additional fragment shader variable decorations in SPIR-V:

- `PerVertexKHR`, which indicates that a fragment shader input will not have interpolated values, but instead must be accessed with an extra array index that identifies one of the vertices of the primitive producing the fragment
- `BaryCoordKHR`, which indicates that the variable is a three-component floating-point vector holding barycentric weights for the fragment produced using perspective interpolation
- `BaryCoordNoPerspKHR`, which indicates that the variable is a three-component floating-point vector holding barycentric weights for the fragment produced using linear interpolation

When using GLSL source-based shader languages, the following variables from `GL_EXT_fragment_shader_barycentric` map to these SPIR-V built-in decorations:

- `in vec3 gl_BaryCoordEXT;` → `BaryCoordKHR`
- `in vec3 gl_BaryCoordNoPerspEXT;` → `BaryCoordNoPerspKHR`

GLSL variables declared using the `pervertexEXT` GLSL qualifier are expected to be decorated with `PerVertexKHR` in SPIR-V.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR`

If `VK_EXT_provoking_vertex` is supported:

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR`

## New Enum Constants

- `VK_KHR_FRAGMENT_SHADER_BARYCENTRIC_EXTENSION_NAME`
- `VK_KHR_FRAGMENT_SHADER_BARYCENTRIC_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_FEATURES_KHR`

If `VK_EXT_provoking_vertex` is supported:

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_PROPERTIES_KHR`

## New Built-In Variables

- `BaryCoordKHR`
- `BaryCoordNoPerspKHR`

## New SPIR-V Decorations

- `PerVertexKHR`

## New SPIR-V Capabilities

- `FragmentBarycentricKHR`

## Issues

1) What are the interactions with MSAA and how are `BaryCoordKHR` and `BaryCoordNoPerspKHR` interpolated?

**RESOLVED:** The inputs decorated with `BaryCoordKHR` or `BaryCoordNoPerspKHR` **may** also be decorated with the `Centroid` or `Sample` qualifiers to specify interpolation, like any other fragment shader input. If the `shaderSampleRateInterpolationFunctions` feature is enabled, the extended instructions `InterpolateAtCentroid`, `InterpolateAtOffset`, and `InterpolateAtSample` from the GLSL.std.450 **may** also be used with inputs decorated with `BaryCoordKHR` or `BaryCoordNoPerspKHR`.

- Contributors to the `VK_EXT_fragment_density_map` specification

## Description

This extension adds the ability to change the rate at which fragments are shaded. Rather than the usual single fragment invocation for each pixel covered by a primitive, multiple pixels can be shaded by a single fragment shader invocation.

Up to three methods are available to the application to change the fragment shading rate:

- [Pipeline Fragment Shading Rate](#), which allows the specification of a rate per-draw.
- [Primitive Fragment Shading Rate](#), which allows the specification of a rate per primitive, specified during shading.
- [Attachment Fragment Shading Rate](#), which allows the specification of a rate per-region of the framebuffer, specified in a specialized image attachment.

Additionally, these rates can all be specified and combined in order to adjust the overall detail in the image at each point.

This functionality can be used to focus shading efforts where higher levels of detail are needed in some parts of a scene compared to others. This can be particularly useful in high resolution rendering, or for XR contexts.

This extension also adds support for the `SPV_KHR_fragment_shading_rate` extension which enables setting the [primitive fragment shading rate](#), and allows querying the final shading rate from a fragment shader.

## New Commands

- [vkCmdSetFragmentShadingRateKHR](#)
- [vkGetPhysicalDeviceFragmentShadingRatesKHR](#)

## New Structures

- [VkPhysicalDeviceFragmentShadingRateKHR](#)
- Extending [VkGraphicsPipelineCreateInfo](#):

- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_MODE\\_PROPERTIES\\_2\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_PLANE\\_CAPABILITIES\\_2\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_PLANE\\_INFO\\_2\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_PLANE\\_PROPERTIES\\_2\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_PROPERTIES\\_2\\_KHR](#)

## Issues

1) What should this extension be named?

**RESOLVED:** [VK\\_KHR\\_get\\_display\\_properties2](#). Other alternatives:

- [VK\\_KHR\\_display2](#)
- One extension, combined with [VK\\_KHR\\_surface\\_capabilities2](#).

2) Should extensible input structs be added for these new functions:

**RESOLVED:**

- [vkGetPhysicalDeviceDisplayProperties2KHR](#): No. The only current input is a [VkPhysicalDevice](#). Other inputs would not make sense.
- [vkGetPhysicalDeviceDisplayPlaneProperties2KHR](#): No. The only current input is a [VkPhysicalDevice](#). Other inputs would not make sense.
- [vkGetDisplayModeProperties2KHR](#): No. The only current inputs are a [VkPhysicalDevice](#) and a [VkDisplayModeKHR](#). Other inputs would not make sense.

3) Should additional display query functions be extended?

**RESOLVED:**

- [vkGetDisplayPlaneSupportedDisplaysKHR](#): No. Extensions should instead extend [vkGetDisplayPlaneCapabilitiesKHR\(\)](#).

## Description

This extension provides new queries for device surface capabilities that can be easily extended by other extensions, without introducing any further queries. This extension can be considered the [VK\\_KHR\\_surface](#) equivalent of the [VK\\_KHR\\_get\\_physical\\_device\\_properties2](#) extension.

## New Commands

- [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#)
- [vkGetPhysicalDeviceSurfaceFormats2KHR](#)

## New Structures

- [VkPhysicalDeviceSurfaceInfo2KHR](#)
- [VkSurfaceCapabilities2KHR](#)
- [VkSurfaceFormat2KHR](#)

## New Enum Constants

- [VK\\_KHR\\_GET\\_SURFACE\\_CAPABILITIES\\_2\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_GET\\_SURFACE\\_CAPABILITIES\\_2\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_SURFACE\\_INFO\\_2\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_CAPABILITIES\\_2\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_FORMAT\\_2\\_KHR](#)

## Issues

1) What should this extension be named?

**RESOLVED:** [VK\\_KHR\\_get\\_surface\\_capabilities2](#). Other alternatives:

- [VK\\_KHR\\_surface2](#)
- One extension, combining a separate display-specific query extension.

2) Should additional WSI query functions be extended?

**RESOLVED:**

- [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#): Yes. The need for this motivated the extension.
- [vkGetPhysicalDeviceSurfaceSupportKHR](#): No. Currently only has boolean output. Extensions should instead extend [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#).
- [vkGetPhysicalDeviceSurfaceFormatsKHR](#): Yes.
- [vkGetPhysicalDeviceSurfacePresentModesKHR](#): No. Recent discussion concluded this introduced too much variability for applications to deal with. Extensions should instead extend [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#).
- [vkGetPhysicalDeviceXlibPresentationSupportKHR](#): Not in this extension.
- [vkGetPhysicalDeviceXcbPresentationSupportKHR](#): Not in this extension.
- [vkGetPhysicalDeviceWaylandPresentationSupportKHR](#): Not in this extension.
- [vkGetPhysicalDeviceWin32PresentationSupportKHR](#): Not in this extension.

## Description

This device extension extends [vkQueuePresentKHR](#), from the [VK\\_KHR\\_swapchain](#) extension, allowing

an application to specify a list of rectangular, modified regions of each image to present. This should be used in situations where an application is only changing a small portion of the presentable images within a swapchain, since it enables the presentation engine to avoid wasting time presenting parts of the surface that have not changed.

This extension is leveraged from the [EGL\\_KHR\\_swap\\_buffers\\_with\\_damage](#) extension.

## New Structures

- [VkPresentRegionKHR](#)
- [VkRectLayerKHR](#)
- Extending [VkPresentInfoKHR](#):
  - [VkPresentRegionsKHR](#)

## New Enum Constants

- [VK\\_KHR\\_INCREMENTAL\\_PRESENT\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_INCREMENTAL\\_PRESENT\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PRESENT\\_REGIONS\\_KHR](#)

## Issues

1) How should we handle stereoscopic-3D swapchains? We need to add a layer for each rectangle. One approach is to create another structure containing the [VkRect2D](#) plus layer, and have [VkPresentRegionsKHR](#) point to an array of that struct. Another approach is to have two parallel arrays, [pRectangles](#) and [pLayers](#), where [pRectangles\[i\]](#) and [pLayers\[i\]](#) must be used together. Which approach should we use, and if the array of a new structure, what should that be called?

**RESOLVED:** Create a new structure, which is a [VkRect2D](#) plus a layer, and will be called [VkRectLayerKHR](#).

2) Where is the origin of the [VkRectLayerKHR](#)?

**RESOLVED:** The upper left corner of the presentable image(s) of the swapchain, per the definition of framebuffer coordinates.

3) Does the rectangular region, [VkRectLayerKHR](#), specify pixels of the swapchain's image(s), or of the surface?

**RESOLVED:** Of the image(s). Some presentation engines may scale the pixels of a swapchain's image(s) to the size of the surface. The size of the swapchain's image(s) will be consistent, where the size of the surface may vary over time.

4) What if all of the rectangles for a given swapchain contain a width and/or height of zero?

**RESOLVED:** The application is indicating that no pixels changed since the last present. The presentation engine may use such a hint and not update any pixels for the swapchain. However, all

other semantics of [vkQueuePresentKHR](#) must still be honored, including waiting for semaphores to signal.

5) When the swapchain is created with [VkSwapchainCreateInfoKHR::preTransform](#) set to a value other than [VK\\_SURFACE\\_TRANSFORM\\_IDENTITY\\_BIT\\_KHR](#), should the rectangular region, [VkRectLayerKHR](#), be transformed to align with the [preTransform](#)?

**RESOLVED:** No. The rectangular region in [VkRectLayerKHR](#) should not be transformed. As such, it may not align with the extents of the swapchain's image(s). It is the responsibility of the presentation engine to transform the rectangular region. This matches the behavior of the Android presentation engine, which set the precedent.

## Version History

- Hans-Kristian Arntzen, Valve

## Description

[VK\\_KHR\\_maintenance10](#) adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

- New image format feature bits that indicate support for copying depth or stencil aspects using non-graphics queue families
- If [vkCmdSetSampleMaskEXT](#) is called with [pSampleMask](#) set to `NULL`, it is treated as if the mask has all bits set to `1`.
- Add [vkCmdEndRendering2KHR](#) as an extensible version of [vkCmdEndRendering](#)
- Add input attachment information to dynamic rendering
- Require that vertex inputs follow sRGB encoding when those formats are used, instead of being underspecified.
- Add a query to determine if sRGB images are resolved in nonlinear or linear space by default
- Add an optional feature to allow applications to override the default sRGB resolve behavior
- Add resolve mode and depth-stencil resolve support to [vkCmdResolveImage2](#) to bring it in-line with render pass attachment resolves

## New Commands

- [vkCmdEndRendering2KHR](#)

## New Structures

- [VkRenderingEndInfoKHR](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceMaintenance10FeaturesKHR](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceMaintenance10PropertiesKHR](#)
- Extending [VkRenderingAttachmentInfo](#):
  - [VkRenderingAttachmentFlagsInfoKHR](#)
- Extending [VkResolveImageInfo2](#):
  - [VkResolveImageModeInfoKHR](#)

## New Enums

## Description

[VK\\_KHR\\_maintenance11](#) adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Add D3D compatibility for mismatch between [Arrayed](#) in shaders and the arrayness of the underlying descriptor when the descriptor contains a single array layer
- Clarify the pipeline depth clipping state when the pipeline is created without [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_CLIP\\_ENABLE\\_EXT](#) being set and the [VkPipelineRasterizationDepthClipStateCreateInfoEXT](#) struct is not present
- Add [VK\\_SHADER\\_CREATE\\_INDEPENDENT\\_SETS\\_BIT\\_KHR](#) to enable shader object functionality to mimic [VK\\_PIPELINE\\_LAYOUT\\_CREATE\\_INDEPENDENT\\_SETS\\_BIT\\_EXT](#) used for graphics pipeline libraries, including a new pipeline layout creation flag [VK\\_PIPELINE\\_LAYOUT\\_CREATE\\_NO\\_TASK\\_SHADER\\_BIT\\_KHR](#) to ensure pipeline layouts used with shader objects also created with [VK\\_SHADER\\_CREATE\\_NO\\_TASK\\_SHADER\\_BIT\\_EXT](#) to be compatible
- Allow [queueFamilyIndexCount](#) of 1 in [VkBufferCreateInfo](#), [VkPhysicalDeviceImageDrmFormatModifierInfoEXT](#), and [VkImageCreateInfo](#), when [sharingMode](#) is [VK\\_SHARING\\_MODE\\_CONCURRENT](#).
- Require [minImageTransferGranularity](#) to be (1,1,1) even on transfer-only queues and add [optimalImageTransferGranularity](#) queue family property to communicate the performance bump for copies not aligned to the optimal granularity.
- When copying between a buffer and an image on a transfer-only queue, do not require [bufferOffset](#) to be a multiple of 4.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceMaintenance11FeaturesKHR](#)
- Extending [VkQueueFamilyProperties2](#):
  - [VkQueueFamilyOptimalImageTransferGranularityPropertiesKHR](#)

## New Enum Constants

- [VK\\_KHR\\_MAINTENANCE\\_11\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_MAINTENANCE\\_11\\_SPEC\\_VERSION](#)
- Extending [VkImageCreateFlagBits](#):
  - [VK\\_IMAGE\\_CREATE\\_ALIAS\\_SINGLE\\_LAYER\\_DESCRIPTOR\\_BIT\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MAINTENANCE\\_11\\_FEATURES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_QUEUE\\_FAMILY\\_OPTIMAL\\_IMAGE\\_TRANSFER\\_GRANULARITY\\_PROPERTIES\\_KHR](#)

If `VK_EXT_shader_object` is supported:

- Extending `VkPipelineLayoutCreateFlagBits`:
  - `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT`
- Extending `VkShaderCreateFlagBitsEXT`:
  - `VK_SHADER_CREATE_INDEPENDENT_SETS_BIT_KHR`

If `VK_EXT_shader_object` and `VK_EXT_mesh_shader` or `VK_NV_mesh_shader` is supported:

- Extending `VkPipelineLayoutCreateFlagBits`:
  - `VK_PIPELINE_LAYOUT_CREATE_NO_TASK_SHADER_BIT_KHR`

If `VK_KHR_extended_flags` is supported:

- Extending `VkImageCreateFlagBits2KHR`:
  - `VK_IMAGE_CREATE_2_ALIAS_SINGLE_LAYER_DESCRIPTOR_BIT_KHR`

## Issues

None.

## Description

[VK\\_KHR\\_maintenance7](#) adds a collection of minor features, none of which would warrant an entire extension of their own.

The proposed new features are as follows:

- Add a property query to determine if a framebuffer writes to depth or stencil aspect does not trigger a write access in the sibling aspect. For example, this allows sampling stencil aspect as a texture while rendering to the sibling depth attachment and vice-versa given appropriate image layouts.
- Add a way to query information regarding the underlying devices in environments where the Vulkan implementation is provided through layered implementations. For example, running on Mesa/Venus, driver ID is returned as [VK\\_DRIVER\\_ID\\_MESA\\_VENUS](#), but it can be necessary to know what the real driver under the hood is. The new [VkPhysicalDeviceLayeredApiPropertiesKHR](#) structure can be used to gather information regarding layers underneath the top-level physical device.
- Promote [VK\\_RENDERING\\_CONTENTS\\_INLINE\\_BIT\\_EXT](#) and [VK\\_SUBPASS\\_CONTENTS\\_INLINE\\_AND\\_SECONDARY\\_COMMAND\\_BUFFERS\\_EXT](#) to KHR
- Add a limit to report the maximum total count of dynamic uniform buffers and dynamic storage buffers that can be included in a pipeline layout.
- Require that for an unsigned integer query, the 32-bit result value **must** be equal to the 32 least significant bits of the equivalent 64-bit result value.
- Add query for robust access support when using fragment shading rate attachments

## Description

[VK\\_KHR\\_maintenance8](#) adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Allow copies between depth/stencil and “matching” color attachments
- Allow [dstCache](#) in [vkMergePipelineCaches](#) to be implicitly synchronized.
- Require src/dst sync scopes to work when doing queue family ownership transfers
- Support [Offset](#) (as an alternative to [ConstOffset](#)) image operand in texture sampling and fetch operations
- Use the SPIR-V definition of [OpSRem](#) and [OpSMod](#), making these operations produce well-defined results for negative operands
- Loosen layer restrictions when blitting from 3D images to other image types
- Add space for an additional 64 access flags for use with [VkMemoryBarrier2](#), [VkBufferMemoryBarrier2](#), and [VkImageMemoryBarrier2](#)

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceMaintenance8FeaturesKHR](#)
- Extending [VkSubpassDependency2](#), [VkBufferMemoryBarrier2](#), [VkImageMemoryBarrier2](#), [VkMemoryBarrier2](#), [VkMemoryRangeBarrierKHR](#):

## Description

[VK\\_KHR\\_maintenance9](#) adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Support `VkDevice` with no queues. These can be used as effectively an offline compiler to prepopulate pipeline caches, without expensive queue creation or internal memory allocations.
- Allow `vkCmdSetEvent2` to not provide a dependency, providing `vkCmdSetEvent`-style usage using enums from `VK_KHR_synchronization2`
- Add a `VkQueryPoolCreateFlagBits::VK_QUERY_POOL_CREATE_RESET_BIT_KHR` flag to create a query pool with all queries initialized to the reset state.
- Allow any integer bit width for specific bit-wise operations.
- Add a property to enable sparse support with `VK_EXT_image_2d_view_of_3d`.
- Add a property to indicate the implementation will return (0,0,0,0) or (0,0,0,1) to vertex shaders that read unassigned attributes.
- The effects of image memory barriers and image layout transitions on 3D images created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` are scoped to the slices specified by the user-provided `VkImageSubresourceRange`.
- Queue family ownership transfers are no longer required for buffers and linear images, and a new physical device queue family property is exposed to indicate whether queue family ownership transfers are required for optimal images.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceMaintenance9FeaturesKHR`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceMaintenance9PropertiesKHR`
- Extending `VkQueueFamilyProperties2`:
  - `VkQueueFamilyOwnershipTransferPropertiesKHR`

## New Enums

- `VkDefaultVertexAttributeValueKHR`

## New Enum Constants

- `VK_KHR_MAINTENANCE_9_EXTENSION_NAME`
- `VK_KHR_MAINTENANCE_9_SPEC_VERSION`
- Extending `VkDependencyFlagBits`:
  - `VK_DEPENDENCY_ASYMMETRIC_EVENT_BIT_KHR`
- Extending `VkQueryPoolCreateFlagBits`:
  - `VK_QUERY_POOL_CREATE_RESET_BIT_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_9_FEATURES_KHR`

- [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MAINTENANCE\\_9\\_PROPERTIES\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_QUEUE\\_FAMILY\\_OWNERSHIP\\_TRANSFER\\_PROPERTIES\\_KHR](#)

## Description

When adding transparency to a ray traced scene, an application can choose between further tessellating the geometry or using an any-hit shader to allow the ray through specific parts of the geometry. These options have the downside of either significantly increasing memory consumption or adding runtime overhead to run shader code in the middle of traversal, respectively.

This extension adds the ability to add an *opacity micromap* to geometry when building an acceleration structure. The opacity micromap compactly encodes opacity information which can be read by the implementation to mark parts of triangles as opaque or transparent. The format is externally visible to allow the application to compress its internal geometry and surface representations into the compressed format ahead of time. The compressed format subdivides each triangle into a set of subtriangles, each of which can be assigned either two or four opacity values. These opacity values can control if a ray hitting that subtriangle is treated as an opaque hit, complete miss, or possible hit, depending on the controls described in [Ray Opacity Micromap](#).

This extension provides:

- the ability to create micromaps as [VkAccelerationStructureKHR](#) structures
- the ability to build, copy, and query micromaps with the acceleration structure functions, and

- a structure to extend [VkAccelerationStructureGeometryTrianglesDataKHR](#) to attach a micromap to the geometry of the acceleration structure.

Traversing an acceleration structure that contains opacity micromap data requires the shader or pipeline to declare that it does so. Traversal performed by [pipeline trace ray](#) instructions requires the pipeline to have been created with [VK\\_PIPELINE\\_CREATE\\_RAY\\_TRACING\\_OPACITY\\_MICROMAP\\_BIT\\_KHR](#). Traversal performed by [OpRayQueryProceedKHR](#) instead requires the shader to declare the [OpacityMicromapIdKHR](#) execution mode, added by [SPV\\_KHR\\_opacity\\_micromap](#), with its specialization-constant operand equal to [VK\\_TRUE](#). See [Ray Opacity Micromap](#) for details.

## Reference Code

The following code illustrates an algorithm that converts the barycentric coordinates inside a triangle into an OMM array index:

```
uint32_t BarycentricsToSpaceFillingCurveIndex(float u, float v, uint32_t level)
{
    u = clamp(u, 0.0f, 1.0f);
    v = clamp(v, 0.0f, 1.0f);

    uint32_t iu, iv, iw;

    // Quantize barycentric coordinates
    float fu = u * (1u << level);
    float fv = v * (1u << level);

    iu = (uint32_t)fu;
    iv = (uint32_t)fv;

    float uf = fu - float(iu);
    float vf = fv - float(iv);
```

```

if (iu >= (1u << level)) iu = (1u << level) - 1u;
if (iv >= (1u << level)) iv = (1u << level) - 1u;

uint32_t iuv = iu + iv;

if (iuv >= (1u << level))
    iu -= iuv - (1u << level) + 1u;

iw = ~(iu + iv);

if (uf + vf >= 1.0f && iuv < (1u << level) - 1u) --iw;

uint32_t b0 = ~(iu ^ iw);
b0 &= ((1u << level) - 1u);
uint32_t t = (iu ^ iv) & b0;

uint32_t f = t;
f ^= f >> 1u;
f ^= f >> 2u;
f ^= f >> 4u;
f ^= f >> 8u;
uint32_t b1 = ((f ^ iu) & ~b0) | t;

// Interleave bits
b0 = (b0 | (b0 << 8u)) & 0x00ff00ffu;
b0 = (b0 | (b0 << 4u)) & 0xf0f0f0fu;
b0 = (b0 | (b0 << 2u)) & 0x33333333u;
b0 = (b0 | (b0 << 1u)) & 0x55555555u;
b1 = (b1 | (b1 << 8u)) & 0x00ff00ffu;
b1 = (b1 | (b1 << 4u)) & 0xf0f0f0fu;
b1 = (b1 | (b1 << 2u)) & 0x33333333u;
b1 = (b1 | (b1 << 1u)) & 0x55555555u;

return b0 | (b1 << 1u);
}

```

## Issues

(1) Is the build actually similar to an acceleration structure build?

- Resolved: The build should be much lighter-weight than an acceleration structure build

(2) Why does `VkMicromapUsageKHR` not have type/pNext?

- Resolved: There can be a very large number of these structures, so doubling the size of these can be significant memory consumption. Also, an application may be loading these directly from a file which is more compatible with it being a flat structure. The including structures are extensible and are probably a more suitable place to add extensibility.

(3) Why is there a SPIR-V extension?

- Resolved: There is a ray flag and an execution mode. To be consistent with how the existing ray tracing extensions work that these needs its own extension.

(4) Should there be indirect micromap build?

- Resolved: Not for now. There is more in-depth usage metadata required and it seems less likely that something like a GPU culling system would need to change the counts for a micromap.

(5) Should the feature struct be aliased with `VkPhysicalDeviceOpacityMicromapFeaturesEXT`?

- Resolved: No. This extension is not an exact promotion of `VK_EXT_opacity_micromap` and provides significantly different functionality.

(6) Should micromaps API be similar to the `VK_EXT_opacity_micromap`?

`VK_EXT_opacity_micromap` introduced almost an identical set of functionality for micromaps as acceleration structures. Should this promotion fold in micromaps as an acceleration structure type?

- Resolved: Yes. While this is significant API breakage from the EXT, it is a better design choice going forward and can eliminate significant API surface area if promoted in the future.

(7) Should micromaps support host commands?

- Resolved: No. Host commands are deprecated and not widely supported.

(8) Should `vkCreateAccelerationStructureKHR` be used to create micromaps?

This interface that uses `VkBuffer` to back micromaps is deprecated, but is still available for acceleration structure object creation.

- Resolved: No. Make a new entry point that uses a device address to back micromaps and other acceleration structures instead of a buffer. Eliminate the ability to provide a separate capture/replay address as well. Top-level acceleration structures **must** reference the device address that backs the bottom-level acceleration structures and implementations **must** not expose an indirect handle.

(9) Should `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT` be promoted from `VK_EXT_opacity_micromap` to this extension?

`VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_BIT_EXT` distinguished between replacing a micromap with one of a different shape (`VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_BIT_EXT`) and replacing one where the shape is identical and only the opacity values have changed (`DATA_UPDATE`). The `DATA_UPDATE` flag was correlated with the discardable micromap feature, where an implementation might embed micromap state directly in the acceleration structure and exploit the tighter constraint to avoid a full rebuild. However, the spec never required `DATA_UPDATE` to be restricted to discardable micromaps, and it was already legal to treat `DATA_UPDATE` identically to `UPDATE`.

- Resolved: No. The discardable micromap feature is not promoted to this extension, removing

the primary motivation for DATA\_UPDATE. No implementation identified a meaningful optimization from the stricter constraint beyond what UPDATE already provides, and no CTS coverage existed for either opacity micromap update flag in the EXT. Removing it is a pure API simplification with no functional loss. Applications must still perform a BLAS build update when opacity micromap data changes, even if only values and not structure have changed.

## Description

The `VK_KHR_performance_query` extension adds a mechanism to allow querying of performance counters for use in applications and by profiling tools.

Each queue family **may** expose counters that **can** be enabled on a queue of that family. We extend `VkQueryType` to add a new query type for performance queries, and chain a structure on `VkQueryPoolCreateInfo` to specify the performance queries to enable.

## New Commands

- `vkAcquireProfilingLockKHR`
- `vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR`
- `vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR`
- `vkReleaseProfilingLockKHR`

## New Structures

- `VkAcquireProfilingLockInfoKHR`
- `VkPerformanceCounterDescriptionKHR`
- `VkPerformanceCounterKHR`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDevicePerformanceQueryFeaturesKHR`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDevicePerformanceQueryPropertiesKHR`
- Extending `VkQueryPoolCreateInfo`:
  - `VkQueryPoolPerformanceCreateInfoKHR`
- Extending `VkSubmitInfo`, `VkSubmitInfo2`:
  - `VkPerformanceQuerySubmitInfoKHR`

## New Unions

- `VkPerformanceCounterResultKHR`

## New Enums

- `VkAcquireProfilingLockFlagBitsKHR`

- [VkPerformanceCounterDescriptionFlagBitsKHR](#)
- [VkPerformanceCounterScopeKHR](#)
- [VkPerformanceCounterStorageKHR](#)
- [VkPerformanceCounterUnitKHR](#)

## New Bitmasks

- [VkAcquireProfilingLockFlagsKHR](#)
- [VkPerformanceCounterDescriptionFlagsKHR](#)

## New Enum Constants

- [VK\\_KHR\\_PERFORMANCE\\_QUERY\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_PERFORMANCE\\_QUERY\\_SPEC\\_VERSION](#)
- Extending [VkQueryType](#):
  - [VK\\_QUERY\\_TYPE\\_PERFORMANCE\\_QUERY\\_KHR](#)
- Extending [VkStructureType](#):

  - [VK\\_STRUCTURE\\_TYPE\\_QUERY\\_POOL\\_PERFORMANCE\\_CREATE\\_INFO\\_KHR](#)

## Issues

1) Should this extension include a mechanism to begin a query in command buffer *A* and end the query in command buffer *B*?

**RESOLVED** No - queries are tied to command buffer creation and thus have to be encapsulated within a single command buffer.

2) Should this extension include a mechanism to begin and end queries globally on the queue, not using the existing command buffer commands?

**RESOLVED** No - for the same reasoning as the resolution of 1).

3) Should this extension expose counters that require multiple passes?

**RESOLVED** Yes - users should re-submit a command buffer with the same commands in it multiple times, specifying the pass to count as the query parameter in [VkPerformanceQuerySubmitInfoKHR](#).

4) How to handle counters across parallel workloads?

**RESOLVED** In the spirit of Vulkan, a counter description flag [VK\\_PERFORMANCE\\_COUNTER\\_DESCRIPTION\\_CONCURRENTLY\\_IMPACTED\\_BIT\\_KHR](#) denotes that the accuracy of a counter result is affected by parallel workloads.

5) How to handle secondary command buffers?

**RESOLVED** Secondary command buffers inherit any counter pass index specified in the parent primary command buffer. Note: this is no longer an issue after change from issue 10 resolution

6) What commands does the profiling lock have to be held for?

**RESOLVED** For any command buffer that is being queried with a performance query pool, the profiling lock **must** be held while that command buffer is in the *recording*, *executable*, or *pending state*.

7) Should we support [vkCmdCopyQueryPoolResults](#)?

**RESOLVED** Yes.

8) Should we allow performance queries to interact with multiview?

**RESOLVED** Yes, but the performance queries must be performed once for each pass per view.

9) Should a `queryCount > 1` be usable for performance queries?

**RESOLVED** Yes. Some vendors will have costly performance counter query pool creation, and would rather if a certain set of counters were to be used multiple times that a `queryCount > 1` can be used to amortize the instantiation cost.

10) Should we introduce an indirect mechanism to set the counter pass index?

**RESOLVED** Specify the counter pass index at submit time instead, to avoid requiring re-recording of command buffers when multiple counter passes are needed.

## Examples

The following example shows how to find what performance counters a queue family supports, setup a query pool to record these performance counters, how to add the query pool to the command buffer to record information, and how to get the results from the query pool.

```
// A previously created physical device
VkPhysicalDevice physicalDevice;

// One of the queue families our device supports
uint32_t queueFamilyIndex;

uint32_t counterCount;

// Get the count of counters supported
vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR(
    physicalDevice,
```

```

    queueFamilyIndex,
    &counterCount,
    NULL,
    NULL);

VkPerformanceCounterKHR* counters =
    malloc(sizeof(VkPerformanceCounterKHR) * counterCount);
VkPerformanceCounterDescriptionKHR* counterDescriptions =
    malloc(sizeof(VkPerformanceCounterDescriptionKHR) * counterCount);

// Get the counters supported
vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR(
    physicalDevice,
    queueFamilyIndex,
    &counterCount,
    counters,
    counterDescriptions);

// Try to enable the first 8 counters
uint32_t enabledCounters[8];

const uint32_t enabledCounterCount = min(counterCount, 8);

for (uint32_t i = 0; i < enabledCounterCount; i++) {
    enabledCounters[i] = i;
}

// A previously created device that had the performanceCounterQueryPools feature
// set to VK_TRUE
VkDevice device;

VkQueryPoolPerformanceCreateInfoKHR performanceQueryCreateInfo = {
    .sType = VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_CREATE_INFO_KHR,
    .pNext = NULL,

    // Specify the queue family that this performance query is performed on
    .queueFamilyIndex = queueFamilyIndex,

    // The number of counters to enable
    .counterIndexCount = enabledCounterCount,

    // The array of indices of counters to enable
    .pCounterIndices = enabledCounters
};

// Get the number of passes our counters will require.
uint32_t numPasses;

vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR(
    physicalDevice,

```

```

&performanceQueryCreateInfo,
&numPasses);

VkQueryPoolCreateInfo queryPoolCreateInfo = {
    .sType = VK_STRUCTURE_TYPE_QUERY_POOL_CREATE_INFO,
    .pNext = &performanceQueryCreateInfo,
    .flags = 0,
    // Using our new query type here
    .queryType = VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR,
    .queryCount = 1,
    .pipelineStatistics = 0
};

VkQueryPool queryPool;

VkResult result = vkCreateQueryPool(
    device,
    &queryPoolCreateInfo,
    NULL,
    &queryPool);

assert(VK_SUCCESS == result);

// A queue from queueFamilyIndex
VkQueue queue;

// A command buffer we want to record counters on
VkCommandBuffer commandBuffer;

VkCommandBufferBeginInfo commandBufferBeginInfo = {
    .sType = VK_STRUCTURE_TYPE_COMMAND_BUFFER_BEGIN_INFO,
    .pNext = NULL,
    .flags = 0,
    .pInheritanceInfo = NULL
};

VkAcquireProfilingLockInfoKHR lockInfo = {
    .sType = VK_STRUCTURE_TYPE_ACQUIRE_PROFILING_LOCK_INFO_KHR,
    .pNext = NULL,
    .flags = 0,
    .timeout = UINT64_MAX // Wait forever for the lock
};

// Acquire the profiling lock before we record command buffers
// that will use performance queries

result = vkAcquireProfilingLockKHR(device, &lockInfo);

assert(VK_SUCCESS == result);

result = vkBeginCommandBuffer(commandBuffer, &commandBufferBeginInfo);

```

```

assert(VK_SUCCESS == result);

vkCmdResetQueryPool(
    commandBuffer,
    queryPool,
    0,
    1);

vkCmdBeginQuery(
    commandBuffer,

## Description

This extension provides a method to obtain binary data associated with individual pipelines such that applications can manage caching themselves instead of using `VkPipelineCache` objects.

## New Object Types

- [VkPipelineBinaryKHR](#)

## New Commands

- [vkCreatePipelineBinariesKHR](#)

## Description

When a pipeline is created, its state and shaders are compiled into zero or more device-specific executables, which are used when executing commands against that pipeline. This extension adds a mechanism to query properties and statistics about the different executables produced by the pipeline compilation process. This is intended to be used by debugging and performance tools to allow them to provide more detailed information to the user. Certain compile time shader statistics provided through this extension may be useful to developers for debugging or performance analysis.

  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_EXECUTABLE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_EXECUTABLE\\_INTERNAL\\_REPRESENTATION\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_EXECUTABLE\\_PROPERTIES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_EXECUTABLE\\_STATISTIC\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_INFO\\_KHR](#)

## Issues

1) What should we call the pieces of the pipeline which are produced by the compilation process and about which you can query properties and statistics?

**RESOLVED:** Call them “executables”. The name “binary” was used in early drafts of the extension but it was determined that “pipeline binary” could have a fairly broad meaning (such as a binary serialized form of an entire pipeline) and was too big of a namespace for the very specific needs of this extension.

## Description

A pipeline library is a special pipeline that cannot be bound, instead it defines a set of shaders and shader groups which can be linked into other pipelines. This extension defines the infrastructure for pipeline libraries, but does not specify the creation or usage of pipeline libraries. This is left to additional dependent extensions.

## New Structures

## Description

This extension is based on the [VK\\_EXT\\_pipeline\\_library\\_group\\_handles](#) extension.

When using pipeline libraries in ray tracing pipelines, a library might get linked into different pipelines in an incremental way. An application can have a strategy where a ray tracing pipeline is comprised of  $N$  pipeline libraries and is later augmented by creating a new pipeline with  $N + 1$  libraries. Without this extension, all group handles must be re-queried as the group handle is tied to the pipeline, not the library. This is problematic for applications which aim to decouple construction of record buffers and the linkage of ray tracing pipelines.

To aid in this, this extension enables support for querying group handles directly from pipeline libraries. Group handles obtained from a library **must** remain bitwise identical in any `VkPipeline` that links to the library.

With this feature, the extension also improves compatibility with DXR 1.1 `AddToStateObject()`, which guarantees that group handles returned remain bitwise identical between parent and child pipelines. In addition, querying group handles from `COLLECTION` objects is also supported with that API.

## New Structures

## Description

This extension allows applications to control whether devices that expose the [VK\\_KHR\\_portability\\_subset](#) extension are included in the results of physical device enumeration. Since devices which support the [VK\\_KHR\\_portability\\_subset](#) extension are not fully conformant Vulkan implementations, the Vulkan loader does not report those devices unless the application explicitly asks for them. This prevents applications which may not be aware of non-conformant devices from accidentally using them, as any device which supports the [VK\\_KHR\\_portability\\_subset](#) extension mandates that the extension must be enabled if that device is used.

This extension is implemented in the loader.

## Description

This extension is based on [VK\\_EXT\\_present\\_mode\\_fifo\\_latest\\_ready](#) and provides equivalent functionality.

This extension adds a new present mode, [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_KHR](#).

This tear-free present mode behaves much like [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#), except that each vertical blanking period dequeues consecutive present requests until the latest ready is found to update the current image.

While this seems similar in concept to [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#), the fundamental difference is that the processing of the present requests is done during vblank. From the application perspective, this means for example, that in a flip-based model, a single vblank **may** cause multiple swapchain images to be released at once, while [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#) **may** continuously be releasing images as new requests become ready.

This additional present mode is useful when using a time-based present API.

## New Structures

## Description

This device extension allows an application that uses the [VK\\_KHR\\_swapchain](#) extension to wait for present operations to complete. An application can use this to monitor and control the pacing of the application by managing the number of outstanding images yet to be presented.

## New Commands

- [vkWaitForPresentKHR](#)

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDevicePresentWaitFeaturesKHR](#)

## New Enum Constants

- [VK\\_KHR\\_PRESENT\\_WAIT\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_PRESENT\\_WAIT\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PRESENT\\_WAIT\\_FEATURES\\_KHR](#)

## Issues

1) When does the wait finish?

**RESOLVED.** The wait will finish when the present is visible to the user. There is no requirement for any precise timing relationship between the presentation of the image to the user, but implementations **should** signal the wait as close as possible to the presentation of the first pixel in the new image to the user.

2) Should this use fences or other existing synchronization mechanism.

**RESOLVED.** Because display and rendering are often implemented in separate drivers, this extension will provide a separate synchronization API.

3) Should this extension share present identification with other extensions?

**RESOLVED.** Yes. A new extension, [VK\\_KHR\\_present\\_id](#), should be created to provide a shared structure for presentation identifiers.

4) What happens when presentations complete out of order wrt calls to `vkQueuePresent`? This could happen if the semaphores for the presentations were ready out of order.

**OPTION A:** Require that when a `PresentId` is set that the driver ensure that images are always presented in the order of calls to `vkQueuePresent`.

**OPTION B:** Finish both waits when the earliest present completes. This will complete the later present wait earlier than the actual presentation. This should be the easiest to implement as the driver need only track the largest present ID completed. This is also the 'natural' consequence of interpreting the existing `vkWaitForPresentKHR` specification.

**OPTION C:** Finish both waits when both have completed. This will complete the earlier presentation later than the actual presentation time. This is allowed by the current specification as there is no precise timing requirement for when the `presentId` value is updated. This requires slightly more complexity in the driver as it will need to track all outstanding `presentId` values.

## Description

This device extension allows an application that uses the [VK\\_KHR\\_swapchain](#) extension to wait for present operations to complete. An application can use this to monitor and control the pacing of the application by managing the number of outstanding images yet to be presented.

## New Commands

- [vkWaitForPresent2KHR](#)

## New Structures

- [VkPresentWait2InfoKHR](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDevicePresentWait2FeaturesKHR](#)
- Extending [VkSurfaceCapabilities2KHR](#):
  - [VkSurfaceCapabilitiesPresentWait2KHR](#)

## New Enum Constants

- [VK\\_KHR\\_PRESENT\\_WAIT\\_2\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_PRESENT\\_WAIT\\_2\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PRESENT\\_WAIT\\_2\\_FEATURES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PRESENT\\_WAIT\\_2\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_CAPABILITIES\\_PRESENT\\_WAIT\\_2\\_KHR](#)
- Extending [VkSwapchainCreateFlagBitsKHR](#):
  - [VK\\_SWAPCHAIN\\_CREATE\\_PRESENT\\_WAIT\\_2\\_BIT\\_KHR](#)

## Issues

1) When does the wait finish?

**RESOLVED.** The wait request will complete when the timeout expires, or after the corresponding presentation request has either taken effect within the presentation engine or has been replaced without presentation. Additionally, a wait may complete immediately if the swapchain becomes out of date.

In circumstances outside the application's control, this wait may be particularly long. For example, a user session may have the display locked and switched off for multiple days. During this time, the latest image presented through the WSI will never be presented to the user (because nothing is being presented), or replaced (because nothing newer has been queued by the application). Each operating system may have a separate mechanism to inform the application of states such as these, however it is out of scope of the Vulkan WSI.

There is no requirement for any precise timing relationship between the presentation of the image

to the user and the end of the wait.

This extension is not intended for time-to-light estimation, which is better solved by a separate extension dedicated to present-timing feedback for audio/visual/input synchronization.

2) Should this use fences or other existing synchronization mechanism?

**RESOLVED.** `VkFence` is a legacy primitive. Building a new API around a legacy primitive is undesirable.

Other existing synchronization mechanisms may lack a platform-provided framework for sharing synchronization objects between display and render drivers.

For these reasons, this extension will provide a separate synchronization API.

3) Should this extension share present identification with other extensions?

**RESOLVED.** Yes. A new extension, `VK_KHR_present_id2`, should be created to provide a shared structure for presentation identifiers.

4) What happens when presentations complete out of order with respect to calls to `vkQueuePresent`? This could happen if the semaphores for the presentations were ready out of order.

**OPTION A:** Require that when a `PresentId` is set that the driver ensure that images are always presented in the order of calls to `vkQueuePresent`.

**OPTION B:** Finish both waits when the earliest present completes. This will complete the later present wait earlier than the actual presentation. This should be the easiest to implement as the driver need only track the largest present ID completed. This is also the 'natural' consequence of interpreting the existing `vkWaitForPresentKHR` specification.

**OPTION C:** Finish both waits when both have completed. This will complete the earlier presentation later than the actual presentation time. This is allowed by the current specification as there is no precise timing requirement for when the `presentId` value is updated. This requires slightly more complexity in the driver as it will need to track all outstanding `presentId` values.

**OPTION D:** The order of completion between outstanding `vkWaitForPresent2KHR` calls is always undefined. However, a `VK_SUCCESS` return value in `VkPresentWait2InfoKHR::presentId` implies that future calls to `vkWaitForPresent2KHR` where `VkPresentWait2InfoKHR::presentId` is less than or equal to `N` will complete immediately.

**RESOLVED. OPTION D:** This option ensures implementations do not need to create complex internal queues to generate signals in the right order.

5) Should this extension deviate from `VK_KHR_present_wait` and require the presentation engine to provide the `presentId` values?

**RESOLVED.** No. This extension is intended to be a bugfix of `VK_KHR_present_wait`, and existing low-latency apis require an application provided id. At least on some platforms, a mapping mechanism would be required to translate between presentation engine and application ids. This exceeds the

intended scope of this extension.

When needed in the future, we can introduce an independent presentation engine driven id and a mechanism for mapping presentation engine ids to application provided ids.

## **Examples**

## **Version History**

- Revision 1, 2022-10-05 (Daniel Stone)
  - Repurposed from VK\_KHR\_present\_wait to be based on surface capabilities
  - Reworded wait finish section to avoid time-to-light

## Description

Rasterization has been the dominant method to produce interactive graphics, but increasing performance of graphics hardware has made ray tracing a viable option for interactive rendering. Being able to integrate ray tracing with traditional rasterization makes it easier for applications to incrementally add ray traced effects to existing applications or to do hybrid approaches with rasterization for primary visibility and ray tracing for secondary queries.

Ray queries are available to all shader types, including graphics, compute, and ray tracing pipelines. Ray queries are not able to launch additional shaders, instead returning traversal results to the calling shader.

This extension adds support for the following SPIR-V extension in Vulkan:

- `SPV_KHR_ray_query`

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceRayQueryFeaturesKHR](#)

## New Enum Constants

- `VK_KHR_RAY_QUERY_EXTENSION_NAME`
- `VK_KHR_RAY_QUERY_SPEC_VERSION`
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_RAY\\_QUERY\\_FEATURES\\_KHR](#)

## New SPIR-V Capabilities

- `RayQueryKHR`
- `RayTraversalPrimitiveCullingKHR`

## Sample Code

Example of ray query in a GLSL shader, illustrating how to use ray queries to determine whether a given position (at ray origin) is in shadow or not, by tracing a ray towards the light, and checking for any intersections with geometry occluding the light.

```
rayQueryEXT rq;

rayQueryInitializeEXT(rq, accStruct, gl_RayFlagsTerminateOnFirstHitEXT, cullMask,
origin, tMin, direction, tMax);

// Traverse the acceleration structure and store information about the first
intersection (if any)
rayQueryProceedEXT(rq);
```

```
if (rayQueryGetIntersectionTypeEXT(rq, true) ==  
    gl_RayQueryCommittedIntersectionNoneEXT) {  
    // Not in shadow  
}
```

## Issues

(1) What are the changes between the public provisional (VK\_KHR\_ray\_tracing v8) release and the final (VK\_KHR\_acceleration\_structure v11 / VK\_KHR\_ray\_query v1) release?

- refactor VK\_KHR\_ray\_tracing into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - VK\_KHR\_acceleration\_structure (for acceleration structure operations)
  - VK\_KHR\_ray\_tracing\_pipeline (for ray tracing pipeline and shader stages)
  - VK\_KHR\_ray\_query (for ray queries in existing shader stages)
- Update SPIRV capabilities to use RayQueryKHR
- extension is no longer provisional

## Version History

- Revision 1, 2020-11-12 (Mathieu Robart, Daniel Koch, Andrew Garrard)
  - Decomposition of the specification, from VK\_KHR\_ray\_tracing to VK\_KHR\_ray\_query (#1918,!3912)
  - update to use RayQueryKHR SPIR-V capability
  - add numerical limits for ray parameters (#2235,!3960)
  - relax formula for ray intersection candidate determination (#2322,!4080)
  - restrict traces to TLAS (#2239,!4141)
  - require HitT to be in ray interval for OpRayQueryGenerateIntersectionKHR (#2359,!4146)
  - add ray query shader stages for AS read bit (#2407,!4203)

## Description

[VK\\_KHR\\_ray\\_tracing\\_maintenance1](#) adds a collection of minor ray tracing features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Adds support for the [SPV\\_KHR\\_ray\\_cull\\_mask](#) SPIR-V extension in Vulkan. This extension provides access to built-in [CullMaskKHR](#) shader variable which contains the value of the [OpTrace\\* Cull Mask](#) parameter. This new shader variable is accessible in the intersection, any-hit, closest hit and miss shader stages.
- Adds support for a new pipeline stage and access mask built on top of [VK\\_KHR\\_synchronization2](#):
  - [VK\\_PIPELINE\\_STAGE\\_2\\_ACCELERATION\\_STRUCTURE\\_COPY\\_BIT\\_KHR](#) to specify execution of [acceleration structure copy](#) commands
  - [VK\\_ACCESS\\_2\\_SHADER\\_BINDING\\_TABLE\\_READ\\_BIT\\_KHR](#) to specify read access to a [shader binding table](#) in any shader pipeline stage
- Adds two new acceleration structure query parameters:
  - [VK\\_QUERY\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_SIZE\\_KHR](#) to query the acceleration structure size on the device timeline
  - [VK\\_QUERY\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_SERIALIZATION\\_BOTTOM\\_LEVEL\\_POINTER\\_S\\_KHR](#) to query the number of bottom level acceleration structure pointers for serialization
- Adds an optional new indirect ray tracing dispatch command, [vkCmdTraceRaysIndirect2KHR](#), which sources the shader binding table parameters as well as the dispatch dimensions from the device. The [rayTracingPipelineTraceRaysIndirect2](#) feature indicates whether this functionality is supported.

## New Commands

If [VK\\_KHR\\_ray\\_tracing\\_pipeline](#) is supported:

- [vkCmdTraceRaysIndirect2KHR](#)

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR](#)

If [VK\\_KHR\\_ray\\_tracing\\_pipeline](#) is supported:

- [VkTraceRaysIndirectCommand2KHR](#)

## New Enum Constants

- [VK\\_KHR\\_RAY\\_TRACING\\_MAINTENANCE\\_1\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_RAY\\_TRACING\\_MAINTENANCE\\_1\\_SPEC\\_VERSION](#)
- Extending [VkQueryType](#):
  - [VK\\_QUERY\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_SERIALIZATION\\_BOTTOM\\_LEVEL\\_POINTER\\_S\\_KHR](#)
  - [VK\\_QUERY\\_TYPE\\_ACCELERATION\\_STRUCTURE\\_SIZE\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_RAY\\_TRACING\\_MAINTENANCE\\_1\\_FEATURES\\_KHR](#)

If [VK\\_KHR\\_synchronization2](#) or Vulkan Version 1.3 and [VK\\_KHR\\_ray\\_tracing\\_pipeline](#) is supported:

- Extending [VkAccessFlagBits2](#):
  - [VK\\_ACCESS\\_2\\_SHADER\\_BINDING\\_TABLE\\_READ\\_BIT\\_KHR](#)

If [VK\\_EXT\\_device\\_generated\\_commands](#) is supported:

- Extending [VkIndirectCommandsTokenTypeEXT](#):
  - [VK\\_INDIRECT\\_COMMANDS\\_TOKEN\\_TYPE\\_TRACE\\_RAYS2\\_EXT](#)

If [VK\\_KHR\\_synchronization2](#) or Vulkan Version 1.3 is supported:

- Extending [VkPipelineStageFlagBits2](#):
  - [VK\\_PIPELINE\\_STAGE\\_2\\_ACCELERATION\\_STRUCTURE\\_COPY\\_BIT\\_KHR](#)

## New Built-In Variables

- [CullMaskKHR](#)

## New SPIR-V Capabilities

- [RayCullMaskKHR](#)

## Description

Rasterization has been the dominant method to produce interactive graphics, but increasing performance of graphics hardware has made ray tracing a viable option for interactive rendering. Being able to integrate ray tracing with traditional rasterization makes it easier for applications to incrementally add ray traced effects to existing applications or to do hybrid approaches with rasterization for primary visibility and ray tracing for secondary queries.

To enable ray tracing, this extension adds a few different categories of new functionality:

- A new ray tracing pipeline type with new shader domains: ray generation, intersection, any-hit, closest hit, miss, and callable
- A shader binding indirection table to link shader groups with acceleration structure items
- Ray tracing commands which initiate the ray pipeline traversal and invocation of the various new shader domains depending on which traversal conditions are met

This extension adds support for the following SPIR-V extension in Vulkan:

- `SPV_KHR_ray_tracing`

## New Commands

- `VK_SHADER_STAGE_INTERSECTION_BIT_KHR`
- `VK_SHADER_STAGE_MISS_BIT_KHR`
- `VK_SHADER_STAGE_RAYGEN_BIT_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_PROPERTIES_KHR`
  - `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_CREATE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_RAY_TRACING_PIPELINE_INTERFACE_CREATE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_RAY_TRACING_SHADER_GROUP_CREATE_INFO_KHR`

### New or Modified Built-In Variables

- `LaunchIdKHR`
- `LaunchSizeKHR`
- `WorldRayOriginKHR`
- `WorldRayDirectionKHR`
- `ObjectRayOriginKHR`
- `ObjectRayDirectionKHR`
- `RayTminKHR`
- `RayTmaxKHR`
- `InstanceCustomIndexKHR`
- `InstanceId`
- `ObjectToWorldKHR`
- `WorldToObjectKHR`
- `HitKindKHR`
- `IncomingRayFlagsKHR`
- `RayGeometryIndexKHR`
- `(modified)PrimitiveId`

### New SPIR-V Capabilities

- `RayTracingKHR`
- `RayTraversalPrimitiveCullingKHR`

### Issues

(1) How does this extension differ from `VK_NV_ray_tracing`?

## DISCUSSION:

The following is a summary of the main functional differences between VK\_KHR\_ray\_tracing\_pipeline and VK\_NV\_ray\_tracing:

- added support for indirect ray tracing ([vkCmdTraceRaysIndirectKHR](#))
- uses SPV\_KHR\_ray\_tracing instead of SPV\_NV\_ray\_tracing
  - refer to KHR SPIR-V enums instead of NV SPIR-V enums (which are functionally equivalent and aliased to the same values).
  - added [RayGeometryIndexKHR](#) built-in
- removed `vkCompileDeferredNV` compilation functionality and replaced with [deferred host operations](#) interactions for ray tracing
- added [VkPhysicalDeviceRayTracingPipelineFeaturesKHR](#) structure
- extended [VkPhysicalDeviceRayTracingPipelinePropertiesKHR](#) structure
  - renamed `maxRecursionDepth` to `maxRayRecursionDepth` and it has a minimum of 1 instead of 31
  - require `shaderGroupHandleSize` to be 32 bytes
  - added `maxRayDispatchInvocationCount`, `shaderGroupHandleAlignment` and `maxRayHitAttributeSize`
- reworked geometry structures so they could be better shared between device, host, and indirect builds
- changed SBT parameters to a structure and added size ([VkStridedDeviceAddressRegionKHR](#))
- add parameter for requesting memory requirements for host and/or device build
- added [pipeline library](#) support for ray tracing
- added [watertightness guarantees](#)
- added no-null-shader pipeline flags (`VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_*_SHADERS_BIT_KHR`)
- added [memory model interactions](#) with ray tracing and define how subgroups work and can be repacked

(3) What are the changes between the public provisional (VK\_KHR\_ray\_tracing v8) release and the internal provisional (VK\_KHR\_ray\_tracing v9) release?

- Require Vulkan 1.1 and SPIR-V 1.4
- Added interactions with Vulkan 1.2 and [VK\\_KHR\\_vulkan\\_memory\\_model](#)
- added creation time capture and replay flags
  - added [VK\\_PIPELINE\\_CREATE\\_RAY\\_TRACING\\_SHADER\\_GROUP\\_HANDLE\\_CAPTURE\\_REPLAY\\_BIT\\_KHR](#) to [VkPipelineCreateFlagBits](#)
- replace `VkStridedBufferRegionKHR` with [VkStridedDeviceAddressRegionKHR](#) and change [vkCmdTraceRaysKHR](#), [vkCmdTraceRaysIndirectKHR](#), to take these for the shader binding table and use device addresses instead of buffers.
- require the shader binding table buffers to have the `VK_BUFFER_USAGE_RAY_TRACING_BIT_KHR` set

- make `VK_KHR_pipeline_library` an interaction instead of required extension
- rename the `libraries` member of `VkRayTracingPipelineCreateInfoKHR` to `pLibraryInfo` and make it a pointer
- make `VK_KHR_deferred_host_operations` an interaction instead of a required extension (later went back on this)
- added explicit stack size management for ray tracing pipelines
  - removed the `maxCallableSize` member of `VkRayTracingPipelineInterfaceCreateInfoKHR`
  - added the `pDynamicState` member to `VkRayTracingPipelineCreateInfoKHR`
  - added `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state for ray tracing pipelines
  - added `vkGetRayTracingShaderGroupStackSizeKHR` and `vkCmdSetRayTracingPipelineStackSizeKHR` commands
  - added `VkShaderGroupShaderKHR` enum
- Added `maxRayDispatchInvocationCount` limit to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`
- Added `shaderGroupHandleAlignment` property to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`
- Added `maxRayHitAttributeSize` property to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`
- Clarify deferred host ops for pipeline creation
  - `VkDeferredOperationKHR` is now a top-level parameter for `vkCreateRayTracingPipelinesKHR`
  - removed `VkDeferredOperationInfoKHR` structure
  - change deferred host creation/return parameter behavior such that the implementation can modify such parameters until the deferred host operation completes
  - `VK_KHR_deferred_host_operations` is required again

(4) What are the changes between the internal provisional (VK\_KHR\_ray\_tracing v9) release and the final (VK\_KHR\_acceleration\_structure v11 / VK\_KHR\_ray\_tracing\_pipeline v1) release?

- refactor `VK_KHR_ray_tracing` into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - `VK_KHR_acceleration_structure` (for acceleration structure operations)
  - `VK_KHR_ray_tracing_pipeline` (for ray tracing pipeline and shader stages)
  - `VK_KHR_ray_query` (for ray queries in existing shader stages)
- Require `Volatile` for the following builtins in the ray generation, closest hit, miss, intersection, and callable shader stages:
  - `SubgroupSize`, `SubgroupLocalInvocationId`, `SubgroupEqMask`, `SubgroupGeMask`, `SubgroupGtMask`, `SubgroupLeMask`, `SubgroupLtMask`
  - `SMIDNV`, `WarpIDNV`

- clarify buffer usage flags for ray tracing
  - `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` is added as an alias of `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` and is required on shader binding table buffers
  - `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` is used in `VK_KHR_acceleration_structure` for `scratchData`
- rename `maxRecursionDepth` to `maxRayPipelineRecursionDepth` (pipeline creation) and `maxRayRecursionDepth` (limit) to reduce confusion
- Add queryable `maxRayHitAttributeSize` limit and rename members of `VkRayTracingPipelineInterfaceCreateInfoKHR` to `maxPipelineRayPayloadSize` and `maxPipelineRayHitAttributeSize` for clarity
- Update SPIRV capabilities to use `RayTracingKHR`
- extension is no longer provisional
- define synchronization requirements for indirect trace rays and indirect buffer

(5) This extension adds `gl_InstanceID` for the intersection, any-hit, and closest hit shaders, but in `KHR_vulkan_glsl`, `gl_InstanceID` is replaced with `gl_InstanceIndex`. Which should be used for Vulkan in this extension?

**RESOLVED:** This extension uses `gl_InstanceID` and maps it to `InstanceId` in SPIR-V. It is acknowledged that this is different than other shader stages in Vulkan. There are two main reasons for the difference here:

- symmetry with `gl_PrimitiveID` which is also available in these shaders
- there is no “baseInstance” relevant for these shaders, and so ID makes it more obvious that this is zero-based.

(6) Why is `VK_KHR_pipeline_library` an interaction instead of a required dependency, particularly when the “Device Extensions” section says it is required to be supported anyhow?

**RESOLVED:** If the `VK_KHR_pipeline_library` extension were a required dependency, then every application would need to enable the extension whether or not they actually want to use the pipeline library functionality. Developers found this to be annoying and unfriendly behavior. We do wish to require all **implementations** to support it though, and thus it is listed as a requirement in device extensions section.

## Sample Code

Example ray generation GLSL shader

```
#version 450 core
#extension GL_EXT_ray_tracing : require
layout(set = 0, binding = 0, rgba8) uniform image2D image;
layout(set = 0, binding = 1) uniform accelerationStructureEXT as;
layout(location = 0) rayPayloadEXT float payload;

void main()
```

```

{
    vec4 col = vec4(0, 0, 0, 1);

    vec3 origin = vec3(float(gl_LaunchIDEXT.x)/float(gl_LaunchSizeEXT.x), float
(gl_LaunchIDEXT.y)/float(gl_LaunchSizeEXT.y), 1.0);
    vec3 dir = vec3(0.0, 0.0, -1.0);

    traceRayEXT(as, 0, 0xff, 0, 1, 0, origin, 0.0, dir, 1000.0, 0);

    col.y = payload;

    imageStore(image, ivec2(gl_LaunchIDEXT.xy), col);
}

```

## Version History

- Revision 1, 2020-11-12 (Mathieu Robart, Daniel Koch, Eric Werness, Tobias Hector)
  - Decomposition of the specification, from VK\_KHR\_ray\_tracing to VK\_KHR\_ray\_tracing\_pipeline (#1918,!3912)
  - require certain subgroup and sm\_shader\_builtin shader builtins to be decorated as volatile in the ray generation, closest hit, miss, intersection, and callable stages (#1924,!3903,!3954)
  - clarify buffer usage flags for ray tracing (#2181,!3939)
  - rename maxRecursionDepth to maxRayPipelineRecursionDepth and maxRayRecursionDepth (#2203,!3937)
  - add queryable maxRayHitAttributeSize and rename members of VkRayTracingPipelineInterfaceCreateInfoKHR (#2102,!3966)
  - update to use RayTracingKHR SPIR-V capability
  - add VUs for matching hit group type against geometry type (#2245,!3994)
  - require RayTMaxKHR be volatile in intersection shaders (#2268,!4030)
  - add numerical limits for ray parameters (#2235,!3960)
  - fix SBT indexing rules for device addresses (#2308,!4079)
  - relax formula for ray intersection candidate determination (#2322,!4080)
  - add more details on ShaderRecordBufferKHR variables (#2230,!4083)
  - clarify valid bits for InstanceCustomIndexKHR (GLSL/GLSL#19,!4128)
  - allow at most one IncomingRayPayloadKHR, IncomingCallableDataKHR, and HitAttributeKHR (!4129)
  - add minimum for maxShaderGroupStride (#2353,!4131)
  - require VK\_KHR\_pipeline\_library extension to be supported (#2348,!4135)
  - clarify meaning of 'geometry index' (#2272,!4137)
  - restrict traces to TLAS (#2239,!4141)
  - add note about maxPipelineRayPayloadSize (#2383,!4172)

- do not require raygen shader in pipeline libraries (!4185)
- define sync for indirect trace rays and indirect buffer (#2407,!4208)

## Description

[VK\\_KHR\\_ray\\_tracing\\_position\\_fetch](#) adds the ability to fetch the vertex positions in the shader from a hit triangle as stored in the acceleration structure.

An application adds [VK\\_BUILD\\_ACCELERATION\\_STRUCTURE\\_ALLOW\\_DATA\\_ACCESS\\_BIT\\_KHR](#) to the acceleration structure at build time. Then, if the hit is a triangle geometry, the shader (any-hit or closest hit for ray pipelines or using ray query) **can** fetch the three, three-component vertex positions in object space, of the triangle which was hit.

- Jeff Bolz, NVIDIA

## Description

This extension is based on the [VK\\_EXT\\_robustness2](#) extension. This extension adds stricter requirements for how out of bounds reads and writes are handled. Most accesses **must** be tightly bounds-checked, out of bounds writes **must** be discarded, out of bound reads **must** return zero. Rather than allowing multiple possible (0,0,0,x) vectors, the out of bounds values are treated as zero, and then missing components are inserted based on the format as described in [Component Substitution](#) and [vertex input attribute extraction](#).

These additional requirements **may** be expensive on some implementations, and should only be enabled when truly necessary.

This extension also adds support for “null descriptors”, where `VK_NULL_HANDLE` can be used instead of a valid handle. Accesses to null descriptors have well-defined behavior, and do not rely on robustness.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceRobustness2FeaturesKHR`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceRobustness2PropertiesKHR`

## New Enum Constants

- `VK_KHR_ROBUSTNESS_2_EXTENSION_NAME`
- `VK_KHR_ROBUSTNESS_2_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_PROPERTIES_KHR`

## Issues

1. Why do `VkPhysicalDeviceRobustness2PropertiesKHR::robustUniformBufferAccessSizeAlignment` and `VkPhysicalDeviceRobustness2PropertiesKHR::robustStorageBufferAccessSizeAlignment` exist?

**RESOLVED:** Some implementations cannot efficiently tightly bounds-check all buffer accesses. Rather, the size of the bound range is padded to some power of two multiple, up to 256 bytes for uniform buffers and up to 4 bytes for storage buffers, and that padded size is bounds-checked. This is sufficient to implement D3D-like behavior, because D3D only allows binding whole uniform buffers or ranges that are a multiple of 256 bytes, and D3D raw and structured buffers only support 32-bit accesses.

## Interactions and External Dependencies

- This extension provides API support for [GL\\_ARB\\_shader\\_clock](#) and [GL\\_EXT\\_shader\\_realtime\\_clock](#)

## Contributors

- Aaron Hagan, AMD
- Daniel Koch, NVIDIA

## Description

This extension advertises the SPIR-V [ShaderClockKHR](#) capability for Vulkan, which allows a shader to query a real-time or monotonically incrementing counter at the subgroup level or across the device level. The two valid SPIR-V scopes for [OpReadClockKHR](#) are [Subgroup](#) and [Device](#).

When using GLSL source-based shading languages, the `clockRealtime*EXT()` timing functions map to the `OpReadClockKHR` instruction with a scope of `Device`, and the `clock*ARB()` timing functions map to the `OpReadClockKHR` instruction with a scope of `Subgroup`.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceShaderClockFeaturesKHR`

## New Enum Constants

- `VK_KHR_SHADER_CLOCK_EXTENSION_NAME`

## Description

This extension allows applications to use the SPV\_KHR\_fma extension to obtain correctly-rounded results for fused-multiply add (fma) operations.

Fused-multiply add is a building block of many high-precision numerical functions. It provides better accuracy than separate operations, because of the removal of the intermediate rounding step, and often costs less than the pair of separate operations.

Vulkan currently exposes an fma primitive that can give the reduced cost, but it is not guaranteed to be a fused operation, so the accuracy cannot be relied on. For applications which require the

high accuracy, therefore, the operation must be emulated or the algorithm changed so as not to require fma. This is often vastly more costly, even though fma is supported in much of the underlying hardware.

## Interactions and External Dependencies

- Requires SPIR-V 1.3.
- This extension requires [SPV\\_KHR\\_maximal\\_reconvergence](#)

## Contributors

- Alan Baker, Google

## Description

This extension allows the use of the [SPV\\_KHR\\_maximal\\_reconvergence](#) SPIR-V extension in shader modules. [SPV\\_KHR\\_maximal\\_reconvergence](#) provides stronger guarantees that diverged subgroups will reconverge. These guarantees should match shader author intuition about divergence and

reconvergence of invocations based on the structure of the code in the HLL.

Developers should utilize this extension if they require stronger guarantees about reconvergence than either the core spec or `SPV_KHR_subgroup_uniform_control_flow`. This extension will define the rules that govern how invocations diverge and reconverge in a way that should match developer intuition. It allows robust programs to be written relying on subgroup operations and other tangled instructions.

## Description

This extension allows the use of the [SPV\\_KHR\\_relaxed\\_extended\\_instruction](#) extension in SPIR-V shader modules.

It adds a new SPIR-V instruction, which allows some usage of forward references in non-semantic

instruction sets. This extensions interacts with the `SPV_KHR_non_semantic_info` extension, hence with `VK_KHR_shader_non_semantic_info`.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceShaderRelaxedExtendedInstructionFeaturesKHR`

## New Enum Constants

- `VK_KHR_SHADER_RELAXED_EXTENDED_INSTRUCTION_EXTENSION_NAME`
- `VK_KHR_SHADER_RELAXED_EXTENDED_INSTRUCTION_SPEC_VERSION`
- Extending `VkStructureType`:

- Shahbaz Youssefi, Google
- Tobias Hector, AMD

This extension adds Vulkan support for the [SPV\\_KHR\\_untyped\\_pointers](#) SPIR-V extension. It provides an alternative to strongly-typed pointers. Untyped pointers allow shader authors to reinterpret data

accessed through memory and atomic instructions versus the data type declared in the variable without extra conversion instructions. Untyped pointers also provide an efficient translation from templated load/store operations in high-level languages and simplify shaders that support operations, but not storage, on smaller data types (e.g. 16-bit floating-point types).

## New Structures

## Description

This extension extends [VK\\_KHR\\_swapchain](#) to enable creation of a shared presentable image. This allows the application to use the image while the presentation engine is accessing it, in order to reduce the latency between rendering and presentation.

## New Commands

- [vkGetSwapchainStatusKHR](#)

## New Structures

- Extending [VkSurfaceCapabilities2KHR](#):
  - [VkSharedPresentSurfaceCapabilitiesKHR](#)

## New Enum Constants

- [VK\\_KHR\\_SHARED\\_PRESENTABLE\\_IMAGE\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_SHARED\\_PRESENTABLE\\_IMAGE\\_SPEC\\_VERSION](#)
- Extending [VkImageLayout](#):
  - [VK\\_IMAGE\\_LAYOUT\\_SHARED\\_PRESENT\\_KHR](#)
- Extending [VkPresentModeKHR](#):
  - [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#)
  - [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_SHARED\\_PRESENT\\_SURFACE\\_CAPABILITIES\\_KHR](#)

## Issues

1) Should we allow a Vulkan WSI swapchain to toggle between normal usage and shared presentation usage?

**RESOLVED:** No. WSI swapchains are typically recreated with new properties instead of having their properties changed. This can also save resources, assuming that fewer images are needed for shared presentation, and assuming that most VR applications do not need to switch between normal and shared usage.

2) Should we have a query for determining how the presentation engine refresh is triggered?

**RESOLVED:** Yes. This is done via which presentation modes a surface supports.

3) Should the object representing a shared presentable image be an extension of a [VkSwapchainKHR](#) or a separate object?

**RESOLVED:** Extension of a swapchain due to overlap in creation properties and to allow common functionality between shared and normal presentable images and swapchains.

4) What should we call the extension and the new structures it creates?

**RESOLVED:** Shared presentable image / shared present.

5) Should the `minImageCount` and `presentMode` values of the [VkSwapchainCreateInfoKHR](#) be ignored, or required to be compatible values?

**RESOLVED:** `minImageCount` must be 1, and `presentMode` should be set to either [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#).

6) What should the layout of the shared presentable image be?

**RESOLVED:** After acquiring the shared presentable image, the application must transition it to the [VK\\_IMAGE\\_LAYOUT\\_SHARED\\_PRESENT\\_KHR](#) layout prior to it being used. After this initial transition, any image usage that was requested during swapchain creation **can** be performed on the image without layout transitions being performed.

7) Do we need a new API for the trigger to refresh new content?

**RESOLVED:** [vkQueuePresentKHR](#) to act as API to trigger a refresh, as will allow combination with other compatible extensions to [vkQueuePresentKHR](#).

8) How should an application detect a [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) error on a swapchain using the [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#) present mode?

**RESOLVED:** Introduce [vkGetSwapchainStatusKHR](#) to allow applications to query the status of a swapchain using a shared presentation mode.

9) What should subsequent calls to [vkQueuePresentKHR](#) for [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#) swapchains be defined to do?

**RESOLVED:** State that implementations may use it as a hint for updated content.

10) Can the ownership of a shared presentable image be transferred to a different queue?

**RESOLVED:** No. It is not possible to transfer ownership of a shared presentable image obtained from a swapchain created using [VK\\_SHARING\\_MODE\\_EXCLUSIVE](#) after it has been presented.

11) How should [vkQueueSubmit](#) behave if a command buffer uses an image from a [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) swapchain?

**RESOLVED:** `vkQueueSubmit` is expected to return the `VK_ERROR_DEVICE_LOST` error.

12) Can Vulkan provide any guarantee on the order of rendering, to enable beam chasing?

**RESOLVED:** This could be achieved via use of render passes to ensure strip rendering.

## Description

The `VK_KHR_surface` extension is an instance extension. It introduces `VkSurfaceKHR` objects, which abstract native platform surface or window objects for use with Vulkan. It also provides a way to determine whether a queue family in a physical device supports presenting to particular surface.

Separate extensions for each platform provide the mechanisms for creating `VkSurfaceKHR` objects, but once created they may be used in this and other platform-independent extensions, in particular the `VK_KHR_swapchain` extension.

## New Object Types

- `VkSurfaceKHR`

## New Commands

- `vkDestroySurfaceKHR`

## New Enums

- `VkColorSpaceKHR`
- `VkCompositeAlphaFlagBitsKHR`
- `VkPresentModeKHR`
- `VkSurfaceTransformFlagBitsKHR`

## New Bitmasks

- `VkCompositeAlphaFlagsKHR`
- `VkSurfaceTransformFlagsKHR`

## New Enum Constants

- `VK_KHR_SURFACE_EXTENSION_NAME`
- `VK_KHR_SURFACE_SPEC_VERSION`
- Extending `VkObjectType`:

- [VK\\_OBJECT\\_TYPE\\_SURFACE\\_KHR](#)
- Extending [VkResult](#):
  - [VK\\_ERROR\\_NATIVE\\_WINDOW\\_IN\\_USE\\_KHR](#)
  - [VK\\_ERROR\\_SURFACE\\_LOST\\_KHR](#)

## Examples

### NOTE

The example code for the [VK\\_KHR\\_surface](#) and [VK\\_KHR\\_swapchain](#) extensions was removed from the appendix after revision 1.0.29. This WSI example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: <https://github.com/KhronosGroup/Vulkan-Tools/blob/main/cube/cube.c>).

## Issues

1) Should this extension include a method to query whether a physical device supports presenting to a specific window or native surface on a given platform?

**RESOLVED:** Yes. Without this, applications would need to create a device instance to determine whether a particular window can be presented to. Knowing that a device supports presentation to a platform in general is not sufficient, as a single machine might support multiple seats, or instances of the platform that each use different underlying physical devices. Additionally, on some platforms, such as the X Window System, different drivers and devices might be used for different windows depending on which section of the desktop they exist on.

2) Should the [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#), [vkGetPhysicalDeviceSurfaceFormatsKHR](#), and [vkGetPhysicalDeviceSurfacePresentModesKHR](#) functions be in this extension and operate on physical devices, rather than being in [VK\\_KHR\\_swapchain](#) (i.e. device extension) and being dependent on [VkDevice](#)?

**RESOLVED:** Yes. While it might be useful to depend on [VkDevice](#) (and therefore on enabled extensions and features) for the queries, Vulkan was released only with the [VkPhysicalDevice](#) versions. Many cases can be resolved by a Valid Usage statement. The following extensible queries are also available to allow additional input parameters:

- [vkGetPhysicalDeviceSurfacePresentModes2EXT](#)
- [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#)
- [vkGetPhysicalDeviceSurfaceFormats2KHR](#)

3) Should Vulkan support Xlib or XCB as the API for accessing the X Window System platform?

**RESOLVED:** Both. XCB is a more modern and efficient API, but Xlib usage is deeply ingrained in many applications and likely will remain in use for the foreseeable future. Not all drivers necessarily need to support both, but including both as options in the core specification will probably encourage support, which should in turn ease adoption of the Vulkan API in older codebases. Additionally, the performance improvements possible with XCB likely will not have a measurable impact on the performance of Vulkan presentation and other minimal window system

interactions defined here.

4) Should the GBM platform be included in the list of platform enums?

**RESOLVED:** Deferred, and will be addressed with a platform-specific extension to be written in the future.

## Version History

- Revision 1, 2015-05-20 (James Jones)
  - Initial draft, based on LunarG KHR spec, other KHR specs, patches attached to bugs.
- Revision 2, 2015-05-22 (Ian Elliott)
  - Created initial Description section.
  - Removed query for whether a platform requires the use of a queue for presentation, since it was decided that presentation will always be modeled as being part of the queue.
  - Fixed typos and other minor mistakes.
- Revision 3, 2015-05-26 (Ian Elliott)
  - Improved the Description section.
- Revision 4, 2015-05-27 (James Jones)
  - Fixed compilation errors in example code.
- Revision 5, 2015-06-01 (James Jones)
  - Added issues 1 and 2 and made related spec updates.
- Revision 6, 2015-06-01 (James Jones)
  - Merged the platform type mappings table previously removed from VK\_KHR\_swapchain with the platform description table in this spec.
  - Added issues 3 and 4 documenting choices made when building the initial list of native platforms supported.
- Revision 7, 2015-06-11 (Ian Elliott)
  - Updated table 1 per input from the KHR TSG.
  - Updated issue 4 (GBM) per discussion with Daniel Stone. He will create a platform-specific extension sometime in the future.
- Revision 8, 2015-06-17 (James Jones)
  - Updated enum-extending values using new convention.
  - Fixed the value of VK\_SURFACE\_PLATFORM\_INFO\_TYPE\_SUPPORTED\_KHR.
- Revision 9, 2015-06-17 (James Jones)
  - Rebased on Vulkan API version 126.
- Revision 10, 2015-06-18 (James Jones)
  - Marked issues 2 and 3 resolved.
- Revision 11, 2015-06-23 (Ian Elliott)

- Examples now show use of function pointers for extension functions.
- Eliminated extraneous whitespace.
- Revision 12, 2015-07-07 (Daniel Rakos)
  - Added error section describing when each error is expected to be reported.
  - Replaced the term “queue node index” with “queue family index” in the spec as that is the agreed term to be used in the latest version of the core header and spec.
  - Replaced `bool32_t` with `VkBool32`.
- Revision 13, 2015-08-06 (Daniel Rakos)
  - Updated spec against latest core API header version.
- Revision 14, 2015-08-20 (Ian Elliott)
  - Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  - Switched from “revision” to “version”, including use of the `VK_MAKE_VERSION` macro in the header file.
  - Did miscellaneous cleanup, etc.
- Revision 15, 2015-08-20 (Ian Elliott—porting a 2015-07-29 change from James Jones)
  - Moved the surface transform enums here from `VK_WSI_swapchain` so they could be reused by `VK_WSI_display`.
- Revision 16, 2015-09-01 (James Jones)
  - Restore single-field revision number.
- Revision 17, 2015-09-01 (James Jones)
  - Fix example code compilation errors.
- Revision 18, 2015-09-26 (Jesse Hall)
  - Replaced `VkSurfaceDescriptionKHR` with the `VkSurfaceKHR` object, which is created via layered extensions. Added `VkDestroySurfaceKHR`.
- Revision 19, 2015-09-28 (Jesse Hall)
  - Renamed from `VK_EXT_KHR_swapchain` to `VK_EXT_KHR_surface`.
- Revision 20, 2015-09-30 (Jeff Vigil)
  - Add error result `VK_ERROR_SURFACE_LOST_KHR`.
- Revision 21, 2015-10-15 (Daniel Rakos)
  - Updated the resolution of issue #2 and include the surface capability queries in this extension.
  - Renamed `SurfaceProperties` to `SurfaceCapabilities` as it better reflects that the values returned are the capabilities of the surface on a particular device.
  - Other minor cleanup and consistency changes.
- Revision 22, 2015-10-26 (Ian Elliott)
  - Renamed from `VK_EXT_KHR_surface` to `VK_KHR_surface`.

- Revision 23, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to `vkDestroySurfaceKHR`.
- Revision 24, 2015-11-10 (Jesse Hall)
  - Removed `VkSurfaceTransformKHR`. Use `VkSurfaceTransformFlagBitsKHR` instead.
  - Rename `VkSurfaceCapabilitiesKHR` member `maxImageArraySize` to `maxImageArrayLayers`.
- Revision 25, 2016-01-14 (James Jones)
  - Moved `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR` from the `VK_KHR_android_surface` to the `VK_KHR_surface` extension.
- 2016-08-23 (Ian Elliott)
  - Update the example code, to not have so many characters per line, and to split out a new example to show how to obtain function pointers.
- 2016-08-25 (Ian Elliott)
  - A note was added at the beginning of the example code, stating that it will be removed from future versions of the appendix.

## Description

This extension is based off the [VK\\_EXT\\_surface\\_maintenance1](#) extension.

[VK\\_KHR\\_surface\\_maintenance1](#) adds a collection of window system integration features that were intentionally left out or overlooked in the original [VK\\_KHR\\_surface](#) extension.

The new features are as follows:

- Allow querying number of min/max images from a surface for a particular presentation mode.
- Allow querying a surface's scaled presentation capabilities.
- Allow querying a surface for the set of presentation modes which can be easily switched between without requiring swapchain recreation.

## New Structures

## Description

This extension extends [VkSurfaceCapabilities2KHR](#), providing applications a way to query whether swapchains **can** be created with the [VK\\_SWAPCHAIN\\_CREATE\\_PROTECTED\\_BIT\\_KHR](#) flag set.

Vulkan 1.1 added (optional) support for protect memory and protected resources including buffers ([VK\\_BUFFER\\_CREATE\\_PROTECTED\\_BIT](#)), images ([VK\\_IMAGE\\_CREATE\\_PROTECTED\\_BIT](#)), and swapchains ([VK\\_SWAPCHAIN\\_CREATE\\_PROTECTED\\_BIT\\_KHR](#)). However, on implementations which support multiple windowing systems, not all window systems **may** be able to provide a protected display path.

This extension provides a way to query if a protected swapchain created for a surface (and thus a specific windowing system) **can** be displayed on screen. It extends the existing [VkSurfaceCapabilities2KHR](#) structure with a new [VkSurfaceProtectedCapabilitiesKHR](#) structure from which the application **can** obtain information about support for protected swapchain creation through [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#).

## New Structures

## Description

The [VK\\_KHR\\_swapchain](#) extension is the device-level companion to the [VK\\_KHR\\_surface](#) extension. It introduces [VkSwapchainKHR](#) objects, which provide the ability to present rendering results to a surface.

## New Object Types

- [VkSwapchainKHR](#)

## New Commands

- [vkAcquireNextImageKHR](#)
- [vkCreateSwapchainKHR](#)
- [vkDestroySwapchainKHR](#)
- [vkGetSwapchainImagesKHR](#)
- [vkQueuePresentKHR](#)

If [Vulkan Version 1.1](#) is supported:

- [vkAcquireNextImage2KHR](#)
- [vkGetDeviceGroupPresentCapabilitiesKHR](#)
- [vkGetDeviceGroupSurfacePresentModesKHR](#)
- [vkGetPhysicalDevicePresentRectanglesKHR](#)

## New Structures

- [VkPresentInfoKHR](#)
- [VkSwapchainCreateInfoKHR](#)

If [Vulkan Version 1.1](#) is supported:

- [VkAcquireNextImageInfoKHR](#)
- [VkDeviceGroupPresentCapabilitiesKHR](#)

- Extending [VkBindImageMemoryInfo](#):
  - [VkBindImageMemorySwapchainInfoKHR](#)
- Extending [VkImageCreateInfo](#):
  - [VkImageSwapchainCreateInfoKHR](#)
- Extending [VkPresentInfoKHR](#):
  - [VkDeviceGroupPresentInfoKHR](#)
- Extending [VkSwapchainCreateInfoKHR](#):
  - [VkDeviceGroupSwapchainCreateInfoKHR](#)

## New Enums

- [VkSwapchainCreateFlagBitsKHR](#)

If [Vulkan Version 1.1](#) is supported:

- [VkDeviceGroupPresentModeFlagBitsKHR](#)

## New Bitmasks

- [VkSwapchainCreateFlagsKHR](#)

If [Vulkan Version 1.1](#) is supported:

- [VkDeviceGroupPresentModeFlagsKHR](#)

## New Enum Constants

- [VK\\_KHR\\_SWAPCHAIN\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_SWAPCHAIN\\_SPEC\\_VERSION](#)
- Extending [VkImageLayout](#):
  - [VK\\_IMAGE\\_LAYOUT\\_PRESENT\\_SRC\\_KHR](#)
- Extending [VkObjectType](#):
  - [VK\\_OBJECT\\_TYPE\\_SWAPCHAIN\\_KHR](#)
- Extending [VkResult](#):
  - [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#)
  - [VK\\_SUBOPTIMAL\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PRESENT\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_SWAPCHAIN\\_CREATE\\_INFO\\_KHR](#)

If [Vulkan Version 1.1](#) is supported:

- Extending [VkStructureType](#):

- [VK\\_STRUCTURE\\_TYPE\\_ACQUIRE\\_NEXT\\_IMAGE\\_INFO\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_BIND\\_IMAGE\\_MEMORY\\_SWAPCHAIN\\_INFO\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_GROUP\\_PRESENT\\_CAPABILITIES\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_GROUP\\_PRESENT\\_INFO\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_GROUP\\_SWAPCHAIN\\_CREATE\\_INFO\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_IMAGE\\_SWAPCHAIN\\_CREATE\\_INFO\\_KHR](#)
- Extending [VkSwapchainCreateFlagBitsKHR](#):
  - [VK\\_SWAPCHAIN\\_CREATE\\_PROTECTED\\_BIT\\_KHR](#)
  - [VK\\_SWAPCHAIN\\_CREATE\\_SPLIT\\_INSTANCE\\_BIND\\_REGIONS\\_BIT\\_KHR](#)

## Issues

1) Does this extension allow the application to specify the memory backing of the presentable images?

**RESOLVED:** No. Unlike standard images, the implementation will allocate the memory backing of the presentable image.

2) What operations are allowed on presentable images?

**RESOLVED:** This is determined by the image usage flags specified when creating the presentable image's swapchain.

3) Does this extension support MSAA presentable images?

**RESOLVED:** No. Presentable images are always single-sampled. Multi-sampled rendering must use regular images. To present the rendering results the application must manually resolve the multi-sampled image to a single-sampled presentable image prior to presentation.

4) Does this extension support stereo/multi-view presentable images?

**RESOLVED:** Yes. The number of views associated with a presentable image is determined by the [imageArrayLayers](#) specified when creating a swapchain. All presentable images in a given swapchain use the same array size.

5) Are the layers of stereo presentable images half-sized?

**RESOLVED:** No. The image extents always match those requested by the application.

6) Do the “present” and “acquire next image” commands operate on a queue? If not, do they need to include explicit semaphore objects to interlock them with queue operations?

**RESOLVED:** The present command operates on a queue. The image ownership operation it represents happens in order with other operations on the queue, so no explicit semaphore object is required to synchronize its actions.

Applications may want to acquire the next image in separate threads from those in which they manage their queue, or in multiple threads. To make such usage easier, the acquire next image

command takes a semaphore to signal as a method of explicit synchronization. The application must later queue a wait for this semaphore before queuing execution of any commands using the image.

7) Does [vkAcquireNextImageKHR](#) block if no images are available?

**RESOLVED:** The command takes a timeout parameter. Special values for the timeout are 0, which makes the call a non-blocking operation, and [UINT64\\_MAX](#), which blocks indefinitely. Values in between will block for up to the specified time. The call will return when an image becomes available or an error occurs. It may, but is not required to, return before the specified timeout expires if the swapchain becomes out of date.

8) Can multiple presents be queued using one [vkQueuePresentKHR](#) call?

**RESOLVED:** Yes. [VkPresentInfoKHR](#) contains a list of swapchains and corresponding image indices that will be presented. When supported, all presentations queued with a single [vkQueuePresentKHR](#) call will be applied atomically as one operation. The same swapchain must not appear in the list more than once. Later extensions may provide applications stronger guarantees of atomicity for such present operations, and/or allow them to query whether atomic presentation of a particular group of swapchains is possible.

9) How do the presentation and acquire next image functions notify the application the targeted surface has changed?

**RESOLVED:** Two new result codes are introduced for this purpose:

- [VK\\_SUBOPTIMAL\\_KHR](#) - Presentation will still succeed, subject to the window resize behavior, but the swapchain is no longer configured optimally for the surface it targets. Applications should query updated surface information and recreate their swapchain at the next convenient opportunity.
- [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) - Failure. The swapchain is no longer compatible with the surface it targets. The application must query updated surface information and recreate the swapchain before presentation will succeed.

These can be returned by both [vkAcquireNextImageKHR](#) and [vkQueuePresentKHR](#).

10) Does the [vkAcquireNextImageKHR](#) command return a semaphore to the application via an output parameter, or accept a semaphore to signal from the application as an object handle parameter?

**RESOLVED:** Accept a semaphore to signal as an object handle. This avoids the need to specify whether the application must destroy the semaphore or whether it is owned by the swapchain, and if the latter, what its lifetime is and whether it can be reused for other operations once it is received from [vkAcquireNextImageKHR](#).

11) What types of swapchain queuing behavior should be exposed? Options include swap interval specification, mailbox/most recent vs. FIFO queue management, targeting specific vertical blank intervals or absolute times for a given present operation, and probably others. For some of these, whether they are specified at swapchain creation time or as per-present parameters needs to be decided as well.

**RESOLVED:** The base swapchain extension will expose 3 possible behaviors (of which, FIFO will always be supported):

- Immediate present: Does not wait for vertical blanking period to update the current image, likely resulting in visible tearing. No internal queue is used. Present requests are applied immediately.
- Mailbox queue: Waits for the next vertical blanking period to update the current image. No tearing should be observed. An internal single-entry queue is used to hold pending presentation requests. If the queue is full when a new presentation request is received, the new request replaces the existing entry, and any images associated with the prior entry become available for reuse by the application.
- FIFO queue: Waits for the next vertical blanking period to update the current image. No tearing should be observed. An internal queue containing `numSwapchainImages` - 1 entries is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during each vertical blanking period in which the queue is non-empty

Not all surfaces will support all of these modes, so the modes supported will be returned using a surface information query. All surfaces must support the FIFO queue mode. Applications must choose one of these modes up front when creating a swapchain. Switching modes can be accomplished by recreating the swapchain.

12) Can `VK_PRESENT_MODE_MAILBOX_KHR` provide non-blocking guarantees for `vkAcquireNextImageKHR`? If so, what is the proper criteria?

**RESOLVED:** Yes. The difficulty is not immediately obvious here. Naively, if at least 3 images are requested, mailbox mode should always have an image available for the application if the application does not own any images when the call to `vkAcquireNextImageKHR` was made. However, some presentation engines may have more than one “current” image, and would still need to block in some cases. The right requirement appears to be that if the application allocates the surface’s minimum number of images + 1 then it is guaranteed non-blocking behavior when it does not currently own any images.

13) Is there a way to create and initialize a new swapchain for a surface that has generated a `VK_SUBOPTIMAL_KHR` return code while still using the old swapchain?

**RESOLVED:** Not as part of this specification. This could be useful to allow the application to create an “optimal” replacement swapchain and rebuild all its command buffers using it in a background thread at a low priority while continuing to use the “suboptimal” swapchain in the main thread. It could probably use the same “atomic replace” semantics proposed for recreating direct-to-device swapchains without incurring a mode switch. However, after discussion, it was determined some platforms probably could not support concurrent swapchains for the same surface though, so this will be left out of the base KHR extensions. A future extension could add this for platforms where it is supported.

14) Should there be a special value for `VkSurfaceCapabilitiesKHR::maxImageCount` to indicate there are no practical limits on the number of images in a swapchain?

**RESOLVED:** Yes. There will often be cases where there is no practical limit to the number of images

in a swapchain other than the amount of available resources (i.e., memory) in the system. Trying to derive a hard limit from things like memory size is prone to failure. It is better in such cases to leave it to applications to figure such soft limits out via trial/failure iterations.

15) Should there be a special value for `VkSurfaceCapabilitiesKHR::currentExtent` to indicate the size of the platform surface is undefined?

**RESOLVED:** Yes. On some platforms (Wayland, for example), the surface size is defined by the images presented to it rather than the other way around.

16) Should there be a special value for `VkSurfaceCapabilitiesKHR::maxImageExtent` to indicate there is no practical limit on the surface size?

**RESOLVED:** No. It seems unlikely such a system would exist. 0 could be used to indicate the platform places no limits on the extents beyond those imposed by Vulkan for normal images, but this query could just as easily return those same limits, so a special “unlimited” value does not seem useful for this field.

17) How should surface rotation and mirroring be exposed to applications? How do they specify rotation and mirroring transforms applied prior to presentation?

**RESOLVED:** Applications can query both the supported and current transforms of a surface. Both are specified relative to the device’s “natural” display rotation and direction. The supported transforms indicate which orientations the presentation engine accepts images in. For example, a presentation engine that does not support transforming surfaces as part of presentation, and which is presenting to a surface that is displayed with a 90-degree rotation, would return only one supported transform bit: `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`. Applications must transform their rendering by the transform they specify when creating the swapchain in `preTransform` field.

18) Can surfaces ever not support `VK_MIRROR_NONE`? Can they support vertical and horizontal mirroring simultaneously? Relatedly, should `VK_MIRROR_NONE[_BIT]` be zero, or bit one, and should applications be allowed to specify multiple pre and current mirror transform bits, or exactly one?

**RESOLVED:** Since some platforms may not support presenting with a transform other than the native window’s current transform, and prerotation/mirroring are specified relative to the device’s natural rotation and direction, rather than relative to the surface’s current rotation and direction, it is necessary to express lack of support for no mirroring. To allow this, the `MIRROR_NONE` enum must occupy a bit in the flags. Since `MIRROR_NONE` must be a bit in the bitmask rather than a bitmask with no values set, allowing more than one bit to be set in the bitmask would make it possible to describe undefined transforms such as `VK_MIRROR_NONE_BIT | VK_MIRROR_HORIZONTAL_BIT`, or a transform that includes both “no mirroring” and “horizontal mirroring” simultaneously. Therefore, it is desirable to allow specifying all supported mirroring transforms using only one bit. The question then becomes, should there be a `VK_MIRROR_HORIZONTAL_AND_VERTICAL_BIT` to represent a simultaneous horizontal and vertical mirror transform? However, such a transform is equivalent to a 180 degree rotation, so presentation engines and applications that wish to support or use such a transform can express it through rotation instead. Therefore, 3 exclusive bits are sufficient to express all needed mirroring transforms.

19) Should support for sRGB be required?

**RESOLVED:** In the advent of UHD and HDR display devices, proper color space information is vital to the display pipeline represented by the swapchain. The application can discover the supported format/color-space pairs and select a pair most suited to its rendering needs. Currently only the sRGB color space is supported, future extensions may provide support for more color spaces. See issues 23 and 24.

20) Is there a mechanism to modify or replace an existing swapchain with one targeting the same surface?

**RESOLVED:** Yes. This is described above in the text.

21) Should there be a way to set prerotation and mirroring using native APIs when presenting using a Vulkan swapchain?

**RESOLVED:** Yes. The transforms that can be expressed in this extension are a subset of those possible on native platforms. If a platform exposes a method to specify the transform of presented images for a given surface using native methods and exposes more transforms or other properties for surfaces than Vulkan supports, it might be impossible, difficult, or inconvenient to set some of those properties using Vulkan KHR extensions and some using the native interfaces. To avoid overwriting properties set using native commands when presenting using a Vulkan swapchain, the application can set the pretransform to “inherit”, in which case the current native properties will be used, or if none are available, a platform-specific default will be used. Platforms that do not specify a reasonable default or do not provide native mechanisms to specify such transforms should not include the inherit bits in the `supportedTransforms` bitmask they return in `VkSurfaceCapabilitiesKHR`.

22) Should the content of presentable images be clipped by objects obscuring their target surface?

**RESOLVED:** Applications can choose which behavior they prefer. Allowing the content to be clipped could enable more efficient presentation methods on some platforms, but some applications might rely on the content of presentable images to perform techniques such as partial updates or motion blurs.

23) What is the purpose of specifying a `VkColorSpaceKHR` along with `VkFormat` when creating a swapchain?

**RESOLVED:** While Vulkan itself is color space agnostic (e.g. even the meaning of R, G, B, and A can be freely defined by the rendering application), the swapchain eventually will have to present the images on a display device with specific color reproduction characteristics. If any color space transformations are necessary before an image can be displayed, the color space of the presented image must be known to the swapchain. A swapchain will only support a restricted set of color format and -space pairs. This set can be discovered via `vkGetPhysicalDeviceSurfaceFormatsKHR`. As it can be expected that most display devices support the sRGB color space, at least one format/color-space pair has to be exposed, where the color space is `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR`.

24) How are sRGB formats and the sRGB color space related?

**RESOLVED:** While Vulkan exposes a number of SRGB texture formats, using such formats does not guarantee working in a specific color space. It merely means that the hardware can directly support applying the non-linear transfer functions defined by the sRGB standard color space when

reading from or writing to images of those formats. Still, it is unlikely that a swapchain will expose a `*_SRGB` format along with any color space other than `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR`.

On the other hand, non-`*_SRGB` formats will be very likely exposed in pair with a SRGB color space. This means, the hardware will not apply any transfer function when reading from or writing to such images, yet they will still be presented on a device with sRGB display characteristics. In this case the application is responsible for applying the transfer function, for instance by using shader math.

25) How are the lifetimes of surfaces and swapchains targeting them related?

**RESOLVED:** A surface must outlive any swapchains targeting it. A `VkSurfaceKHR` owns the binding of the native window to the Vulkan driver.

26) How can the application control the way the alpha component of swapchain images is treated by the presentation engine during compositing?

**RESOLVED:** We should add new enum values to allow the application to negotiate with the presentation engine on how to treat image alpha values during the compositing process. Since not all platforms can practically control this through the Vulkan driver, a value of `VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR` is provided like for surface transforms.

27) Is `vkCreateSwapchainKHR` the right function to return `VK_ERROR_NATIVE_WINDOW_IN_USE_KHR`, or should the various platform-specific `VkSurfaceKHR` factory functions catch this error earlier?

**RESOLVED:** For most platforms, the `VkSurfaceKHR` structure is a simple container holding the data that identifies a native window or other object representing a surface on a particular platform. For the surface factory functions to return this error, they would likely need to register a reference on the native objects with the native display server somehow, and ensure no other such references exist. Surfaces were not intended to be that heavyweight.

Swapchains are intended to be the objects that directly manipulate native windows and communicate with the native presentation mechanisms. Swapchains will already need to communicate with the native display server to negotiate allocation and/or presentation of presentable images for a native surface. Therefore, it makes more sense for swapchain creation to be the point at which native object exclusivity is enforced. Platforms may choose to enforce further restrictions on the number of `VkSurfaceKHR` objects that may be created for the same native window if such a requirement makes sense on a particular platform, but a global requirement is only sensible at the swapchain level.

## Examples

### NOTE

The example code for the `VK_KHR_surface` and `VK_KHR_swapchain` extensions was removed from the appendix after revision 1.0.29. This WSI example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: <https://github.com/KhronosGroup/Vulkan-Tools/blob/main/cube/cube.c>).

## Version History

- Revision 1, 2015-05-20 (James Jones)
  - Initial draft, based on LunarG KHR spec, other KHR specs, patches attached to bugs.
- Revision 2, 2015-05-22 (Ian Elliott)
  - Made many agreed-upon changes from 2015-05-21 KHR TSG meeting. This includes using only a queue for presentation, and having an explicit function to acquire the next image.
  - Fixed typos and other minor mistakes.
- Revision 3, 2015-05-26 (Ian Elliott)
  - Improved the Description section.
  - Added or resolved issues that were found in improving the Description. For example, `pSurfaceDescription` is used consistently, instead of sometimes using `pSurface`.
- Revision 4, 2015-05-27 (James Jones)
  - Fixed some grammatical errors and typos
  - Filled in the description of `imageUseFlags` when creating a swapchain.
  - Added a description of `swapInterval`.
  - Replaced the paragraph describing the order of operations on a queue for image ownership and presentation.
- Revision 5, 2015-05-27 (James Jones)
  - Imported relevant issues from the (abandoned) `vk_wsi_persistent_swapchain_images` extension.
  - Added issues 6 and 7, regarding behavior of the `acquire next image` and `present` commands with respect to queues.
  - Updated spec language and examples to align with proposed resolutions to issues 6 and 7.
- Revision 6, 2015-05-27 (James Jones)
  - Added issue 8, regarding atomic presentation of multiple swapchains
  - Updated spec language and examples to align with proposed resolution to issue 8.
- Revision 7, 2015-05-27 (James Jones)
  - Fixed compilation errors in example code, and made related spec fixes.
- Revision 8, 2015-05-27 (James Jones)
  - Added issue 9, and the related `VK_SUBOPTIMAL_KHR` result code.
  - Renamed `VK_OUT_OF_DATE_KHR` to `VK_ERROR_OUT_OF_DATE_KHR`.
- Revision 9, 2015-05-27 (James Jones)
  - Added inline proposed resolutions (marked with [JR]) to some XXX questions/issues. These should be moved to the issues section in a subsequent update if the proposals are adopted.
- Revision 10, 2015-05-28 (James Jones)
  - Converted `vkAcquireNextImageKHR` back to a non-queue operation that uses a

VkSemaphore object for explicit synchronization.

- Added issue 10 to determine whether `vkAcquireNextImageKHR` generates or returns semaphores, or whether it operates on a semaphore provided by the application.
- Revision 11, 2015-05-28 (James Jones)
  - Marked issues 6, 7, and 8 resolved.
  - Renamed `VkSurfaceCapabilityPropertiesKHR` to `VkSurfacePropertiesKHR` to better convey the mutable nature of the information it contains.
- Revision 12, 2015-05-28 (James Jones)
  - Added issue 11 with a proposed resolution, and the related issue 12.
  - Updated various sections of the spec to match the proposed resolution to issue 11.
- Revision 13, 2015-06-01 (James Jones)
  - Moved some structures to `VK_EXT_KHR_swap_chain` to resolve the specification's issues 1 and 2.
- Revision 14, 2015-06-01 (James Jones)
  - Added code for example 4 demonstrating how an application might make use of the two different present and acquire next image KHR result codes.
  - Added issue 13.
- Revision 15, 2015-06-01 (James Jones)
  - Added issues 14 - 16 and related spec language.
  - Fixed some spelling errors.
  - Added language describing the meaningful return values for `vkAcquireNextImageKHR` and `vkQueuePresentKHR`.
- Revision 16, 2015-06-02 (James Jones)
  - Added issues 17 and 18, as well as related spec language.
  - Removed some erroneous text added by mistake in the last update.
- Revision 17, 2015-06-15 (Ian Elliott)
  - Changed special value from “-1” to “0” so that the data types can be unsigned.
- Revision 18, 2015-06-15 (Ian Elliott)
  - Clarified the values of `VkSurfacePropertiesKHR::minImageCount` and the timeout parameter of the `vkAcquireNextImageKHR` function.
- Revision 19, 2015-06-17 (James Jones)
  - Misc. cleanup. Removed resolved inline issues and fixed typos.
  - Fixed clarification of `VkSurfacePropertiesKHR::minImageCount` made in version 18.
  - Added a brief “Image Ownership” definition to the list of terms used in the spec.
- Revision 20, 2015-06-17 (James Jones)
  - Updated enum-extending values using new convention.

- Revision 21, 2015-06-17 (James Jones)
  - Added language describing how to use VK\_IMAGE\_LAYOUT\_PRESENT\_SOURCE\_KHR.
  - Cleaned up an XXX comment regarding the description of which queues vkQueuePresentKHR can be used on.
- Revision 22, 2015-06-17 (James Jones)
  - Rebased on Vulkan API version 126.
- Revision 23, 2015-06-18 (James Jones)
  - Updated language for issue 12 to read as a proposed resolution.
  - Marked issues 11, 12, 13, 16, and 17 resolved.
  - Temporarily added links to the relevant bugs under the remaining unresolved issues.
  - Added issues 19 and 20 as well as proposed resolutions.
- Revision 24, 2015-06-19 (Ian Elliott)
  - Changed special value for VkSurfacePropertiesKHR::currentExtent back to “-1” from “0”. This value will never need to be unsigned, and “0” is actually a legal value.
- Revision 25, 2015-06-23 (Ian Elliott)
  - Examples now show use of function pointers for extension functions.
  - Eliminated extraneous whitespace.
- Revision 26, 2015-06-25 (Ian Elliott)
  - Resolved Issues 9 & 10 per KHR TSG meeting.
- Revision 27, 2015-06-25 (James Jones)
  - Added oldSwapchain member to VkSwapchainCreateInfoKHR.
- Revision 28, 2015-06-25 (James Jones)
  - Added the “inherit” bits to the rotation and mirroring flags and the associated issue 21.
- Revision 29, 2015-06-25 (James Jones)
  - Added the “clipped” flag to VkSwapchainCreateInfoKHR, and the associated issue 22.
  - Specified that presenting an image does not modify it.
- Revision 30, 2015-06-25 (James Jones)
  - Added language to the spec that clarifies the behavior of vkCreateSwapchainKHR() when the oldSwapchain field of VkSwapchainCreateInfoKHR is not NULL.
- Revision 31, 2015-06-26 (Ian Elliott)
  - Example of new VkSwapchainCreateInfoKHR members, “oldSwapchain” and “clipped”.
  - Example of using VkSurfacePropertiesKHR::{min|max}ImageCount to set VkSwapchainCreateInfoKHR::minImageCount.
  - Rename vkGetSurfaceInfoKHR()'s 4th parameter to “pDataSize”, for consistency with other functions.
  - Add macro with C-string name of extension (just to header file).

- Revision 32, 2015-06-26 (James Jones)
  - Minor adjustments to the language describing the behavior of “oldSwapchain”
  - Fixed the version date on my previous two updates.
- Revision 33, 2015-06-26 (Jesse Hall)
  - Add usage flags to `VkSwapchainCreateInfoKHR`
- Revision 34, 2015-06-26 (Ian Elliott)
  - Rename `vkQueuePresentKHR()`'s 2nd parameter to “`pPresentInfo`”, for consistency with other functions.
- Revision 35, 2015-06-26 (Faith Ekstrand)
  - Merged the `VkRotationFlagBitsKHR` and `VkMirrorFlagBitsKHR` enums into a single `VkSurfaceTransformFlagBitsKHR` enum.
- Revision 36, 2015-06-26 (Faith Ekstrand)
  - Added a `VkSurfaceTransformKHR` enum that is not a bitmask. Each value in `VkSurfaceTransformKHR` corresponds directly to one of the bits in `VkSurfaceTransformFlagBitsKHR` so transforming from one to the other is easy. Having a separate enum means that `currentTransform` and `preTransform` are now unambiguous by definition.
- Revision 37, 2015-06-29 (Ian Elliott)
  - Corrected one of the signatures of `vkAcquireNextImageKHR`, which had the last two parameters switched from what it is elsewhere in the specification and header files.
- Revision 38, 2015-06-30 (Ian Elliott)
  - Corrected a typo in description of the `vkGetSwapchainInfoKHR()` function.
  - Corrected a typo in header file comment for `VkPresentInfoKHR::sType`.
- Revision 39, 2015-07-07 (Daniel Rakos)
  - Added error section describing when each error is expected to be reported.
  - Replaced `bool32_t` with `VkBool32`.
- Revision 40, 2015-07-10 (Ian Elliott)
  - Updated to work with version 138 of the `vulkan.h` header. This includes declaring the `VkSwapchainKHR` type using the new `VK_DEFINE_NONDISP_HANDLE` macro, and no longer extending `VkObjectType` (which was eliminated).
- Revision 41 2015-07-09 (Mathias Heyer)
  - Added color space language.
- Revision 42, 2015-07-10 (Daniel Rakos)
  - Updated query mechanism to reflect the convention changes done in the core spec.
  - Removed “queue” from the name of `VK_STRUCTURE_TYPE_QUEUE_PRESENT_INFO_KHR` to be consistent with the established naming convention.
  - Removed reference to the no longer existing `VkObjectType` enum.

- Revision 43, 2015-07-17 (Daniel Rakos)
  - Added support for concurrent sharing of swapchain images across queue families.
  - Updated sample code based on recent changes
- Revision 44, 2015-07-27 (Ian Elliott)
  - Noted that support for VK\_PRESENT\_MODE\_FIFO\_KHR is required. That is ICDs may optionally support IMMEDIATE and MAILBOX, but must support FIFO.
- Revision 45, 2015-08-07 (Ian Elliott)
  - Corrected a typo in spec file (type and variable name had wrong case for the imageColorSpace member of the VkSwapchainCreateInfoKHR struct).
  - Corrected a typo in header file (last parameter in PFN\_vkGetSurfacePropertiesKHR was missing “KHR” at the end of type: VkSurfacePropertiesKHR).
- Revision 46, 2015-08-20 (Ian Elliott)
  - Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  - Switched from “revision” to “version”, including use of the VK\_MAKE\_VERSION macro in the header file.
  - Made improvements to several descriptions.
  - Changed the status of several issues, leaving no unresolved issues.
  - Resolved several TODOs, did miscellaneous cleanup, etc.
- Revision 47, 2015-08-20 (Ian Elliott—porting a 2015-07-29 change from James Jones)
  - Moved the surface transform enums to VK\_WSI\_swapchain so they could be reused by VK\_WSI\_display.
- Revision 48, 2015-09-01 (James Jones)
  - Various minor cleanups.
- Revision 49, 2015-09-01 (James Jones)
  - Restore single-field revision number.
- Revision 50, 2015-09-01 (James Jones)
  - Update Example #4 to include code that illustrates how to use the oldSwapchain field.
- Revision 51, 2015-09-01 (James Jones)
  - Fix example code compilation errors.
- Revision 52, 2015-09-08 (Matthaeus G. Chajdas)
  - Corrected a typo.
- Revision 53, 2015-09-10 (Alon Or-bach)
  - Removed underscore from SWAP\_CHAIN left in VK\_STRUCTURE\_TYPE\_SWAPCHAIN\_CREATE\_INFO\_KHR.
- Revision 54, 2015-09-11 (Jesse Hall)
  - Described the execution and memory coherence requirements for image transitions to and

from VK\_IMAGE\_LAYOUT\_PRESENT\_SOURCE\_KHR.

- Revision 55, 2015-09-11 (Ray Smith)
  - Added errors for destroying and binding memory to presentable images
- Revision 56, 2015-09-18 (James Jones)
  - Added fence argument to vkAcquireNextImageKHR
  - Added example of how to meter a host thread based on presentation rate.
- Revision 57, 2015-09-26 (Jesse Hall)
  - Replace VkSurfaceDescriptionKHR with VkSurfaceKHR.
  - Added issue 25 with agreed resolution.
- Revision 58, 2015-09-28 (Jesse Hall)
  - Renamed from VK\_EXT\_KHR\_device\_swapchain to VK\_EXT\_KHR\_swapchain.
- Revision 59, 2015-09-29 (Ian Elliott)
  - Changed vkDestroySwapchainKHR() to return void.
- Revision 60, 2015-10-01 (Jeff Vigil)
  - Added error result VK\_ERROR\_SURFACE\_LOST\_KHR.
- Revision 61, 2015-10-05 (Faith Ekstrand)
  - Added the VkCompositeAlpha enum and corresponding structure fields.
- Revision 62, 2015-10-12 (Daniel Rakos)
  - Added VK\_PRESENT\_MODE\_FIFO\_RELAXED\_KHR.
- Revision 63, 2015-10-15 (Daniel Rakos)
  - Moved surface capability queries to VK\_EXT\_KHR\_surface.
- Revision 64, 2015-10-26 (Ian Elliott)
  - Renamed from VK\_EXT\_KHR\_swapchain to VK\_KHR\_swapchain.
- Revision 65, 2015-10-28 (Ian Elliott)
  - Added optional pResult member to VkPresentInfoKHR, so that per-swapchain results can be obtained from vkQueuePresentKHR().
- Revision 66, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to create and destroy functions.
  - Updated resource transition language.
  - Updated sample code.
- Revision 67, 2015-11-10 (Jesse Hall)
  - Add reserved flags bitmask to VkSwapchainCreateInfoKHR.
  - Modify naming and member ordering to match API style conventions, and so the VkSwapchainCreateInfoKHR image property members mirror corresponding VkImageCreateInfo members but with an 'image' prefix.

- Make `VkPresentInfoKHR::pResults` non-const; it is an output array parameter.
- Make `pPresentInfo` parameter to `vkQueuePresentKHR` const.
- Revision 68, 2016-04-05 (Ian Elliott)
  - Moved the “validity” include for `vkAcquireNextImage` to be in its proper place, after the prototype and list of parameters.
  - Clarified language about presentable images, including how they are acquired, when applications can and cannot use them, etc. As part of this, removed language about “ownership” of presentable images, and replaced it with more-consistent language about presentable images being “acquired” by the application.
- 2016-08-23 (Ian Elliott)
  - Update the example code, to use the final API command names, to not have so many characters per line, and to split out a new example to show how to obtain function pointers. This code is more similar to the LunarG “cube” demo program.
- 2016-08-25 (Ian Elliott)
  - A note was added at the beginning of the example code, stating that it will be removed from future versions of the appendix.
- Revision 69, 2017-09-07 (Tobias Hector)
  - Added interactions with Vulkan 1.1
- Revision 70, 2017-10-06 (Ian Elliott)
  - Corrected interactions with Vulkan 1.1

## Description

This extension is based off the [VK\\_EXT\\_swapchain\\_maintenance1](#) extension.

[VK\\_KHR\\_swapchain\\_maintenance1](#) adds a collection of window system integration features that were intentionally left out or overlooked in the original [VK\\_KHR\\_swapchain](#) extension.

The new features are as follows:

- Specify a fence that will be signaled when the resources associated with a present operation **can** be safely destroyed.
- Allow changing the present mode a swapchain is using at per-present granularity.
- Allow applications to define the behavior when presenting a swapchain image to a surface with different dimensions than the image. Using this feature **may** allow implementations to avoid returning [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) in this situation.
- Allow applications to defer swapchain memory allocation for improved startup time and memory footprint.
- Allow applications to release previously acquired images without presenting them.

## Description

This extension allows processing of swapchain images as different formats to that used by the window system, which is particularly useful for switching between sRGB and linear RGB formats.

It adds a new swapchain creation flag that enables creating image views from presentable images with a different format than the one used to create the swapchain.

## New Enum Constants

- `VK_KHR_SWAPCHAIN_MUTABLE_FORMAT_EXTENSION_NAME`
- `VK_KHR_SWAPCHAIN_MUTABLE_FORMAT_SPEC_VERSION`
- Extending `VkSwapchainCreateFlagBitsKHR`:
  - `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR`

## Issues

1) Are there any new capabilities needed?

**RESOLVED:** No. It is expected that all implementations exposing this extension support swapchain image format mutability.

2) Do we need a separate `VK_SWAPCHAIN_CREATE_EXTENDED_USAGE_BIT_KHR`?

**RESOLVED:** No. This extension requires `VK_KHR_maintenance2` and presentable images of swapchains created with `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR` are created internally in a way equivalent to specifying both `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` and `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT`.

3) Do we need a separate structure to allow specifying an image format list for swapchains?

**RESOLVED:** No. We use the `VkImageFormatListCreateInfo` structure introduced by `VK_KHR_image_format_list`. The structure is required to be included in the `pNext` chain of `VkSwapchainCreateInfoKHR` for swapchains created with `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR`.

## Version History

## Description

This extension significantly simplifies synchronization in Vulkan by removing the need for image layout transitions in most cases. In particular, it guarantees that using the `VK_IMAGE_LAYOUT_GENERAL` layout everywhere possible is just as efficient as using the other layouts.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceUnifiedImageLayoutsFeaturesKHR`

If `VK_EXT_attachment_feedback_loop_layout` and Vulkan Version 1.3 or `VK_KHR_dynamic_rendering` is supported:

- Extending `VkRenderingAttachmentInfo`:
  - `VkAttachmentFeedbackLoopInfoEXT`

## New Enum Constants

- `VK_KHR_UNIFIED_IMAGE_LAYOUTS_EXTENSION_NAME`
- `VK_KHR_UNIFIED_IMAGE_LAYOUTS_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_UNIFIED_IMAGE_LAYOUTS_FEATURES_KHR`

If [VK\\_EXT\\_attachment\\_feedback\\_loop\\_layout](#) and [Vulkan Version 1.3](#) or [VK\\_KHR\\_dynamic\\_rendering](#) is supported:

- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_ATTACHMENT\\_FEEDBACK\\_LOOP\\_INFO\\_EXT](#)

## Version History

## Description

This extension builds upon the [VK\\_KHR\\_video\\_decode\\_queue](#) extension by adding support for decoding elementary video stream sequences compliant with the AV1 video compression standard.

## New Structures

- Extending [VkVideoCapabilitiesKHR](#):
  - [VkVideoDecodeAV1CapabilitiesKHR](#)
- Extending [VkVideoDecodeInfoKHR](#):
  - [VkVideoDecodeAV1PictureInfoKHR](#)

## Version History

- Revision 1, 2018-6-11 (Peter Fang)
  - Initial draft
- Revision 2, March 29 2021 (Tony Zlatinski)
  - Spec and API Updates
- Revision 3, August 1 2021 (Srinath Kumarapuram)
  - Rename [VkVideoDecodeH264FieldLayoutFlagsEXT](#) to [VkVideoDecodeH264PictureLayoutFlagsEXT](#), [VkVideoDecodeH264FieldLayoutFlagBitsEXT](#) to [VkVideoDecodeH264PictureLayoutFlagBitsEXT](#) (along with the names of enumerants it defines), and [VkVideoDecodeH264ProfileEXT.fieldLayout](#) to [VkVideoDecodeH264ProfileEXT.pictureLayout](#), following Vulkan naming conventions.
- Revision 4, 2022-03-16 (Ahmed Abdelkhalek)
  - Relocate Std header version reporting/requesting from this extension to [VK\\_KHR\\_video\\_queue](#) extension.
  - Remove the now empty [VkVideoDecodeH264SessionCreateInfoEXT](#).
- Revision 5, 2022-03-31 (Ahmed Abdelkhalek)
  - Use type [StdVideoH264Level](#) for [VkVideoDecodeH264Capabilities.maxLevel](#)
- Revision 6, 2022-08-09 (Daniel Rakos)
  - Rename [VkVideoDecodeH264ProfileEXT](#) to [VkVideoDecodeH264ProfileInfoEXT](#)
  - Rename [VkVideoDecodeH264MvcEXT](#) to [VkVideoDecodeH264MvcInfoEXT](#)
- Revision 7, 2022-09-18 (Daniel Rakos)
  - Change type of [VkVideoDecodeH264ProfileInfoEXT::pictureLayout](#) to [VkVideoDecodeH264PictureLayoutFlagBitsEXT](#)
  - Remove MVC support and related [VkVideoDecodeH264MvcInfoEXT](#) structure
  - Rename [spsStdCount](#), [pSpsStd](#), [ppsStdCount](#), and [pPpsStd](#) to [stdSPSCount](#), [pStdSPSs](#), [stdPPSCount](#), and [pStdPPSs](#), respectively, in [VkVideoDecodeH264SessionParametersAddInfoEXT](#)
  - Rename [maxSpsStdCount](#) and [maxPpsStdCount](#) to [maxStdSPSCount](#) and [maxStdPPSCount](#), respectively, in [VkVideoDecodeH264SessionParametersCreateInfoEXT](#)
  - Rename [slicesCount](#) and [pSlicesDataOffsets](#) to [sliceCount](#) and [pSliceOffsets](#), respectively, in [VkVideoDecodeH264PictureInfoEXT](#)
- Revision 8, 2022-09-29 (Daniel Rakos)
  - Change extension from [EXT](#) to [KHR](#)
  - Extension is no longer provisional
- Revision 9, 2023-12-05 (Daniel Rakos)

- Condition reference picture setup based on the value of `StdVideoDecodeH264PictureInfo::flags.is_reference`

## Description

This extension builds upon the [VK\\_KHR\\_video\\_queue](#) extension by adding common APIs specific to video decoding and thus enabling implementations to expose queue families supporting video decode operations.

More specifically, it adds video decode specific capabilities and a new command buffer command that allows recording video decode operations against a video session.

This extension is to be used in conjunction with other codec specific video decode extensions that enable decoding video sequences of specific video compression standards.

## New Commands

- [vkCmdDecodeVideoKHR](#)

## New Structures

- [VkVideoDecodeInfoKHR](#)
- Extending [VkVideoCapabilitiesKHR](#):
  - [VkVideoDecodeCapabilitiesKHR](#)
- Extending [VkVideoProfileInfoKHR](#), [VkQueryPoolCreateInfo](#):
  - [VkVideoDecodeUsageInfoKHR](#)

## New Enums

- [VkVideoDecodeCapabilityFlagBitsKHR](#)
- [VkVideoDecodeUsageFlagBitsKHR](#)

## New Bitmasks

- [VkVideoDecodeCapabilityFlagsKHR](#)
- [VkVideoDecodeFlagsKHR](#)
- [VkVideoDecodeUsageFlagsKHR](#)

## New Enum Constants

- [VK\\_KHR\\_VIDEO\\_DECODE\\_QUEUE\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_VIDEO\\_DECODE\\_QUEUE\\_SPEC\\_VERSION](#)
- Extending [VkAccessFlagBits2](#):

- [VK\\_ACCESS\\_2\\_VIDEO\\_DECODE\\_READ\\_BIT\\_KHR](#)
- [VK\\_ACCESS\\_2\\_VIDEO\\_DECODE\\_WRITE\\_BIT\\_KHR](#)
- Extending [VkBufferUsageFlagBits](#):
  - [VK\\_BUFFER\\_USAGE\\_VIDEO\\_DECODE\\_DST\\_BIT\\_KHR](#)
  - [VK\\_BUFFER\\_USAGE\\_VIDEO\\_DECODE\\_SRC\\_BIT\\_KHR](#)
- Extending [VkFormatFeatureFlagBits](#):
  - [VK\\_FORMAT\\_FEATURE\\_VIDEO\\_DECODE\\_DPB\\_BIT\\_KHR](#)
  - [VK\\_FORMAT\\_FEATURE\\_VIDEO\\_DECODE\\_OUTPUT\\_BIT\\_KHR](#)
- Extending [VkImageLayout](#):
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_DECODE\\_DPB\\_KHR](#)
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_DECODE\\_DST\\_KHR](#)
  - [VK\\_IMAGE\\_LAYOUT\\_VIDEO\\_DECODE\\_SRC\\_KHR](#)
- Extending [VkImageUsageFlagBits](#):
  - [VK\\_IMAGE\\_USAGE\\_VIDEO\\_DECODE\\_DPB\\_BIT\\_KHR](#)
  - [VK\\_IMAGE\\_USAGE\\_VIDEO\\_DECODE\\_DST\\_BIT\\_KHR](#)
  - [VK\\_IMAGE\\_USAGE\\_VIDEO\\_DECODE\\_SRC\\_BIT\\_KHR](#)
- Extending [VkPipelineStageFlagBits2](#):
  - [VK\\_PIPELINE\\_STAGE\\_2\\_VIDEO\\_DECODE\\_BIT\\_KHR](#)
- Extending [VkQueueFlagBits](#):
  - [VK\\_QUEUE\\_VIDEO\\_DECODE\\_BIT\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_CAPABILITIES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_VIDEO\\_DECODE\\_USAGE\\_INFO\\_KHR](#)

If [VK\\_KHR\\_format\\_feature\\_flags2](#) or Vulkan Version 1.3 is supported:

- Extending [VkFormatFeatureFlagBits2](#):
  - [VK\\_FORMAT\\_FEATURE\\_2\\_VIDEO\\_DECODE\\_DPB\\_BIT\\_KHR](#)
  - [VK\\_FORMAT\\_FEATURE\\_2\\_VIDEO\\_DECODE\\_OUTPUT\\_BIT\\_KHR](#)

## Version History

- Revision 1, 2018-6-11 (Peter Fang)
  - Initial draft
- Revision 1.5, Nov 09 2018 (Tony Zlatinski)
  - API Updates

- Revision 1.6, Jan 08 2020 (Tony Zlatinski)
  - API unify with the `video_encode_queue` spec
- Revision 1.7, March 29 2021 (Tony Zlatinski)
  - Spec and API updates.
- Revision 2, September 30 2021 (Jon Leech)
  - Add interaction with `VK_KHR_format_feature_flags2` to `vk.xml`
- Revision 3, 2022-02-25 (Ahmed Abdelkhalek)
  - Add `VkVideoDecodeCapabilitiesKHR` with new flags to report support for decode DPB and output coinciding in the same image, or in distinct images.
- Revision 4, 2022-03-31 (Ahmed Abdelkhalek)
  - Remove redundant `VkVideoDecodeInfoKHR.coded{Offset|Extent}`
- Revision 5, 2022-07-18 (Daniel Rakos)
  - Remove `VkVideoDecodeFlagBitsKHR` as it contains no defined flags for now
- Revision 6, 2022-08-12 (Daniel Rakos)
  - Add `VkVideoDecodeUsageInfoKHR` structure and related flags
- Revision 7, 2022-09-29 (Daniel Rakos)
  - Extension is no longer provisional
- Revision 8, 2023-12-05 (Daniel Rakos)
  - Require the specification of a reconstructed picture in all cases, except when the video session was created with no DPB slots to match shipping implementations
  - Make DPB slot activation behavior codec-specific to continue allowing application control over reference picture setup now that a reconstructed picture is always mandatory

## Description

This extension builds upon the [VK\\_QUERY\\_TYPE\\_VIDEO\\_ENCODE\\_FEEDBACK\\_KHR](#) queries introduced by the [VK\\_KHR\\_video\\_encode\\_queue](#) extension and extends the set of supported video encode feedback values with additional statistics about the encoded picture, including per picture partition feedback values.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):

## Version History

- Revision 0, 2018-7-23 (Ahmed Abdelkhalek)
  - Initial draft
- Revision 0.5, 2020-02-13 (Tony Zlatinski)
  - General Spec cleanup
  - Added DPB structures
  - Change the VCL frame encode structure
  - Added a common Non-VCL Picture Paramameters structure
- Revision 1, 2021-03-29 (Tony Zlatinski)
  - Spec and API updates
- Revision 2, August 1 2021 (Srinath Kumarapuram)
  - Rename `VkVideoEncodeH264CapabilitiesFlagsEXT` to `VkVideoEncodeH264CapabilityFlagsEXT` and `VkVideoEncodeH264CapabilitiesFlagsEXT` to `VkVideoEncodeH264CapabilityFlagsEXT`, following Vulkan naming conventions.
- Revision 3, 2021-12-08 (Ahmed Abdelkhalek)
  - Rate control updates
- Revision 4, 2022-02-04 (Ahmed Abdelkhalek)
  - Align `VkVideoEncodeH264VclFrameInfoEXT` structure to similar one in `VK_EXT_video_encode_h265` extension
- Revision 5, 2022-02-10 (Ahmed Abdelkhalek)
  - Updates to encode capability interface
- Revision 6, 2022-03-16 (Ahmed Abdelkhalek)
  - Relocate Std header version reporting/requesting from this extension to `VK_KHR_video_queue` extension.
  - Remove redundant `maxPictureSizeInMbs` from `VkVideoEncodeH264SessionCreateInfoEXT`.
  - Remove the now empty `VkVideoEncodeH264SessionCreateInfoEXT`.
- Revision 7, 2022-04-06 (Ahmed Abdelkhalek)
  - Add capability flag to report support to use B frame in L1 reference list.
  - Add capability flag to report support for disabling SPS `direct_8x8_inference_flag`.
- Revision 8, 2022-07-18 (Daniel Rakos)
  - Replace `VkVideoEncodeH264RateControlStructureFlagBitsEXT` bit enum with `VkVideoEncodeH264RateControlStructureEXT` enum
  - Rename `VkVideoEncodeH264ProfileEXT` to `VkVideoEncodeH264ProfileInfoEXT`
  - Rename `VkVideoEncodeH264ReferenceListsEXT` to `VkVideoEncodeH264ReferenceListsInfoEXT`

- Rename `VkVideoEncodeH264EmitPictureParametersEXT` to `VkVideoEncodeH264EmitPictureParametersInfoEXT`
- Rename `VkVideoEncodeH264NaluSliceEXT` to `VkVideoEncodeH264NaluSliceInfoEXT`
- Revision 9, 2022-09-18 (Daniel Rakos)
  - Rename `spsStdCount`, `pSpsStd`, `ppsStdCount`, and `pPpsStd` to `stdSPSCount`, `pStdSPSs`, `stdPPSCount`, and `pStdPPSs`, respectively, in `VkVideoEncodeH264SessionParametersAddInfoEXT`
  - Rename `maxSpsStdCount` and `maxPpsStdCount` to `maxStdSPSCount` and `maxStdPPSCount`, respectively, in `VkVideoEncodeH264SessionParametersCreateInfoEXT`
- Revision 10, 2023-03-06 (Daniel Rakos)
  - Removed `VkVideoEncodeH264EmitPictureParametersInfoEXT`
  - Changed member types in `VkVideoEncodeH264CapabilitiesEXT` and `VkVideoEncodeH264ReferenceListsInfoEXT` from `uint8_t` to `uint32_t`
  - Changed the type of `VkVideoEncodeH264RateControlInfoEXT::temporalLayerCount` and `VkVideoEncodeH264RateControlLayerInfoEXT::temporalLayerId` from `uint8_t` to `uint32_t`
  - Removed `VkVideoEncodeH264InputModeFlagsEXT` and `VkVideoEncodeH264OutputModeFlagsEXT` as we only support frame-in-frame-out mode for now
  - Rename `pCurrentPictureInfo` in `VkVideoEncodeH264VclFrameInfoEXT` to `pStdPictureInfo`
  - Rename `pSliceHeaderStd` in `VkVideoEncodeH264NaluSliceInfoEXT` to `pStdSliceHeader`
  - Rename `pReferenceFinalLists` in `VkVideoEncodeH264VclFrameInfoEXT` and `VkVideoEncodeH264NaluSliceInfoEXT` to `pStdReferenceFinalLists`
  - Removed the `slotIndex` member of `VkVideoEncodeH264DpbSlotInfoEXT` and changed it to be chained to `VkVideoReferenceSlotInfoKHR`
  - Replaced `VkVideoEncodeH264ReferenceListsInfoEXT` with the new Video Std header structure `StdVideoEncodeH264ReferenceLists` that also includes data previously part of the now removed `StdVideoEncodeH264RefMemMgmtCtrlOperations` structure
  - Added new capability flag `VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_REFERENCE_FINAL_LISTS_BIT_EXT`
- Revision 11, 2023-05-22 (Daniel Rakos)
  - Renamed `VkVideoEncodeH264VclFrameInfoEXT` to `VkVideoEncodeH264PictureInfoEXT`
  - Added `VkVideoEncodeH264PictureInfoEXT::generatePrefixNalu` and `VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_EXT` to enable the generation of H.264 prefix NALUs when supported by the implementation
  - Removed `VkVideoEncodeH264RateControlLayerInfoEXT::temporalLayerId`
  - Added `expectDyadicTemporalLayerPattern` capability
  - Added the `VkVideoEncodeH264SessionParametersGetInfoEXT` structure to identify the H.264 parameter sets to retrieve encoded parameter data for, and the `VkVideoEncodeH264SessionParametersFeedbackInfoEXT` structure to retrieve H.264 parameter set override information when using the new `vkGetEncodedVideoSessionParametersKHR` command

- Added `VkVideoEncodeH264NaluSliceInfoEXT::constantQp` to specify per-slice constant QP when rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`
- Added `VkVideoEncodeH264QualityLevelPropertiesEXT` for retrieving H.264 specific quality level recommendations
- Replaced `VkVideoEncodeH264RateControlStructureEXT` enum with the flags type `VkVideoEncodeH264RateControlFlagsEXT` and bits defined in `VkVideoEncodeH264RateControlFlagBitsEXT` and added HRD compliance flag
- Removed `useInitialRcQp` and `initialRcQp` members of `VkVideoEncodeH264RateControlLayerInfoEXT`
- Added `prefersGopRemainingFrames` and `requiresGopRemainingFrames`, and the new `VkVideoEncodeH264GopRemainingFrameInfoEXT` structure to allow specifying remaining frames of each type in the rate control GOP
- Added `maxTemporalLayers`, `maxQp`, and `minQp` capabilities
- Added `maxLevelIdc` capability and new `VkVideoEncodeH264SessionCreateInfoEXT` structure to specify upper bounds on the H.264 level of the produced video bitstream
- Moved capability flags specific to codec syntax restrictions from `VkVideoEncodeH264CapabilityFlagsEXT` to the new `VkVideoEncodeH264StdFlagsEXT` which is now included as a separate `stdSyntaxFlags` member in `VkVideoEncodeH264CapabilitiesEXT`
- Removed codec syntax override values from `VkVideoEncodeH264CapabilitiesEXT`
- Removed `VkVideoEncodeH264NaluSliceInfoEXT::mbCount` and `VK_VIDEO_ENCODE_H264_CAPABILITY_SLICE_MB_COUNT_BIT_EXT`
- Replaced `VK_VIDEO_ENCODE_H264_CAPABILITY_MULTIPLE_SLICES_PER_FRAME_BIT_EXT` with the new `maxSliceCount` capability
- Removed `VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_REFERENCE_FINAL_LISTS_BIT_EXT` capability flag and removed `pStdReferenceFinalLists` members from the `VkVideoEncodeH264PictureInfoEXT` and `VkVideoEncodeH264NaluSliceInfoEXT` structures as reference lists info is now included in `pStdPictureInfo`
- Added capability flag `VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_EXT`
- Revision 12, 2023-07-19 (Daniel Rakos)
  - Added video std capability flags `VK_VIDEO_ENCODE_H264_STD_SLICE_QP_DELTA_BIT_EXT` and `VK_VIDEO_ENCODE_H264_STD_DIFFERENT_SLICE_QP_DELTA_BIT_EXT`
  - Fixed optionality of the array members of `VkVideoEncodeH264SessionParametersAddInfoEXT`
  - Fixed optionality of `VkVideoEncodeH264RateControlInfoEXT::flags`
- Revision 13, 2023-09-04 (Daniel Rakos)
  - Change extension from `EXT` to `KHR`
  - Extension is no longer provisional
- Revision 14, 2023-12-05 (Daniel Rakos)
  - Condition reference picture setup based on the value of `StdVideoEncodeH264PictureInfo::flags.is_reference`

## Version History

- Revision 0, 2019-11-14 (Ahmed Abdelkhalek)
  - Initial draft
- Revision 0.5, 2020-02-13 (Tony Zlatinski)
  - General Spec cleanup
  - Added DPB structures
  - Change the VCL frame encode structure
  - Added a common Non-VCL Picture Paramameters structure
- Revision 2, Oct 10 2021 (Srinath Kumarapuram)
  - Vulkan Video Encode h.265 update and spec edits
- Revision 3, 2021-12-08 (Ahmed Abdelkhalek)
  - Rate control updates
- Revision 4, 2022-01-11 (Ahmed Abdelkhalek)
  - Replace occurrences of “slice” by “slice segment” and rename structures/enums to reflect this.
- Revision 5, 2022-02-10 (Ahmed Abdelkhalek)
  - Updates to encode capability interface
- Revision 6, 2022-03-16 (Ahmed Abdelkhalek)
  - Relocate Std header version reporting/requesting from this extension to [VK\\_KHR\\_video\\_queue](#) extension.
  - Remove the now empty [VkVideoEncodeH265SessionCreateInfoEXT](#).
- Revision 7, 2022-03-24 (Ahmed Abdelkhalek)
  - Add capability flags to report support to disable transform skip and support to use B frame in L1 reference list.
- Revision 8, 2022-07-18 (Daniel Rakos)
  - Replace [VkVideoEncodeH265RateControlStructureFlagBitsEXT](#) bit enum with [VkVideoEncodeH265RateControlStructureEXT](#) enum
  - Rename [VkVideoEncodeH265ProfileEXT](#) to [VkVideoEncodeH265ProfileInfoEXT](#)
  - Rename [VkVideoEncodeH265ReferenceListsEXT](#) to [VkVideoEncodeH265ReferenceListsInfoEXT](#)
  - Rename [VkVideoEncodeH265EmitPictureParametersEXT](#) to [VkVideoEncodeH265EmitPictureParametersInfoEXT](#)

- Rename `VkVideoEncodeH265NaluSliceSegmentEXT` to `VkVideoEncodeH265NaluSliceSegmentInfoEXT`
- Revision 9, 2022-09-18 (Daniel Rakos)
  - Rename `vpsStdCount`, `pVpsStd`, `spsStdCount`, `pSpsStd`, `ppsStdCount`, and `pPpsStd` to `stdVPSCount`, `pStdVPSs`, `stdSPSCount`, `pStdSPSs`, `stdPPSCount`, and `pStdPPSs`, respectively, in `VkVideoEncodeH265SessionParametersAddInfoEXT`
  - Rename `maxVpsStdCount`, `maxSpsStdCount`, and `maxPpsStdCount` to `maxStdVPSCount`, `maxStdSPSCount` and `maxStdPPSCount`, respectively, in `VkVideoEncodeH265SessionParametersCreateInfoEXT`
- Revision 10, 2023-03-06 (Daniel Rakos)
  - Removed `VkVideoEncodeH265EmitPictureParametersInfoEXT`
  - Changed member types in `VkVideoEncodeH265CapabilitiesEXT` and `VkVideoEncodeH265ReferenceListsInfoEXT` from `uint8_t` to `uint32_t`
  - Changed the type of `VkVideoEncodeH265RateControlInfoEXT::subLayerCount` and `VkVideoEncodeH265RateControlLayerInfoEXT::temporalId` from `uint8_t` to `uint32_t`
  - Removed `VkVideoEncodeH265InputModeFlagsEXT` and `VkVideoEncodeH265OutputModeFlagsEXT` as we only support frame-in-frame-out mode for now
  - Rename `pCurrentPictureInfo` in `VkVideoEncodeH265VclFrameInfoEXT` to `pStdPictureInfo`
  - Rename `pSliceSegmentHeaderStd` in `VkVideoEncodeH265NaluSliceSegmentInfoEXT` to `pStdSliceSegmentHeader`
  - Rename `pReferenceFinalLists` in `VkVideoEncodeH265VclFrameInfoEXT` and `VkVideoEncodeH265NaluSliceSegmentInfoEXT` to `pStdReferenceFinalLists`
  - Removed the `slotIndex` member of `VkVideoEncodeH265DpbSlotInfoEXT` and changed it to be chained to `VkVideoReferenceSlotInfoKHR`
  - Replaced `VkVideoEncodeH265ReferenceListsInfoEXT` with the new Video Std header structure `StdVideoEncodeH265ReferenceLists`
  - Added new capability flag `VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_REFERENCE_FINAL_LISTS_BIT_EXT`
- Revision 11, 2023-05-26 (Daniel Rakos)
  - Renamed `VkVideoEncodeH265VclFrameInfoEXT` to `VkVideoEncodeH265PictureInfoEXT`
  - Removed `VkVideoEncodeH265RateControlLayerInfoEXT::temporalId`
  - Added `expectDyadicTemporalSubLayerPattern` capability
  - Added the `VkVideoEncodeH265SessionParametersGetInfoEXT` structure to identify the H.265 parameter sets to retrieve encoded parameter data for, and the `VkVideoEncodeH265SessionParametersFeedbackInfoEXT` structure to retrieve H.265 parameter set override information when using the new `vkGetEncodedVideoSessionParametersKHR` command
  - Added `VkVideoEncodeH265NaluSliceSegmentInfoEXT::constantQp` to specify per-slice segment constant QP when rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`
  - Added `VkVideoEncodeH265QualityLevelPropertiesEXT` for retrieving H.265 specific quality level recommendations

- Replaced `VkVideoEncodeH265RateControlStructureEXT` enum with the flags type `VkVideoEncodeH265RateControlFlagsEXT` and bits defined in `VkVideoEncodeH265RateControlFlagBitsEXT` and added HRD compliance flag
- Removed `useInitialRcQp` and `initialRcQp` members of `VkVideoEncodeH265RateControlLayerInfoEXT`
- Added `prefersGopRemainingFrames` and `requiresGopRemainingFrames`, and the new `VkVideoEncodeH265GopRemainingFrameInfoEXT` structure to allow specifying remaining frames of each type in the rate control GOP
- Renamed `maxSubLayersCount` capability to `maxSubLayerCount`
- Added `maxQp`, and `minQp` capabilities
- Added `maxLevelIdc` capability and new `VkVideoEncodeH265SessionCreateInfoEXT` structure to specify upper bounds on the H.265 level of the produced video bitstream
- Moved capability flags specific to codec syntax restrictions from `VkVideoEncodeH265CapabilityFlagsEXT` to the new `VkVideoEncodeH265StdFlagsEXT` which is now included as a separate `stdSyntaxFlags` member in `VkVideoEncodeH265CapabilitiesEXT`
- Added `std` prefix to codec syntax capabilities in `VkVideoEncodeH265CapabilitiesEXT`
- Removed `VkVideoEncodeH265NaluSliceSegmentInfoEXT::ctbCount` and `VK_VIDEO_ENCODE_H265_CAPABILITY_SLICE_SEGMENT_CTB_COUNT_BIT_EXT`
- Replaced `VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_FRAME_BIT_EXT` with the new `maxSliceSegmentCount` capability
- Added `maxTiles` capability
- Removed codec syntax min/max capabilities from `VkVideoEncodeH265CapabilitiesEXT`
- Removed `VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_REFERENCE_FINAL_LISTS_BIT_EXT` capability flag and removed `pStdReferenceFinalLists` members from the `VkVideoEncodeH265PictureInfoEXT` and `VkVideoEncodeH265NaluSliceSegmentInfoEXT` structures as reference lists info is now included in `pStdPictureInfo`
- Added capability flag `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_EXT`
- Revision 12, 2023-07-19 (Daniel Rakos)
  - Added video std capability flags `VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_EXT` and `VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_EXT`
  - Fixed optionality of the array members of `VkVideoEncodeH265SessionParametersAddInfoEXT`
  - Fixed optionality of `VkVideoEncodeH265RateControlInfoEXT::flags`
- Revision 13, 2023-09-04 (Daniel Rakos)
  - Change extension from `EXT` to `KHR`
  - Extension is no longer provisional
- Revision 14, 2023-12-05 (Daniel Rakos)
  - Condition reference picture setup based on the value of `StdVideoEncodeH265PictureInfo::flags.is_reference`

## Description

This extension builds upon the [VK\\_KHR\\_video\\_encode\\_queue](#) extension by enabling fine grained control of codec-specific quantization parameters in video encode operations.

More specifically, it adds support for quantization maps:

- Quantization delta maps to directly control the relative value of quantization parameter values on a per-block basis for all rate control modes (including when rate control is disabled).
- Emphasis maps to indirectly control the relative quantization parameter values on a per-block basis when rate control is not disabled and the rate control mode is not configured to the implementation-defined default mode.

This extension is to be used in conjunction with other codec specific video encode extensions that specify the codec specific quantization parameters these maps control.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceVideoEncodeQuantizationMapFeaturesKHR](#)

## Description

This extension builds upon the [VK\\_KHR\\_video\\_queue](#) extension by adding common APIs specific to video encoding and thus enabling implementations to expose queue families supporting video encode operations.

More specifically, it adds video encode specific capabilities and a new command buffer command that allows recording video encode operations against a video session.

This extension is to be used in conjunction with other codec specific video encode extensions that enable encoding video sequences of specific video compression standards.

## Version History

- Revision 1, 2018-07-23 (Ahmed Abdelkhalek)
  - Initial draft
- Revision 1.1, 10/29/2019 (Tony Zlatinski)
  - Updated the reserved spec tokens and renamed `VkVideoEncoderKHR` to `VkVideoSessionKHR`
- Revision 1.6, Jan 08 2020 (Tony Zlatinski)
  - API unify with the `video_decode_queue` spec
- Revision 2, March 29 2021 (Tony Zlatinski)
  - Spec and API updates.
- Revision 3, 2021-09-30 (Jon Leech)
  - Add interaction with [VK\\_KHR\\_format\\_feature\\_flags2](#) to [vk.xml](#)
- Revision 4, 2022-02-10 (Ahmed Abdelkhalek)
  - Updates to encode capability interface
- Revision 5, 2022-03-31 (Ahmed Abdelkhalek)
  - Remove redundant `VkVideoEncodeInfoKHR.codedExtent`
- Revision 6, 2022-07-18 (Daniel Rakos)
  - Remove [VkVideoEncodeRateControlFlagBitsKHR](#) and [VkVideoEncodeFlagBitsKHR](#) as they contain no defined flags for now
  - Add [VK\\_VIDEO\\_CODING\\_CONTROL\\_ENCODE\\_RATE\\_CONTROL\\_BIT\\_KHR](#) and [VK\\_VIDEO\\_CODING\\_CONTROL\\_ENCODE\\_RATE\\_CONTROL\\_LAYER\\_BIT\\_KHR](#) to indicate rate control and rate control layer change requests, respectively, in video coding control operations
- Revision 7, 2022-08-12 (Daniel Rakos)
  - Add `VkVideoEncodeUsageInfoKHR` structure and related flags
- Revision 8, 2023-03-06 (Daniel Rakos)
  - Replace [VK\\_QUERY\\_TYPE\\_VIDEO\\_ENCODE\\_BITSTREAM\\_BUFFER\\_RANGE\\_KHR](#) queries with more generic [VK\\_QUERY\\_TYPE\\_VIDEO\\_ENCODE\\_FEEDBACK\\_KHR](#) queries that can be extended in the future with more feedback values
  - Rename [dstBitstreamBuffer](#), [dstBitstreamBufferOffset](#), and [dstBitstreamBufferMaxRange](#) in `VkVideoEncodeInfoKHR` to [dstBuffer](#), [dstBufferOffset](#), and [dstBufferRange](#), respectively, for consistency with the naming convention in the video decode extensions

- Change the type of `rateControlLayerCount` and `qualityLevelCount` in `VkVideoEncodeCapabilitiesKHR` from `uint8_t` to `uint32_t` and rename them to `maxRateControlLayers` and `maxQualityLevels`, respectively
- Change the type of `averageBitrate` and `maxBitrate` in `VkVideoEncodeRateControlLayerInfoKHR` from `uint32_t` to `uint64_t`
- Fixed the definition of rate control flag bits and added the new `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` constant to indicate implementation-specific automatic rate control
- Change the type of `VkVideoEncodeRateControlInfoKHR::layerCount` from `uint8_t` to `uint32_t`
- Rename `pLayerConfigs` to `pLayers` in `VkVideoEncodeRateControlInfoKHR`
- Revision 9, 2023-03-28 (Daniel Rakos)
  - Removed `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_LAYER_BIT_KHR` and the ability to change the state of individual rate control layers
  - Added new `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` flag to video encode feedback queries
  - Added new video session create flag `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR` to opt-in to video session and encoding parameter optimizations
  - Added the `vkGetEncodedVideoSessionParametersKHR` command to enable retrieving encoded video session parameter data
  - Moved `virtualBufferSizeInMs` and `initialVirtualBufferSizeInMs` from `VkVideoEncodeRateControlLayerInfoKHR` to `VkVideoEncodeRateControlInfoKHR`
  - Added `maxBitrate` capability
  - Renamed `inputImageDataFillAlignment` capability to `encodeInputPictureGranularity` to better reflect its purpose
  - Added new `vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR` command and related structures to enable querying recommended settings for video encode quality levels
  - Added `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR` flag and `VkVideoEncodeQualityLevelInfoKHR` structure to allow controlling video encode quality level and removed `qualityLevel` from the encode operation parameters
- Revision 10, 2023-07-19 (Daniel Rakos)
  - Added `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` query result status code and the related capability flag `VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR`
- Revision 11, 2023-09-04 (Daniel Rakos)
  - Extension is no longer provisional
- Revision 12, 2023-12-05 (Daniel Rakos)
  - Require the specification of a reconstructed picture in all cases, except when the video session was created with no DPB slots to match shipping implementations
  - Make DPB slot activation behavior codec-specific to continue allowing application control

over reference picture setup now that a reconstructed picture is always mandatory

## Description

[VK\\_KHR\\_video\\_maintenance1](#) adds a collection of minor video coding features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Allow creating buffers that can be used in video coding operations, independent of the used video profile, using the new buffer creation flag [VK\\_BUFFER\\_CREATE\\_VIDEO\\_PROFILE\\_INDEPENDENT\\_BIT\\_KHR](#).
- Allow creating images that can be used as decode output or encode input pictures, independent of the used video profile, using the new image creation flag [VK\\_IMAGE\\_CREATE\\_VIDEO\\_PROFILE\\_INDEPENDENT\\_BIT\\_KHR](#).
- Allow specifying queries used by video coding operations as part of the video coding command parameters, instead of using begin/end query when the video session is created using the new video session creation flag [VK\\_VIDEO\\_SESSION\\_CREATE\\_INLINE\\_QUERIES\\_BIT\\_KHR](#).

## New Structures

## Description

[VK\\_KHR\\_video\\_maintenance2](#) adds a collection of minor video coding features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Allow video coding control commands (such as video session reset) to be issued without the need for a bound video session parameters object for video decode operations that would otherwise require the use of video session parameters objects.
- Allow applications to specify codec-specific parameter sets inline for each decode operation instead of having to construct video session parameters objects.
- Require support for [VK\\_VIDEO\\_ENCODE\\_RATE\\_CONTROL\\_MODE\\_DISABLED\\_BIT\\_KHR](#) in all applicable video encode profiles.
- Provide additional guarantees on Video Std parameters that the encoder implementation will not override.

## New Structures

## Description

This extension provides common APIs to enable exposing queue families with support for video codec operations by introducing the following new object types and related functionalities:

- Video session objects that represent and maintain the state needed to perform video codec operations.
- Video session parameters objects that act as a container for codec specific parameters.

In addition, it also introduces query commands that allow applications to determine video coding related capabilities, and command buffer commands that enable recording video coding operations against a video session.

This extension is to be used in conjunction with other extensions that enable specific video coding operations.

## Version History

- Revision 0.1, 2019-11-21 (Tony Zlatinski)
  - Initial draft
- Revision 0.2, 2019-11-27 (Tony Zlatinski)
  - Make vulkan video core common between decode and encode
- Revision 1, March 29 2021 (Tony Zlatinski)
  - Spec and API updates.
- Revision 2, August 1 2021 (Srinath Kumarapuram)
  - Rename [VkVideoCapabilitiesFlagBitsKHR](#) to [VkVideoCapabilityFlagBitsKHR](#) (along with the names of enumerants it defines) and [VkVideoCapabilitiesFlagsKHR](#) to [VkVideoCapabilityFlagsKHR](#), following Vulkan naming conventions.
- Revision 3, 2022-03-16 (Ahmed Abdelkhalek)
  - Relocate Std header version reporting/requesting from codec-operation specific extensions to this extension.
  - Make Std header versions codec-operation specific instead of only codec-specific.
- Revision 4, 2022-05-30 (Daniel Rakos)
  - Refactor the video format query APIs and related language
  - Extend VkResult with video-specific error codes
- Revision 5, 2022-08-11 (Daniel Rakos)
  - Add [VkVideoSessionParametersCreateFlagsKHR](#)
  - Remove [VkVideoCodingQualityPresetFlagsKHR](#)
  - Rename [VkQueueFamilyQueryResultStatusProperties2KHR](#) to [VkQueueFamilyQueryResultStatusPropertiesKHR](#)
  - Rename [VkVideoQueueFamilyProperties2KHR](#) to [VkQueueFamilyVideoPropertiesKHR](#)
  - Rename [VkVideoProfileKHR](#) to [VkVideoProfileInfoKHR](#)
  - Rename [VkVideoProfilesKHR](#) to [VkVideoProfileListInfoKHR](#)
  - Rename [VkVideoGetMemoryPropertiesKHR](#) to [VkVideoSessionMemoryRequirementsKHR](#)
  - Rename [VkVideoBindMemoryKHR](#) to [VkBindVideoSessionMemoryInfoKHR](#)
  - Fix [pNext](#) constness of [VkPhysicalDeviceVideoFormatInfoKHR](#) and [VkVideoSessionMemoryRequirementsKHR](#)
  - Fix incorrectly named value enums in bit enum types [VkVideoCodecOperationFlagBitsKHR](#) and [VkVideoChromaSubsamplingFlagBitsKHR](#)
  - Remove unnecessary default values from [VkVideoSessionCreateFlagBitsKHR](#) and [VkVideoCodingControlFlagBitsKHR](#)

- Eliminate nested pointer in `VkVideoSessionMemoryRequirementsKHR`
- Rename `VkVideoPictureResourceKHR` to `VkVideoPictureResourceInfoKHR`
- Rename `VkVideoReferenceSlotKHR` to `VkVideoReferenceSlotInfoKHR`
- Revision 6, 2022-09-18 (Daniel Rakos)
  - Rename the `maxReferencePicturesSlotsCount` and `maxReferencePicturesActiveCount` fields of `VkVideoCapabilitiesKHR` and `VkVideoSessionCreateInfoKHR` to `maxDpbSlots` and `maxActiveReferencePictures`, respectively, to clarify their meaning
  - Rename `capabilityFlags` to `flags` in `VkVideoCapabilitiesKHR`
  - Rename `videoPictureExtentGranularity` to `pictureAccessGranularity` in `VkVideoCapabilitiesKHR`
  - Rename `minExtent` and `maxExtent` to `minCodedExtent` and `maxCodedExtent`, respectively, in `VkVideoCapabilitiesKHR`
  - Rename `referencePicturesFormat` to `referencePictureFormat` in `VkVideoSessionCreateInfoKHR`
- Revision 7, 2022-09-26 (Daniel Rakos)
  - Change type of `VkVideoReferenceSlotInfoKHR::slotIndex` from `int8_t` to `int32_t`
- Revision 8, 2022-09-29 (Daniel Rakos)
  - Extension is no longer provisional

## Description

The `VK_KHR_wayland_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to a Wayland `wl_surface`, as well as a query to determine support for rendering to a Wayland compositor.

## New Commands

- `vkCreateWaylandSurfaceKHR`
- `vkGetPhysicalDeviceWaylandPresentationSupportKHR`

## New Structures

- `VkWaylandSurfaceCreateInfoKHR`

## New Bitmasks

- `VkWaylandSurfaceCreateFlagsKHR`

## New Enum Constants

- `VK_KHR_WAYLAND_SURFACE_EXTENSION_NAME`
- `VK_KHR_WAYLAND_SURFACE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_WAYLAND_SURFACE_CREATE_INFO_KHR`

## Issues

1) Does Wayland need a way to query for compatibility between a particular physical device and a specific Wayland display? This would be a more general query than `vkGetPhysicalDeviceSurfaceSupportKHR`: if the Wayland-specific query returned `VK_TRUE` for a (`VkPhysicalDevice`, `struct wl_display*`) pair, then the physical device could be assumed to support presentation to any `VkSurfaceKHR` for surfaces on the display.

**RESOLVED:** Yes. `vkGetPhysicalDeviceWaylandPresentationSupportKHR` was added to address this issue.

2) Should we require surfaces created with `vkCreateWaylandSurfaceKHR` to support the `VK_PRESENT_MODE_MAILBOX_KHR` present mode?

**RESOLVED:** Yes. Wayland is an inherently mailbox window system and mailbox support is

required for some Wayland compositor interactions to work as expected. While handling these interactions may be possible with [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#), it is much more difficult to do without deadlock and requiring all Wayland applications to be able to support implementations which only support [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#) would be an onerous restriction on application developers.

## Version History

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft, based on the previous contents of `VK_EXT_KHR_swapchain` (later renamed `VK_EXT_KHR_surface`).
- Revision 2, 2015-10-02 (James Jones)
  - Added `vkGetPhysicalDeviceWaylandPresentationSupportKHR()` to resolve issue #1.
  - Adjusted wording of issue #1 to match the agreed-upon solution.
  - Renamed “window” parameters to “surface” to match Wayland conventions.
- Revision 3, 2015-10-26 (Ian Elliott)
  - Renamed from `VK_EXT_KHR_wayland_surface` to `VK_KHR_wayland_surface`.
- Revision 4, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to `vkCreateWaylandSurfaceKHR`.
- Revision 5, 2015-11-28 (Daniel Rakos)
  - Updated the surface create function to take a `pCreateInfo` structure.
- Revision 6, 2017-02-08 (Faith Ekstrand)
  - Added the requirement that implementations support [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#).
  - Added wording about interactions between [vkQueuePresentKHR](#) and the Wayland requests sent to the compositor.

## Description

Applications that wish to import Direct3D 11 memory objects into the Vulkan API may wish to use the native keyed mutex mechanism to synchronize access to the memory between Vulkan and Direct3D. This extension provides a way for an application to access the keyed mutex associated with an imported Vulkan memory object when submitting command buffers to a queue.

## Description

The `VK_KHR_win32_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to a Win32 `HWND`, as well as a query to determine support for rendering to the windows desktop.

## New Commands

- `vkCreateWin32SurfaceKHR`
- `vkGetPhysicalDeviceWin32PresentationSupportKHR`

## New Structures

- `VkWin32SurfaceCreateInfoKHR`

## New Bitmasks

- `VkWin32SurfaceCreateFlagsKHR`

## New Enum Constants

- `VK_KHR_WIN32_SURFACE_EXTENSION_NAME`
- `VK_KHR_WIN32_SURFACE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_WIN32_SURFACE_CREATE_INFO_KHR`

## Issues

1) Does Win32 need a way to query for compatibility between a particular physical device and a specific screen? Compatibility between a physical device and a window generally only depends on what screen the window is on. However, there is not an obvious way to identify a screen without already having a window on the screen.

**RESOLVED:** No. While it may be useful, there is not a clear way to do this on Win32. However, a method was added to query support for presenting to the windows desktop as a whole.

2) If a native window object (`HWND`) is used by one graphics API, and then is later used by a different graphics API (one of which is Vulkan), can these uses interfere with each other?

**RESOLVED:** Yes.

Uses of a window object by multiple graphics APIs results in undefined behavior. Such behavior

may succeed when using one Vulkan implementation but fail when using a different Vulkan implementation. Potential failures include:

- Creating then destroying a flip presentation model DXGI swapchain on a window object can prevent [vkCreateSwapchainKHR](#) from succeeding on the same window object.
- Creating then destroying a [VkSwapchainKHR](#) on a window object can prevent creation of a bitblt model DXGI swapchain on the same window object.
- Creating then destroying a [VkSwapchainKHR](#) on a window object can effectively [SetPixelFormat](#) to a different format than the format chosen by an OpenGL application.
- Creating then destroying a [VkSwapchainKHR](#) on a window object on one [VkPhysicalDevice](#) can prevent [vkCreateSwapchainKHR](#) from succeeding on the same window object, but on a different [VkPhysicalDevice](#) that is associated with a different Vulkan ICD.

In all cases the problem can be worked around by creating a new window object.

Technical details include:

- Creating a DXGI swapchain over a window object can alter the object for the remainder of its lifetime. The alteration persists even after the DXGI swapchain has been destroyed. This alteration can make it impossible for a conformant Vulkan implementation to create a [VkSwapchainKHR](#) over the same window object. Mention of this alteration can be found in the remarks section of the MSDN documentation for [DXGI\\_SWAP\\_EFFECT](#).
- Calling GDI's [SetPixelFormat](#) (needed by OpenGL's WGL layer) on a window object alters the object for the remainder of its lifetime. The MSDN documentation for [SetPixelFormat](#) explains that a window object's pixel format can be set only one time.
- Creating a [VkSwapchainKHR](#) over a window object can alter the object for its remaining lifetime. Either of the above alterations may occur as a side effect of [vkCreateSwapchainKHR](#).

## Version History

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft, based on the previous contents of VK\_EXT\_KHR\_swapchain (later renamed VK\_EXT\_KHR\_surface).
- Revision 2, 2015-10-02 (James Jones)
  - Added presentation support query for win32 desktops.
- Revision 3, 2015-10-26 (Ian Elliott)
  - Renamed from VK\_EXT\_KHR\_win32\_surface to VK\_KHR\_win32\_surface.
- Revision 4, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to vkCreateWin32SurfaceKHR.
- Revision 5, 2015-11-28 (Daniel Rakos)
  - Updated the surface create function to take a pCreateInfo structure.
- Revision 6, 2017-04-24 (Jeff Juliano)
  - Add issue 2 addressing reuse of a native window object in a different Graphics API, or by a

different Vulkan ICD.

## Description

This extension adds Vulkan support for the `SPV_KHR_workgroup_memory_explicit_layout` SPIR-V extension, which allows shaders to explicitly define the layout of `Workgroup` storage class memory and create aliases between variables from that storage class in a compute shader.

The aliasing feature allows different “views” on the same data, so the shader can bulk copy data from another storage class using one type (e.g. an array of large vectors), and then use the data with a more specific type. It also enables reducing the amount of workgroup memory consumed by allowing the shader to alias data whose lifetimes do not overlap.

The explicit layout support and some form of aliasing is also required for layering OpenCL on top of Vulkan.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR`

## New Enum Constants

- `VK_KHR_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_EXTENSION_NAME`

## Description

The `VK_KHR_xcb_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to an X11 `Window`, using the XCB client-side library, as well as a query to determine support for rendering via XCB.

## New Commands

- `vkCreateXcbSurfaceKHR`
- `vkGetPhysicalDeviceXcbPresentationSupportKHR`

## New Structures

- `VkXcbSurfaceCreateInfoKHR`

## New Bitmasks

- `VkXcbSurfaceCreateFlagsKHR`

## New Enum Constants

- `VK_KHR_XCB_SURFACE_EXTENSION_NAME`
- `VK_KHR_XCB_SURFACE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_XCB_SURFACE_CREATE_INFO_KHR`

## Issues

1) Does XCB need a way to query for compatibility between a particular physical device and a specific screen? This would be a more general query than `vkGetPhysicalDeviceSurfaceSupportKHR`: If it returned `VK_TRUE`, then the physical device could be assumed to support presentation to any window on that screen.

**RESOLVED:** Yes, this is needed for toolkits that want to create a `VkDevice` before creating a window. To ensure the query is reliable, it must be made against a particular X visual rather than the screen in general.

## Version History

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft, based on the previous contents of `VK_EXT_KHR_swapchain` (later renamed

VK\_EXT\_KHR\_surface).

- Revision 2, 2015-10-02 (James Jones)
  - Added presentation support query for an (xcb\_connection\_t\*, xcb\_visualid\_t) pair.
  - Removed “root” parameter from CreateXcbSurfaceKHR(), as it is redundant when a window on the same screen is specified as well.
  - Adjusted wording of issue #1 and added agreed upon resolution.
- Revision 3, 2015-10-14 (Ian Elliott)
  - Removed “root” parameter from CreateXcbSurfaceKHR() in one more place.
- Revision 4, 2015-10-26 (Ian Elliott)
  - Renamed from VK\_EXT\_KHR\_xcb\_surface to VK\_KHR\_xcb\_surface.
- Revision 5, 2015-10-23 (Daniel Rakos)
  - Added allocation callbacks to vkCreateXcbSurfaceKHR.
- Revision 6, 2015-11-28 (Daniel Rakos)
  - Updated the surface create function to take a pCreateInfo structure.

## Description

This extension allows an application to take exclusive control on a display currently associated with an X11 screen. When control is acquired, the display will be deassociated from the X11 screen until control is released or the specified display connection is closed. Essentially, the X11 screen will behave as if the monitor has been unplugged until control is released.

## New Commands

- [vkAcquireXlibDisplayEXT](#)
- [vkGetRandROutputDisplayEXT](#)

## New Enum Constants

- [VK\\_EXT\\_ACQUIRE\\_XLIB\\_DISPLAY\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_ACQUIRE\\_XLIB\\_DISPLAY\\_SPEC\\_VERSION](#)

## Issues

1) Should [vkAcquireXlibDisplayEXT](#) take an RandR display ID, or a Vulkan display handle as input?

**RESOLVED:** A Vulkan display handle. Otherwise there would be no way to specify handles to displays that had been prevented from being included in the X11 display list by some native platform or vendor-specific mechanism.

2) How does an application figure out which RandR display corresponds to a Vulkan display?

**RESOLVED:** A new function, [vkGetRandROutputDisplayEXT](#), is introduced for this purpose.

3) Should [vkGetRandROutputDisplayEXT](#) be part of this extension, or a general Vulkan / RandR or Vulkan / Xlib extension?

**RESOLVED:** To avoid yet another extension, include it in this extension.

## Description

The existing specification requires that low dynamic range (LDR) ASTC textures are decompressed to FP16 values per component. In many cases, decompressing LDR textures to a lower precision intermediate result gives acceptable image quality. Source material for LDR textures is typically authored as 8-bit UNORM values, so decoding to FP16 values adds little value. On the other hand, reducing precision of the decoded result reduces the size of the decompressed data, potentially improving texture cache performance and saving power.

The goal of this extension is to enable this efficiency gain on existing ASTC texture data. This is achieved by giving the application the ability to select the intermediate decoding precision.

Three decoding options are provided:

- Decode to [VK\\_FORMAT\\_R16G16B16A16\\_SFLOAT](#) precision: This is the default, and matches the required behavior in the core API.

- Decode to [VK\\_FORMAT\\_R8G8B8A8\\_UNORM](#) precision: This is provided as an option in LDR mode.
- Decode to [VK\\_FORMAT\\_E5B9G9R9\\_UFLOAT\\_PACK32](#) precision: This is provided as an option in both LDR and HDR mode. In this mode, negative values cannot be represented and are clamped to zero. The alpha component is ignored, and the results are as if alpha was 1.0. This decode mode is optional and support can be queried via the physical device properties.

## New Structures

- Extending [VkImageViewCreateInfo](#):
  - [VkImageViewASTCDecodeModeEXT](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceASTCDecodeFeaturesEXT](#)

## New Enum Constants

- [VK\\_EXT\\_ASTC\\_DECODE\\_MODE\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_ASTC\\_DECODE\\_MODE\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_IMAGE\\_VIEW\\_ASTC\\_DECODE\\_MODE\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_ASTC\\_DECODE\\_FEATURES\\_EXT](#)

## Issues

1) Are implementations allowed to decode at a higher precision than what is requested?

RESOLUTION: No.

If we allow this, then this extension could be exposed on all implementations that support ASTC.

But developers would have no way of knowing what precision was actually used, and thus whether the image quality is sufficient at reduced precision.

2) Should the decode mode be image view state and/or sampler state?

RESOLUTION: Image view state only.

Some implementations treat the different decode modes as different texture formats.

## Example

Create an image view that decodes to [VK\\_FORMAT\\_R8G8B8A8\\_UNORM](#) precision:

```
VkImageViewASTCDecodeModeEXT decodeMode =
```

```

{
    .sType = VK_STRUCTURE_TYPE_IMAGE_VIEW_ASTC_DECODE_MODE_EXT,
    .pNext = NULL,
    .decodeMode = VK_FORMAT_R8G8B8A8_UNORM
};

VkImageViewCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_IMAGE_VIEW_CREATE_INFO,
    .pNext = &decodeMode,
    // flags, image, viewType set to application-desired values
    .format = VK_FORMAT_ASTC_8x8_UNORM_BLOCK,
    // components, subresourceRange set to application-desired values
};

VkImageView imageView;
VkResult result = vkCreateImageView(
    device,
    &createInfo,
    NULL,
    &imageView);

```

## Description

This extension adds a number of “advanced” blending operations that **can** be used to perform new color blending operations, many of which are more complex than the standard blend modes provided by unextended Vulkan. This extension requires different styles of usage, depending on the level of hardware support and the enabled features:

- If [VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT::advancedBlendCoherentOperations](#) is [VK\\_FALSE](#), the new blending operations are supported, but a memory dependency **must** separate each advanced blend operation on a given sample. [VK\\_ACCESS\\_COLOR\\_ATTACHMENT\\_READ\\_NONCOHERENT\\_BIT\\_EXT](#) is used to synchronize reads using advanced blend operations.
- If [VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT::advancedBlendCoherentOperations](#) is [VK\\_TRUE](#), advanced blend operations obey primitive order just like basic blend operations.

In unextended Vulkan, the set of blending operations is limited, and **can** be expressed very simply.

The [VK\\_BLEND\\_OP\\_MIN](#) and [VK\\_BLEND\\_OP\\_MAX](#) blend operations simply compute component-wise minimums or maximums of source and destination color components. The [VK\\_BLEND\\_OP\\_ADD](#), [VK\\_BLEND\\_OP\\_SUBTRACT](#), and [VK\\_BLEND\\_OP\\_REVERSE\\_SUBTRACT](#) modes multiply the source and destination colors by source and destination factors and either add the two products together or subtract one from the other. This limited set of operations supports many common blending operations but precludes the use of more sophisticated transparency and blending operations commonly available in many dedicated imaging APIs.

This extension provides a number of new “advanced” blending operations. Unlike traditional blending operations using [VK\\_BLEND\\_OP\\_ADD](#), these blending equations do not use source and destination factors specified by [VkBlendFactor](#). Instead, each blend operation specifies a complete equation based on the source and destination colors. These new blend operations are used for both RGB and alpha components; they **must** not be used to perform separate RGB and alpha blending (via different values of color and alpha [VkBlendOp](#)).

These blending operations are performed using premultiplied colors, where RGB colors **can** be considered premultiplied or non-premultiplied by alpha, according to the [srcPremultiplied](#) and [dstPremultiplied](#) members of [VkPipelineColorBlendAdvancedStateCreateInfoEXT](#). If a color is considered non-premultiplied, the (R,G,B) color components are multiplied by the alpha component prior to blending. For non-premultiplied color components in the range [0,1], the corresponding premultiplied color component would have values in the range  $[0 \times A, 1 \times A]$ .

Many of these advanced blending equations are formulated where the result of blending source and destination colors with partial coverage have three separate contributions: from the portions covered by both the source and the destination, from the portion covered only by the source, and from the portion covered only by the destination. The blend parameter [VkPipelineColorBlendAdvancedStateCreateInfoEXT::blendOverlap](#) **can** be used to specify a correlation between source and destination pixel coverage. If set to [VK\\_BLEND\\_OVERLAP\\_CONJOINT\\_EXT](#), the source and destination are considered to have maximal overlap, as would be the case if drawing two objects on top of each other. If set to [VK\\_BLEND\\_OVERLAP\\_DISJOINT\\_EXT](#), the source and destination are considered to have minimal overlap, as would be the case when rendering a complex polygon tessellated into individual non-intersecting triangles. If set to [VK\\_BLEND\\_OVERLAP\\_UNCORRELATED\\_EXT](#), the source and destination coverage are assumed to have no spatial correlation within the pixel.

In addition to the coherency issues on implementations not supporting [advancedBlendCoherentOperations](#), this extension has several limitations worth noting. First, the new blend operations have a limit on the number of color attachments they **can** be used with, as indicated by [VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT::advancedBlendMaxColorAttachments](#). Additionally, blending precision **may** be limited to 16-bit floating-point, which **may** result in a loss of precision and dynamic range for framebuffer formats with 32-bit floating-point components, and in a loss of precision for formats with 12- and 16-bit signed or unsigned normalized integer components.

## Description

After the publication of [VK\\_EXT\\_custom\\_border\\_color](#), it was discovered that some implementations had undefined behavior when combining a sampler that uses a custom border color with image views whose component mapping is not the identity mapping.

Since `VK_EXT_custom_border_color` has already shipped, this new extension `VK_EXT_border_color_swizzle` was created to define the interaction between custom border colors and non-identity image view swizzles, and provide a work-around for implementations that must pre-swizzle the sampler border color to match the image view component mapping it is combined with.

This extension also defines the behavior between samplers with an opaque black border color and image views with a non-identity component swizzle, which was previously left undefined.

## Description

This extension allows for selectively enabling and disabling writes to output color attachments via a pipeline dynamic state.

The intended use cases for this new state are mostly identical to those of `colorWriteMask`, such as selectively disabling writes to avoid feedback loops between subpasses or bandwidth savings for unused outputs. By making the state dynamic, one additional benefit is the ability to reduce pipeline counts and pipeline switching via shaders that write a superset of the desired data of which subsets are selected dynamically. The reason for a new state, `colorWriteEnable`, rather than

making `colorWriteMask` dynamic is that, on many implementations, the more flexible per-component semantics of the `colorWriteMask` state cannot be made dynamic in a performant manner.

## Description

This extension allows the execution of one or more rendering commands to be conditional on a value in buffer memory. This may help an application reduce the latency by conditionally discarding rendering commands without application intervention. The conditional rendering commands are limited to draws, compute dispatches and clearing attachments within a conditional

rendering block.

## New Commands

- [vkCmdBeginConditionalRenderingEXT](#)
- [vkCmdEndConditionalRenderingEXT](#)

## New Structures

- [VkConditionalRenderingBeginInfoEXT](#)
- Extending [VkCommandBufferInheritanceInfo](#):
  - [VkCommandBufferInheritanceConditionalRenderingInfoEXT](#)

  - [VK\\_BUFFER\\_USAGE\\_CONDITIONAL\\_RENDERING\\_BIT\\_EXT](#)
- Extending [VkPipelineStageFlagBits](#):
  - [VK\\_PIPELINE\\_STAGE\\_CONDITIONAL\\_RENDERING\\_BIT\\_EXT](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_COMMAND\\_BUFFER\\_INHERITANCE\\_CONDITIONAL\\_RENDERING\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_CONDITIONAL\\_RENDERING\\_BEGIN\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_CONDITIONAL\\_RENDERING\\_FEATURES\\_EXT](#)

## Issues

1) Should conditional rendering affect copy and blit commands?

**RESOLVED:** Conditional rendering should not affect copies and blits.

2) Should secondary command buffers be allowed to execute while conditional rendering is active in the primary command buffer?

**RESOLVED:** The rendering commands in secondary command buffer will be affected by an active conditional rendering in primary command buffer if the `conditionalRenderingEnable` is set to `VK_TRUE`. Conditional rendering **must** not be active in the primary command buffer if `conditionalRenderingEnable` is `VK_FALSE`.

### Examples

None.

### Version History

## Description

This extension adds a new rasterization mode called conservative rasterization. There are two modes of conservative rasterization; overestimation and underestimation.

When overestimation is enabled, if any part of the primitive, including its edges, covers any part of the rectangular pixel area, including its sides, then a fragment is generated with all coverage samples turned on. This extension allows for some variation in implementations by accounting for differences in overestimation, where the generating primitive size is increased at each of its edges by some sub-pixel amount to further increase conservative pixel coverage. Implementations can allow the application to specify an extra overestimation beyond the base overestimation the implementation already does. It also allows implementations to either cull degenerate primitives or rasterize them.

When underestimation is enabled, fragments are only generated if the rectangular pixel area is fully covered by the generating primitive. If supported by the implementation, when a pixel rectangle is fully covered the fragment shader input variable builtin called FullyCoveredEXT is set to true. The shader variable works in either overestimation or underestimation mode.

Implementations can process degenerate triangles and lines by either discarding them or generating conservative fragments for them. Degenerate triangles are those that end up with zero area after the rasterizer quantizes them to the fixed-point pixel grid. Degenerate lines are those with zero length after quantization.

## Description

This extension adds several new features building on the cooperative matrix types added in [VK\\_KHR\\_cooperative\\_matrix](#). The goal is to add and accelerate features beyond just simple GEMM

kernels, including adding support for type/use conversions, reductions, per-element operations, and conversion of an element index to a matrix coordinate.

The new functionality is defined by the `SPV_EXT_cooperative_matrix_maintenance1` SPIR-V extension and can be used with the `GLSL_EXT_cooperative_matrix_maintenance1` GLSL extension.

This extension also provides a new command to query the properties of cooperative matrices, which can be easily extended by other extensions in the future. The new query also includes inputs for the desired subgroup size and (when used together with extensions that support workgroup scope cooperative matrices, such as `VK_NV_cooperative_matrix2`) the number of invocations in the local workgroup, allowing implementations to expose properties that are optimal or compatible only with specific subgroup sizes or local workgroup sizes.

## Description

This extension provides cross-vendor functionality to specify a custom border color for use when the sampler address mode `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` is used.

To create a sampler which uses a custom border color set `VkSamplerCreateInfo::borderColor` to one of:

- `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`
- `VK_BORDER_COLOR_INT_CUSTOM_EXT`

When `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT` is used, applications must provide a `VkSamplerCustomBorderColorCreateInfoEXT` in the `pNext` chain for `VkSamplerCreateInfo`.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceCustomBorderColorFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceCustomBorderColorPropertiesEXT`
- Extending `VkSamplerCreateInfo`:
  - `VkSamplerCustomBorderColorCreateInfoEXT`

## New Enum Constants

- `VK_EXT_CUSTOM_BORDER_COLOR_EXTENSION_NAME`
- `VK_EXT_CUSTOM_BORDER_COLOR_SPEC_VERSION`
- Extending `VkBorderColor`:
  - `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`
  - `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_FEATURES_EXT`

- [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_CUSTOM\\_BORDER\\_COLOR\\_PROPERTIES\\_EXT](#)
- [VK\\_STRUCTURE\\_TYPE\\_SAMPLER\\_CUSTOM\\_BORDER\\_COLOR\\_CREATE\\_INFO\\_EXT](#)

## Issues

1) Should `VkClearColorValue` be used for the border color value, or should we have our own struct/union? Do we need to specify the type of the input values for the components? This is more of a concern if `VkClearColorValue` is used here because it provides a union of float,int,uint types.

**RESOLVED:** Will reuse existing `VkClearColorValue` structure in order to easily take advantage of float,int,uint border color types.

2) For hardware which supports a limited number of border colors what happens if that number is exceeded? Should this be handled by the driver unbeknownst to the application? In Revision 1 we had solved this issue using a new Object type, however that may have lead to additional system resource consumption which would otherwise not be required.

**RESOLVED:** Added `VkPhysicalDeviceCustomBorderColorPropertiesEXT::maxCustomBorderColorSamplers` for tracking implementation-specific limit, and Valid Usage statement handling overflow.

3) Should this be supported for immutable samplers at all, or by a feature bit? Some implementations may not be able to support custom border colors on immutable samplers—is it worthwhile enabling this to work on them for implementations that can support it, or forbidding it entirely.

**RESOLVED:** Samplers created with a custom border color are forbidden from being immutable. This resolves concerns for implementations where the custom border color is an index to a LUT instead of being directly embedded into sampler state.

4) Should `UINT` and `SINT` (unsigned integer and signed integer) border color types be separated or should they be combined into one generic `INT` (integer) type?

**RESOLVED:** Separating these does not make much sense as the existing fixed border color types do not have this distinction, and there is no reason in hardware to do so. This separation would also create unnecessary work and considerations for the application.

## Version History

- Revision 1, 2019-10-10 (Joshua Ashton)
  - Internal revisions.
- Revision 2, 2019-10-11 (Liam Middlebrook)
  - Remove `VkCustomBorderColor` object and associated functions
  - Add issues concerning HW limitations for custom border color count
- Revision 3, 2019-10-12 (Joshua Ashton)
  - Re-expose the limits for the maximum number of unique border colors
  - Add extra details about border color tracking
  - Fix typos

- Revision 4, 2019-10-12 (Joshua Ashton)
  - Changed maxUniqueCustomBorderColors to a uint32\_t from a VkDeviceSize
- Revision 5, 2019-10-14 (Liam Middlebrook)
  - Added features bit
- Revision 6, 2019-10-15 (Joshua Ashton)
  - Type-ize VK\_BORDER\_COLOR\_CUSTOM
  - Fix const-ness on pNext of VkSamplerCustomBorderColorCreateInfoEXT
- Revision 7, 2019-11-26 (Liam Middlebrook)
  - Renamed maxUniqueCustomBorderColors to maxCustomBorderColors
- Revision 8, 2019-11-29 (Joshua Ashton)
  - Renamed borderColor member of VkSamplerCustomBorderColorCreateInfoEXT to customBorderColor
- Revision 9, 2020-02-19 (Joshua Ashton)
  - Renamed maxCustomBorderColors to maxCustomBorderColorSamplers
- Revision 10, 2020-02-21 (Joshua Ashton)
  - Added format to VkSamplerCustomBorderColorCreateInfoEXT and feature bit
- Revision 11, 2020-04-07 (Joshua Ashton)
  - Dropped UINT/SINT border color differences, consolidated types
- Revision 12, 2020-04-16 (Joshua Ashton)
  - Renamed VK\_BORDER\_COLOR\_CUSTOM\_FLOAT\_EXT to VK\_BORDER\_COLOR\_FLOAT\_CUSTOM\_EXT for consistency

  - [VK\\_STRUCTURE\\_TYPE\\_BEGIN\\_CUSTOM\\_RESOLVE\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_CUSTOM\\_RESOLVE\\_CREATE\\_INFO\\_EXT](#)

## Issues

1) How will this work with shader objects?

Some vendors emit an epilog at the end of the FS that stores each color/depth/stencil attachment to the appropriate tilebuffer location, and to do that they need to know the layout of the tilebuffer which depends on the attachment formats/sample counts. We agreed that for shader object the FS epilog is emitted dynamically when the draw happens.

## Description

Due to the nature of the Vulkan interface, there is very little error information available to the developer and application. By using the `VK_EXT_debug_utils` extension, developers **can** obtain more information. When combined with validation layers, even more detailed feedback on the application's use of Vulkan will be provided.

This extension provides the following capabilities:

- The ability to create a debug messenger which will pass along debug messages to an application supplied callback.
- The ability to identify specific Vulkan objects using a name or tag to improve tracking.
- The ability to identify specific sections within a `VkQueue` or `VkCommandBuffer` using labels to aid organization and offline analysis in external tools.

## Examples

### Example 1

`VK_EXT_debug_utils` allows an application to register multiple callbacks with any Vulkan component wishing to report debug information. Some callbacks may log the information to a file, others may cause a debug break point or other application-defined behavior. An application **can** register callbacks even when no validation layers are enabled, but they will only be called for loader and, if implemented, driver events.

To capture events that occur while creating or destroying an instance an application **can** link a `VkDebugUtilsMessengerCreateInfoEXT` structure to the `pNext` chain of the `VkInstanceCreateInfo` structure passed to `vkCreateInstance`.

Example uses: Create three callback objects. One will log errors and warnings to the debug console using Windows `OutputDebugString`. The second will cause the debugger to break at that callback when an error happens and the third will log warnings to stdout.

```
extern VkInstance instance;
VkResult res;
VkDebugUtilsMessengerEXT cb1, cb2, cb3;

// Must call extension functions through a function pointer:
PFN_vkCreateDebugUtilsMessengerEXT pfnCreateDebugUtilsMessengerEXT =
(PFN_vkCreateDebugUtilsMessengerEXT)vkGetInstanceProcAddr(instance,
"vkCreateDebugUtilsMessengerEXT");
PFN_vkDestroyDebugUtilsMessengerEXT pfnDestroyDebugUtilsMessengerEXT =
(PFN_vkDestroyDebugUtilsMessengerEXT)vkGetInstanceProcAddr(instance,
"vkDestroyDebugUtilsMessengerEXT");

VkDebugUtilsMessengerCreateInfoEXT callback1 = {
    .sType = VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CREATE_INFO_EXT,
    .pNext = NULL,
    .flags = 0,
    .messageSeverity = VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT |
                      VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT,
    .messageType = VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT |
                  VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT,
    .pfnUserCallback = myOutputDebugString,
    .pUserData = NULL
};
res = pfnCreateDebugUtilsMessengerEXT(instance, &callback1, NULL, &cb1);
if (res != VK_SUCCESS) {
    // Do error handling for VK_ERROR_OUT_OF_MEMORY
}

callback1.messageSeverity = VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT;
callback1.pfnUserCallback = myDebugBreak;
callback1.pUserData = NULL;
res = pfnCreateDebugUtilsMessengerEXT(instance, &callback1, NULL, &cb2);
```

```

if (res != VK_SUCCESS) {
    // Do error handling for VK_ERROR_OUT_OF_MEMORY
}

VkDebugUtilsMessengerCreateInfoEXT callback3 = {
    .sType = VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CREATE_INFO_EXT,
    .pNext = NULL,
    .flags = 0,
    .messageSeverity = VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT,
    .messageType = VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT |
        VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT,
    .pfnUserCallback = mystdOutLogger,
    .pUserData = NULL
};
res = pfnCreateDebugUtilsMessengerEXT(instance, &callback3, NULL, &cb3);
if (res != VK_SUCCESS) {
    // Do error handling for VK_ERROR_OUT_OF_MEMORY
}

...

// Remove callbacks when cleaning up
pfnDestroyDebugUtilsMessengerEXT(instance, cb1, NULL);
pfnDestroyDebugUtilsMessengerEXT(instance, cb2, NULL);
pfnDestroyDebugUtilsMessengerEXT(instance, cb3, NULL);

```

## Example 2

Associate a name with an image, for easier debugging in external tools or with validation layers that can print a friendly name when referring to objects in error messages.

```

extern VkInstance instance;
extern VkDevice device;
extern VkImage image;

// Must call extension functions through a function pointer:
PFN_vkSetDebugUtilsObjectNameEXT pfnSetDebugUtilsObjectNameEXT =
(PFN_vkSetDebugUtilsObjectNameEXT)vkGetInstanceProcAddr(instance,
"vkSetDebugUtilsObjectNameEXT");

// Set a name on the image
const VkDebugUtilsObjectNameInfoEXT imageNameInfo =
{
    .sType = VK_STRUCTURE_TYPE_DEBUG_UTILS_OBJECT_NAME_INFO_EXT,
    .pNext = NULL,
    .objectType = VK_OBJECT_TYPE_IMAGE,
    .objectHandle = (uint64_t)image,
    .pObjectName = "Brick Diffuse Texture",
};

```

```

pfnSetDebugUtilsObjectNameEXT(device, &imageNameInfo);

// A subsequent error might print:
//   Image 'Brick Diffuse Texture' (0xc0dec0dedeadbeef) is used in a
//   command buffer with no memory bound to it.

```

### Example 3

Annotating regions of a workload with naming information so that offline analysis tools can display a more usable visualization of the commands submitted.

```

extern VkInstance instance;
extern VkCommandBuffer commandBuffer;

// Must call extension functions through a function pointer:
PFN_vkQueueBeginDebugUtilsLabelEXT pfnQueueBeginDebugUtilsLabelEXT =
(PFN_vkQueueBeginDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance,
"vkQueueBeginDebugUtilsLabelEXT");
PFN_vkQueueEndDebugUtilsLabelEXT pfnQueueEndDebugUtilsLabelEXT =
(PFN_vkQueueEndDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance,
"vkQueueEndDebugUtilsLabelEXT");
PFN_vkCmdBeginDebugUtilsLabelEXT pfnCmdBeginDebugUtilsLabelEXT =
(PFN_vkCmdBeginDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance,
"vkCmdBeginDebugUtilsLabelEXT");
PFN_vkCmdEndDebugUtilsLabelEXT pfnCmdEndDebugUtilsLabelEXT =
(PFN_vkCmdEndDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance,
"vkCmdEndDebugUtilsLabelEXT");
PFN_vkCmdInsertDebugUtilsLabelEXT pfnCmdInsertDebugUtilsLabelEXT =
(PFN_vkCmdInsertDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance,
"vkCmdInsertDebugUtilsLabelEXT");

// Describe the area being rendered
const VkDebugUtilsLabelEXT houseLabel =
{
    .sType = VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT,
    .pNext = NULL,
    .pLabelName = "Brick House",
    .color = { 1.0f, 0.0f, 0.0f, 1.0f },
};

// Start an annotated group of calls under the 'Brick House' name
pfnCmdBeginDebugUtilsLabelEXT(commandBuffer, &houseLabel);
{
    // A mutable structure for each part being rendered
    VkDebugUtilsLabelEXT housePartLabel =
    {
        .sType = VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT,
        .pNext = NULL,
        .pLabelName = NULL,
        .color = { 0.0f, 0.0f, 0.0f, 0.0f },
    }
}

```

```

};

// Set the name and insert the marker
housePartLabel.pLabelName = "Walls";
pfncmdInsertDebugUtilsLabelEXT(commandBuffer, &housePartLabel);

// Insert the drawcall for the walls
vkCmdDrawIndexed(commandBuffer, 1000, 1, 0, 0, 0);

// Insert a recursive region for two sets of windows
housePartLabel.pLabelName = "Windows";
pfncmdBeginDebugUtilsLabelEXT(commandBuffer, &housePartLabel);
{
    vkCmdDrawIndexed(commandBuffer, 75, 6, 1000, 0, 0);
    vkCmdDrawIndexed(commandBuffer, 100, 2, 1450, 0, 0);
}
pfncmdEndDebugUtilsLabelEXT(commandBuffer);

housePartLabel.pLabelName = "Front Door";
pfncmdInsertDebugUtilsLabelEXT(commandBuffer, &housePartLabel);

vkCmdDrawIndexed(commandBuffer, 350, 1, 1650, 0, 0);

housePartLabel.pLabelName = "Roof";
pfncmdInsertDebugUtilsLabelEXT(commandBuffer, &housePartLabel);

vkCmdDrawIndexed(commandBuffer, 500, 1, 2000, 0, 0);
}
// End the house annotation started above
pfncmdEndDebugUtilsLabelEXT(commandBuffer);

// Do other work

vkEndCommandBuffer(commandBuffer);

// Describe the queue being used
const VkDebugUtilsLabelEXT queueLabel =
{
    .sType = VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT,
    .pNext = NULL,
    .pLabelName = "Main Render Work",
    .color = { 0.0f, 1.0f, 0.0f, 1.0f },
};

// Identify the queue label region
pfncmdQueueBeginDebugUtilsLabelEXT(queue, &queueLabel);

// Submit the work for the main render thread
const VkCommandBuffer cmd_bufs[] = {commandBuffer};
VkSubmitInfo submit_info =
{

```

```

        .sType = VK_STRUCTURE_TYPE_SUBMIT_INFO,
        .pNext = NULL,
        .waitSemaphoreCount = 0,
        .pWaitSemaphores = NULL,
        .pWaitDstStageMask = NULL,
        .commandBufferCount = 1,
        .pCommandBuffers = cmd_bufs,
        .signalSemaphoreCount = 0,
        .pSignalSemaphores = NULL
    };
    vkQueueSubmit(queue, 1, &submit_info, fence);

    // End the queue label region
    pfnQueueEndDebugUtilsLabelEXT(queue);

```

## Issues

1) Should we just name this extension `VK_EXT_debug_report2`

**RESOLVED:** No. There is enough additional changes to the structures to break backwards compatibility. So, a new name was decided that would not indicate any interaction with the previous extension.

2) Will validation layers immediately support all the new features.

**RESOLVED:** Not immediately. As one can imagine, there is a lot of work involved with converting the validation layer logging over to the new functionality. Basic logging, as seen in the origin `VK_EXT_debug_report` extension will be made available immediately. However, adding the labels and object names will take time. Since the priority for Khronos at this time is to continue focusing on Valid Usage statements, it may take a while before the new functionality is fully exposed.

3) If the validation layers will not expose the new functionality immediately, then what is the point of this extension?

**RESOLVED:** We needed a replacement for `VK_EXT_debug_report` because the `VkDebugReportObjectTypeEXT` enumeration will no longer be updated and any new objects will need to be debugged using the new functionality provided by this extension.

4) Should this extension be split into two separate parts (1 extension that is an instance extension providing the callback functionality, and another device extension providing the general debug marker and annotation functionality)?

**RESOLVED:** No, the functionality for this extension is too closely related. If we did split up the extension, where would the structures and enums live, and how would you define that the device behavior in the instance extension is really only valid if the device extension is enabled, and the functionality is passed in. It is cleaner to just define this all as an instance extension, plus it allows the application to enable all debug functionality provided with one enable string during `vkCreateInstance`.

## Version History

- Revision 1, 2017-09-14 (Mark Young and all listed Contributors)
  - Initial draft, based on `VK_EXT_debug_report` and `VK_EXT_debug_marker` in addition to previous feedback supplied from various companies including Valve, Epic, and Oxide games.
- Revision 2, 2020-04-03 (Mark Young and Piers Daniell)
  - Updated to allow either `NULL` or an empty string to be passed in for `pObjectName` in `VkDebugUtilsObjectNameInfoEXT`, because the loader and various drivers support `NULL` already.

## Description

This extension adds a new structure, `VkDepthBiasRepresentationInfoEXT`, that can be added to a `pNext` chain of `VkPipelineRasterizationStateCreateInfo` and allows setting the scaling and representation of depth bias for a pipeline.

This state can also be set dynamically by using the new structure mentioned above in combination with the new `vkCmdSetDepthBias2EXT` command.

## New Commands

## Description

This extension allows the application to control the viewport depth clamp range separately from the viewport `minDepth` and `maxDepth`. This gives the ability for the application to restrict depth values to an application-defined range rather than the viewport depth range or the range defined in the [VK\\_EXT\\_depth\\_clamp\\_zero\\_one](#) extension.

It can be used to set a smaller or larger clamping range than the viewport depth range without affecting the depth mapping of the viewport transform. Another possible use of this extension is to restrict depth values beyond the viewport depth range to a clamping range other than the [0, 1] range defined in the [VK\\_EXT\\_depth\\_clamp\\_zero\\_one](#) extension.

## New Commands

- [vkCmdSetDepthClampRangeEXT](#)

## New Structures

- [VkDepthClampRangeEXT](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):

- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_DEPTH\\_CLAMP\\_CONTROL\\_FEATURES\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_VIEWPORT\\_DEPTH\\_CLAMP\\_CONTROL\\_CREATE\\_INFO\\_EXT](#)

## Issues

1) Should the depth clamp range be a per-viewport parameter?

**RESOLVED:** No. Because the depth clamp range was previously defined to be equal to the viewport depth range, conformant runtimes are already handling the depth clamp range as a per-viewport parameter. However because of complexities from interactions with multiple viewports a per-viewport clamp range is left to a future extensions if a use case arises.

2) Should this pipeline state be dynamic?

**RESOLVED:** Yes. Since the viewport depth range can already be a dynamic state conformant runtimes are already able to handle the depth clamp range as a dynamic state.

3) Can the depth clamp range be ignored when depth clamping is disabled?

**RESOLVED:** Yes. This extension overrides the clamping range used only when depth clamping is enabled. The alternative would be highly unintuitive. As a consequence the [VK\\_EXT\\_depth\\_clip\\_enable](#) extension is required if depth clipping is desired in combination with this extension.

## Description

This extension allows the application to use the OpenGL depth range in NDC, i.e. with depth in range [-1, 1], as opposed to Vulkan's default of [0, 1]. The purpose of this extension is to allow efficient layering of OpenGL over Vulkan, by avoiding emulation in the pre-rasterization shader stages. This emulation, which effectively duplicates `gl_Position` but with a different depth value, costs ALU and consumes shader output components that the implementation may not have to spare to meet OpenGL minimum requirements.

## New Structures

  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_VIEWPORT\\_DEPTH\\_CLIP\\_CONTROL\\_CREATE\\_INFO\\_EXT](#)

## Issues

1) Should this extension include an origin control option to match `GL_LOWER_LEFT` found in `ARB_clip_control`?

**RESOLVED:** No. The fix for porting over the origin is a simple y-axis flip. The depth clip control is a much harder problem to solve than what this extension is aimed to solve. Adding an equivalent to `GL_LOWER_LEFT` would require more testing.

2) Should this pipeline state be dynamic?

**RESOLVED:** Yes. The purpose of this extension is to emulate the OpenGL depth range, which is expected to be globally fixed (in case of OpenGL ES) or very infrequently changed (with `glClipControl` in OpenGL).

3) Should the control provided in this extension be an enum that could be extended in the future?

**RESOLVED:** No. It is highly unlikely that the depth range is changed to anything other than `[0, 1]` in the future. Should that happen a new extension will be required to extend such an enum, and that extension might as well add a new structure to chain to [VkPipelineViewportStateCreateInfo::pNext](#) instead.

## Description

This extension allows the depth clipping operation, that is normally implicitly controlled by [VkPipelineRasterizationStateCreateInfo::depthClampEnable](#), to instead be controlled explicitly by [VkPipelineRasterizationDepthClipStateCreateInfoEXT::depthClipEnable](#).

This is useful for translating DX content which assumes depth clamping is always enabled, but depth clip can be controlled by the DepthClipEnable rasterization state (D3D12\_RASTERIZER\_DESC).

## Description

This extension removes the [VkViewport](#) `minDepth` and `maxDepth` restrictions that the values must be between `0.0` and `1.0`, inclusive. It also removes the same restriction on [VkPipelineDepthStencilStateCreateInfo](#) `minDepthBounds` and `maxDepthBounds`. Finally it removes the restriction on the `depth` value in [VkClearDepthStencilValue](#).

## New Enum Constants

- VK\_EXT\_DEPTH\_RANGE\_UNRESTRICTED\_EXTENSION\_NAME
- VK\_EXT\_DEPTH\_RANGE\_UNRESTRICTED\_SPEC\_VERSION

## Issues

1) How do [VkViewport](#) `minDepth` and `maxDepth` values outside of the `0.0` to `1.0` range interact with [Primitive Clipping](#)?

**RESOLVED:** The behavior described in [Primitive Clipping](#) still applies. If depth clamping is disabled the depth values are still clipped to  $0 \leq z_c \leq w_c$  before the viewport transform. If depth clamping is enabled the above equation is ignored and the depth values are instead clamped to the [VkViewport minDepth](#) and [maxDepth](#) values, which in the case of this extension can be outside of the 0.0 to 1.0 range.

2) What happens if a resulting depth fragment is outside of the 0.0 to 1.0 range and the depth buffer is fixed-point rather than floating-point?

**RESOLVED:** This situation can also arise without this extension (when fragment shaders replace depth values, for example), and this extension does not change the behavior, which is defined in the [Depth Test](#) section of the Fragment Operations chapter.

## Interactions and External Dependencies

- [VK\\_KHR\\_shader\\_untyped\\_pointers](#) must be supported, but it does not need to be enabled for applications using only the [binding interface](#).

## Description

This extension allows explicit management of descriptors, and the memory used to store descriptors, conceptualised as descriptor heaps. Descriptor heap memory can be accessed as any other memory, enabling management of descriptors on both CPU and the GPU.

This extension was developed based on issues discovered with [VK\\_EXT\\_descriptor\\_buffer](#). There are more constraints on how it is implemented, to provide more portable guarantees and more predictable performance characteristics. For instance, rather than an arbitrary number of sampler or resource buffers, there is exactly one sampler heap and exactly one resource heap.

This extension also eliminates descriptor sets and pipeline layouts completely; instead applications can look descriptors up solely by their offset into a heap. Shaders still using descriptor set and binding decorations can still be mapped to heaps through an API that maps set and binding decorations to heap offsets, either as constants or through push data. This new mapping API also enables a much more straightforward mapping to HLSL shaders using the root signature and descriptor table interfaces.

The push constant API has also been replaced with the *push data* interface, which aims to provide much more clarity about how data is passed to the shader, without requiring any mapping information to be provided during pipeline or shader creation. Mappings are still available for

shaders written for the legacy interface.

There is also a much clearer path for mapping shader constant data, with two recommended options for mapping constant data through push data; either directly in push data, or through a device address stored in push data, both of which can be mapped to shaders with set and binding interfaces.

## Description

This extension enables applications to track the binding of regions of the GPU virtual address space, and to associate those regions with Vulkan objects. This extension is primarily intended to aid in crash postmortem, where applications may wish to map a faulting GPU address to a Vulkan object.

For example, a page fault triggered by accessing an address located within a region of the GPU virtual address space that was previously reported as bound and then unbound may indicate a use-after-free error. Similarly, faults generated by accessing virtual addresses outside the limits of a bound region of GPU virtual address space may indicate indexing beyond the bounds of a resource.

## Issues

1.) Should this extend `VK_EXT_debug_utils` or `VK_EXT_device_memory_report`?

**RESOLVED:** Extend `VK_EXT_debug_utils`. `VK_EXT_device_memory_report` focuses on memory allocations and would not normally trigger callbacks in all of the situations where `VK_EXT_device_address_binding_report` is expected to.

2.) Should this extension cover all Vulkan object types, or only resources such as buffers and images?

**RESOLVED:** The extension covers all Vulkan objects, and is not restricted to objects backed by VkDeviceMemory objects.

3.) Should reallocation be identified explicitly, or as an unbind/bind pair?

**RESOLVED:** Reallocation should be represented as an unbind/bind pair.

4.) Can multiple Vulkan objects share an overlapping virtual address range?

**RESOLVED:** Yes. This can be expected to occur due to resources aliasing.

5.) Can a single Vulkan object be associated with multiple virtual address ranges concurrently?

**RESOLVED:** Yes. These should be reported via multiple calls to the reporting callback.

6.) Should the virtual address ranges associated with internal allocations such as memory pools be reported?

**RESOLVED:** Virtual address ranges associated with internal allocations should only be reported when they become associated with a specific Vulkan object. In the case of internal pool allocations, a bind event should be reported when resources from the pool are assigned to a Vulkan object, and an unbind event should be reported when those resources are returned to the pool. Implementations should not report the binding or unbinding of virtual address ranges for which there are no related API objects visible to the application developer.

7.) Can an implementation report binding a virtual address range at VkImage or VkImageView creation, rather than in response to vkBindImageMemory?

**RESOLVED:** Yes. Virtual address range binding should be reported at the appropriate point at which it occurs within the implementation. This extension does not mandate when that should occur, and applications should anticipate receiving callback events at any point after registering callbacks.

8.) Can reporting of binding/unbinding be deferred until a resource is referenced by an executing command buffer?

**RESOLVED:** Changes to the virtual address ranges associated with a Vulkan object should be reported as close as possible to where they occur within the implementation. If virtual address binding is deferred, then the callback should also be deferred to match.

9.) Do bind/unbind callbacks have to form matched pairs? Can a large region be bound, and then subregions unbound, resulting in fragmentation?

**RESOLVED:** Splitting of virtual address regions, and unmatched bind/unbind callbacks may occur. Developers should anticipate that sparse memory may exhibit this behavior.

10.) The specification mandates that a callback **must** be triggered whenever a GPU virtual address range associated with any Vulkan object is bound or unbound. Do we need queries or properties indicating which Vulkan objects will report binding modifications?

**RESOLVED:** No. This extension is not intended to mandate how and when implementations bind

virtual ranges to objects. Adding queries or properties would constrain implementations, which might otherwise vary how virtual address bindings occur based on usage.

11.) Should `vkAllocateMemory` and `vkFreeMemory` trigger reporting callbacks?

**RESOLVED:** If an implementation binds a GPU virtual address range when `vkAllocateMemory` is called, then the callbacks must be triggered associating the virtual address range with the `VkDeviceMemory` object. If the device memory is subsequently bound to a buffer or image via `vkBind*Memory`, the callbacks should be triggered a second time, reporting the association between virtual address range and the buffer/image.

12.) Should binding reports be emitted for `vkQueueBindSparse()` operations?

**RESOLVED:** binding reports for sparse objects are best effort, some implementations might report events on `vkQueueBindSparse()` other implementations might report events on sparse object creation/destruction.

## Description

This extension allows the device to generate a number of commands for command buffers. It provides a subset of functionality from both `VK_NV_device_generated_commands` and `VK_NV_device_generated_commands_compute` as well as some new features.

When rendering a large number of objects, the device can be leveraged to implement a number of critical functions, like updating matrices, or implementing occlusion culling, frustum culling, front to back sorting, etc. Implementing those on the device does not require any special extension, since an application is free to define its own data structures, and just process them using shaders.

To render objects which have been processed on the device, Vulkan has several ways to perform indirect rendering, from the most basic `vkCmdDrawIndirect` with one indirect draw to `vkCmdDrawIndirectCount` which supports multiple indirect draws batched together, with a way to determine number of draws at device execution time.

However, if rendering state needs to change between the indirect draws, then unextended Vulkan forces the application to speculatively record a prohibitive number of redundant indirect commands covering all possible state combinations - which could end up processing nothing after culling - or read back the processed stream and issue graphics command from the host. For very large scenes, the synchronization overhead and cost to generate the command buffer can become the bottleneck. This extension allows an application to generate a device side stream of state changes and commands, and convert it efficiently into a command buffer without having to read it back to the host.

Furthermore, it allows incremental changes to such command buffers by manipulating only partial sections of a command stream—for example pipeline and shader object bindings. Unextended Vulkan requires re-creation of entire command buffers in such a scenario, or updates synchronized on the host.

The intended usage for this extension is for the application to:

- create `VkBuffer` objects and retrieve physical addresses from them via `vkGetBufferDeviceAddress`
- create a `VkIndirectExecutionSetEXT` for the ability to change shaders on the device.
- create a `VkIndirectCommandsLayoutEXT`, which lists the `VkIndirectCommandsTokenTypeEXT` it wants to dynamically execute as an atomic command sequence. This step likely involves some internal device code compilation, since the intent is for the GPU to generate the command buffer based on the layout.
- fill the input stream buffers with the data for each of the inputs it needs. Each input is an array that will be filled with token-dependent data.
- set up a preprocess `VkBuffer` that uses memory according to the information retrieved via `vkGetGeneratedCommandsMemoryRequirementsEXT`.
- optionally preprocess the generated content using `vkCmdPreprocessGeneratedCommandsEXT`, for example on an asynchronous compute queue, or for the purpose of reusing the data in multiple executions.
- call `vkCmdExecuteGeneratedCommandsEXT` to create and execute the actual device commands for all sequences based on the inputs provided.

For each draw in a sequence, the following can be specified:

- a number of vertex buffer bindings
- a different index buffer, with an optional dynamic offset and index type
- a number of different push constants
- updates to bound shader stages

For each dispatch in a sequence, the following can be specified:

- a number of different push constants
- updates to bound shader stages

For each trace rays in a sequence, the following can be specified:

- a number of different push constants
- updates to bound shader stages

While the GPU can be faster than a CPU to generate the commands, it will not happen asynchronously to the device, therefore the primary use case is generating “less” total work (occlusion culling, classification to use specialized shaders, etc.).

## **New Object Types**

## Description

This device extension allows registration of device memory event callbacks upon device creation, so that applications or middleware can obtain detailed information about memory usage and how memory is associated with Vulkan objects. This extension exposes the actual underlying device memory usage, including allocations that are not normally visible to the application, such as memory consumed by [vkCreateGraphicsPipelines](#). It is intended primarily for use by debug tooling rather than for production applications.

  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_DEVICE\\_MEMORY\\_REPORT\\_FEATURES\\_EXT](#)

## Issues

1) Should this be better expressed as an extension to [VK\\_EXT\\_debug\\_utils](#) and its general-purpose messenger construct?

**RESOLVED:** No. The intended lifecycle is quite different. We want to make this extension tied to the device's lifecycle. Each ICD just handles its own implementation of this extension, and this extension will only be directly exposed from the ICD. So we can avoid the extra implementation complexity used to accommodate the flexibility of [VK\\_EXT\\_debug\\_utils](#) extension.

2) Can we extend and use the existing internal allocation callbacks instead of adding the new callback structure in this extension?

**RESOLVED:** No. Our memory reporting layer that combines this information with other memory information it collects directly (e.g. bindings of resources to [VkDeviceMemory](#)) would have to intercept all entry points that take a [VkAllocationCallbacks](#) parameter and inject its own [pfnInternalAllocation](#) and [pfnInternalFree](#). That may be doable for the extensions we know about, but not for ones we do not. The proposal would work fine in the face of most unknown extensions.

But even for ones we know about, since apps can provide a different set of callbacks and userdata and those can be retained by the driver and used later (esp. for pool object, but not just those), we would have to dynamically allocate the interception trampoline every time. That is getting to be an unreasonably large amount of complexity and (possibly) overhead.

We are interested in both alloc/free and import/unimport. The latter is fairly important for tracking (and avoiding double-counting) of swapchain images (still true with “native swapchains” based on external memory) and media/camera interop. Though we might be able to handle this with additional [VkInternalAllocationType](#) values, for import/export we do want to be able to tie this to the external resource, which is one thing that the [memoryObjectId](#) is for.

The internal alloc/free callbacks are not extensible except via new [VkInternalAllocationType](#) values. The [VkDeviceMemoryReportCallbackDataEXT](#) in this extension is extensible. That was deliberate: there is a real possibility we will want to get extra information in the future. As one example, currently this reports only physical allocations, but we believe there are interesting cases for tracking how populated that VA region is.

The callbacks are clearly specified as only callable within the context of a call from the application into Vulkan. We believe there are some cases where drivers can allocate device memory asynchronously. This was one of the sticky issues that derailed the internal device memory allocation reporting design (which is essentially what this extension is trying to do) leading up to 1.0.

[VkAllocationCallbacks](#) is described in a section called “Host memory” and the intro to it is very explicitly about host memory. The other callbacks are all inherently about host memory. But this extension is very focused on device memory.

3) Should the callback be reporting which heap is used?

**RESOLVED:** Yes. It is important for non-UMA systems to have all the device memory allocations attributed to the corresponding device memory heaps. For internally-allocated device memory, [heapIndex](#) will always correspond to an advertised heap, rather than having a magic value indicating a non-advertised heap. Drivers can advertise heaps that do not have any corresponding memory types if they need to.

4) Should we use an array of callback for the layers to intercept instead of chaining multiple of the [VkDeviceDeviceMemoryReportCreateInfoEXT](#) structures in the [pNext](#) of [VkDeviceCreateInfo](#)?

**RESOLVED** No. The pointer to the [VkDeviceDeviceMemoryReportCreateInfoEXT](#) structure itself is const and you cannot just cast it away. Thus we cannot update the callback array inside the structure. In addition, we cannot drop this [pNext](#) chain either, so making a copy of this whole structure does not work either.

5) Should we track bulk allocations shared among multiple objects?

**RESOLVED** No. Take the shader heap as an example. Some implementations will let multiple [VkPipeline](#) objects share the same shader heap. We are not asking the implementation to report [VK\\_OBJECT\\_TYPE\\_PIPELINE](#) along with a [VK\\_NULL\\_HANDLE](#) for this bulk allocation. Instead, this bulk allocation is considered as a layer below what this extension is interested in. Later, when the actual [VkPipeline](#) objects are created by suballocating from the bulk allocation, we ask the

implementation to report the valid handles of the [VkPipeline](#) objects along with the actual suballocated sizes and different [memoryObjectId](#).

6) Can we require the callbacks to be always called in the same thread with the Vulkan commands?

**RESOLVED** No. Some implementations might choose to multiplex work from multiple application threads into a single backend thread and perform JIT allocations as a part of that flow. Since this behavior is theoretically legit, we cannot require the callbacks to be always called in the same thread with the Vulkan commands, and the note is to remind the applications to handle this case properly.

7) Should we add an additional “allocation failed” event type with things like size and heap index reported?

**RESOLVED** Yes. This fits in well with the callback infrastructure added in this extension, and implementation touches the same code and has the same overheads as the rest of the extension. It could help debugging things like getting a [VK\\_ERROR\\_OUT\\_OF\\_HOST\\_MEMORY](#) error when ending a command buffer. Right now the allocation failure could have happened anywhere during recording, and a callback would be really useful to understand where and why.

## Description

This is extension, along with related platform extensions, allows applications to take exclusive control of displays associated with a native windowing system. This is especially useful for virtual reality applications that wish to hide HMDs (head mounted displays) from the native platform's display management system, desktop, and/or other applications.

## New Commands

- [vkReleaseDisplayEXT](#)

## New Enum Constants

- [VK\\_EXT\\_DIRECT\\_MODE\\_DISPLAY\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_DIRECT\\_MODE\\_DISPLAY\\_SPEC\\_VERSION](#)

## Issues

1) Should this extension and its related platform-specific extensions leverage [VK\\_KHR\\_display](#), or provide separate equivalent interfaces.

**RESOLVED:** Use [VK\\_KHR\\_display](#) concepts and objects. [VK\\_KHR\\_display](#) can be used to enumerate all displays on the system, including those attached to/in use by a window system or native platform, but [VK\\_KHR\\_display\\_swapchain](#) will fail to create a swapchain on in-use displays. This extension and its platform-specific children will allow applications to grab in-use displays away from window systems and/or native platforms, allowing them to be used with [VK\\_KHR\\_display\\_swapchain](#).

2) Are separate calls needed to acquire displays and enable direct mode?

**RESOLVED:** No, these operations happen in one combined command. Acquiring a display puts it into direct mode.

## Description

This extension provides additional orthogonally aligned “discard rectangles” specified in framebuffer-space coordinates that restrict rasterization of all points, lines, and triangles.

From zero to an implementation-dependent limit (specified by `maxDiscardRectangles`) number of discard rectangles can be operational at once. When one or more discard rectangles are active, rasterized fragments can either survive if the fragment is within any of the operational discard rectangles (`VK_DISCARD_RECTANGLE_MODE_INCLUSIVE_EXT` mode) or be rejected if the fragment is within any of the operational discard rectangles

([VK\\_DISCARD\\_RECTANGLE\\_MODE\\_EXCLUSIVE\\_EXT](#) mode).

These discard rectangles operate orthogonally to the existing scissor test functionality. The discard rectangles can be different for each physical device in a device group by specifying the device mask and setting discard rectangle dynamic state.

Version 2 of this extension introduces new dynamic states [VK\\_DYNAMIC\\_STATE\\_DISCARD\\_RECTANGLE\\_ENABLE\\_EXT](#) and [VK\\_DYNAMIC\\_STATE\\_DISCARD\\_RECTANGLE\\_MODE\\_EXT](#), and the corresponding functions [vkCmdSetDiscardRectangleEnableEXT](#) and [vkCmdSetDiscardRectangleModeEXT](#). Applications that use these dynamic states must ensure the implementation advertises at least [specVersion 2](#) of this extension.

### New Commands

- [vkCmdSetDiscardRectangleEXT](#)
- [vkCmdSetDiscardRectangleEnableEXT](#)
- [vkCmdSetDiscardRectangleModeEXT](#)

### New Structures

- Extending [VkGraphicsPipelineCreateInfo](#):
  - [VkPipelineDiscardRectangleStateCreateInfoEXT](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceDiscardRectanglePropertiesEXT](#)

### New Enums

- [VkDiscardRectangleModeEXT](#)

### New Bitmasks

- [VkPipelineDiscardRectangleStateCreateFlagsEXT](#)

### New Enum Constants

- [VK\\_EXT\\_DISCARD\\_RECTANGLES\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_DISCARD\\_RECTANGLES\\_SPEC\\_VERSION](#)
- Extending [VkDynamicState](#):
  - [VK\\_DYNAMIC\\_STATE\\_DISCARD\\_RECTANGLE\\_ENABLE\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_DISCARD\\_RECTANGLE\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_DISCARD\\_RECTANGLE\\_MODE\\_EXT](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_DISCARD\\_RECTANGLE\\_PROPERTIES\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_DISCARD\\_RECTANGLE\\_STATE\\_CREATE\\_INFO\\_EXT](#)

## **Version History**

- Extending [VkSwapchainCreateInfoKHR](#):
  - [VkSwapchainCounterCreateInfoEXT](#)

## New Enums

- [VkDeviceEventTypeEXT](#)
- [VkDisplayEventTypeEXT](#)
- [VkDisplayPowerStateEXT](#)

## New Enum Constants

- [VK\\_EXT\\_DISPLAY\\_CONTROL\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_DISPLAY\\_CONTROL\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_EVENT\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_EVENT\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_DISPLAY\\_POWER\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_SWAPCHAIN\\_COUNTER\\_CREATE\\_INFO\\_EXT](#)

## Issues

1) Should this extension add an explicit “WaitForVsync” API or a fence signaled at vsync that the application can wait on?

**RESOLVED:** A fence. A separate API could later be provided that allows exporting the fence to a native object that could be inserted into standard run loops on POSIX and Windows systems.

2) Should callbacks be added for a vsync event, or in general to monitor events in Vulkan?

**RESOLVED:** No, fences should be used. Some events are generated by interrupts which are managed in the kernel. In order to use a callback provided by the application, drivers would need to have the userspace driver spawn threads that would wait on the kernel event, and hence the

callbacks could be difficult for the application to synchronize with its other work given they would arrive on a foreign thread.

3) Should vblank or scanline events be exposed?

**RESOLVED:** Vblank events. Scanline events could be added by a separate extension, but the latency of processing an interrupt and waking up a userspace event is high enough that the accuracy of a scanline event would be rather low. Further, per-scanline interrupts are not supported by all hardware.

## Description

This extension adds almost all of the remaining pipeline state as dynamic state to help applications further reduce the number of monolithic pipelines they need to create and bind.

## New Commands

- [vkCmdSetAlphaToCoverageEnableEXT](#)
- [vkCmdSetAlphaToOneEnableEXT](#)
- [vkCmdSetColorBlendEnableEXT](#)
- [vkCmdSetColorBlendEquationEXT](#)
- [vkCmdSetColorWriteMaskEXT](#)
- [vkCmdSetDepthClampEnableEXT](#)
- [vkCmdSetLogicOpEnableEXT](#)
- [vkCmdSetPolygonModeEXT](#)
- [vkCmdSetRasterizationSamplesEXT](#)
- [vkCmdSetSampleMaskEXT](#)

If [VK\\_EXT\\_blend\\_operation\\_advanced](#) is supported:

- [vkCmdSetColorBlendAdvancedEXT](#)

If [VK\\_EXT\\_conservative\\_rasterization](#) is supported:

- [vkCmdSetConservativeRasterizationModeEXT](#)
- [vkCmdSetExtraPrimitiveOverestimationSizeEXT](#)

If [VK\\_EXT\\_depth\\_clip\\_control](#) is supported:

- [vkCmdSetDepthClipNegativeOneToOneEXT](#)

If [VK\\_EXT\\_depth\\_clip\\_enable](#) is supported:

- [vkCmdSetDepthClipEnableEXT](#)

If [VK\\_EXT\\_provoking\\_vertex](#) is supported:

- [vkCmdSetProvokingVertexModeEXT](#)

If [VK\\_EXT\\_sample\\_locations](#) is supported:

- [vkCmdSetSampleLocationsEnableEXT](#)

If [VK\\_EXT\\_transform\\_feedback](#) is supported:

- [vkCmdSetRasterizationStreamEXT](#)

If [VK\\_KHR\\_maintenance2](#) or Vulkan Version 1.1 is supported:

- [vkCmdSetTessellationDomainOriginEXT](#)

If Vulkan Version 1.4 or [VK\\_KHR\\_line\\_rasterization](#) or [VK\\_EXT\\_line\\_rasterization](#) is supported:

- [vkCmdSetLineRasterizationModeEXT](#)
- [vkCmdSetLineStippleEnableEXT](#)

## New Structures

- [VkColorBlendAdvancedEXT](#)
- [VkColorBlendEquationEXT](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceExtendedDynamicState3FeaturesEXT](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceExtendedDynamicState3PropertiesEXT](#)

## New Enum Constants

- [VK\\_EXT\\_EXTENDED\\_DYNAMIC\\_STATE\\_3\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_EXTENDED\\_DYNAMIC\\_STATE\\_3\\_SPEC\\_VERSION](#)
- Extending [VkDynamicState](#):
  - [VK\\_DYNAMIC\\_STATE\\_ALPHA\\_TO\\_COVERAGE\\_ENABLE\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_ALPHA\\_TO\\_ONE\\_ENABLE\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_COLOR\\_BLEND\\_ENABLE\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_COLOR\\_BLEND\\_EQUATION\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_COLOR\\_WRITE\\_MASK\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_DEPTH\\_CLAMP\\_ENABLE\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_LOGIC\\_OP\\_ENABLE\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_POLYGON\\_MODE\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_RASTERIZATION\\_SAMPLES\\_EXT](#)
  - [VK\\_DYNAMIC\\_STATE\\_SAMPLE\\_MASK\\_EXT](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTENDED\\_DYNAMIC\\_STATE\\_3\\_FEATURES\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTENDED\\_DYNAMIC\\_STATE\\_3\\_PROPERTIES\\_EXT](#)

If [VK\\_EXT\\_blend\\_operation\\_advanced](#) is supported:

- Extending [VkDynamicState](#):

- `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT`

If `VK_EXT_conservative_rasterization` is supported:

- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT`
  - `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT`

If `VK_EXT_depth_clip_control` is supported:

- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT`

If `VK_EXT_depth_clip_enable` is supported:

- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT`

If `VK_EXT_provoking_vertex` is supported:

- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT`

If `VK_EXT_sample_locations` is supported:

- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT`

If `VK_EXT_transform_feedback` is supported:

- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT`

If `VK_KHR_maintenance2` or Vulkan Version 1.1 is supported:

- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT`

If Vulkan Version 1.4 or `VK_KHR_line_rasterization` or `VK_EXT_line_rasterization` is supported:

- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT`
  - `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT`

## Issues

1) What about the `VkPipelineMultisampleStateCreateInfo` state `sampleShadingEnable` and `minSampleShading`?

`sampleShadingEnable` and `minSampleShading` are required when compiling the fragment shader, and it is not meaningful to set them dynamically since they always need to match the fragment shader state, so this hardware state may as well just come from the pipeline with the fragment shader.

## Version History

## Description

A memory barrier **may** have a performance penalty when acquiring ownership of a subresource range from an external queue family. This extension provides API that **may** reduce the performance penalty if ownership of the subresource range was previously released to the external queue family and if the resource's memory has remained unmodified between the release and acquire operations.

## New Structures

- Extending [VkBufferMemoryBarrier](#), [VkBufferMemoryBarrier2](#), [VkImageMemoryBarrier](#), [VkImageMemoryBarrier2](#):
  - [VkExternalMemoryAcquireUnmodifiedEXT](#)

## New Enum Constants

- [VK\\_EXT\\_EXTERNAL\\_MEMORY\\_ACQUIRE\\_UNMODIFIED\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_EXTERNAL\\_MEMORY\\_ACQUIRE\\_UNMODIFIED\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):

## Description

A [dma\\_buf](#) is a type of file descriptor, defined by the Linux kernel, that allows sharing memory across kernel device drivers and across processes. This extension enables applications to import a [dma\\_buf](#) as [VkDeviceMemory](#), to export [VkDeviceMemory](#) as a [dma\\_buf](#), and to create [VkBuffer](#) objects that **can** be bound to that memory.

## New Enum Constants

- [VK\\_EXT\\_EXTERNAL\\_MEMORY\\_DMA\\_BUF\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_EXTERNAL\\_MEMORY\\_DMA\\_BUF\\_SPEC\\_VERSION](#)

- Extending `VkExternalMemoryHandleTypeFlagBits`:
  - `VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT`

## Issues

1) How does the application, when creating a `VkImage` that it intends to bind to `dma_buf` `VkDeviceMemory` containing an externally produced image, specify the memory layout (such as row pitch and DRM format modifier) of the `VkImage`? In other words, how does the application achieve behavior comparable to that provided by `EGL_EXT_image_dma_buf_import` and `EGL_EXT_image_dma_buf_import_modifiers`?

**RESOLVED:** Features comparable to those in `EGL_EXT_image_dma_buf_import` and `EGL_EXT_image_dma_buf_import_modifiers` will be provided by an extension layered atop this one.

2) Without the ability to specify the memory layout of external `dma_buf` images, how is this extension useful?

**RESOLVED:** This extension provides exactly one new feature: the ability to import/export between `dma_buf` and `VkDeviceMemory`. This feature, together with features provided by `VK_KHR_external_memory_fd`, is sufficient to bind a `VkBuffer` to `dma_buf`.

## Description

This extension enables an application to import host allocations and host mapped foreign device memory to Vulkan memory objects.

## New Commands

- [vkGetMemoryHostPointerPropertiesEXT](#)

## New Structures

- [VkMemoryHostPointerPropertiesEXT](#)
- Extending [VkMemoryAllocateInfo](#):
  - [VkImportMemoryHostPointerInfoEXT](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceExternalMemoryHostPropertiesEXT](#)

## New Enum Constants

- [VK\\_EXT\\_EXTERNAL\\_MEMORY\\_HOST\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_EXTERNAL\\_MEMORY\\_HOST\\_SPEC\\_VERSION](#)
- Extending [VkExternalMemoryHandleTypeFlagBits](#):
  - [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_HOST\\_ALLOCATION\\_BIT\\_EXT](#)
  - [VK\\_EXTERNAL\\_MEMORY\\_HANDLE\\_TYPE\\_HOST\\_MAPPED\\_FOREIGN\\_MEMORY\\_BIT\\_EXT](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_IMPORT\\_MEMORY\\_HOST\\_POINTER\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_MEMORY\\_HOST\\_POINTER\\_PROPERTIES\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTERNAL\\_MEMORY\\_HOST\\_PROPERTIES\\_EXT](#)

## Issues

1) What memory type has to be used to import host pointers?

**RESOLVED:** Depends on the implementation. Applications have to use the new [vkGetMemoryHostPointerPropertiesEXT](#) command to query the supported memory types for a particular host pointer. The reported memory types may include memory types that come from a memory heap that is otherwise not usable for regular memory object allocation and thus such a heap's size may be zero.

2) Can the application still access the contents of the host allocation after importing?

**RESOLVED:** Yes. However, usual synchronization requirements apply.

3) Can the application free the host allocation?

**RESOLVED:** No, it violates valid usage conditions. Using the memory object imported from a host allocation that is already freed thus results in undefined behavior.

4) Is [vkMapMemory](#) expected to return the same host address which was specified when importing it to the memory object?

**RESOLVED:** No. Implementations are allowed to return the same address but it is not required. Some implementations might return a different virtual mapping of the allocation, although the same physical pages will be used.

5) Is there any limitation on the alignment of the host pointer and/or size?

**RESOLVED:** Yes. Both the address and the size have to be an integer multiple of `minImportedHostPointerAlignment`. In addition, some platforms and foreign devices may have additional restrictions.

6) Can the same host allocation be imported multiple times into a given physical device?

**RESOLVED:** No, at least not guaranteed by this extension. Some platforms do not allow locking the same physical pages for device access multiple times, so attempting to do it may result in undefined behavior.

7) Does this extension support exporting the new handle type?

**RESOLVED:** No.

8) Should we include the possibility to import host mapped foreign device memory using this API?

**RESOLVED:** Yes, through a separate handle type. Implementations are still allowed to support only one of the handle types introduced by this extension by not returning import support for a particular handle type as returned in [VkExternalMemoryProperties](#).

## Description

An application may wish to reference device memory in multiple Vulkan device instances, in multiple processes, and/or in Metal API. This extension enables an application to export and import Metal handles from Vulkan memory objects such that the underlying resources can be referenced outside the scope of the Vulkan device instance that created them.

## Description

VK\_EXT\_filter\_cubic extends VK\_IMG\_filter\_cubic.

It documents cubic filtering of other image view types. It adds new structures that **can** be added to

the **pNext** chain of [VkPhysicalDeviceImageFormatInfo2](#) and [VkImageFormatProperties2](#) that **can** be used to determine which image types and which image view types support cubic filtering.

## New Structures

- Extending [VkImageFormatProperties2](#):
  - [VkFilterCubicImageViewImageFormatPropertiesEXT](#)
- Extending [VkPhysicalDeviceImageFormatInfo2](#):
  - [VkPhysicalDeviceImageViewImageFormatInfoEXT](#)

## New Enum Constants

- [VK\\_EXT\\_FILTER\\_CUBIC\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_FILTER\\_CUBIC\\_SPEC\\_VERSION](#)
- Extending [VkFilter](#):
  - [VK\\_FILTER\\_CUBIC\\_EXT](#)
- Extending [VkFormatFeatureFlagBits](#):
  - [VK\\_FORMAT\\_FEATURE\\_SAMPLED\\_IMAGE\\_FILTER\\_CUBIC\\_BIT\\_EXT](#)

## Description

This extension allows an application to specify areas of the render target where the fragment shader may be invoked fewer times. These fragments are broadcasted out to multiple pixels to cover the render target.

The primary use of this extension is to reduce workloads in areas where lower quality may not be perceived such as the distorted edges of a lens or the periphery of a user's gaze.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceFragmentDensityMapFeaturesEXT](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceFragmentDensityMapPropertiesEXT](#)
- Extending [VkRenderPassCreateInfo](#), [VkRenderPassCreateInfo2](#):
  - [VkRenderPassFragmentDensityMapCreateInfoEXT](#)

If [Vulkan Version 1.3](#) or [VK\\_KHR\\_dynamic\\_rendering](#) is supported:

- Extending [VkRenderingInfo](#):
  - [VkRenderingFragmentDensityMapAttachmentInfoEXT](#)

## New Enum Constants

- [VK\\_EXT\\_FRAGMENT\\_DENSITY\\_MAP\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_FRAGMENT\\_DENSITY\\_MAP\\_SPEC\\_VERSION](#)
- Extending [VkAccessFlagBits](#):
  - [VK\\_ACCESS\\_FRAGMENT\\_DENSITY\\_MAP\\_READ\\_BIT\\_EXT](#)
- Extending [VkFormatFeatureFlagBits](#):
  - [VK\\_FORMAT\\_FEATURE\\_FRAGMENT\\_DENSITY\\_MAP\\_BIT\\_EXT](#)
- Extending [VkImageCreateFlagBits](#):
  - [VK\\_IMAGE\\_CREATE\\_SUBSAMPLED\\_BIT\\_EXT](#)
- Extending [VkImageLayout](#):
  - [VK\\_IMAGE\\_LAYOUT\\_FRAGMENT\\_DENSITY\\_MAP\\_OPTIMAL\\_EXT](#)

- Extending `VkImageUsageFlagBits`:
  - `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`
- Extending `VkImageViewCreateFlagBits`:
  - `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT`
- Extending `VkPipelineStageFlagBits`:
  - `VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT`
- Extending `VkSamplerCreateFlagBits`:
  - `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`
  - `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_RENDER_PASS_FRAGMENT_DENSITY_MAP_CREATE_INFO_EXT`

If `VK_KHR_format_feature_flags2` or Vulkan Version 1.3 is supported:

- Extending `VkFormatFeatureFlagBits2`:
  - `VK_FORMAT_FEATURE_2_FRAGMENT_DENSITY_MAP_BIT_EXT`

If Vulkan Version 1.3 or `VK_KHR_dynamic_rendering` is supported:

- Extending `VkPipelineCreateFlagBits`:
  - `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`
  - `VK_PIPELINE_RASTERIZATION_STATE_CREATE_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_INFO_EXT`

## New or Modified Built-In Variables

- `FragInvocationCountEXT`
- `FragSizeEXT`

## New SPIR-V Capabilities

- `FragmentDensityEXT`

## Version History

- Revision 1, 2018-09-25 (Matthew Netsch)

## Description

This extension adds support for the `FragmentShaderPixelInterlockEXT`, `FragmentShaderSampleInterlockEXT`, and `FragmentShaderShadingRateInterlockEXT` capabilities from the `SPV_EXT_fragment_shader_interlock` extension to Vulkan.

Enabling these capabilities provides a critical section for fragment shaders to avoid overlapping pixels being processed at the same time, and certain guarantees about the ordering of fragment shader invocations of fragments of overlapping pixels.

This extension can be useful for algorithms that need to access per-pixel data structures via shader loads and stores. Algorithms using this extension can access per-pixel data structures in critical sections without other invocations accessing the same per-pixel data. Additionally, the ordering guarantees are useful for cases where the API ordering of fragments is meaningful. For example, applications may be able to execute programmable blending operations in the fragment shader, where the destination buffer is read via image loads and the final value is written via image stores.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT`

## New Enum Constants

- `VK_EXT_FRAGMENT_SHADER_INTERLOCK_EXTENSION_NAME`
- `VK_EXT_FRAGMENT_SHADER_INTERLOCK_SPEC_VERSION`
- Extending `VkStructureType`:

## Description

This extension allows applications to set the policy for swapchain creation and presentation mechanisms relating to full-screen access. Implementations may be able to acquire exclusive access to a particular display for an application window that covers the whole screen. This can increase performance on some systems by bypassing composition, however it can also result in disruptive or expensive transitions in the underlying windowing system when a change occurs.

Applications can choose between explicitly disallowing or allowing this behavior, letting the implementation decide, or managing this mode of operation directly using the new [vkAcquireFullScreenExclusiveModeEXT](#) and [vkReleaseFullScreenExclusiveModeEXT](#) commands.

## New Commands

- [vkAcquireFullScreenExclusiveModeEXT](#)
- [vkGetPhysicalDeviceSurfacePresentModes2EXT](#)
- [vkReleaseFullScreenExclusiveModeEXT](#)

If [VK\\_KHR\\_device\\_group](#) or Vulkan Version 1.1 is supported:

- [vkGetDeviceGroupSurfacePresentModes2EXT](#)

## New Structures

- Extending [VkPhysicalDeviceSurfaceInfo2KHR](#), [VkSwapchainCreateInfoKHR](#):
  - [VkSurfaceFullScreenExclusiveInfoEXT](#)
- Extending [VkSurfaceCapabilities2KHR](#):
  - [VkSurfaceCapabilitiesFullScreenExclusiveEXT](#)

If [VK\\_KHR\\_win32\\_surface](#) is supported:

- Extending [VkPhysicalDeviceSurfaceInfo2KHR](#), [VkSwapchainCreateInfoKHR](#):
  - [VkSurfaceFullScreenExclusiveWin32InfoEXT](#)

## New Enums

- [VkFullScreenExclusiveEXT](#)

## New Enum Constants

- [VK\\_EXT\\_FULL\\_SCREEN\\_EXCLUSIVE\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_FULL\\_SCREEN\\_EXCLUSIVE\\_SPEC\\_VERSION](#)
- Extending [VkResult](#):
  - [VK\\_ERROR\\_FULL\\_SCREEN\\_EXCLUSIVE\\_MODE\\_LOST\\_EXT](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_CAPABILITIES\\_FULL\\_SCREEN\\_EXCLUSIVE\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_FULL\\_SCREEN\\_EXCLUSIVE\\_INFO\\_EXT](#)

If [VK\\_KHR\\_win32\\_surface](#) is supported:

- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_SURFACE\\_FULL\\_SCREEN\\_EXCLUSIVE\\_WIN32\\_INFO\\_EXT](#)

## Issues

1) What should the extension & flag be called?

**RESOLVED:** [VK\\_EXT\\_full\\_screen\\_exclusive](#).

Other options considered (prior to the app-controlled mode) were:

- [VK\\_EXT\\_smooth\\_fullscreen\\_transition](#)
- [VK\\_EXT\\_fullscreen\\_behavior](#)
- [VK\\_EXT\\_fullscreen\\_preference](#)
- [VK\\_EXT\\_fullscreen\\_hint](#)
- [VK\\_EXT\\_fast\\_fullscreen\\_transition](#)
- [VK\\_EXT\\_avoid\\_fullscreen\\_exclusive](#)

2) Do we need more than a boolean toggle?

**RESOLVED:** Yes.

Using an enum with default/allowed/disallowed/app-controlled enables applications to accept driver default behavior, specifically override it in either direction without implying the driver is ever required to use full-screen exclusive mechanisms, or manage this mode explicitly.

3) Should this be a KHR or EXT extension?

**RESOLVED:** EXT, in order to allow it to be shipped faster.

4) Can the fullscreen hint affect the surface capabilities, and if so, should the hint also be specified

as input when querying the surface capabilities?

**RESOLVED:** Yes on both accounts.

While the hint does not guarantee a particular fullscreen mode will be used when the swapchain is created, it can sometimes imply particular modes will NOT be used. If the driver determines that it will opt-out of using a particular mode based on the policy, and knows it can only support certain capabilities if that mode is used, it would be confusing at best to the application to report those capabilities in such cases. Not allowing implementations to report this state to applications could result in situations where applications are unable to determine why swapchain creation fails when they specify certain hint values, which could result in never-terminating surface creation loops.

5) Should full-screen be one word or two?

**RESOLVED:** Two words.

"Fullscreen" is not in my dictionary, and web searches did not turn up definitive proof that it is a colloquially accepted compound word. Documentation for the corresponding Windows API mechanisms dithers. The text consistently uses a hyphen, but none-the-less, there is a `SetFullscreenState` method in the DXGI swapchain object. Given this inconclusive external guidance, it is best to adhere to the Vulkan style guidelines and avoid inventing new compound words.

## Version History

- Revision 4, 2019-03-12 (Tobias Hector)
  - Added application-controlled mode, and related functions
  - Tidied up appendix
- Revision 3, 2019-01-03 (James Jones)
  - Renamed to `VK_EXT_full_screen_exclusive`
  - Made related adjustments to the tri-state enumerant names.
- Revision 2, 2018-11-27 (James Jones)
  - Renamed to `VK_KHR_fullscreen_behavior`
  - Switched from boolean flag to tri-state enum
- Revision 1, 2018-11-06 (James Jones)
  - Internal revision

## Description

This extension allows the separate compilation of four distinct parts of graphics pipelines, with the intent of allowing faster pipeline loading for applications reusing the same shaders or state in multiple pipelines. Each part can be independently compiled into a graphics pipeline library, with a final link step required to create an executable pipeline that can be bound to a command buffer.

## Description

This extension defines two new structures and a function to assign SMPTE (the Society of Motion Picture and Television Engineers) 2086 metadata and CTA (Consumer Technology Association) 861.3 metadata to a swapchain.

SMPTE 2086 metadata defines the color volume of the display on which the content was optimized for viewing and includes the color primaries, white point, and luminance range. When such content is reproduced on another display, this metadata can be used by the presentation engine to improve processing of images. For instance, values in the image can first be clamped to the color volume described in the metadata, and then what remains can be remapped to the color volume of the presentation engine.

CTA 861.3 metadata additionally includes the maximum intended luminance for the content and the maximum average light level across frames.

This extension does not define exactly how this metadata is used, however, it simply provides a mechanism to provide it to the presentation engine. Presentation engines may process the image based on the metadata before displaying it, resulting in the image being modified outside of Vulkan. For example, the clamping of colors in the image to the color volume may change those values in the image itself.

The metadata does not override or otherwise influence the color space and color encoding.

### New Commands

- [vkSetHdrMetadataEXT](#)

### New Structures

- [VkHdrMetadataEXT](#)
- [VkXYColorEXT](#)

### New Enum Constants

- [VK\\_EXT\\_HDR\\_METADATA\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_HDR\\_METADATA\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_HDR\\_METADATA\\_EXT](#)

### Issues

1) Do we need a query function for the currently specified metadata?

No, Vulkan does not provide queries for state that the application can track on its own.

2) Should we specify default metadata if not specified by the application?

No, the metadata is optional and the absence of the metadata is well-defined.

## Description

The [VK\\_EXT\\_headless\\_surface](#) extension is an instance extension. It provides a mechanism to create [VkSurfaceKHR](#) objects independently of any window system or display device. The presentation operation for a swapchain created from a headless surface is by default a no-op, resulting in no externally-visible result.

Because there is no real presentation target, future extensions can layer on top of the headless surface to introduce arbitrary or customizable sets of restrictions or features. These could include features like saving to a file or restrictions to emulate a particular presentation target.

This functionality is expected to be useful for application and driver development because it allows any platform to expose an arbitrary or customizable set of restrictions and features of a presentation engine. This makes it a useful portable test target for applications targeting a wide range of presentation engines where the actual target presentation engines might be scarce,

unavailable, or otherwise undesirable or inconvenient to use for general Vulkan application development.

## Description

This extension allows a single slice of a 3D image to be used as a 2D view in image descriptors, matching both the functionality of `glBindImageTexture` in OpenGL with the `layer` parameter set to true and 2D view binding provided by the extension `EGL_KHR_gl_texture_3D_image`. It is primarily intended to support GL emulation.

## Description

This extension enables fixed-rate image compression and adds the ability to control when this kind of compression can be applied. Many implementations support some form of framebuffer

compression. This is typically transparent to applications as lossless compression schemes are used. With fixed-rate compression, the compression is done at a defined bitrate. Such compression algorithms generally produce results that are visually lossless, but the results are typically not bit-exact when compared to a non-compressed result. The implementation may not be able to use the requested compression rate in all cases. This extension adds a query that can be used to determine the compression scheme and rate that was applied to an image.

## Description

This extension provides the ability to use *DRM format modifiers* with images, enabling Vulkan to better integrate with the Linux ecosystem of graphics, video, and display APIs.

Its functionality closely overlaps with `EGL_EXT_image_dma_buf_import_modifiers`<sup>2</sup> and `EGL_MESA_image_dma_buf_export`<sup>3</sup>. Unlike the EGL extensions, this extension does not require the use of a specific handle type (such as a `dma_buf`) for external memory and provides more explicit control of image creation.

## Introduction to DRM Format Modifiers

A *DRM format modifier* is a 64-bit, vendor-prefixed, semi-opaque unsigned integer. Most *modifiers* represent a concrete, vendor-specific tiling format for images. Some exceptions are `DRM_FORMAT_MOD_LINEAR` (which is not vendor-specific); `DRM_FORMAT_MOD_NONE` (which is an alias of `DRM_FORMAT_MOD_LINEAR` due to historical accident); and `DRM_FORMAT_MOD_INVALID` (which does not represent a tiling format). The *modifier*'s vendor prefix consists of the 8 most significant bits. The canonical list of *modifiers* and vendor prefixes is found in `drm_fourcc.h` in the Linux kernel source. The other dominant source of *modifiers* are vendor kernel trees.

One goal of *modifiers* in the Linux ecosystem is to enumerate for each vendor a reasonably sized set of tiling formats that are appropriate for images shared across processes, APIs, and/or devices, where each participating component may possibly be from different vendors. A non-goal is to enumerate all tiling formats supported by all vendors. Some tiling formats used internally by vendors are inappropriate for sharing; no *modifiers* should be assigned to such tiling formats.

Modifier values typically do not *describe* memory layouts. More precisely, a *modifier*'s lower 56 bits usually have no structure. Instead, modifiers *name* memory layouts; they name a small set of vendor-preferred layouts for image sharing. As a consequence, in each vendor namespace the modifier values are often sequentially allocated starting at 1.

Each *modifier* is usually supported by a single vendor and its name matches the pattern `{VENDOR}_FORMAT_MOD_*` or `DRM_FORMAT_MOD_{VENDOR}_*`. Examples are `I915_FORMAT_MOD_X_TILED` and `DRM_FORMAT_MOD_BROADCOM_VC4_T_TILED`. An exception is `DRM_FORMAT_MOD_LINEAR`, which is supported by most vendors.

Many APIs in Linux use *modifiers* to negotiate and specify the memory layout of shared images. For example, a Wayland compositor and Wayland client may, by relaying *modifiers* over the Wayland protocol `zwp_linux_dmabuf_v1`, negotiate a vendor-specific tiling format for a shared `wl_buffer`. The client may allocate the underlying memory for the `wl_buffer` with GBM, providing the chosen *modifier* to `gbm_bo_create_with_modifiers`. The client may then import the `wl_buffer` into Vulkan for

producing image content, providing the resource's `dma_buf` to `VkImportMemoryFdInfoKHR` and its *modifier* to `VkImageDrmFormatModifierExplicitCreateInfoEXT`. The compositor may then import the `wl_buffer` into OpenGL for sampling, providing the resource's `dma_buf` and *modifier* to `eglCreateImage`. The compositor may also bypass OpenGL and submit the `wl_buffer` directly to the kernel's display API, providing the `dma_buf` and *modifier* through `drm_mode_fb_cmd2`.

## Format Translation

*Modifier*-capable APIs often pair *modifiers* with DRM formats, which are defined in `drm_fourcc.h`. However, `VK_EXT_image_drm_format_modifier` uses `VkFormat` instead of DRM formats. The application must convert between `VkFormat` and DRM format when it sends or receives a DRM format to or from an external API.

The mapping from `VkFormat` to DRM format is lossy. Therefore, when receiving a DRM format from an external API, often the application must use information from the external API to accurately map the DRM format to a `VkFormat`. For example, DRM formats do not distinguish between RGB and sRGB (as of 2018-03-28); external information is required to identify the image's color space.

The mapping between `VkFormat` and DRM format is also incomplete. For some DRM formats there exist no corresponding Vulkan format, and for some Vulkan formats there exist no corresponding DRM format.

## Usage Patterns

Three primary usage patterns are intended for this extension:

- **Negotiation.** The application negotiates with *modifier*-aware, external components to determine sets of image creation parameters supported among all components.

In the Linux ecosystem, the negotiation usually assumes the image is a 2D, single-sampled, non-mipmapped, non-array image; this extension permits that assumption but does not require it. The result of the negotiation usually resembles a set of tuples such as *(drmFormat, drmFormatModifier)*, where each participating component supports all tuples in the set.

Many details of this negotiation - such as the protocol used during negotiation, the set of image creation parameters expressible in the protocol, and how the protocol chooses which process and which API will create the image - are outside the scope of this specification.

In this extension, `vkGetPhysicalDeviceFormatProperties2` with `VkDrmFormatModifierPropertiesListEXT` serves a primary role during the negotiation, and `vkGetPhysicalDeviceImageFormatProperties2` with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` serves a secondary role.

- **Import.** The application imports an image with a *modifier*.

In this pattern, the application receives from an external source the image's memory and its creation parameters, which are often the result of the negotiation described above. Some image creation parameters are implicitly defined by the external source; for example, `VK_IMAGE_TYPE_2D` is often assumed. Some image creation parameters are usually explicit, such as the image's `format`, `drmFormatModifier`, and `extent`; and each plane's `offset` and `rowPitch`.

Before creating the image, the application first verifies that the physical device supports the received creation parameters by querying `vkGetPhysicalDeviceFormatProperties2` with `VkDrmFormatModifierPropertiesListEXT` and `vkGetPhysicalDeviceImageFormatProperties2` with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`. Then the application creates the image by chaining `VkImageDrmFormatModifierExplicitCreateInfoEXT` and `VkExternalMemoryImageCreateInfo` onto `VkImageCreateInfo`.

- **Export.** The application creates an image and allocates its memory. Then the application exports to *modifier*-aware consumers the image's memory handles; its creation parameters; its *modifier*; and the *offset*, *size*, and *rowPitch* of each *memory plane*.

In this pattern, the Vulkan device is the authority for the image; it is the allocator of the image's memory and the decider of the image's creation parameters. When choosing the image's creation parameters, the application usually chooses a tuple (*format*, *drmFormatModifier*) from the result of the negotiation described above. The negotiation's result often contains multiple tuples that share the same format but differ in their *modifier*. In this case, the application should defer the choice of the image's *modifier* to the Vulkan implementation by providing all such *modifiers* to `VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers`; and the implementation should choose from `pDrmFormatModifiers` the optimal *modifier* in consideration with the other image parameters.

The application creates the image by chaining `VkImageDrmFormatModifierListCreateInfoEXT` and `VkExternalMemoryImageCreateInfo` onto `VkImageCreateInfo`. The protocol and APIs by which the application will share the image with external consumers will likely determine the value of `VkExternalMemoryImageCreateInfo::handleTypes`. The implementation chooses for the image an optimal *modifier* from `VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers`. The application then queries the implementation-chosen *modifier* with `vkGetImageDrmFormatModifierPropertiesEXT`, and queries the memory layout of each plane with `vkGetImageSubresourceLayout`.

The application then allocates the image's memory with `VkMemoryAllocateInfo`, adding chained extending structures for external memory; binds it to the image; and exports the memory, for example, with `vkGetMemoryFdKHR`.

Finally, the application sends the image's creation parameters, its *modifier*, its per-plane memory layout, and the exported memory handle to the external consumers. The details of how the application transmits this information to external consumers is outside the scope of this specification.

## Prior Art

Extension `EGL_EXT_image_dma_buf_import`<sup>1</sup> introduced the ability to create an `EGLImage` by importing for each plane a `dma_buf`, *offset*, and *row pitch*.

Later, extension `EGL_EXT_image_dma_buf_import_modifiers`<sup>2</sup> introduced the ability to query which combination of formats and *modifiers* the implementation supports and to specify *modifiers* during creation of the `EGLImage`.

Extension `EGL_MESA_image_dma_buf_export`<sup>3</sup> is the inverse of `EGL_EXT_image_dma_buf_import_modifiers`.

The Linux kernel modesetting API (KMS), when configuring the display's framebuffer with `struct drm_mode_fb_cmd2`<sup>4</sup>, allows one to specify the framebuffer's *modifier* as well as a per-plane memory handle, offset, and row pitch.

GBM, a graphics buffer manager for Linux, allows creation of a `gbm_bo` (that is, a graphics *buffer object*) by importing data similar to that in `EGL_EXT_image_dma_buf_import_modifiers`<sup>1</sup>; and symmetrically allows exporting the same data from the `gbm_bo`. See the references to *modifier* and *plane* in `gbm.h`<sup>5</sup>.

## New Commands

- `vkGetImageDrmFormatModifierPropertiesEXT`

## New Structures

- `VkDrmFormatModifierPropertiesEXT`
- `VkImageDrmFormatModifierPropertiesEXT`
- Extending `VkFormatProperties2`:
  - `VkDrmFormatModifierPropertiesListEXT`
- Extending `VkImageCreateInfo`:
  - `VkImageDrmFormatModifierExplicitCreateInfoEXT`
  - `VkImageDrmFormatModifierListCreateInfoEXT`
- Extending `VkPhysicalDeviceImageFormatInfo2`:
  - `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`

If `VK_KHR_format_feature_flags2` or Vulkan Version 1.3 is supported:

- `VkDrmFormatModifierProperties2EXT`
- Extending `VkFormatProperties2`:
  - `VkDrmFormatModifierPropertiesList2EXT`

## New Enum Constants

- `VK_EXT_IMAGE_DRM_FORMAT_MODIFIER_EXTENSION_NAME`
- `VK_EXT_IMAGE_DRM_FORMAT_MODIFIER_SPEC_VERSION`
- Extending `VkImageAspectFlagBits`:
  - `VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT`
  - `VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT`
  - `VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT`
  - `VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT`
- Extending `VkImageTiling`:
  - `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`

- Extending `VkResult`:
  - `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_EXT`
  - `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_EXPLICIT_CREATE_INFO_EXT`
  - `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_LIST_CREATE_INFO_EXT`
  - `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_DRM_FORMAT_MODIFIER_INFO_EXT`

If `VK_KHR_format_feature_flags2` or Vulkan Version 1.3 is supported:

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_2_EXT`

## Issues

1) Should this extension define a single DRM format modifier per `VkImage`? Or define one per plane?

+

**RESOLVED:** There exists a single DRM format modifier per `VkImage`.

**DISCUSSION:** Prior art, such as `EGL_EXT_image_dma_buf_import_modifiers`<sup>2</sup>, `struct drm_mode_fb_cmd2`<sup>4</sup>, and `struct gbm_import_fd_modifier_data`<sup>5</sup>, allows defining one *modifier* per plane. However, developers of the GBM and kernel APIs concede it was a mistake. Beginning in Linux 4.10, the kernel requires that the application provide the same DRM format *modifier* for each plane. (See Linux commit [bae781b259269590109e8a4a8227331362b88212](#)). And GBM provides an entry point, `gbm_bo_get_modifier`, for querying the *modifier* of the image but does not provide one to query the modifier of individual planes.

2) When creating an image with `VkImageDrmFormatModifierExplicitCreateInfoEXT`, which is typically used when *importing* an image, should the application explicitly provide the size of each plane?

+

**RESOLVED:** No. The application **must** not provide the size. To enforce this, the API requires that `VkImageDrmFormatModifierExplicitCreateInfoEXT::pPlaneLayouts->size` **must** be 0.

**DISCUSSION:** Prior art, such as `EGL_EXT_image_dma_buf_import_modifiers`<sup>2</sup>, `struct drm_mode_fb_cmd2`<sup>4</sup>, and `struct gbm_import_fd_modifier_data`<sup>5</sup>, omits from the API the size of each plane. Instead, the APIs infer each plane's size from the import parameters, which include the image's pixel format and a `dma_buf`, offset, and row pitch for each plane.

However, Vulkan differs from EGL and GBM with regards to image creation in the following ways:

### *Differences in Image Creation*

- **Undedicated allocation by default.** When importing or exporting a set of `dma_bufs` as an `EGLImage` or `gbm_bo`, common practice mandates that each `dma_buf`'s memory be dedicated (in the sense of `VK_KHR_dedicated_allocation`) to the image (though not necessarily dedicated to a single plane). In particular, neither the GBM documentation nor the EGL extension specifications explicitly state this requirement, but in light of common practice this is likely due to under-specification rather than intentional omission. In contrast, `VK_EXT_image_drm_format_modifier` permits, but does not require, the implementation to require dedicated allocations for images created with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`.
- **Separation of image creation and memory allocation.** When importing a set of `dma_bufs` as an `EGLImage` or `gbm_bo`, EGL and GBM create the image resource and bind it to memory (the `dma_bufs`) simultaneously. This allows EGL and GBM to query each `dma_buf`'s size during image creation. In Vulkan, image creation and memory allocation are independent unless a dedicated allocation is used (as in `VK_KHR_dedicated_allocation`). Therefore, without requiring dedicated allocation, Vulkan cannot query the size of each `dma_buf` (or other external handle) when calculating the image's memory layout. Even if dedication allocation were required, Vulkan cannot calculate the image's memory layout until after the image is bound to its `dma_bufs`.

The above differences complicate the potential inference of plane size in Vulkan. Consider the following problematic cases:

#### *Problematic Plane Size Calculations*

- **Padding.** Some plane of the image may require implementation-dependent padding.
- **Metadata.** For some *modifiers*, the image may have a metadata plane which requires a non-trivial calculation to determine its size.
- **Mipmapped, array, and 3D images.** The implementation may support `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` for images whose `mipLevels`, `arrayLayers`, or `depth` is greater than 1. For such images with certain *modifiers*, the calculation of each plane's size may be non-trivial.

However, an application-provided plane size solves none of the above problems.

For simplicity, consider an external image with a single memory plane. The implementation is obviously capable calculating the image's size when its tiling is `VK_IMAGE_TILING_OPTIMAL`. Likewise, any reasonable implementation is capable of calculating the image's size when its tiling uses a supported *modifier*.

Suppose that the external image's size is smaller than the implementation-calculated size. If the application provided the external image's size to `vkCreateImage`, the implementation would observe the mismatched size and recognize its inability to comprehend the external image's layout (unless the implementation used the application-provided size to select a refinement of the tiling layout indicated by the *modifier*, which is strongly discouraged). The implementation would observe the conflict, and reject image creation with `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`. On the other hand, if the application did not provide the external image's size to `vkCreateImage`, then the application would observe after calling `vkGetImageMemoryRequirements` that the external image's size is less than

the size required by the implementation. The application would observe the conflict and refuse to bind the `VkImage` to the external memory. In both cases, the result is explicit failure.

Suppose that the external image's size is larger than the implementation-calculated size. If the application provided the external image's size to `vkCreateImage`, for reasons similar to above the implementation would observe the mismatched size and recognize its inability to comprehend the image data residing in the extra size. The implementation, however, must assume that image data resides in the entire size provided by the application. The implementation would observe the conflict and reject image creation with `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`. On the other hand, if the application did not provide the external image's size to `vkCreateImage`, then the application would observe after calling `vkGetImageMemoryRequirements` that the external image's size is larger than the implementation-usable size. The application would observe the conflict and refuse to bind the `VkImage` to the external memory. In both cases, the result is explicit failure.

Therefore, an application-provided size provides no benefit, and this extension should not require it. This decision renders `VkSubresourceLayout::size` an unused field during image creation, and thus introduces a risk that implementations may require applications to submit sideband creation parameters in the unused field. To prevent implementations from relying on sideband data, this extension *requires* the application to set `size` to 0.

## Description

This extension allows creating 3D views of 3D images such that the views contain a subset of the slices in the image, using a Z offset and range, for the purpose of using the views as storage image descriptors. This matches functionality in D3D12 and is primarily intended to support D3D12 emulation.

## Description

This extension allows applications to clamp the minimum LOD value during [Image Level\(s\) Selection](#), [Texel Gathering](#) and [Integer Texel Coordinate Operations](#) with a given [VkImageView](#) by [VkImageViewMinLodCreateInfoEXT::minLod](#).

This extension may be useful to restrict a [VkImageView](#) to only mips which have been uploaded, and the use of fractional [minLod](#) can be useful for smoothly introducing new mip levels when using linear mipmap filtering.

## New Structures

## Description

This extension provides a mechanism for configuring programmatically through the Vulkan API the behavior of layers.

This extension provides the [VkLayerSettingsCreateInfoEXT](#) structure that can be included in the [pNext](#) chain of the [VkInstanceCreateInfo](#) structure passed as the [pCreateInfo](#) parameter of [vkCreateInstance](#).

The structure contains an array of [VkLayerSettingEXT](#) structure values that configure specific features of layers.

### NOTE

The [VK\\_EXT\\_layer\\_settings](#) extension subsumes all the functionality provided in the [VK\\_EXT\\_validation\\_flags](#) extension and the [VK\\_EXT\\_validation\\_features](#) extension.

## New Structures

- [VkLayerSettingEXT](#)
- Extending [VkInstanceCreateInfo](#):
  - [VkLayerSettingsCreateInfoEXT](#)

## New Enums

- [VkLayerSettingTypeEXT](#)

## New Enum Constants

- [VK\\_EXT\\_LAYER\\_SETTINGS\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_LAYER\\_SETTINGS\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_LAYER\\_SETTINGS\\_CREATE\\_INFO\\_EXT](#)

## Example

One example usage of [VK\\_EXT\\_layer\\_settings](#) is as implemented by the Vulkan Profiles layer.

It allows the profiles layer tests used by the profiles layer C.I. to programmatically configure the layer for each test without affecting the C.I. environment, allowing to run multiple tests concurrently.

```
const char* profile_file_data = JSON_TEST_FILES_PATH "VP_KHR_roadmap_2022.json";
const char* profile_name_data = "VP_KHR_roadmap_2022";
VkBool32 emulate_portability_data = VK_TRUE;
const char* simulate_capabilities[] = {
    "SIMULATE_API_VERSION_BIT",
    "SIMULATE_FEATURES_BIT",
```

```

"SIMULATE_PROPERTIES_BIT",
"SIMULATE_EXTENSIONS_BIT",
"SIMULATE_FORMATS_BIT",
"SIMULATE_QUEUE_FAMILY_PROPERTIES_BIT"
};

const char* debug_reports[] = {
    "DEBUG_REPORT_ERROR_BIT",
    "DEBUG_REPORT_WARNING_BIT",
    "DEBUG_REPORT_NOTIFICATION_BIT",
    "DEBUG_REPORT_DEBUG_BIT"
};

const VkLayerSettingEXT settings[] = {
    {kLayerName, kLayerSettingsProfileFile, VK_LAYER_SETTING_TYPE_STRING_EXT, 1,
    &profile_file_data},
    {kLayerName, kLayerSettingsProfileName, VK_LAYER_SETTING_TYPE_STRING_EXT, 1,
    &profile_name_data},
    {kLayerName, kLayerSettingsEmulatePortability, VK_LAYER_SETTING_TYPE_BOOL32_EXT,
    1, &emulate_portability_data},
    {kLayerName, kLayerSettingsSimulateCapabilities,
    VK_LAYER_SETTING_TYPE_STRING_EXT,
        static_cast<uint32_t>(std::size(simulate_capabilities)),
    simulate_capabilities},
    {kLayerName, kLayerSettingsDebugReports, VK_LAYER_SETTING_TYPE_STRING_EXT,
        static_cast<uint32_t>(std::size(debug_reports)), debug_reports}
};

const VkLayerSettingsCreateInfoEXT layer_settings_create_info{
    VK_STRUCTURE_TYPE_LAYER_SETTINGS_CREATE_INFO_EXT, nullptr,
    static_cast<uint32_t>(std::size(settings)), settings};

VkInstanceCreateInfo inst_create_info = {};
...
inst_create_info.pNext = &layer_settings_create_info;
vkCreateInstance(&inst_create_info, nullptr, &instances);

```

## Issues

- How should application developers figure out the list of available settings?

This extension does not provide a reflection API for layer settings. Layer settings are described in each layer JSON manifest and the documentation of each layer which implements this extension.

- Extending [VkSubpassDescriptionFlagBits](#):
  - [VK\\_SUBPASS\\_DESCRIPTION\\_ENABLE\\_LEGACY\\_DITHERING\\_BIT\\_EXT](#)

If [VK\\_KHR\\_dynamic\\_rendering](#) or [Vulkan Version 1.3](#) and [Vulkan Version 1.4](#) or [VK\\_KHR\\_extended\\_flags](#) or [VK\\_KHR\\_maintenance5](#) is supported:

- Extending [VkPipelineCreateFlagBits2](#):
  - [VK\\_PIPELINE\\_CREATE\\_2\\_ENABLE\\_LEGACY\\_DITHERING\\_BIT\\_EXT](#)
- Extending [VkRenderingFlagBits](#):
  - [VK\\_RENDERING\\_ENABLE\\_LEGACY\\_DITHERING\\_BIT\\_EXT](#)

## Version History

- Revision 1, 2022-03-31 (Shahbaz Youssefi)
  - Internal revisions
- Revision 2, 2024-02-22 (Shahbaz Youssefi)
  - Added pipeline create flag to support dynamic rendering

## Issues

1) In OpenGL, the dither state can change dynamically. Should this extension add a pipeline state for dither?

**RESOLVED:** No. Changing dither state is rarely, if ever, done during rendering. Every surveyed Android application either entirely disables dither, explicitly enables it, or uses the default state (which is enabled). Additionally, on some hardware dither can only be specified in a render pass granularity, so a change in dither state would necessarily need to cause a render pass break. This extension considers dynamic changes in OpenGL dither state a theoretical situation, and expects

the layer to break the render pass in such a situation without any practical downsides.

## Description

This extension adds support for legacy features of (non-64-bit) vertex attributes as found in OpenGL:

- Vertex attributes loaded from arbitrary buffer alignments
- Vertex attributes using arbitrary strides
- Vertex attributes where the component data type of the binding does not match the component numeric type of the shader input

These features are only usable with dynamic vertex input. Unaligned loads of vertex attributes may incur performance penalties, indicated with a property.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceLegacyVertexAttributesFeaturesEXT](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceLegacyVertexAttributesPropertiesEXT](#)

## New Enum Constants

  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_LEGACY\\_VERTEX\\_ATTRIBUTES\\_PROPERTIES\\_EXT](#)

## Issues

1.) Should implementations convert float/integer values?

**RESOLVED:** No. When fetching an integer data type from float values or float data types from integer values, the resulting shader values are implementation-dependent.

## Description

While running a Vulkan application, other processes on the machine might also be attempting to use the same device memory, which can pose problems. This extension adds support for querying the amount of memory used and the total memory budget for a memory heap. The values returned by this query are implementation-dependent and can depend on a variety of factors including operating system and system load.

The [VkPhysicalDeviceMemoryBudgetPropertiesEXT::heapBudget](#) values can be used as a guideline for how much total memory from each heap the **current process** can use at any given time, before allocations may start failing or causing performance degradation. The values may change based on other activity in the system that is outside the scope and control of the Vulkan implementation.

The [VkPhysicalDeviceMemoryBudgetPropertiesEXT::heapUsage](#) will display the **current process** estimated heap usage.

With this information, the idea is for an application at some interval (once per frame, per few seconds, etc) to query `heapBudget` and `heapUsage`. From here the application can notice if it is over budget and decide how it wants to handle the memory situation (free it, move to host memory, changing mipmap levels, etc). This extension is designed to be used in concert with `VK_EXT_memory_priority` to help with this part of memory management.

  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MEMORY\\_DECOMPRESSION\\_PROPERTIES\\_EXT](#)

## Issues

1) How does an app know the minimum size that [decompressedSize](#) should be set to?

**RESOLVED:** When decompressing, data is typically processed in chunks. For example, with

GDeflate 1.0, data is streamed in 64 KB blocks, but the final block may be smaller. The exact size of this last block depends on the compression method and original data size and so it must be stored in the compressed bitstream so that the decompressor can set `decompressedSize` correctly. It is still ok for the last block to take up all 64 KB, but setting it too low will cause issues and is undefined behavior. It is a known limitation that the validation layers will not be able to detect the minimum size of `decompressedSize` unless it decides to implement each decompression method specification.

## Description

This extension adds a **priority** value specified at memory allocation time. On some systems with both device-local and non-device-local memory heaps, the implementation may transparently move memory from one heap to another when a heap becomes full (for example, when the total memory used across all processes exceeds the size of the heap). In such a case, this priority value may be used to determine which allocations are more likely to remain in device-local memory.

## Description

This extension provides a new mechanism allowing applications to generate collections of geometric primitives via programmable mesh shading. It is an alternative to the existing programmable primitive shading pipeline, which relied on generating input primitives by a fixed function assembler as well as fixed function vertex fetch.

This extension also adds support for the following SPIR-V extension in Vulkan:

- `SPV_EXT_mesh_shader`

## New Commands

- `vkCmdDrawMeshTasksEXT`
- `vkCmdDrawMeshTasksIndirectEXT`

If Vulkan Version 1.2 or `VK_KHR_draw_indirect_count` or `VK_AMD_draw_indirect_count` is supported:

- `vkCmdDrawMeshTasksIndirectCountEXT`

## New Structures

- `VkDrawMeshTasksIndirectCommandEXT`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceMeshShaderFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceMeshShaderPropertiesEXT`

## New Enum Constants

- `VK_EXT_MESH_SHADER_EXTENSION_NAME`
- `VK_EXT_MESH_SHADER_SPEC_VERSION`
- Extending `VkPipelineStageFlagBits`:
  - `VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT`
  - `VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT`
- Extending `VkQueryPipelineStatisticFlagBits`:
  - `VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT`
  - `VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT`
- Extending `VkQueryType`:
  - `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT`
- Extending `VkShaderStageFlagBits`:
  - `VK_SHADER_STAGE_MESH_BIT_EXT`
  - `VK_SHADER_STAGE_TASK_BIT_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_EXT`

If `VK_EXT_device_generated_commands` is supported:

- Extending `VkIndirectCommandsTokenTypeEXT`:
  - `VK_INDIRECT_COMMANDS_TOKEN_TYPE_DRAW_MESH_TASKS_COUNT_EXT`

- [VK\\_INDIRECT\\_COMMANDS\\_TOKEN\\_TYPE\\_DRAW\\_MESH\\_TASKS\\_EXT](#)

## Description

In a Vulkan implementation that is layered on top of Metal on Apple device platforms, this extension provides the ability to import and export the underlying Metal objects associated with specific Vulkan objects.

As detailed in the [extension proposal document](#), this extension adds one new Vulkan command, [vkExportMetalObjectsEXT](#), to export underlying Metal objects from Vulkan objects, and supports importing the appropriate existing Metal objects when creating Vulkan objects of types [VkDeviceMemory](#), [VkImage](#), [VkSemaphore](#), and [VkEvent](#),

The intent is that this extension will be advertised and supported only on implementations that are layered on top of Metal on Apple device platforms.

### New Base Types

- [IOSurfaceRef](#)
- [MTLBuffer\\_id](#)
- [MTLCommandQueue\\_id](#)
- [MTLDevice\\_id](#)
- [MTLSharedEvent\\_id](#)
- [MTLTexture\\_id](#)

### New Commands

- [vkExportMetalObjectsEXT](#)

### New Structures

- [VkExportMetalObjectsInfoEXT](#)
- Extending [VkExportMetalObjectsInfoEXT](#):
  - [VkExportMetalBufferInfoEXT](#)
  - [VkExportMetalCommandQueueInfoEXT](#)
  - [VkExportMetalDeviceInfoEXT](#)
  - [VkExportMetalIOSurfaceInfoEXT](#)
  - [VkExportMetalSharedEventInfoEXT](#)
  - [VkExportMetalTextureInfoEXT](#)
- Extending [VkImageCreateInfo](#):
  - [VkImportMetalIOSurfaceInfoEXT](#)
  - [VkImportMetalTextureInfoEXT](#)
- Extending [VkInstanceCreateInfo](#), [VkMemoryAllocateInfo](#), [VkImageCreateInfo](#), [VkImageViewCreateInfo](#), [VkBufferViewCreateInfo](#), [VkSemaphoreCreateInfo](#), [VkEventCreateInfo](#):
  - [VkExportMetalObjectCreateInfoEXT](#)
- Extending [VkMemoryAllocateInfo](#):
  - [VkImportMetalBufferInfoEXT](#)
- Extending [VkSemaphoreCreateInfo](#), [VkEventCreateInfo](#):
  - [VkImportMetalSharedEventInfoEXT](#)

### New Enums

- [VkExportMetalObjectTypeFlagBitsEXT](#)

## New Bitmasks

- [VkExportMetalObjectTypeFlagsEXT](#)

## New Enum Constants

- [VK\\_EXT\\_METAL\\_OBJECTS\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_METAL\\_OBJECTS\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_METAL\\_BUFFER\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_METAL\\_COMMAND\\_QUEUE\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_METAL\\_DEVICE\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_METAL\\_IO\\_SURFACE\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_METAL\\_OBJECTS\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_METAL\\_OBJECT\\_CREATE\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_METAL\\_SHARED\\_EVENT\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_EXPORT\\_METAL\\_TEXTURE\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_IMPORT\\_METAL\\_BUFFER\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_IMPORT\\_METAL\\_IO\\_SURFACE\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_IMPORT\\_METAL\\_SHARED\\_EVENT\\_INFO\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_IMPORT\\_METAL\\_TEXTURE\\_INFO\\_EXT](#)

## Issues

None.

## Version History

- Revision 1, 2022-05-28 (Bill Hollings)
  - Initial draft.
  - Incorporated feedback from review by the Vulkan Working Group. Renamed many structures, moved import/export of MTLBuffer to VkDeviceMemory, added export of MTLSharedEvent, added import of MTLSharedEvent for VkSemaphore and VkEvent, and changed used bit mask fields to individual bit fields to simplify Valid Usage rules.
- Revision 2, 2024-04-04 (Bill Hollings)
  - Add an [\\_\\_unsafe\\_unretained](#) ownership qualifier to all Metal object declarations, to support Automatic Reference Counting (ARC) on Apple devices.

## Description

Processing multiple draw commands in sequence incurs measurable overhead within drivers due to repeated state checks and updates during dispatch. This extension enables passing the entire sequence of draws directly to the driver in order to avoid any such overhead, using an array of [VkMultiDrawInfoEXT](#) or [VkMultiDrawIndexedInfoEXT](#) structs with [vkCmdDrawMultiEXT](#) or [vkCmdDrawMultiIndexedEXT](#), respectively. These functions could be used any time multiple draw commands are being recorded without any state changes between them in order to maximize performance.

## New Commands

## Description

With careful usage of resolve attachments, multisampled image memory allocated with [VK\\_MEMORY\\_PROPERTY\\_LAZILY\\_ALLOCATED\\_BIT](#), [loadOp](#) not equal to [VK\\_ATTACHMENT\\_LOAD\\_OP\\_LOAD](#) and [storeOp](#) not equal to [VK\\_ATTACHMENT\\_STORE\\_OP\\_STORE](#), a Vulkan application is able to efficiently perform multisampled rendering without incurring any additional memory penalty on some implementations.

Under certain circumstances however, the application may not be able to complete its multisampled rendering within a single render pass; for example if it does partial rasterization from frame to frame, blending on an image from a previous frame, or in emulation of [GL\\_EXT\\_multisampled\\_render\\_to\\_texture](#). In such cases, the application can use an initial subpass to effectively load single-sampled data from the next subpass's resolve attachment and fill in the multisampled attachment which otherwise uses [loadOp](#) equal to [VK\\_ATTACHMENT\\_LOAD\\_OP\\_DONT\\_CARE](#). However, this is not always possible (for example for stencil in the absence of [VK\\_EXT\\_shader\\_stencil\\_export](#)) and has multiple drawbacks.

Some implementations are able to perform said operation efficiently in hardware, effectively loading a multisampled attachment from the contents of a single sampled one. Together with the ability to perform a resolve operation at the end of a subpass, these implementations are able to perform multisampled rendering on single-sampled attachments with no extra memory or bandwidth overhead. This extension exposes this capability by allowing a framebuffer and render pass to include single-sampled attachments while rendering is done with a specified number of samples.

## New Structures

- Extending [VkFormatProperties2](#):
  - [VkSubpassResolvePerformanceQueryEXT](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT](#)
- Extending [VkSubpassDescription2](#), [VkRenderingInfo](#):
  - [VkMultisampledRenderToSingleSampledInfoEXT](#)

## New Enum Constants

- [VK\\_EXT\\_MULTISAMPLED\\_RENDER\\_TO\\_SINGLE\\_SAMPLED\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_MULTISAMPLED\\_RENDER\\_TO\\_SINGLE\\_SAMPLED\\_SPEC\\_VERSION](#)

  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_MULTISAMPLED\\_RENDER\\_TO\\_SINGLE\\_SAMPLED\\_FEATURES\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_SUBPASS\\_RESOLVE\\_PERFORMANCE\\_QUERY\\_EXT](#)

## Issues

1) Could the multisampled attachment be initialized through some form of copy?

**RESOLVED:** No. Some implementations do not support copying between attachments in general, and find expressing this operation through a copy unnatural.

2) Another way to achieve this is by introducing a new `loadOp` to load the contents of the multisampled image from a single-sampled one. Why is this extension preferred?

**RESOLVED:** Using this extension simplifies the application, as it does not need to manage a secondary lazily-allocated image. Additionally, using this extension leaves less room for error; for example a single mistake in `loadOp` or `storeOp` would result in the lazily-allocated image to actually take up memory, and remain so until destruction.

3) There is no guarantee that multisampled data between two subpasses with the same number of samples will be retained as the implementation may be forced to split the render pass implicitly for various reasons. Should this extension require that every subpass that uses multisampled-render-to-single-sampled end in an implicit render pass split (which results in a resolve operation)?

**RESOLVED:** No. Not requiring this allows render passes with multiple multisampled-render-to-single-sampled subpasses to potentially execute more efficiently (though there is no guarantee).

## Description

This extension allows applications to reduce descriptor memory footprint by allowing a descriptor to be able to mutate to a given list of descriptor types depending on which descriptor types are written into, or copied into a descriptor set.

The main use case this extension intends to address is descriptor indexing with [VK\\_DESCRIPTOR\\_BINDING\\_VARIABLE\\_DESCRIPTOR\\_COUNT\\_BIT](#) where the descriptor types are completely generic, as this means applications can allocate one large descriptor set, rather than having one large descriptor set per descriptor type, which significantly bloats descriptor memory usage and causes performance issues.

This extension also adds a mechanism to declare that a descriptor pool, and therefore the descriptor sets that are allocated from it, reside only in host memory; as such these descriptors can only be updated/copied, but not bound.

These features together allow much more efficient emulation of the raw D3D12 binding model. This extension is primarily intended to be useful for API layering efforts.

- Extending [VkRenderingFlagBits](#):
  - [VK\\_RENDERING\\_CONTENTS\\_INLINE\\_BIT\\_EXT](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_NESTED\\_COMMAND\\_BUFFER\\_FEATURES\\_EXT](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_NESTED\\_COMMAND\\_BUFFER\\_PROPERTIES\\_EXT](#)
- Extending [VkSubpassContents](#):
  - [VK\\_SUBPASS\\_CONTENTS\\_INLINE\\_AND\\_SECONDARY\\_COMMAND\\_BUFFERS\\_EXT](#)

## Issues

1) The Command Buffer Levels property for the Vulkan commands comes from the `cmdbufferlevel` attribute in `vk.xml` for the command, and it is currently not possible to modify this attribute based on whether an extension is enabled. For this extension we want the `cmdbufferlevel` attribute for `vkCmdExecuteCommands` to be `primary,secondary` when this extension is enabled and `primary` otherwise.

**RESOLVED:** The `cmdbufferlevel` attribute for [vkCmdExecuteCommands](#) has been changed to `primary,secondary` and a new VUID added to prohibit recording this command in a secondary command buffer unless this extension is enabled.

## Description

Vulkan is frequently implemented on multi-user and multi-process operating systems where the device-local memory can be shared by more than one process. On such systems the size of the device-local memory available to the application may not be the full size of the memory heap at all times. In order for these operating systems to support multiple applications the device-local memory is virtualized and paging is used to move memory between device-local and host-local memory heaps, transparent to the application.

The current Vulkan specification does not expose this behavior well and may cause applications to make suboptimal memory choices when allocating memory. For example, in a system with multiple applications running, the application may think that device-local memory is full and revert to making performance-sensitive allocations from host-local memory. In reality the memory heap might not have been full, it just appeared to be at the time memory consumption was queried, and a device-local allocation would have succeeded. A well designed operating system that implements pageable device-local memory will try to have all memory allocations for the foreground application paged into device-local memory, and paged out for other applications as needed when not in use.

When this extension is exposed by the Vulkan implementation it indicates to the application that the operating system implements pageable device-local memory and the application should adjust its memory allocation strategy accordingly. The extension also exposes a new [vkSetDeviceMemoryPriorityEXT](#) function to allow the application to dynamically adjust the priority of existing memory allocations based on its current needs. This will help the operating system page out lower priority memory allocations before higher priority allocations when needed. It will also help the operating system decide which memory allocations to page back into device-local memory first.

To take best advantage of pageable device-local memory the application must create the Vulkan device with the [VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT::pageableDeviceLocalMemory](#) feature enabled. When enabled the Vulkan implementation will allow device-local memory allocations to be paged in and out by the operating system, and **may** not return `VK_ERROR_OUT_OF_DEVICE_MEMORY` even if device-local memory appears to be full, but will instead page this, or other allocations, out to make room. The Vulkan implementation will also ensure that host-local memory allocations will never be promoted to device-local memory by the operating system, or consume device-local memory.

## Description

This extension adds a new query to obtain PCI bus information about a physical device.

Not all physical devices have PCI bus information, either due to the device not being connected to the system through a PCI interface or due to platform specific restrictions and policies. Thus this extension is only expected to be supported by physical devices which can provide the information.

As a consequence, applications should always check for the presence of the extension string for each individual physical device for which they intend to issue the new query for and should not have any assumptions about the availability of the extension on any given platform.

## Description

This extension provides new facilities to query DRM properties for physical devices, enabling users to match Vulkan physical devices with DRM nodes on Linux.

Its functionality closely overlaps with [EGL\\_EXT\\_device\\_drm](#)<sup>1</sup>. Unlike the EGL extension, this extension does not expose a string containing the name of the device file and instead exposes device minor numbers.

DRM defines multiple device node types. Each physical device may have one primary node and one render node associated. Physical devices may have no primary node (e.g. if the device does not have a display subsystem), may have no render node (e.g. if it is a software rendering engine), or may have neither (e.g. if it is a software rendering engine without a display subsystem).

To query DRM properties for a physical device, chain [VkPhysicalDeviceDrmPropertiesEXT](#) to [VkPhysicalDeviceProperties2](#).

## New Structures

## Description

Vulkan SC requires offline compilation of pipelines. In order to support this, the pipeline state is represented in a [JSON schema](#) that is read by an offline tool for compilation.

One method of developing a Vulkan SC application is to author a Vulkan application and use a layer to record and serialize the pipeline state and shaders for offline compilation. Each pipeline is represented by a separate JSON file, and can be identified with a [pipelineIdentifier](#).

Once the pipelines have been compiled by the offline pipeline cache compiler, the Vulkan SC

application can then use this `pipelineIdentifier` for identifying the pipeline via Vulkan SC's `VkPipelineIdentifierInfo` structure.

This extension allows the Vulkan application to query the `pipelineIdentifier` associated with each pipeline so that the application can store this with its pipeline metadata and the Vulkan SC application will then use to map the same state to an entry in the Vulkan SC pipeline cache.

It is expected that this extension will initially be implemented in the json generation layer, although we can envision that there might be future uses for it in native Vulkan drivers as well.

## New Commands

- `vkGetPipelinePropertiesEXT`

## New Structures

- `VkPipelineInfoEXT`
- `VkPipelinePropertiesIdentifierEXT`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDevicePipelinePropertiesFeaturesEXT`

## New Enum Constants

- `VK_EXT_PIPELINE_PROPERTIES_EXTENSION_NAME`
- `VK_EXT_PIPELINE_PROPERTIES_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROPERTIES_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_INFO_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_PROPERTIES_IDENTIFIER_EXT`

## Issues

(1) This extension does not make sense on a strict Vulkan SC implementation. It may however be of potential use in a non-strict Vulkan SC implementation. Should this extension be enabled as part of Vulkan SC as well?

**RESOLVED:** No. This extension will not be enabled for Vulkan SC.

(2) This is intended to be a general pipeline properties query, but is currently only retrieving the pipeline identifier. Should the pipeline identifier query be mandatory for this extension and for all queries using this command?

**RESOLVED:** Use `VkBaseOutStructure` for the return parameter. Currently this is required to actually be a `VkPipelinePropertiesIdentifierEXT` structure, but that could be relaxed in the future to allow other structure types or to allow other structures to be chained in along with this one.

(3) Should there be a feature structure? Should it be required?

**RESOLVED:** Add a feature structure, and a feature for querying pipeline identifier, but allow it to be optional so that this extension can be used as the basis for other pipeline property queries without requiring the pipeline identifier to be supported.

## Interactions and External Dependencies

- This extension provides API support for [GL\\_ARB\\_post\\_depth\\_coverage](#) and [GL\\_EXT\\_post\\_depth\\_coverage](#)

## Contributors

- Jeff Bolz, NVIDIA

## Description

This extension adds support for the following SPIR-V extension in Vulkan:

- [SPV\\_KHR\\_post\\_depth\\_coverage](#)

which allows the fragment shader to control whether values in the [SampleMask](#) built-in input variable reflect the coverage after early [depth](#) and [stencil](#) tests are applied.

This extension adds a new [PostDepthCoverage](#) execution mode under the [SampleMaskPostDepthCoverage](#) capability. When this mode is specified along with [EarlyFragmentTests](#), the value of an input variable decorated with the [SampleMask](#) built-in reflects the coverage after the

early fragment tests are applied. Otherwise, it reflects the coverage before the depth and stencil tests.

When using GLSL source-based shading languages, the `post_depth_coverage` layout qualifier from `GL_ARB_post_depth_coverage` or `GL_EXT_post_depth_coverage` maps to the `PostDepthCoverage` execution mode.

## Description

This device extension allows an application that uses the [VK\\_KHR\\_swapchain](#) extension to obtain information about the presentation engine's display, to obtain timing information about each present, and to schedule a present to happen no earlier than a desired time. An application can use this to minimize various visual anomalies (e.g. stuttering).

Traditional game and real-time animation applications need to correctly position their geometry for when the presentable image will be presented to the user. To accomplish this, applications need various timing information about the presentation engine's display. They need to know when presentable images were actually presented, and when they could have been presented. Applications also need to tell the presentation engine to display an image no sooner than a given time. This allows the application to avoid stuttering, so the animation looks smooth to the user.

## Issues

1) How does the application determine refresh duration, quanta for change, whether FRR vs. VRR, etc.

The query returns two values: 1) a refresh-cycle duration ([refreshDuration](#)), and 2) an indication whether the timing is currently fixed (FRR) or variable (VRR). If [refreshDuration](#) is zero, the platform cannot supply these values until after at least one [vkQueuePresentKHR](#) has been done, from this time (e.g. if [vkQueuePresentKHR](#) has been previously called for this swapchain, at least one additional call must be made). After calling [vkQueuePresentKHR](#), the query can be repeated until [refreshDuration](#) is non-zero, at which point the FRR vs. VRR indication will also be valid.

If the presentation engine's [refreshDuration](#) is a fixed value, the application's image present duration (IPD) should be a multiple of [refreshDuration](#). That is, the quanta for changing the IPD is [refreshDuration](#). For example, if [refreshDuration](#) is 16.67ms, the IPD can be 16.67ms, 33.33ms, 50.0ms, etc.

If the presentation engine's [refreshDuration](#) is variable, [refreshDuration](#) is the minimum value of the application's IPD, and the IPD can be larger by any quanta that is meaningful to the application. For example, if the [refreshDuration](#) is 10ms (i.e. the maximum refresh rate is 100Hz), the application can choose an IPD of 11ms, 13.33ms, 13.5ms, or 66.0ms; any value greater than or equal to 10ms is valid. There may be negative consequences for choosing an IPD that is too high, as the presentation engine may actually have a practical maximum [refreshDuration](#), where it needs to display the previous image again, and during this time the presentation engine might delay displaying a newly-presented image.

FRR displays on at least one platform (Wayland) are not necessarily fixed; but can change over time. For example, if a full-screen video player application is visible, the display may operate at a 24Hz refresh cycle; and then later switch to 60Hz when multiple windows are visible.

VRR displays on some platforms can also be seen as having different characteristics over time. For example, if an application's window is full-screen-exclusive (i.e. no other window or window system component is visible), the display can look like a VRR display (however that is defined). If the application's window is not full-screen-exclusive (e.g. a normal multi-window case), the display can look like an FRR display (i.e. because the compositor is trying to treat all windows in a consistent manner). A different issue will deal with how the timing characteristics can change over time.

2) Do we return min/max values for refresh duration for VRR?

Return only the minimum value of [refreshDuration](#) for a VRR.

VRR displays have a minimum and maximum refresh rate, and therefore a minimum and maximum [refreshDuration](#). It has been asserted that the display effectively does not have a

minimum refresh rate. That is because if an application does not present soon enough, the display hardware will automatically re-display the previous image. However, when the display does that, an application cannot present a new image for a certain period of time. It is unclear about whether that period is large enough to cause visual artifacts.

### 3) How to deal with changes in timing properties?

**RESOLVED:** The `VkPastPresentationTimingPropertiesEXT` structure that is returned by `vkGetPastPresentationTimingEXT` contains `timeDomainsCounter`, which is incremented if the time domain enabled for the swapchain is not currently available.

An example of why display timing properties can change is if a surface changes from being a window that's a subset of the display size, to becoming full-screen-exclusive. While the surface was a subset of the display, a compositor might enforce fixed timings on the surface (e.g. FRR of 60Hz), where the presentation engine might be free to allow VRR behavior of a full-screen-exclusive surface.

It is possible that a full-screen-exclusive window can become temporarily obscured (e.g. when a short-term dialog pops up). In this case, the surface might use FRR timings while the dialog is visible and VRR otherwise.

### 4) One Query for all Timing info vs. an initial query to determine FRR vs. VRR, and then FRR-specific vs VRR-specific queries?

**RESOLVED:** Have one query, as described in issue 1, that can be called whenever the application needs to obtain the timing properties of the surface.

### 5) Query to determine time domain?

**RESOLVED:** Have a query to determine the time domain. This extension defines a basic swapchain-local time domain. Other extensions can add other platform-specific time domains.

### 6) What time to use for targetPresentTime for early images?

**RESOLVED:** Have no query for determining the current time in the PE's time domain; and do allow the special value of zero for targetPresentTime, meaning that there is no target.

On some platforms, there is no way to determine the current time, nor to determine surface timing properties until after at least one image has been presented.

In such cases, the special value of zero allows the application to indicate that timing feedback is desired, but that no targetPresentTime is requested. Later, once the application has obtained feedback, it can specify targetPresentTime by using the result's actualPresentTime.

### 7) How long before an application's request for new image duration is honored?

Apparently, changes to some vendors' display hardware settings do not take effect immediately. It is not clear what settings, and therefore, it is not clear how to address this issue.

### 8) Do we have a query for the anticipated latency from present to feedback?

**RESOLVED:** Do not provide a query for the feedback latency.

There is some amount of latency from when an application calls `vkQueuePresentKHR` to when the image is displayed to the user, to when feedback is available to the application on when the image was actually displayed to the user. The first time (from the call till the image is presented) generally doesn't matter, because the application will likely be providing a `targetPresentTime` (i.e. the application may have some indication for how long this will be). However, the latency between `targetPresentTime` until feedback is available may be much longer. For example, on Android on the 1st-generation Pixel phone (60Hz FRR display), the latency was approximately 5 refresh cycles (83.33ms). For higher-frequency displays, the latency may have a larger number of refresh cycles.

9) Do we have a query(s) about the number of `VkPastPresentationTimingEXT` structs to keep?

**RESOLVED:** Do not provide a query for the number of results the swapchain is allowed to store before querying them with `vkGetPastPresentationTimingEXT`. Let the application specify that value with a dedicated API.

10) How is the `SWAPCHAIN_LOCAL` and `STAGE_LOCAL` time domain used with the calibrated timestamps extension?

**RESOLVED:** Define a struct to chain into `VkCalibratedTimestampInfoEXT::pNext` that specifies a swapchain and present stage.

11) Should `VK_PRESENT_MODE_FIFO_LATEST_READY_EXT` be part of this extension, or split out into its own extension?

**RESOLVED:** It is only tangentially related. Split it out into its own extension and define the interaction here.

## Description

This extension adds support for a new query type to match OpenGL's [GL\\_PRIMITIVES\\_GENERATED](#) to support layering.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):

- `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT`

## New Enum Constants

- `VK_EXT_PRIMITIVES_GENERATED_QUERY_EXTENSION_NAME`
- `VK_EXT_PRIMITIVES_GENERATED_QUERY_SPEC_VERSION`
- Extending `VkQueryType`:
  - `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVES_GENERATED_QUERY_FEATURES_EXT`

## Issues

1) Can the query from `VK_EXT_transform_feedback` be used instead?

**RESOLVED:** No. While the query from `VK_EXT_transform_feedback` can produce the same results as in this extension, it is only available while transform feedback is active. The `OpenGL GL_PRIMITIVES_GENERATED` query is independent from transform feedback. Emulation through artificial transform feedback is unnecessarily inefficient.

2) Can `VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT` be used instead?

**RESOLVED:** It could, but we prefer the extension for simplicity. Vulkan requires that only one query be active at a time. If both the `GL_PRIMITIVES_GENERATED` and the `GL_CLIPPING_INPUT_PRIMITIVES_ARB` queries need to be simultaneously enabled, emulation of both through `VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT` is inconvenient.

3) On some hardware, this query cannot be implemented if `VkPipelineRasterizationStateCreateInfo::rasterizerDiscardEnable` is enabled. How will this be handled?

**RESOLVED:** A feature flag is exposed by this extension for this. On said hardware, the GL implementation disables rasterizer-discard and achieves the same effect through other means. It will not be able to do the same in Vulkan due to lack of state information. A feature flag is exposed by this extension so the OpenGL implementation on top of Vulkan would be able to implement a similar workaround.

4) On some hardware, this query cannot be implemented for non-zero query indices. How will this be handled?

**RESOLVED:** A feature flag is exposed by this extension for this. If this feature is not present, the query from `VK_EXT_transform_feedback` can be used to the same effect.

5) How is the interaction of this extension with `transformFeedbackRasterizationStreamSelect` handled?

**RESOLVED:** Disallowed for non-zero streams. In OpenGL, the rasterization stream is always stream zero.

## Description

This extension allows changing the provoking vertex convention between Vulkan's default convention (first vertex) and OpenGL's convention (last vertex).

This extension is intended for use by API-translation layers that implement APIs like OpenGL on top of Vulkan, and need to match the source API's provoking vertex convention. Applications using Vulkan directly should use Vulkan's default convention.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceProvokingVertexFeaturesEXT](#)

  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_RASTERIZATION\\_PROVOKING\\_VERTEX\\_STATE\\_CREATE\\_INFO\\_EXT](#)

## Issues

1) At what granularity should this state be set?

**RESOLVED:** At pipeline bind, with an optional per-render pass restriction.

The most natural place to put this state is in the graphics pipeline object. Some implementations

require it to be known when creating the pipeline, and pipeline state is convenient for implementing OpenGL 3.2's `glProvokingVertex`, which can change the state between draw calls. However, some implementations can only change it approximately render pass granularity. To accommodate both, provoking vertex will be pipeline state, but implementations can require that only one mode is used within a render pass instance; the render pass's mode is chosen implicitly when the first pipeline is bound.

2) Does the provoking vertex mode affect the order that vertices are written to transform feedback buffers?

**RESOLVED:** Yes, to enable layered implementations of OpenGL and D3D.

All of OpenGL, OpenGL ES, and Direct3D 11 require that vertices are written to transform feedback buffers such that flat-shaded attributes have the same value when drawing the contents of the transform feedback buffer as they did in the original drawing when the transform feedback buffer was written (assuming the provoking vertex mode has not changed, in APIs that support more than one mode).

## Version History

- Revision 1, (1c) 2021-02-22 (Jesse Hall)
  - Added `VkPhysicalDeviceProvokingVertexPropertiesEXT::transformFeedbackPreservesTriangleFanProvokingVertex` to accommodate implementations that cannot change the transform feedback vertex order for triangle fans.
- Revision 1, (1b) 2020-06-14 (Jesse Hall)
  - Added `VkPhysicalDeviceProvokingVertexFeaturesEXT::transformFeedbackPreservesProvokingVertex` and required that transform feedback write vertices so as to preserve the provoking vertex of each primitive.
- Revision 1, (1a) 2019-10-23 (Jesse Hall)
  - Initial draft, based on a proposal by Alexis Héту

## Description

This extension defines a special queue family, [VK\\_QUEUE\\_FAMILY\\_FOREIGN\\_EXT](#), which can be used to transfer ownership of resources backed by external memory to foreign, external queues. This is similar to [VK\\_QUEUE\\_FAMILY\\_EXTERNAL\\_KHR](#), defined in [VK\\_KHR\\_external\\_memory](#). The key differences between the two are:

- The queues represented by [VK\\_QUEUE\\_FAMILY\\_EXTERNAL\\_KHR](#) must share the same physical device and the same driver version as the current [VkInstance](#). [VK\\_QUEUE\\_FAMILY\\_FOREIGN\\_EXT](#) has no such restrictions. It can represent devices and drivers from other vendors, and can even represent non-Vulkan-capable devices.
- All resources backed by external memory support [VK\\_QUEUE\\_FAMILY\\_EXTERNAL\\_KHR](#). Support for [VK\\_QUEUE\\_FAMILY\\_FOREIGN\\_EXT](#) is more restrictive.
- Applications should expect transitions to/from [VK\\_QUEUE\\_FAMILY\\_FOREIGN\\_EXT](#) to be more expensive than transitions to/from [VK\\_QUEUE\\_FAMILY\\_EXTERNAL\\_KHR](#).

## Description

This extension extends the mechanism of input attachments to allow access to framebuffer attachments that are used both as input and as color or depth/stencil attachments from one fragment to the next, in rasterization order, without explicit synchronization.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):

- [VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT](#)

## New Enums

- [VkPipelineColorBlendStateCreateFlagBits](#)
- [VkPipelineDepthStencilStateCreateFlagBits](#)

## Description

The ray tracing pipeline API provides some ability to reorder for locality, but it is useful to have more control over how the reordering happens and what information is included in the reordering. The shader API provides a hit object to contain result information from the hit which can be used as part of the explicit sorting plus options that contain an integer for hint bits to use to add more coherency.

## New Structures

## Description

This extension enables the [VK\\_FORMAT\\_R10X6G10X6B10X6A10X6\\_UNORM\\_4PACK16](#) format to be used without a [sampler Y'C<sub>B</sub>C<sub>R</sub> conversion](#) enabled.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT](#)

## New Enum Constants

- [VK\\_EXT\\_RGBA10X6\\_FORMATS\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_RGBA10X6\\_FORMATS\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_RGBA10X6\\_FORMATS\\_FEATURES\\_EXT](#)

## Issues

1) Should we reuse the existing format enumeration or introduce a new one?

**RESOLVED:** We reuse an existing format enumeration, [VK\\_FORMAT\\_R10X6G10X6B10X6A10X6\\_UNORM\\_4PACK16](#), that was previously exclusively used for YCbCr and therefore had a set of limitations related to that usage. The alternative was to introduce a new format token with exactly the same bit representation as the existing token, but without the limitations.

2) Should we only introduce [VK\\_FORMAT\\_R10X6G10X6B10X6A10X6\\_UNORM\\_4PACK16](#) or also 1-3 component variations?

**RESOLVED:** Only the 4-component format is introduced because the 1- and 2- component variations are already not exclusive to YCbCr, and the 3-component variation is not a good match for hardware capabilities.

## Description

This extension allows an application to modify the locations of samples within a pixel used in rasterization. Additionally, it allows applications to specify different sample locations for each pixel in a group of adjacent pixels, which **can** increase antialiasing quality (particularly if a custom resolve shader is used that takes advantage of these different locations).

It is common for implementations to optimize the storage of depth values by storing values that **can** be used to reconstruct depth at each sample location, rather than storing separate depth values for each sample. For example, the depth values from a single triangle **may** be represented using plane equations. When the depth value for a sample is needed, it is automatically evaluated at the sample location. Modifying the sample locations causes the reconstruction to no longer evaluate the same depth values as when the samples were originally generated, thus the depth aspect of a depth/stencil attachment **must** be cleared before rendering to it using different sample locations.

Some implementations **may** need to evaluate depth image values while performing image layout transitions. To accommodate this, instances of the [VkSampleLocationsInfoEXT](#) structure **can** be specified for each situation where an explicit or automatic layout transition has to take place. [VkSampleLocationsInfoEXT](#) **can** be chained from [VkImageMemoryBarrier](#) structures to provide sample locations for layout transitions performed by [vkCmdWaitEvents](#) and [vkCmdPipelineBarrier](#) calls, and [VkRenderPassSampleLocationsBeginInfoEXT](#) **can** be chained from [VkRenderPassBeginInfo](#) to provide sample locations for layout transitions performed implicitly by a render pass instance.

## New Commands

- [vkCmdSetSampleLocationsEXT](#)
- [vkGetPhysicalDeviceMultisamplePropertiesEXT](#)

## New Structures

- [VkAttachmentSampleLocationsEXT](#)
- [VkMultisamplePropertiesEXT](#)
- [VkSampleLocationEXT](#)
- [VkSubpassSampleLocationsEXT](#)
- Extending [VkImageMemoryBarrier](#), [VkImageMemoryBarrier2](#):
  - [VkSampleLocationsInfoEXT](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceSampleLocationsPropertiesEXT](#)
- Extending [VkPipelineMultisampleStateCreateInfo](#):
  - [VkPipelineSampleLocationsStateCreateInfoEXT](#)
- Extending [VkRenderPassBeginInfo](#):
  - [VkRenderPassSampleLocationsBeginInfoEXT](#)

## New Enum Constants

- [VK\\_EXT\\_SAMPLE\\_LOCATIONS\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_SAMPLE\\_LOCATIONS\\_SPEC\\_VERSION](#)
- Extending [VkDynamicState](#):
  - [VK\\_DYNAMIC\\_STATE\\_SAMPLE\\_LOCATIONS\\_EXT](#)

- Extending `VkImageCreateFlagBits`:
  - `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_MULTISAMPLE_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLE_LOCATIONS_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_SAMPLE_LOCATIONS_STATE_CREATE_INFO_EXT`
  - `VK_STRUCTURE_TYPE_RENDER_PASS_SAMPLE_LOCATIONS_BEGIN_INFO_EXT`
  - `VK_STRUCTURE_TYPE_SAMPLE_LOCATIONS_INFO_EXT`

## Issues

1) When using with Dynamic Rendering, is there a `VkRenderPassSampleLocationsBeginInfoEXT` equivalent struct

**RESOLVED:** No, there are no subpasses that need to have a sample location set.

## Interactions and External Dependencies

- This extension provides API support for [GLSL\\_EXT\\_shader\\_atomic\\_float2](#)

## Contributors

- Faith Ekstrand, Intel

## Description

This extension allows a shader to perform 16-bit floating-point atomic operations on buffer and workgroup memory as well as floating-point atomic minimum and maximum operations on buffer,

workgroup, and image memory. It advertises the SPIR-V `AtomicFloat16AddEXT` capability which allows atomic add operations on 16-bit floating-point numbers and the SPIR-V `AtomicFloat16MinMaxEXT`, `AtomicFloat32MinMaxEXT` and `AtomicFloat64MinMaxEXT` capabilities which allow atomic minimum and maximum operations on floating-point numbers. The supported operations include `OpAtomicFAddEXT`, `OpAtomicFMinEXT` and `OpAtomicFMaxEXT`.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT`

## New Enum Constants

- `VK_EXT_SHADER_ATOMIC_FLOAT_2_EXTENSION_NAME`
- `VK_EXT_SHADER_ATOMIC_FLOAT_2_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_2_FEATURES_EXT`

## Issues

1) Should this extension add support for 16-bit image atomics?

**RESOLVED:** No. While Vulkan supports creating storage images with `VK_FORMAT_R16_SFLOAT` and doing load and store on them, the data in the shader has a 32-bit representation. Vulkan currently has no facility for even basic reading or writing such images using 16-bit float values in the shader. Adding such functionality would be required before 16-bit image atomics would make sense and is outside the scope of this extension.

## New SPIR-V Capabilities

- `AtomicFloat32MinMaxEXT`
- `AtomicFloat32MinMaxEXT`
- `AtomicFloat32MinMaxEXT`
- `AtomicFloat64MinMaxEXT`

- Jeff Bolz, Nvidia
- Faith Ekstrand, Intel

## Description

This extension extends existing 64-bit integer atomic support to enable these operations on images as well.

When working with large 2- or 3-dimensional data sets (e.g. rasterization or screen-space effects), image accesses are generally more efficient than equivalent buffer accesses. This extension allows applications relying on 64-bit integer atomics in this manner to quickly improve performance with only relatively minor code changes.

64-bit integer atomic support is guaranteed for optimally tiled images with the [VK\\_FORMAT\\_R64\\_UINT](#) and [VK\\_FORMAT\\_R64\\_SINT](#) formats.

## Description

Some applications generate SPIR-V code at runtime. When pipeline caches are primed, either explicitly through e.g. [VkPipelineCache](#) mechanisms, or implicitly through driver managed caches, having to re-generate SPIR-V modules is redundant. SPIR-V modules could be cached on disk by an application, but the extra disk size requirement might be prohibitive in some use cases.

This extension adds the ability for an application to query a small identifier associated with a [VkShaderModule](#). On subsequent runs of the application, the same identifier **can** be provided in lieu of a [VkShaderModule](#) object. A pipeline creation call with such a module **may** succeed if a pipeline could be created without invoking compilation, and information inside the SPIR-V module is not required by the implementation.

[VK\\_PIPELINE\\_CREATE\\_FAIL\\_ON\\_PIPELINE\\_COMPILE\\_REQUIRED\\_BIT](#) **must** be used if only the identifier is provided, and this use case is intended to work like a non-blocking, speculative compile. Applications **can** fallback as necessary.

The main motivation for identifying the module itself and not the entire pipeline is that pipeline identifiers change when a driver is updated, but module identifiers are expected to be stable for any particular driver implementation. This approach is helpful for shader pre-compilation systems which can prime pipeline caches ahead of time. When on-disk pipeline caches are updated, the same shader identifiers could lead to a pipeline cache hit.

## Description

This extension introduces a new [VkShaderEXT](#) object type which represents a single compiled shader stage. Shader objects provide a more flexible alternative to [VkPipeline](#) objects, which may be helpful in certain use cases.

## New Object Types

- [VkShaderEXT](#)

## New Commands

- [vkCmdBindShadersEXT](#)
- [vkCmdBindVertexBuffers2EXT](#)
- [vkCmdSetAlphaToCoverageEnableEXT](#)
- [vkCmdSetAlphaToOneEnableEXT](#)
- [vkCmdSetColorBlendEnableEXT](#)
- [vkCmdSetColorBlendEquationEXT](#)
- [vkCmdSetColorWriteMaskEXT](#)
- [vkCmdSetCullModeEXT](#)
- [vkCmdSetDepthBiasEnableEXT](#)

If [VK\\_EXT\\_blend\\_operation\\_advanced](#) is supported:

- [vkCmdSetColorBlendAdvancedEXT](#)

If [VK\\_EXT\\_conservative\\_rasterization](#) is supported:

- [vkCmdSetConservativeRasterizationModeEXT](#)
- [vkCmdSetExtraPrimitiveOverestimationSizeEXT](#)

If [VK\\_EXT\\_depth\\_clamp\\_control](#) is supported:

- [vkCmdSetDepthClampRangeEXT](#)

If [VK\\_EXT\\_depth\\_clip\\_control](#) is supported:

- [vkCmdSetDepthClipNegativeOneToOneEXT](#)

If [VK\\_EXT\\_depth\\_clip\\_enable](#) is supported:

- [vkCmdSetDepthClipEnableEXT](#)

If [VK\\_EXT\\_provoking\\_vertex](#) is supported:

- [vkCmdSetProvokingVertexModeEXT](#)

If [VK\\_EXT\\_sample\\_locations](#) is supported:

- [vkCmdSetSampleLocationsEnableEXT](#)

If [VK\\_EXT\\_transform\\_feedback](#) is supported:

- [vkCmdSetRasterizationStreamEXT](#)

If Vulkan Version 1.4 or [VK\\_KHR\\_line\\_rasterization](#) or [VK\\_EXT\\_line\\_rasterization](#) is supported:

- [vkCmdSetLineRasterizationModeEXT](#)
- [vkCmdSetLineStippleEnableEXT](#)

## New Structures

- [VkColorBlendAdvancedEXT](#)
- [VkColorBlendEquationEXT](#)
- [VkShaderCreateInfoEXT](#)
- [VkVertexInputAttributeDescription2EXT](#)
- [VkVertexInputBindingDescription2EXT](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):

  - [VkShaderRequiredSubgroupSizeCreateInfoEXT](#)

## New Enums

- [VkShaderCodeTypeEXT](#)
- [VkShaderCreateFlagBitsEXT](#)

## New Bitmasks

- [VkShaderCreateFlagsEXT](#)

## New Enum Constants

- `VK_EXT_SHADER_OBJECT_EXTENSION_NAME`
- `VK_EXT_SHADER_OBJECT_SPEC_VERSION`
- Extending `VkObjectType`:
  - `VK_OBJECT_TYPE_SHADER_EXT`
- Extending `VkResult`:
  - `VK_ERROR_INCOMPATIBLE_SHADER_BINARY_EXT`
  - `VK_INCOMPATIBLE_SHADER_BINARY_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT`
  - `VK_STRUCTURE_TYPE_SHADER_REQUIRED_SUBGROUP_SIZE_CREATE_INFO_EXT`
  - `VK_STRUCTURE_TYPE_VERTEX_INPUT_ATTRIBUTE_DESCRIPTION_2_EXT`
  - `VK_STRUCTURE_TYPE_VERTEX_INPUT_BINDING_DESCRIPTION_2_EXT`

If `VK_EXT_fragment_density_map` is supported:

- Extending `VkShaderCreateFlagBitsEXT`:
  - `VK_SHADER_CREATE_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`

If `VK_EXT_mesh_shader` or `VK_NV_mesh_shader` is supported:

- Extending `VkShaderCreateFlagBitsEXT`:
  - `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT`

If `VK_EXT_subgroup_size_control` or Vulkan Version 1.3 is supported:

- Extending `VkShaderCreateFlagBitsEXT`:
  - `VK_SHADER_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT`
  - `VK_SHADER_CREATE_REQUIRE_FULL_SUBGROUPS_BIT_EXT`

If `VK_KHR_device_group` or Vulkan Version 1.1 is supported:

- Extending `VkShaderCreateFlagBitsEXT`:
  - `VK_SHADER_CREATE_DISPATCH_BASE_BIT_EXT`

If `VK_KHR_fragment_shading_rate` is supported:

- Extending `VkShaderCreateFlagBitsEXT`:
  - `VK_SHADER_CREATE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_EXT`

## Examples

### Example 1

Create linked pair of vertex and fragment shaders.

```
// Logical device created with the shaderObject feature enabled
VkDevice device;

// SPIR-V shader code for a vertex shader, along with its size in bytes
void* pVertexSpirv;
size_t vertexSpirvSize;

// SPIR-V shader code for a fragment shader, along with its size in bytes
void* pFragmentSpirv;
size_t fragmentSpirvSize;

// Descriptor set layout compatible with the shaders
VkDescriptorSetLayout descriptorSetLayout;

VkShaderCreateInfoEXT shaderCreateInfos[2] =
{
    {
        .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
        .pNext = NULL,
        .flags = VK_SHADER_CREATE_LINK_STAGE_BIT_EXT,
        .stage = VK_SHADER_STAGE_VERTEX_BIT,
        .nextStage = VK_SHADER_STAGE_FRAGMENT_BIT,
        .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
        .codeSize = vertexSpirvSize,
        .pCode = pVertexSpirv,
        .pName = "main",
        .setLayoutCount = 1,
        .pSetLayouts = &descriptorSetLayout;
        .pushConstantRangeCount = 0,
        .pPushConstantRanges = NULL,
        .pSpecializationInfo = NULL
    },
    {
        .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
        .pNext = NULL,
        .flags = VK_SHADER_CREATE_LINK_STAGE_BIT_EXT,
        .stage = VK_SHADER_STAGE_FRAGMENT_BIT,
        .nextStage = 0,
        .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
        .codeSize = fragmentSpirvSize,
        .pCode = pFragmentSpirv,
        .pName = "main",
        .setLayoutCount = 1,
        .pSetLayouts = &descriptorSetLayout;
        .pushConstantRangeCount = 0,
```

```

        .pPushConstantRanges = NULL,
        .pSpecializationInfo = NULL
    }
};

VkResult result;
VkShaderEXT shaders[2];

result = vkCreateShadersEXT(device, 2, &shaderCreateInfos, NULL, shaders);
if (result != VK_SUCCESS)
{
    // Handle error
}

```

Later, during command buffer recording, bind the linked shaders and draw.

```

// Command buffer in the recording state
VkCommandBuffer commandBuffer;

// Vertex and fragment shader objects created above
VkShaderEXT shaders[2];

// Assume vertex buffers, descriptor sets, etc. have been bound, and existing
// state setting commands have been called to set all required state

const VkShaderStageFlagBits stages[2] =
{
    VK_SHADER_STAGE_VERTEX_BIT,
    VK_SHADER_STAGE_FRAGMENT_BIT
};

// Bind linked shaders
vkCmdBindShadersEXT(commandBuffer, 2, stages, shaders);

// Equivalent to the previous line. Linked shaders can be bound one at a time,
// in any order:
// vkCmdBindShadersEXT(commandBuffer, 1, &stages[1], &shaders[1]);
// vkCmdBindShadersEXT(commandBuffer, 1, &stages[0], &shaders[0]);

// The above is sufficient to draw if the device was created with the
// tessellationShader and geometryShader features disabled. Otherwise, since
// those stages should not execute, vkCmdBindShadersEXT() must be called at
// least once with each of their stages in pStages before drawing:

const VkShaderStageFlagBits unusedStages[3] =
{
    VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT,
    VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT,
    VK_SHADER_STAGE_GEOMETRY_BIT
};

```

```
// NULL pShaders is equivalent to an array of stageCount VK_NULL_HANDLE values,
// meaning no shaders are bound to those stages, and that any previously bound
// shaders are unbound
vkCmdBindShadersEXT(commandBuffer, 3, unusedStages, NULL);

// Graphics shader objects may only be used to draw inside dynamic render pass
// instances begun with vkCmdBeginRendering(), assume one has already been begun

// Draw a triangle
vkCmdDraw(commandBuffer, 3, 1, 0, 0);
```

## Example 2

Create unlinked vertex, geometry, and fragment shaders.

```
// Logical device created with the shaderObject feature enabled
VkDevice device;

// SPIR-V shader code for vertex shaders, along with their sizes in bytes
void* pVertexSpirv[2];
size_t vertexSpirvSize[2];

// SPIR-V shader code for a geometry shader, along with its size in bytes
void pGeometrySpirv;
size_t geometrySpirvSize;

// SPIR-V shader code for fragment shaders, along with their sizes in bytes
void* pFragmentSpirv[2];
size_t fragmentSpirvSize[2];

// Descriptor set layout compatible with the shaders
VkDescriptorSetLayout descriptorSetLayout;

VkShaderCreateInfoEXT shaderCreateInfos[5] =
{
    // Stage order does not matter
    {
        .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
        .pNext = NULL,
        .flags = 0,
        .stage = VK_SHADER_STAGE_GEOMETRY_BIT,
        .nextStage = VK_SHADER_STAGE_FRAGMENT_BIT,
        .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
        .codeSize = pGeometrySpirv,
        .pCode = geometrySpirvSize,
        .pName = "main",
        .setLayoutCount = 1,
        .pSetLayouts = &descriptorSetLayout;
        .pushConstantRangeCount = 0,
```

```

.pPushConstantRanges = NULL,
.pSpecializationInfo = NULL
},
{
.sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
.pNext = NULL,
.flags = 0,
.stage = VK_SHADER_STAGE_VERTEX_BIT,
.nextStage = VK_SHADER_STAGE_GEOMETRY_BIT,
.codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
.codeSize = vertexSpirvSize[0],
.pCode = pVertexSpirv[0],
.pName = "main",
.setLayoutCount = 1,
.pSetLayouts = &descriptorSetLayout;
.pushConstantRangeCount = 0,
.pPushConstantRanges = NULL,
.pSpecializationInfo = NULL
},
{
.sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
.pNext = NULL,
.flags = 0,
.stage = VK_SHADER_STAGE_FRAGMENT_BIT,
.nextStage = 0,
.codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
.codeSize = fragmentSpirvSize[0],
.pCode = pFragmentSpirv[0],
.pName = "main",
.setLayoutCount = 1,
.pSetLayouts = &descriptorSetLayout;
.pushConstantRangeCount = 0,
.pPushConstantRanges = NULL,
.pSpecializationInfo = NULL
},
{
.sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
.pNext = NULL,
.flags = 0,
.stage = VK_SHADER_STAGE_FRAGMENT_BIT,
.nextStage = 0,
.codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
.codeSize = fragmentSpirvSize[1],
.pCode = pFragmentSpirv[1],
.pName = "main",
.setLayoutCount = 1,
.pSetLayouts = &descriptorSetLayout;
.pushConstantRangeCount = 0,
.pPushConstantRanges = NULL,
.pSpecializationInfo = NULL
},

```

```

{
    .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
    .pNext = NULL,
    .flags = 0,
    .stage = VK_SHADER_STAGE_VERTEX_BIT,
    // Suppose we want this vertex shader to be able to be followed by
    // either a geometry shader or fragment shader:
    .nextStage = VK_SHADER_STAGE_GEOMETRY_BIT | VK_SHADER_STAGE_FRAGMENT_BIT,
    .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
    .codeSize = vertexSpirvSize[1],
    .pCode = pVertexSpirv[1],
    .pName = "main",
    .setLayoutCount = 1,
    .pSetLayouts = &descriptorSetLayout;
    .pushConstantRangeCount = 0,
    .pPushConstantRanges = NULL,
    .pSpecializationInfo = NULL
}
};

VkResult result;
VkShaderEXT shaders[5];

result = vkCreateShadersEXT(device, 5, &shaderCreateInfos, NULL, shaders);
if (result != VK_SUCCESS)
{
    // Handle error
}

```

Later, during command buffer recording, bind the linked shaders in different combinations and draw.

```

// Command buffer in the recording state
VkCommandBuffer commandBuffer;

// Vertex, geometry, and fragment shader objects created above
VkShaderEXT shaders[5];

// Assume vertex buffers, descriptor sets, etc. have been bound, and existing
// state setting commands have been called to set all required state

const VkShaderStageFlagBits stages[3] =
{
    // Any order is allowed
    VK_SHADER_STAGE_FRAGMENT_BIT,
    VK_SHADER_STAGE_VERTEX_BIT,
    VK_SHADER_STAGE_GEOMETRY_BIT,
};

VkShaderEXT bindShaders[3] =

```

```

{
    shaders[2], // FS
    shaders[1], // VS
    shaders[0]  // GS
};

// Bind unlinked shaders
vkCmdBindShadersEXT(commandBuffer, 3, stages, bindShaders);

// Assume the tessellationShader feature is disabled, so vkCmdBindShadersEXT()
// need not have been called with either tessellation stage

// Graphics shader objects may only be used to draw inside dynamic render pass
// instances begun with vkCmdBeginRendering(), assume one has already been begun

// Draw a triangle
vkCmdDraw(commandBuffer, 3, 1, 0, 0);

// Bind a different unlinked fragment shader
const VkShaderStageFlagBits fragmentStage = VK_SHADER_STAGE_FRAGMENT_BIT;
vkCmdBindShadersEXT(commandBuffer, 1, &fragmentStage, &shaders[3]);

// Draw another triangle
vkCmdDraw(commandBuffer, 3, 1, 0, 0);

// Bind a different unlinked vertex shader
const VkShaderStageFlagBits vertexStage = VK_SHADER_STAGE_VERTEX_BIT;
vkCmdBindShadersEXT(commandBuffer, 1, &vertexStage, &shaders[4]);

// Draw another triangle
vkCmdDraw(commandBuffer, 3, 1, 0, 0);

```

## Description

This extension enables support for the floating-point data types defined in the Open Compute Project (OCP) Microscaling Formats specification.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceShaderOCPMicroscalingTypesFeaturesEXT](#)

## New Enum Constants

- [VK\\_EXT\\_SHADER\\_OCP\\_MICROSCALING\\_TYPES\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_SHADER\\_OCP\\_MICROSCALING\\_TYPES\\_SPEC\\_VERSION](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_SHADER\\_OCP\\_MICROSCALING\\_TYPES\\_FEATURES\\_EXT](#)

If [VK\\_KHR\\_cooperative\\_matrix](#) is supported:

- Extending [VkComponentTypeKHR](#):
  - [VK\\_COMPONENT\\_TYPE\\_FLOAT4\\_E2M1\\_EXT](#)
  - [VK\\_COMPONENT\\_TYPE\\_FLOAT6\\_E2M3\\_EXT](#)
  - [VK\\_COMPONENT\\_TYPE\\_FLOAT6\\_E3M2\\_EXT](#)
  - [VK\\_COMPONENT\\_TYPE\\_FLOAT8\\_UNSIGNED\\_E8M0\\_EXT](#)
  - [VK\\_COMPONENT\\_TYPE\\_MXINT8\\_EXT](#)

## New SPIR-V Capabilities

- [Float4EXT](#)
- [Float6EXT](#)
- [Float8UnsignedE8M0EXT](#)
- [MXInt8EXT](#)
- [BitcastExtractEXT](#)

## Issues

1) How does this extension add support for microscaling?

**RESOLVED:** It does not directly do so. This extension just introduces basic support for the data types used for microscaling but it does not add any support for microscaled tensors or operations on microscaled data. Reading microscaled data and converting it to other formats such as FP16 or FP32 can be implemented in shaders with the new types provided by this extension but these new types cannot for example be used directly in matrix multiplication operations.

2) What conversions to/from the newly-added types should be supported?

**RESOLVED:** This extension will only add conversions from the newly-added types to a restricted list of existing larger floating-point types. Conversions from existing types to the newly-added types would require complex logic and are not expected to be as useful. Conversions between integer types and the newly-added types are not expected to be generally useful either.

## Description

This extension splits `OpControlBarrier` by exposing two new barrier operations with `SPV_EXT_split_barrier`:

- `OpControlBarrierArriveEXT` - notifies that invocation has arrived here
- `OpControlBarrierWaitEXT` - waits on all invocations before proceeding execution

In the Vulkan context, this allows apps to synchronize Subgroup execution flow within a Workgroup without requiring all Subgroups to wait at the arrival condition before proceeding to execute independent work. It also permits synchronizing memory access like other control barriers.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceShaderSplitBarrierFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceShaderSplitBarrierPropertiesEXT`

## New Enum Constants

- `VK_EXT_SHADER_SPLIT_BARRIER_EXTENSION_NAME`
- `VK_EXT_SHADER_SPLIT_BARRIER_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SPLIT_BARRIER_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SPLIT_BARRIER_PROPERTIES_EXT`

## Version History

## Interactions and External Dependencies

- This extension provides API support for [GL\\_NV\\_shader\\_subgroup\\_partitioned](#)

## Contributors

- Jeff Bolz, NVIDIA

## Description

This extension enables support for a new class of [group operations](#) on [subgroups](#) via the [GL\\_NV\\_shader\\_subgroup\\_partitioned](#) GLSL extension and [SPV\\_EXT\\_shader\\_subgroup\\_partitioned](#) SPIR-V extension. Support for these new operations is advertised via the [VK\\_SUBGROUP\\_FEATURE\\_PARTITIONED\\_BIT\\_EXT](#) bit. Note that there is not a new GLSL extension since [SPV\\_EXT\\_shader\\_subgroup\\_partitioned](#) is compatible with [SPV\\_NV\\_shader\\_subgroup\\_partitioned](#), so the [GL\\_NV\\_shader\\_subgroup\\_partitioned](#) GLSL extension can still be used.

This extension requires Vulkan 1.1, for general subgroup support.

## Description

This extension allows fragment shader invocations to read color, depth, and stencil values at their pixel location in rasterization order. The functionality is only available when using dynamic render passes introduced by VK\_KHR\_dynamic\_rendering. Example use cases are programmable blending and deferred shading.

See [fragment shader tile image reads](#) for more information.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceShaderTileImageFeaturesEXT](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceShaderTileImagePropertiesEXT](#)

## New Enum Constants

## Issues

None.

## Examples

Color read example.

```
layout( location = 0 /* aliased to color attachment 0 */ ) tileImageEXT highp
attachmentEXT color0;
layout( location = 1 /* aliased to color attachment 1 */ ) tileImageEXT highp
attachmentEXT color1;

layout( location = 0 ) out vec4 fragColor;
```

```
void main()
{
    vec4 value = colorAttachmentReadEXT(color0) + colorAttachmentReadEXT(color1);
    fragColor = value;
}
```

Depth & Stencil read example.

```
void main()
{
    // read sample 0: works for non-MSAA or MSAA targets
    highp float last_depth = depthAttachmentReadEXT();
    lowp uint last_stencil = stencilAttachmentReadEXT();

    //..
}
```

## Description

This extension allows the last member of a uniform buffer block to be declared as an unsized array. This capability enables applications to create flexible buffer layouts where the array size can vary based on runtime requirements.

When the last member of a uniform buffer block is declared as an unsized array, the effective array size is inferred at runtime from the size of the buffer object backing the uniform buffer block. Such unsized arrays can be indexed with general integer expressions, but may not be passed as arguments to functions or indexed with negative constant expressions.

This extension leverages existing SPIR-V capabilities, allowing use of `OpTypeRuntimeArray` as the last member of a uniform buffer block structure while prohibiting `OpArrayLength`.

Applications needing to know array sizes at runtime should calculate the length and pass it to shaders via a separate uniform. This calculation can be performed using the formula:  $\max((\text{buffer\_object\_size} - \text{offset\_of\_array}) / \text{stride\_of\_array}, 0)$ , where `buffer_object_size` is the size of the bound buffer, `offset_of_array` is the byte offset of the array in the block, and `stride_of_array` is the byte stride between consecutive array elements.

Uniform buffers have traditionally required explicit sizes for all arrays which limits flexibility. With this extension, developers can create a single shader that adapts to different data set sizes at runtime by binding differently sized buffers.

## New Structures

- [VK\\_COLOR\\_SPACE\\_HDR10\\_ST2084\\_EXT](#)
- [VK\\_COLOR\\_SPACE\\_PASS\\_THROUGH\\_EXT](#)

## Issues

1) Does the spec need to specify which kinds of image formats support the color spaces?

**RESOLVED:** Pixel format is independent of color space (though some color spaces really want / need floating-point color components to be useful). Therefore, do not plan on documenting what formats support which color spaces. An application **can** call [vkGetPhysicalDeviceSurfaceFormatsKHR](#) to query what a particular implementation supports.

2) How does application determine if HW supports appropriate transfer function for a color space?

**RESOLVED:** Extension indicates that implementation **must** not do the OETF encoding if it is not sRGB. That responsibility falls to the application shaders. Any other native OETF / EOTF functions supported by an implementation can be described by separate extension.

## Version History

## Description

This extension adds support for 3D textures compressed using the Adaptive Scalable Texture Compression (ASTC) format.

These formats are compressed in 3D. As such, each slice will contain data for a Width x Height x Depth block of the texture. All transfer operations are done at the granularity of block dimensions.

## Description

This extension adds transform feedback to the Vulkan API by exposing the SPIR-V [TransformFeedback](#) and [GeometryStreams](#) capabilities to capture vertex, tessellation, or geometry shader outputs to one or more buffers. It adds API functionality to bind transform feedback buffers to capture the primitives emitted by the graphics pipeline from SPIR-V outputs decorated for transform feedback. The transform feedback capture can be paused and resumed by way of storing and retrieving a byte counter. The captured data can be drawn again where the vertex count is derived from the byte counter without CPU intervention. If the implementation is capable, a vertex stream other than zero can be rasterized.

All these features are designed to match the full capabilities of OpenGL core transform feedback functionality and beyond. Many of the features are optional to allow base OpenGL ES GPUs to also implement this extension.

The primary purpose of the functionality exposed by this extension is to support translation layers from other 3D APIs. This functionality is not considered forward looking, and is not expected to be promoted to a KHR extension or to core Vulkan. Unless this is needed for translation, it is recommended that developers use alternative techniques of using the GPU to process and capture vertex data.

## New Commands

- [vkCmdBeginQueryIndexedEXT](#)
- [vkCmdBeginTransformFeedbackEXT](#)
- [vkCmdBindTransformFeedbackBuffersEXT](#)
- [vkCmdDrawIndirectByteCountEXT](#)
- [vkCmdEndQueryIndexedEXT](#)
- [vkCmdEndTransformFeedbackEXT](#)

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceTransformFeedbackFeaturesEXT](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceTransformFeedbackPropertiesEXT](#)

- Extending `VkPipelineRasterizationStateCreateInfo`:
  - `VkPipelineRasterizationStateStreamCreateInfoEXT`

## New Bitmasks

- `VkPipelineRasterizationStateStreamCreateFlagsEXT`

## New Enum Constants

- `VK_EXT_TRANSFORM_FEEDBACK_EXTENSION_NAME`
- `VK_EXT_TRANSFORM_FEEDBACK_SPEC_VERSION`
- Extending `VkAccessFlagBits`:
  - `VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_READ_BIT_EXT`
  - `VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_WRITE_BIT_EXT`
  - `VK_ACCESS_TRANSFORM_FEEDBACK_WRITE_BIT_EXT`
- Extending `VkBufferUsageFlagBits`:
  - `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`
  - `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT`
- Extending `VkPipelineStageFlagBits`:
  - `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT`
- Extending `VkQueryType`:
  - `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_STATE_STREAM_CREATE_INFO_EXT`

## Issues

1) Should we include pause/resume functionality?

**RESOLVED:** Yes, this is needed to ease layering other APIs which have this functionality. To pause use `vkCmdEndTransformFeedbackEXT` and provide valid buffer handles in the `pCounterBuffers` array and offsets in the `pCounterBufferOffsets` array for the implementation to save the resume points. Then to resume use `vkCmdBeginTransformFeedbackEXT` with the previous `pCounterBuffers` and `pCounterBufferOffsets` values. Between the pause and resume there needs to be a memory barrier for the counter buffers with a source access of `VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_WRITE_BIT_EXT` at pipeline stage `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT` to a destination access of `VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_READ_BIT_EXT` at pipeline stage `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT`.

2) How does this interact with multiview?

**RESOLVED:** Transform feedback cannot be made active in a render pass with multiview enabled.

3) How should queries be done?

**RESOLVED:** There is a new query type `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT`. A query pool created with this type will capture 2 integers - `numPrimitivesWritten` and `numPrimitivesNeeded` - for the specified vertex stream output from the last [pre-rasterization shader stage](#). The vertex stream output queried is zero by default, but can be specified with the new `vkCmdBeginQueryIndexedEXT` and `vkCmdEndQueryIndexedEXT` commands.

## Description

One of the states that contributes to the combinatorial explosion of pipeline state objects that need to be created, is the vertex input binding and attribute descriptions. By allowing them to be dynamic applications may reduce the number of pipeline objects they need to create.

This extension adds dynamic state support for what is normally static state in [VkPipelineVertexInputStateCreateInfo](#).

## Description

By default, Vulkan provides no guarantees that device memory allocated through `vkAllocateMemory` is cleared to zero. This means that applications wanting resources to be zero-initialized must execute a command such as `vkCmdFillBuffer` or `vkCmdClearColorImage` on the device to ensure a deterministic result. This can be wasteful if the underlying platform either:

- Already performs that zero clear anyway, due to e.g. security concerns.
- Can be performed more efficiently in implementation, by e.g. clearing pages to zero in the background after device memory is freed.

This extension also has uses in API layering and porting efforts, where zero memory behavior may be more strict than Vulkan. Different OS platforms also have wildly different behaviors here, which leads to implementations needing to apply workarounds to paper over these issues in the wild. If an extension exists to make allocation behavior explicit, we hopefully achieve a more robust ecosystem for Vulkan.

## Description

The [VK\\_KHR\\_portability\\_subset](#) extension allows a non-conformant Vulkan implementation to be built on top of another non-Vulkan graphics API, and identifies differences between that implementation and a fully-conformant native Vulkan implementation.

This extension provides Vulkan implementations with the ability to mark otherwise-required capabilities as unsupported, or to establish additional properties and limits that the application should adhere to in order to guarantee portable behavior and operation across platforms, including platforms where Vulkan is not natively supported.

The goal of this specification is to document, and make queryable, capabilities which are required to be supported by a fully-conformant Vulkan 1.0 implementation, but may be optional for an implementation of the Vulkan 1.0 Portability Subset.

The intent is that this extension will be advertised only on implementations of the Vulkan 1.0 Portability Subset, and not on conformant implementations of Vulkan 1.0. Fully-conformant Vulkan implementations provide all the required capabilities, and so will not provide this extension. Therefore, the existence of this extension can be used to determine that an implementation is likely not fully conformant with the Vulkan spec.

If this extension is supported by the Vulkan implementation, the application must enable this extension.

This extension defines several new structures that can be chained to the existing structures used by certain standard Vulkan calls, in order to query for non-conformant portable behavior.

## Description

The `VK_KHR_16bit_storage` extension allows use of 16-bit types in shader input and output interfaces, and push constant blocks. This extension introduces several new optional features which map to SPIR-V capabilities and allow access to 16-bit data in `Block`-decorated objects in the `Uniform` and the `StorageBuffer` storage classes, and objects in the `PushConstant` storage class. This extension allows 16-bit variables to be declared and used as user-defined shader inputs and outputs but does not change location assignment and component assignment rules.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. However, if Vulkan 1.1 is supported and this extension is not, the `storageBuffer16BitAccess` capability is optional. The original type, enum, and command names are still available as aliases of the core functionality.

## Promotion to Vulkan 1.4

If Vulkan 1.4 is supported, support for the `storageBuffer16BitAccess` capability is required.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDevice16BitStorageFeaturesKHR`

## New Enum Constants

- `VK_KHR_16BIT_STORAGE_EXTENSION_NAME`
- `VK_KHR_16BIT_STORAGE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_16BIT_STORAGE_FEATURES_KHR`

## New SPIR-V Capabilities

- `StorageBuffer16BitAccess`
- `UniformAndStorageBuffer16BitAccess`
- `StoragePushConstant16`
- `StorageInputOutput16`

## Version History

- Revision 1, 2017-03-23 (Alexander Galazin)

## Description

The [VK\\_KHR\\_8bit\\_storage](#) extension allows use of 8-bit types in uniform and storage buffers, and

push constant blocks. This extension introduces several new optional features which map to SPIR-V capabilities and allow access to 8-bit data in **Block**-decorated objects in the **Uniform** and the **StorageBuffer** storage classes, and objects in the **PushConstant** storage class.

The **StorageBuffer8BitAccess** capability **must** be supported by all implementations of this extension. The other capabilities are optional.

## Promotion to Vulkan 1.2

Vulkan APIs in this extension are included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the **StorageBuffer8BitAccess** capability is optional. External interactions defined by this extension, such as SPIR-V token names, retain their original names. The original Vulkan API names are still available as aliases of the core functionality.

## Promotion to Vulkan 1.4

If Vulkan 1.4 is supported, support for the **storageBuffer8BitAccess** capability is required.

## New Structures

- Extending **VkPhysicalDeviceFeatures2**, **VkDeviceCreateInfo**:
  - **VkPhysicalDevice8BitStorageFeaturesKHR**

## New Enum Constants

## Description

This extension provides versions of [vkBindBufferMemory](#) and [vkBindImageMemory](#) that allow multiple bindings to be performed at once, and are extensible.

This extension also introduces [VK\\_IMAGE\\_CREATE\\_ALIAS\\_BIT\\_KHR](#), which allows “identical” images that alias the same memory to interpret the contents consistently, even across image layout changes.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

This extension allows the application to query a 64-bit buffer device address value for a buffer, which can be used to access the buffer memory via the `PhysicalStorageBuffer` storage class in the `GL_EXT_buffer_reference` GLSL extension and `SPV_KHR_physical_storage_buffer` SPIR-V extension.

Another way to describe this extension is that it adds “pointers to buffer memory in shaders”. By calling `vkGetBufferDeviceAddress` with a `VkBuffer`, it will return a `VkDeviceAddress` value which represents the address of the start of the buffer.

`vkGetBufferOpaqueCaptureAddress` and `vkGetDeviceMemoryOpaqueCaptureAddress` allow opaque addresses for buffers and memory objects to be queried for the current process. A trace capture and replay tool can then supply these addresses to be used at replay time to match the addresses used when the trace was captured. To enable tools to insert these queries, new memory allocation flags must be specified for memory objects that will be bound to buffers accessed via the `PhysicalStorageBuffer` storage class. **Note that this mechanism is intended only to support capture/replay tools, and is not recommended for use in other applications.**

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the `bufferDeviceAddress` feature is optional. The original type, enum, and command names are still available as aliases of the core functionality.

## Promotion to Vulkan 1.3

If Vulkan 1.3 is supported, support for the `bufferDeviceAddress` capability is required.

## Description

This extension provides extensible versions of the Vulkan buffer and image copy commands. The new commands are functionally identical to the core commands, except that their copy parameters are specified using extensible structures that can be used to pass extension-specific information.

The following extensible copy commands are introduced with this extension: [vkCmdCopyBuffer2KHR](#), [vkCmdCopyImage2KHR](#), [vkCmdCopyBufferToImage2KHR](#), [vkCmdCopyImageToBuffer2KHR](#), [vkCmdBlitImage2KHR](#), and [vkCmdResolveImage2KHR](#). Each

command contains an `*Info2KHR` structure parameter that includes `sType/pNext` members. Lower level structures describing each region to be copied are also extended with `sType/pNext` members.

## New Commands

- `vkCmdBlitImage2KHR`
- `vkCmdCopyBuffer2KHR`
- `vkCmdCopyBufferToImage2KHR`
- `vkCmdCopyImage2KHR`
- `vkCmdCopyImageToBuffer2KHR`
- `vkCmdResolveImage2KHR`

## New Structures

- `VkBlitImageInfo2KHR`
- `VkBufferCopy2KHR`
- `VkBufferImageCopy2KHR`
- `VkCopyBufferInfo2KHR`
- `VkCopyBufferToImageInfo2KHR`
- `VkCopyImageInfo2KHR`
- `VkCopyImageToBufferInfo2KHR`
- `VkImageBlit2KHR`
- `VkImageCopy2KHR`
- `VkImageResolve2KHR`
- `VkResolveImageInfo2KHR`

## New Enum Constants

- `VK_KHR_COPY_COMMANDS_2_EXTENSION_NAME`
- `VK_KHR_COPY_COMMANDS_2_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_BLIT_IMAGE_INFO_2_KHR`
  - `VK_STRUCTURE_TYPE_BUFFER_COPY_2_KHR`
  - `VK_STRUCTURE_TYPE_BUFFER_IMAGE_COPY_2_KHR`
  - `VK_STRUCTURE_TYPE_COPY_BUFFER_INFO_2_KHR`
  - `VK_STRUCTURE_TYPE_COPY_BUFFER_TO_IMAGE_INFO_2_KHR`
  - `VK_STRUCTURE_TYPE_COPY_IMAGE_INFO_2_KHR`
  - `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_BUFFER_INFO_2_KHR`
  - `VK_STRUCTURE_TYPE_IMAGE_BLIT_2_KHR`

- [VK\\_STRUCTURE\\_TYPE\\_IMAGE\\_COPY\\_2\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_IMAGE\\_RESOLVE\\_2\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_RESOLVE\\_IMAGE\\_INFO\\_2\\_KHR](#)

### **Promotion to Vulkan 1.3**

Vulkan APIs in this extension are included in core Vulkan 1.3, with the KHR suffix omitted. External interactions defined by this extension, such as SPIR-V token names, retain their original names. The original Vulkan API names are still available as aliases of the core functionality.

## Description

This extension provides a new command to create render passes in a way that can be easily extended by other extensions through the substructures of render pass creation. The Vulkan 1.0 render pass creation sub-structures do not include **sType/pNext** members. Additionally, the render pass begin/next/end commands have been augmented with new extensible structures for passing additional subpass information.

The [VkRenderPassMultiviewCreateInfo](#) and [VkInputAttachmentAspectReference](#) structures that extended the original [VkRenderPassCreateInfo](#) are not accepted into the new creation functions,

and instead their parameters are folded into this extension as follows:

- Elements of `VkRenderPassMultiviewCreateInfo::pViewMasks` are now specified in `VkSubpassDescription2KHR::viewMask`.
- Elements of `VkRenderPassMultiviewCreateInfo::pViewOffsets` are now specified in `VkSubpassDependency2KHR::viewOffset`.
- `VkRenderPassMultiviewCreateInfo::correlationMaskCount` and `VkRenderPassMultiviewCreateInfo::pCorrelationMasks` are directly specified in `VkRenderPassCreateInfo2KHR`.
- `VkInputAttachmentAspectReference::aspectMask` is now specified in the relevant input attachment reference in `VkAttachmentReference2KHR::aspectMask`

The details of these mappings are explained fully in the new structures.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Commands

- `vkCmdBeginRenderPass2KHR`
- `vkCmdEndRenderPass2KHR`
- `vkCmdNextSubpass2KHR`
- `vkCreateRenderPass2KHR`

## New Structures

- `VkAttachmentDescription2KHR`
- `VkAttachmentReference2KHR`
- `VkRenderPassCreateInfo2KHR`
- `VkSubpassBeginInfoKHR`
- `VkSubpassDependency2KHR`
- `VkSubpassDescription2KHR`
- `VkSubpassEndInfoKHR`

## New Enum Constants

- `VK_KHR_CREATE_RENDERPASS_2_EXTENSION_NAME`

## Description

This extension enables resources to be bound to a dedicated allocation, rather than suballocated. For any particular resource, applications **can** query whether a dedicated allocation is recommended, in which case using a dedicated allocation **may** improve the performance of access to that resource. Normal device memory allocations must support multiple resources per allocation, memory aliasing and sparse binding, which could interfere with some optimizations. Applications should query the implementation for when a dedicated allocation **may** be beneficial by adding a `VkMemoryDedicatedRequirementsKHR` structure to the `pNext` chain of the

`VkMemoryRequirements2` structure passed as the `pMemoryRequirements` parameter of a call to `vkGetBufferMemoryRequirements2` or `vkGetImageMemoryRequirements2`. Certain external handle types and external images or buffers **may** also depend on dedicated allocations on implementations that associate image or buffer metadata with OS-level memory objects.

This extension adds a two small structures to memory requirements querying and memory allocation: a new structure that flags whether an image/buffer should have a dedicated allocation, and a structure indicating the image or buffer that an allocation will be bound to.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Structures

- Extending `VkMemoryAllocateInfo`:
  - `VkMemoryDedicatedAllocateInfoKHR`
- Extending `VkMemoryRequirements2`:
  - `VkMemoryDedicatedRequirementsKHR`

## New Enum Constants

- `VK_KHR_DEDICATED_ALLOCATION_EXTENSION_NAME`
- `VK_KHR_DEDICATED_ALLOCATION_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_MEMORY_DEDICATED_REQUIREMENTS_KHR`

## Examples

```
// Create an image with a dedicated allocation based on the
// implementation's preference

VkImageCreateInfo imageCreateInfo =
{
    // Image creation parameters
};

VkImage image;
VkResult result = vkCreateImage(
    device,
    &imageCreateInfo,
    NULL,           // pAllocator
    &image);

VkMemoryDedicatedRequirementsKHR dedicatedRequirements =
```

```

{
    .sType = VK_STRUCTURE_TYPE_MEMORY_DEDICATED_REQUIREMENTS_KHR,
    .pNext = NULL,
};

VkMemoryRequirements2 memoryRequirements =
{
    .sType = VK_STRUCTURE_TYPE_MEMORY_REQUIREMENTS_2,
    .pNext = &dedicatedRequirements,
};

const VkImageMemoryRequirementsInfo2 imageRequirementsInfo =
{
    .sType = VK_STRUCTURE_TYPE_IMAGE_MEMORY_REQUIREMENTS_INFO_2,
    .pNext = NULL,
    .image = image
};

vkGetImageMemoryRequirements2(
    device,
    &imageRequirementsInfo,
    &memoryRequirements);

if (dedicatedRequirements.prefersDedicatedAllocation) {
    // Allocate memory with VkMemoryDedicatedAllocateInfoKHR::image
    // pointing to the image we are allocating the memory for

    VkMemoryDedicatedAllocateInfoKHR dedicatedInfo =
    {
        .sType = VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO_KHR,
        .pNext = NULL,
        .image = image,
        .buffer = VK_NULL_HANDLE,
    };

    VkMemoryAllocateInfo memoryAllocateInfo =
    {
        .sType = VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_INFO,
        .pNext = &dedicatedInfo,
        .allocationSize = memoryRequirements.size,
        .memoryTypeIndex = FindMemoryTypeIndex(memoryRequirements.memoryTypeBits),
    };

    VkDeviceMemory memory;
    vkAllocateMemory(
        device,
        &memoryAllocateInfo,
        NULL, // pAllocator
        &memory);

    // Bind the image to the memory

```

```
    vkBindImageMemory(  
        device,  
        image,  
        memory,  
        0);  
} else {  
    // Take the normal memory sub-allocation path  
}
```

## Version History

- Revision 1, 2017-02-27 (James Jones)
  - Copy content from VK\_NV\_dedicated\_allocation
  - Add some references to external object interactions to the overview.
- Revision 2, 2017-03-27 (Faith Ekstrand)
  - Rework the extension to be query-based
- Revision 3, 2017-07-31 (Faith Ekstrand)
  - Clarify that memory objects allocated with `VkMemoryDedicatedAllocateInfoKHR` can only have the specified resource bound and no others.

## Description

This extension adds support for automatically resolving multisampled depth/stencil attachments in a subpass in a similar manner as for color attachments.

Multisampled color attachments can be resolved at the end of a subpass by specifying [pResolveAttachments](#) entries corresponding to the [pColorAttachments](#) array entries. This does not allow for a way to map the resolve attachments to the depth/stencil attachment. The

[vkCmdResolveImage](#) command does not allow for depth/stencil images. While there are other ways to resolve the depth/stencil attachment, they can give sub-optimal performance. Extending the [VkSubpassDescription2](#) in this extension allows an application to add a [pDepthStencilResolveAttachment](#), that is similar to the color [pResolveAttachments](#), that the [pDepthStencilAttachment](#) can be resolved into.

Depth and stencil samples are resolved to a single value based on the resolve mode. The set of possible resolve modes is defined in the [VkResolveModeFlagBits](#) enum. The [VK\\_RESOLVE\\_MODE\\_SAMPLE\\_ZERO\\_BIT](#) mode is the only mode that is required of all implementations (that support the extension or support Vulkan 1.2 or higher). Some implementations may also support averaging (the same as color sample resolve) or taking the minimum or maximum sample, which may be more suitable for depth/stencil resolve.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

Applications may wish to update a fixed set of descriptors in a large number of descriptor sets very frequently, i.e. during initialization phase or if it is required to rebuild descriptor sets for each

frame. For those cases it is also not unlikely that all information required to update a single descriptor set is stored in a single struct. This extension provides a way to update a fixed set of descriptors in a single [VkDescriptorSet](#) with a pointer to an application-defined data structure describing the new descriptors.

## Promotion to Vulkan 1.1

[vkCmdPushDescriptorSetWithTemplateKHR](#) is included as an interaction with [VK\\_KHR\\_push\\_descriptor](#). If Vulkan 1.1 and [VK\\_KHR\\_push\\_descriptor](#) are supported, this is included by [VK\\_KHR\\_push\\_descriptor](#).

The base functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

This extension provides functionality to use a logical device that consists of multiple physical devices, as created with the [VK\\_KHR\\_device\\_group\\_creation](#) extension. A device group can allocate memory across the subdevices, bind memory from one subdevice to a resource on another subdevice, record command buffers where some work executes on an arbitrary subset of the subdevices, and potentially present a swapchain image from one or more subdevices.

## Promotion to Vulkan 1.1

The following enums, types, and commands are included as interactions with [VK\\_KHR\\_swapchain](#):

- [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_GROUP\\_PRESENT\\_CAPABILITIES\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_IMAGE\\_SWAPCHAIN\\_CREATE\\_INFO\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_BIND\\_IMAGE\\_MEMORY\\_SWAPCHAIN\\_INFO\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_ACQUIRE\\_NEXT\\_IMAGE\\_INFO\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_GROUP\\_PRESENT\\_INFO\\_KHR](#)
- [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_GROUP\\_SWAPCHAIN\\_CREATE\\_INFO\\_KHR](#)
- [VK\\_SWAPCHAIN\\_CREATE\\_SPLIT\\_INSTANCE\\_BIND\\_REGIONS\\_BIT\\_KHR](#)

  - [VK\\_SWAPCHAIN\\_CREATE\\_SPLIT\\_INSTANCE\\_BIND\\_REGIONS\\_BIT\\_KHR](#)

## New Built-in Variables

- [DeviceIndex](#)

## New SPIR-V Capabilities

- [DeviceGroup](#)

## Version History

- Revision 1, 2016-10-19 (Jeff Bolz)
  - Internal revisions
- Revision 2, 2017-05-19 (Tobias Hector)
  - Removed extended memory bind functions to [VK\\_KHR\\_bind\\_memory2](#), added dependency on that extension, and device-group-specific structs for those functions.

- Revision 3, 2017-10-06 (Ian Elliott)
  - Corrected Vulkan 1.1 interactions with the WSI extensions. All Vulkan 1.1 WSI interactions are with the VK\_KHR\_swapchain extension.
- Revision 4, 2017-10-10 (Jeff Bolz)
  - Rename “SFR” bits and structure members to use the phrase “split instance bind regions”.

## Description

This extension provides instance-level commands to enumerate groups of physical devices, and to create a logical device from a subset of one of those groups. Such a logical device can then be used with new features in the [VK\\_KHR\\_device\\_group](#) extension.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Commands

- [vkEnumeratePhysicalDeviceGroupsKHR](#)

## New Structures

- [VkPhysicalDeviceGroupPropertiesKHR](#)
- Extending [VkDeviceCreateInfo](#):
  - [VkDeviceGroupDeviceCreateInfoKHR](#)

## New Enum Constants

- [VK\\_KHR\\_DEVICE\\_GROUP\\_CREATION\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_DEVICE\\_GROUP\\_CREATION\\_SPEC\\_VERSION](#)
- [VK\\_MAX\\_DEVICE\\_GROUP\\_SIZE\\_KHR](#)
- Extending [VkMemoryHeapFlagBits](#):
  - [VK\\_MEMORY\\_HEAP\\_MULTI\\_INSTANCE\\_BIT\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_DEVICE\\_GROUP\\_DEVICE\\_CREATE\\_INFO\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_GROUP\\_PROPERTIES\\_KHR](#)

## Examples

```
VkDeviceCreateInfo devCreateInfo = { VK_STRUCTURE_TYPE_DEVICE_CREATE_INFO };
// (not shown) fill out devCreateInfo as usual.
uint32_t deviceGroupCount = 0;
VkPhysicalDeviceGroupPropertiesKHR *props = NULL;

// Query the number of device groups
vkEnumeratePhysicalDeviceGroupsKHR(g_vkInstance, &deviceGroupCount, NULL);

// Allocate and initialize structures to query the device groups
props = (VkPhysicalDeviceGroupPropertiesKHR *)malloc(deviceGroupCount*sizeof
(VkPhysicalDeviceGroupPropertiesKHR));
for (i = 0; i < deviceGroupCount; ++i) {
    props[i].sType = VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GROUP_PROPERTIES_KHR;
    props[i].pNext = NULL;
}
vkEnumeratePhysicalDeviceGroupsKHR(g_vkInstance, &deviceGroupCount, props);

// If the first device group has more than one physical device. create
// a logical device using all of the physical devices.
VkDeviceGroupDeviceCreateInfoKHR deviceGroupInfo = {
VK_STRUCTURE_TYPE_DEVICE_GROUP_DEVICE_CREATE_INFO_KHR };
if (props[0].physicalDeviceCount > 1) {
    deviceGroupInfo.physicalDeviceCount = props[0].physicalDeviceCount;
    deviceGroupInfo.pPhysicalDevices = props[0].physicalDevices;
```

```
    devCreateInfo.pNext = &deviceGroupInfo;  
}  
  
vkCreateDevice(props[0].physicalDevices[0], &devCreateInfo, NULL, &g_vkDevice);  
free(props);
```

## Description

This extension is based on the [VK\\_AMD\\_draw\\_indirect\\_count](#) extension. This extension allows an application to source the number of draws for indirect drawing calls from a buffer.

Applications might want to do culling on the GPU via a compute shader prior to drawing. This enables the application to generate an arbitrary number of drawing commands and execute them without host intervention.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the commands [vkCmdDrawIndirectCount](#) and [vkCmdDrawIndexedIndirectCount](#) are optional. The original type, enum, and command names are still available as aliases of the core functionality.

## New Commands

- [vkCmdDrawIndexedIndirectCountKHR](#)
- [vkCmdDrawIndirectCountKHR](#)

## New Enum Constants

## Description

This extension provides a new physical device query which allows retrieving information about the

driver implementation, allowing applications to determine which physical device corresponds to which particular vendor's driver, and which conformance test suite version the driver implementation is compliant with.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

This extension allows applications to create single-pass render pass instances without needing to create render pass objects or framebuffers. Dynamic render passes can also span across multiple primary command buffers, rather than relying on secondary command buffers.

This extension also incorporates [VK\\_ATTACHMENT\\_STORE\\_OP\\_NONE\\_KHR](#) from [VK\\_QCOM\\_render\\_pass\\_store\\_ops](#), enabling applications to avoid unnecessary synchronization when an attachment is not written during a render pass.

## New Commands

- [VK\\_STRUCTURE\\_TYPE\\_RENDERING\\_INPUT\\_ATTACHMENT\\_INDEX\\_INFO\\_KHR](#)

## Promotion to Vulkan 1.4

Functionality in this extension is included in core Vulkan 1.4, with the KHR suffix omitted. However, Vulkan 1.4 implementations only have to support local read for storage resources and single sampled color attachments.

Support for reading depth/stencil attachments and multi-sampled attachments are respectively gated behind the new boolean `dynamicRenderingLocalReadDepthStencilAttachments` and `dynamicRenderingLocalReadMultisampledAttachments` properties, as described in the [Version 1.4](#) appendix.

The original type, enum, and command names are still available as aliases of the core functionality.

## Description

An application may wish to reference device memory in multiple Vulkan logical devices or instances, in multiple processes, and/or in multiple APIs. This extension enables an application to export non-Vulkan handles from Vulkan memory objects such that the underlying resources can be referenced outside the scope of the Vulkan logical device that created them.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Structures

  - [VK\\_STRUCTURE\\_TYPE\\_EXTERNAL\\_MEMORY\\_IMAGE\\_CREATE\\_INFO\\_KHR](#)

## Issues

1) How do applications correlate two physical devices across process or Vulkan instance boundaries?

**RESOLVED:** New device ID fields have been introduced by [VK\\_KHR\\_external\\_memory\\_capabilities](#). These fields, combined with the existing [VkPhysicalDeviceProperties::driverVersion](#) field can be used to identify compatible devices across processes, drivers, and APIs. [VkPhysicalDeviceProperties::pipelineCacheUUID](#) is not sufficient for this purpose because despite its description in the specification, it need only identify a unique pipeline cache format in practice. Multiple devices may be able to use the same pipeline cache data, and hence it would be desirable for all of them to have the same pipeline cache UUID. However, only the same concrete physical device can be used when sharing memory, so an actual unique device ID was introduced. Further, the pipeline cache UUID was specific to Vulkan, but correlation with other, non-extensible APIs is required to enable interoperation with those APIs.

2) If memory objects are shared between processes and APIs, is this considered aliasing according to the rules outlined in the [Memory Aliasing](#) section?

**RESOLVED:** Yes. Applications must take care to obey all restrictions imposed on aliased resources when using memory across multiple Vulkan instances or other APIs.

3) Are new image layouts or metadata required to specify image layouts and layout transitions compatible with non-Vulkan APIs, or with other instances of the same Vulkan driver?

**RESOLVED:** Separate instances of the same Vulkan driver running on the same GPU should have identical internal layout semantics, so applications have the tools they need to ensure views of images are consistent between the two instances. Other APIs will fall into two categories: Those that are Vulkan-compatible, and those that are Vulkan-incompatible. Vulkan-incompatible APIs will require the image to be in the GENERAL layout whenever they are accessing them.

Note this does not attempt to address cross-device transitions, nor transitions to engines on the same device which are not visible within the Vulkan API. Both of these are beyond the scope of this extension.

4) Is a new barrier flag or operation of some type needed to prepare external memory for handoff to another Vulkan instance or API and/or receive it from another instance or API?

**RESOLVED:** Yes. Some implementations need to perform additional cache management when transitioning memory between address spaces and other APIs, instances, or processes which may operate in a separate address space. Options for defining this transition include:

- A new structure that can be added to the [pNext](#) list in [VkMemoryBarrier](#), [VkBufferMemoryBarrier](#), and [VkImageMemoryBarrier](#).
- A new bit in [VkAccessFlags](#) that can be set to indicate an “external” access.
- A new bit in [VkDependencyFlags](#)
- A new special queue family that represents an “external” queue.

A new structure has the advantage that the type of external transition can be described in as much detail as necessary. However, there is not currently a known need for anything beyond differentiating between external and internal accesses, so this is likely an over-engineered solution. The access flag bit has the advantage that it can be applied at buffer, image, or global granularity, and semantically it maps pretty well to the operation being described. Additionally, the API already includes [VK\\_ACCESS\\_MEMORY\\_READ\\_BIT](#) and [VK\\_ACCESS\\_MEMORY\\_WRITE\\_BIT](#) which appear to

be intended for this purpose. However, there is no obvious pipeline stage that would correspond to an external access, and therefore no clear way to use `VK_ACCESS_MEMORY_READ_BIT` or `VK_ACCESS_MEMORY_WRITE_BIT`. `VkDependencyFlags` and `VkPipelineStageFlags` operate at command granularity rather than image or buffer granularity, which would make an entire pipeline barrier an internal → external or external → internal barrier. This may not be a problem in practice, but seems like the wrong scope. Another downside of `VkDependencyFlags` is that it lacks inherent directionality: there are no `src` and `dst` variants of it in the barrier or dependency description semantics, so two bits might need to be added to describe both internal → external and external → internal transitions. Transitioning a resource to a special queue family corresponds well with the operation of transitioning to a separate Vulkan instance, in that both operations ideally include scheduling a barrier on both sides of the transition: Both the releasing and the acquiring queue or process. Using a special queue family requires adding an additional reserved queue family index. Reusing `VK_QUEUE_FAMILY_IGNORED` would have left it unclear how to transition a concurrent usage resource from one process to another, since the semantics would have likely been equivalent to the currently-ignored transition of `VK_QUEUE_FAMILY_IGNORED` → `VK_QUEUE_FAMILY_IGNORED`. Fortunately, creating a new reserved queue family index is not invasive.

Based on the above analysis, the approach of transitioning to a special “external” queue family was chosen.

5) Do internal driver memory arrangements and/or other internal driver image properties need to be exported and imported when sharing images across processes or APIs.

**RESOLVED:** Some vendors claim this is necessary on their implementations, but it was determined that the security risks of allowing opaque metadata to be passed from applications to the driver were too high. Therefore, implementations which require metadata will need to associate it with the objects represented by the external handles, and rely on the dedicated allocation mechanism to associate the exported and imported memory objects with a single image or buffer.

6) Most prior interoperation and cross-process sharing APIs have been based on image-level sharing. Should Vulkan sharing be based on memory-object sharing or image sharing?

**RESOLVED:** These extensions have assumed memory-level sharing is the correct granularity. Vulkan is a lower-level API than most prior APIs, and as such attempts to closely align with to the underlying primitives of the hardware and system-level drivers it abstracts. In general, the resource that holds the backing store for both images and buffers of various types is memory. Images and buffers are merely metadata containing brief descriptions of the layout of bits within that memory.

Because memory object-based sharing is aligned with the overall Vulkan API design, it enables the full range of Vulkan capabilities with external objects. External memory can be used as backing for sparse images, for example, whereas such usage would be awkward at best with a sharing mechanism based on higher-level primitives such as images. Further, aligning the mechanism with the API in this way provides some hope of trivial compatibility with future API enhancements. If new objects backed by memory objects are added to the API, they too can be used across processes with minimal additions to the base external memory APIs.

Earlier APIs implemented interop at a higher level, and this necessitated entirely separate sharing

APIs for images and buffers. To co-exist and interoperate with those APIs, the Vulkan external sharing mechanism must accommodate their model. However, if it can be agreed that memory-based sharing is the more desirable and forward-looking design, legacy interoperation constraints can be considered another reason to favor memory-based sharing: while native and legacy driver primitives that may be used to implement sharing may not be as low-level as the API here suggests, raw memory is still the least common denominator among the types. Image-based sharing can be cleanly derived from a set of base memory- object sharing APIs with minimal effort, whereas image-based sharing does not generalize well to buffer or raw-memory sharing. Therefore, following the general Vulkan design principle of minimalism, it is better to expose interoperability with image-based native and external primitives via the memory sharing API, and place sufficient limits on their usage to ensure they can be used only as backing for equivalent Vulkan images. This provides a consistent API for applications regardless of which platform or external API they are targeting, which makes development of multi-API and multi-platform applications simpler.

7) Should Vulkan define a common external handle type and provide Vulkan functions to facilitate cross-process sharing of such handles rather than relying on native handles to define the external objects?

**RESOLVED:** No. Cross-process sharing of resources is best left to native platforms. There are myriad security and extensibility issues with such a mechanism, and attempting to re-solve all those issues within Vulkan does not align with Vulkan's purpose as a graphics API. If desired, such a mechanism could be built as a layer or helper library on top of the opaque native handle defined in this family of extensions.

8) Must implementations provide additional guarantees about state implicitly included in memory objects for those memory objects that may be exported?

**RESOLVED:** Implementations must ensure that sharing memory objects does not transfer any information between the exporting and importing instances and APIs other than that required to share the data contained in the memory objects explicitly shared. As specific examples, data from previously freed memory objects that used the same underlying physical memory, and data from memory objects using adjacent physical memory must not be visible to applications importing an exported memory object.

9) Must implementations validate external handles the application provides as inputs to memory import operations?

**RESOLVED:** Implementations must return an error to the application if the provided memory handle cannot be used to complete the requested import operation. However, implementations need not validate handles are of the exact type specified by the application.

## Description

An application may wish to reference device memory in multiple Vulkan logical devices or

instances, in multiple processes, and/or in multiple APIs. This extension provides a set of capability queries and handle definitions that allow an application to determine what types of “external” memory handles an implementation supports for a given set of use cases.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_ID\\_PROPERTIES\\_KHR](#)

## Issues

1) Why do so many external memory capabilities need to be queried on a per-memory-handle-type basis?

This is because some handle types are based on OS-native objects that have far more limited capabilities than the very generic Vulkan memory objects. Not all memory handle types can name memory objects that support 3D images, for example. Some handle types cannot even support the deferred image and memory binding behavior of Vulkan and require specifying the image when allocating or importing the memory object.

2) Do the [VkExternalImageFormatPropertiesKHR](#) and [VkExternalBufferPropertiesKHR](#) structs need to include a list of memory type bits that support the given handle type?

No. The memory types that do not support the handle types will simply be filtered out of the results returned by [vkGetImageMemoryRequirements](#) and [vkGetBufferMemoryRequirements](#) when a set of handle types was specified at image or buffer creation time.

3) Should the non-opaque handle types be moved to their own extension?

Perhaps. However, defining the handle type bits does very little and does not require any platform-specific types on its own, and it is easier to maintain the bitfield values in a single extension for now. Presumably more handle types could be added by separate extensions though, and it would be mildly weird to have some platform-specific ones defined in the core spec and some in extensions.

4) Do we need a [D3D11\\_TILEPOOL](#) type?

No. This is technically possible, but the synchronization is awkward. D3D11 surfaces must be synchronized using shared mutexes, and these synchronization primitives are shared by the entire memory object, so D3D11 shared allocations divided among multiple buffer and image bindings

may be difficult to synchronize.

5) Should the Windows 7-compatible handle types be named “KMT” handles or “GLOBAL\_SHARE” handles?

KMT, simply because it is more concise.

6) How do applications identify compatible devices and drivers across instance, process, and API boundaries when sharing memory?

New device properties are exposed that allow applications to correctly correlate devices and drivers. A device and driver UUID that must both match to ensure sharing compatibility between two Vulkan instances, or a Vulkan instance and an extensible external API are added. To allow correlating with Direct3D devices, a device LUID is added that corresponds to a DXGI adapter LUID. A driver ID is not needed for Direct3D because mismatched driver component versions are not currently supported on the Windows OS. Should support for such configurations be introduced at the OS level, further Vulkan extensions would be needed to correlate userspace component builds.

## Issues

1) Should there be restrictions on what side effects can occur when waiting on imported semaphores that are in an invalid state?

**RESOLVED:** Yes. Normally, validating such state would be the responsibility of the application, and the implementation would be free to enter an undefined state if valid usage rules were violated. However, this could cause security concerns when using imported semaphores, as it would require the importing application to trust the exporting application to ensure the state is valid. Requiring this level of trust is undesirable for many potential use cases.

2) Must implementations validate external handles the application provides as input to semaphore state import operations?

**RESOLVED:** Implementations must return an error to the application if the provided semaphore

state handle cannot be used to complete the requested import operation. However, implementations need not validate handles are of the exact type specified by the application.

## Description

This extension adds a new [VkFormatFeatureFlagBits2KHR](#) 64bits format feature flag type to extend the existing [VkFormatFeatureFlagBits](#) which is limited to 31 flags. At the time of this writing 29 bits of [VkFormatFeatureFlagBits](#) are already used.

Because [VkFormatProperties2](#) is already defined to extend the Vulkan 1.0 [vkGetPhysicalDeviceFormatProperties](#) command, this extension defines a new [VkFormatProperties3KHR](#) to extend the [VkFormatProperties](#).

On top of replicating all the bits from [VkFormatFeatureFlagBits](#), [VkFormatFeatureFlagBits2KHR](#) adds the following bits :

- [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_READ\\_WITHOUT\\_FORMAT\\_BIT\\_KHR](#) and [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_WRITE\\_WITHOUT\\_FORMAT\\_BIT\\_KHR](#) specify that an implementation supports reading and writing, respectively, a given [VkFormat](#) through storage operations without specifying the format in the shader.
- [VK\\_FORMAT\\_FEATURE\\_2\\_SAMPLED\\_IMAGE\\_DEPTH\\_COMPARISON\\_BIT\\_KHR](#) specifies that an implementation supports depth comparison performed by [OpImage\\*Dref\\*](#) instructions on a given [VkFormat](#). Previously the result of executing a [OpImage\\*Dref\\*](#) instruction on an image view, where the [format](#) was not one of the depth/stencil formats with a depth component, was undefined. This bit clarifies on which formats such instructions can be used.

Prior to version 2 of this extension, implementations exposing the [shaderStorageImageReadWithoutFormat](#) and [shaderStorageImageWriteWithoutFormat](#) features may not report [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_READ\\_WITHOUT\\_FORMAT\\_BIT\\_KHR](#) and [VK\\_FORMAT\\_FEATURE\\_2\\_STORAGE\\_WRITE\\_WITHOUT\\_FORMAT\\_BIT\\_KHR](#) in [VkFormatProperties3KHR::bufferFeatures](#). Despite this, buffer reads/writes are supported as intended by the original features.

## Description

This extension provides new queries for memory requirements of images and buffers that can be easily extended by other extensions, without introducing any additional commands. The Vulkan 1.0 [VkMemoryRequirements](#) and [VkSparseImageMemoryRequirements](#) structures do not include **sType** and **pNext** members. This extension wraps them in new structures with these members, so an application can query a chain of memory requirements structures by constructing the chain and letting the implementation fill them in. A new command is added for each **vkGet\*MemoryRequirements** command in core Vulkan 1.0.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

This extension provides new queries for device features, device properties, and format properties that can be easily extended by other extensions, without introducing any further queries. The Vulkan 1.0 feature/limit/formatproperty structures do not include **sType/pNext** members. This extension wraps them in new structures with **sType/pNext** members, so an application can query a chain of feature/limit/formatproperty structures by constructing the chain and letting the implementation fill them in. A new command is added for each **vkGetPhysicalDevice\*** command in core Vulkan 1.0. The new feature structure (and a **pNext** chain of extending structures) can also be passed in to device creation to enable features.

This extension also allows applications to use the physical-device components of device extensions before [vkCreateDevice](#) is called.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Examples

```
// Get features with a hypothetical future extension.
VkHypotheticalExtensionFeaturesKHR hypotheticalFeatures =
{
    .sType = VK_STRUCTURE_TYPE_HYPOTHETICAL_FEATURES_KHR,
    .pNext = NULL,
};

VkPhysicalDeviceFeatures2KHR features =
{
    .sType = VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2_KHR,
    .pNext = &hypotheticalFeatures,
};

// After this call, features and hypotheticalFeatures have been filled out.
vkGetPhysicalDeviceFeatures2KHR(physicalDevice, &features);

// Properties/limits can be chained and queried similarly.

// Enable some features:
VkHypotheticalExtensionFeaturesKHR enabledHypotheticalFeatures =
{
    .sType = VK_STRUCTURE_TYPE_HYPOTHETICAL_FEATURES_KHR,
    .pNext = NULL,
};

VkPhysicalDeviceFeatures2KHR enabledFeatures =
{
    .sType = VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2_KHR,
    .pNext = &enabledHypotheticalFeatures,
};

enabledFeatures.features.xyz = VK_TRUE;
enabledHypotheticalFeatures.abc = VK_TRUE;

VkDeviceCreateInfo deviceCreateInfo =
{
    .sType = VK_STRUCTURE_TYPE_DEVICE_CREATE_INFO,
    .pNext = &enabledFeatures,
    ...
    .pEnabledFeatures = NULL,
};
```

```
VkDevice device;  
vkCreateDevice(physicalDevice, &deviceCreateInfo, NULL, &device);
```

## Description

In Vulkan, users can specify device-scope queue priorities. In some cases it may be useful to extend this concept to a system-wide scope. This device extension allows applications to query the global queue priorities supported by a queue family, and then set a priority when creating queues. The default queue priority is [VK\\_QUEUE\\_GLOBAL\\_PRIORITY\\_MEDIUM\\_EXT](#).

Implementations can report which global priority levels are treated differently by the implementation. It is intended primarily for use in system integration along with certain platform-specific priority enforcement rules.

The driver implementation will attempt to skew hardware resource allocation in favor of the higher-priority task. Therefore, higher-priority work may retain similar latency and throughput characteristics even if the system is congested with lower priority work.

The global priority level of a queue shall take precedence over the per-process queue priority ([VkDeviceQueueCreateInfo::pQueuePriorities](#)).

Abuse of this feature may result in starving the rest of the system from hardware resources. Therefore, the driver implementation may deny requests to acquire a priority above the default priority ([VK\\_QUEUE\\_GLOBAL\\_PRIORITY\\_MEDIUM\\_EXT](#)) if the caller does not have sufficient privileges. In this scenario [VK\\_ERROR\\_NOT\\_PERMITTED\\_EXT](#) is returned.

The driver implementation may fail the queue allocation request if resources required to complete the operation have been exhausted (either by the same process or a different process). In this scenario [VK\\_ERROR\\_INITIALIZATION\\_FAILED](#) is returned.

## Promotion to Vulkan 1.4

Functionality in this extension is included in core Vulkan 1.4 with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Issues

1) Can we additionally query whether a caller is permitted to acquire a specific global queue priority in this extension?

**RESOLVED:** No. Whether a caller has enough privilege goes with the OS, and the Vulkan driver cannot really guarantee that the privilege will not change in between this query and the actual queue creation call.

2) If more than 1 queue using global priority is requested, is there a good way to know which queue is failing the device creation?

**RESOLVED:** No. There is not a good way at this moment, and it is also not quite actionable for the applications to know that because the information may not be accurate. Queue creation can fail because of runtime constraints like insufficient privilege or lack of resource, and the failure is not necessarily tied to that particular queue configuration requested.

## Description

On some implementations, setting the [VK\\_IMAGE\\_CREATE\\_MUTABLE\\_FORMAT\\_BIT](#) on image creation can cause access to that image to perform worse than an equivalent image created without [VK\\_IMAGE\\_CREATE\\_MUTABLE\\_FORMAT\\_BIT](#) because the implementation does not know what view formats will be paired with the image.

This extension allows an application to provide the list of all formats that **can** be used with an image when it is created. The implementation may then be able to create a more efficient image that supports the subset of formats required by the application without having to support all formats in the format compatibility class of the image format.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

This extension allows framebuffers to be created without the need for creating images first, allowing more flexibility in how they are used, and avoiding the need for many of the confusing compatibility rules.

Framebuffers are now created with a small amount of additional metadata about the image views that will be used in [VkFramebufferAttachmentsCreateInfoKHR](#), and the actual image views are provided at render pass begin time via [VkRenderPassAttachmentBeginInfoKHR](#).

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

  - [VK\\_LINE\\_RASTERIZATION\\_MODE\\_RECTANGULAR\\_KHR](#)
  - [VK\\_LINE\\_RASTERIZATION\\_MODE\\_RECTANGULAR\\_SMOOTH\\_KHR](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_LINE\\_RASTERIZATION\\_FEATURES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_LINE\\_RASTERIZATION\\_PROPERTIES\\_KHR](#)
  - [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_RASTERIZATION\\_LINE\\_STATE\\_CREATE\\_INFO\\_KHR](#)

## Promotion to Vulkan 1.4

Functionality in this extension is included in core Vulkan 1.4 with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

When [Version 1.4](#) is supported, the [bresenhamLines](#) feature must be supported.

## Issues

- 1) Do we need to support Bresenham-style and smooth lines with more than one rasterization

sample? i.e. the equivalent of `glDisable(GL_MULTISAMPLE)` in OpenGL when the framebuffer has more than one sample?

**RESOLVED:** Yes. For simplicity, Bresenham line rasterization carries forward a few restrictions from OpenGL, such as not supporting per-sample shading, alpha to coverage, or alpha to one.

## Description

[VK\\_KHR\\_maintenance1](#) adds a collection of minor features that were intentionally left out or overlooked from the original Vulkan 1.0 release.

The new features are as follows:

- Allow 2D and 2D array image views to be created from 3D images, which can then be used as color framebuffer attachments. This allows applications to render to slices of a 3D image.
- Support [vkCmdCopyImage](#) between 2D array layers and 3D slices. This extension allows copying from layers of a 2D array image to slices of a 3D image and vice versa.
- Allow negative height to be specified in the [VkViewport::height](#) field to perform y-inversion of the clip-space to framebuffer-space transform. This allows apps to avoid having to use `gl_Position.y = -gl_Position.y` in shaders also targeting other APIs.
- Allow implementations to express support for doing just transfers and clears of image formats that they otherwise support no other format features for. This is done by adding new format feature flags [VK\\_FORMAT\\_FEATURE\\_TRANSFER\\_SRC\\_BIT\\_KHR](#) and [VK\\_FORMAT\\_FEATURE\\_TRANSFER\\_DST\\_BIT\\_KHR](#).
- Support [vkCmdFillBuffer](#) on transfer-only queues. Previously [vkCmdFillBuffer](#) was defined to only work on command buffers allocated from command pools which support graphics or compute queues. It is now allowed on queues that just support transfer operations.
- Fix the inconsistency of how error conditions are returned between the [vkCreateGraphicsPipelines](#) and [vkCreateComputePipelines](#) functions and the [vkAllocateDescriptorSets](#) and [vkAllocateCommandBuffers](#) functions.
- Add new [VK\\_ERROR\\_OUT\\_OF\\_POOL\\_MEMORY\\_KHR](#) error so implementations can give a more precise reason for [vkAllocateDescriptorSets](#) failures.
- Add a new command [vkTrimCommandPoolKHR](#) which gives the implementation an opportunity to release any unused command pool memory back to the system.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

VK\_KHR\_maintenance2 adds a collection of minor features that were intentionally left out or overlooked from the original Vulkan 1.0 release.

The new features are as follows:

- Allow the application to specify which aspect of an input attachment might be read for a given subpass.
- Allow implementations to express the clipping behavior of points.
- Allow creating images with usage flags that may not be supported for the base image's format, but are supported for image views of the image that have a different but compatible format.
- Allow creating uncompressed image views of compressed images.
- Allow the application to select between an upper-left and lower-left origin for the tessellation domain space.
- Adds two new image layouts for depth stencil images to allow either the depth or stencil aspect to be read-only while the other aspect is writable.

## Input Attachment Specification

Input attachment specification allows an application to specify which aspect of a multi-aspect image (e.g. a depth/stencil format) will be accessed via a `subpassLoad` operation.

On some implementations there **may** be a performance penalty if the implementation does not know (at `vkCreateRenderPass` time) which aspect(s) of multi-aspect images **can** be accessed as input attachments.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Structures

- `VkInputAttachmentAspectReferenceKHR`
- Extending `VkImageViewCreateInfo`:
  - `VkImageViewUsageCreateInfoKHR`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDevicePointClippingPropertiesKHR`
- Extending `VkPipelineTessellationStateCreateInfo`:
  - `VkPipelineTessellationDomainOriginStateCreateInfoKHR`
- Extending `VkRenderPassCreateInfo`:
  - `VkRenderPassInputAttachmentAspectCreateInfoKHR`

## New Enums

- `VkPointClippingBehaviorKHR`
- `VkTessellationDomainOriginKHR`

## New Enum Constants

- `VK_KHR_MAINTENANCE2_EXTENSION_NAME`
- `VK_KHR_MAINTENANCE2_SPEC_VERSION`
- `VK_KHR_MAINTENANCE_2_EXTENSION_NAME`
- `VK_KHR_MAINTENANCE_2_SPEC_VERSION`
- Extending `VkImageCreateFlagBits`:
  - `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT_KHR`
  - `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR`
- Extending `VkImageLayout`:
  - `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL_KHR`
  - `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL_KHR`
- Extending `VkPointClippingBehavior`:
  - `VK_POINT_CLIPPING_BEHAVIOR_ALL_CLIP_PLANES_KHR`
  - `VK_POINT_CLIPPING_BEHAVIOR_USER_CLIP_PLANES_ONLY_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_IMAGE_VIEW_USAGE_CREATE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_POINT_CLIPPING_PROPERTIES_KHR`
  - `VK_STRUCTURE_TYPE_PIPELINE_TESSELLATION_DOMAIN_ORIGIN_STATE_CREATE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_RENDER_PASS_INPUT_ATTACHMENT_ASPECT_CREATE_INFO_KHR`
- Extending `VkTessellationDomainOrigin`:
  - `VK_TESSELLATION_DOMAIN_ORIGIN_LOWER_LEFT_KHR`
  - `VK_TESSELLATION_DOMAIN_ORIGIN_UPPER_LEFT_KHR`

## Input Attachment Specification Example

Consider the case where a render pass has two subpasses and two attachments.

Attachment 0 has the format `VK_FORMAT_D24_UNORM_S8_UINT`, attachment 1 has some color format.

Subpass 0 writes to attachment 0, subpass 1 reads only the depth information from attachment 0 (using `inputAttachmentRead`) and writes to attachment 1.

```
VkInputAttachmentAspectReferenceKHR references[] = {  
    {  
        .subpass = 1,  
        .inputAttachmentIndex = 0,  
        .aspectMask = VK_IMAGE_ASPECT_DEPTH_BIT  
    }  
}
```

```
};

VkRenderPassInputAttachmentAspectCreateInfoKHR specifyAspects = {
    .sType =
VK_STRUCTURE_TYPE_RENDER_PASS_INPUT_ATTACHMENT_ASPECT_CREATE_INFO_KHR,
    .pNext = NULL,
    .aspectReferenceCount = 1,
    .pAspectReferences = references
};

VkRenderPassCreateInfo createInfo = {
    ...
    .pNext = &specifyAspects,
    ...
};

vkCreateRenderPass(...);
```

## Issues

1) What is the default tessellation domain origin?

**RESOLVED:** Vulkan 1.0 originally inadvertently documented a lower-left origin, but the conformance tests and all implementations implemented an upper-left origin. This extension adds a control to select between lower-left (for compatibility with OpenGL) and upper-left, and we retroactively fix unextended Vulkan to have a default of an upper-left origin.

## Description

**VK\_KHR\_maintenance3** adds a collection of minor features that were intentionally left out or overlooked from the original Vulkan 1.0 release.

The new features are as follows:

- A limit on the maximum number of descriptors that are supported in a single descriptor set layout. Some implementations have a limit on the total size of descriptors in a set, which cannot be expressed in terms of the limits in Vulkan 1.0.
- A limit on the maximum size of a single memory allocation. Some platforms have kernel interfaces that limit the maximum size of an allocation.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

[VK\\_KHR\\_maintenance4](#) adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Allow the application to destroy their [VkPipelineLayout](#) object immediately after it was used to create another object. It is no longer necessary to keep its handle valid while the created object is in use.
- Add a new [maxBufferSize](#) implementation-defined limit for the maximum size [VkBuffer](#) that **can** be created.
- Add support for the SPIR-V 1.2 [LocalSizeId](#) execution mode, which can be used as an alternative to [LocalSize](#) to specify the local workgroup size with specialization constants.
- Add a guarantee that images created with identical creation parameters will always have the same alignment requirements.
- Add new [vkGetDeviceBufferMemoryRequirementsKHR](#), [vkGetDeviceImageMemoryRequirementsKHR](#), and [vkGetDeviceImageSparseMemoryRequirementsKHR](#) to allow the application to query the image memory requirements without having to create an image object and query it.
- Relax the requirement that push constants must be initialized before they are dynamically accessed.
- Relax the interface matching rules to allow a larger output vector to match with a smaller input vector, with additional values being discarded.
- Add a guarantee for buffer memory requirement that the size memory requirement is never greater than the result of aligning create size with the alignment memory requirement.

## New Commands

- [vkGetDeviceBufferMemoryRequirementsKHR](#)
- [vkGetDeviceImageMemoryRequirementsKHR](#)
- [vkGetDeviceImageSparseMemoryRequirementsKHR](#)

## New Structures

- [VkDeviceBufferMemoryRequirementsKHR](#)
- [VkDeviceImageMemoryRequirementsKHR](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceMaintenance4FeaturesKHR](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceMaintenance4PropertiesKHR](#)

## New Enum Constants

- `VK_KHR_MAINTENANCE_4_EXTENSION_NAME`
- `VK_KHR_MAINTENANCE_4_SPEC_VERSION`
- Extending `VkImageAspectFlagBits`:
  - `VK_IMAGE_ASPECT_NONE_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_DEVICE_BUFFER_MEMORY_REQUIREMENTS_KHR`
  - `VK_STRUCTURE_TYPE_DEVICE_IMAGE_MEMORY_REQUIREMENTS_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_PROPERTIES_KHR`

## Promotion to Vulkan 1.3

Vulkan APIs in this extension are included in core Vulkan 1.3, with the KHR suffix omitted. External interactions defined by this extension, such as SPIR-V token names, retain their original names. The original Vulkan API names are still available as aliases of the core functionality.

## Issues

None.

## Description

`VK_KHR_maintenance5` adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

- A new `VK_FORMAT_A1B5G5R5_UNORM_PACK16_KHR` format
- A new `VK_FORMAT_A8_UNORM_KHR` format
- A property to indicate that multisample coverage operations are performed after sample counting in `EarlyFragmentTests` mode
- Relax `VkBufferView` creation requirements by allowing subsets of the associated `VkBuffer` usage using `VkBufferUsageFlags2CreateInfoKHR`
- A new command `vkCmdBindIndexBuffer2KHR`, allowing a range of memory to be bound as an index buffer
- `vkGetDeviceProcAddr` must return `NULL` for supported core functions beyond the version requested by the application.
- A property to indicate that the sample mask test is performed after sample counting in `EarlyFragmentTests` mode
- `vkCmdBindVertexBuffers2` now supports using `VK_WHOLE_SIZE` in the `pSizes` parameter.
- A default size of 1.0 is used if `PointSize` is not written
- Shader modules are deprecated - applications can now pass `VkShaderModuleCreateInfo` as a chained structure to pipeline creation via `VkPipelineShaderStageCreateInfo`
- A function `vkGetRenderingAreaGranularityKHR` to query the optimal render area for a dynamic rendering instance.
- A property to indicate that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE` have defined behavior
- Add `vkGetImageSubresourceLayout2KHR` and a new function `vkGetDeviceImageSubresourceLayoutKHR` to allow the application to query the image memory layout without having to create an image object and query it.
- Allow `VK_REMAINING_ARRAY_LAYERS` as the `layerCount` member of `VkImageSubresourceLayers`
- Adds stronger guarantees for propagation of `VK_ERROR_DEVICE_LOST` return values
- A property to indicate whether `PointSize` controls the final rasterization of polygons if `polygon mode` is `VK_POLYGON_MODE_POINT`
- Two properties to indicate the non-strict line rasterization algorithm used
- Two new flags words `VkPipelineCreateFlagBits2KHR` and `VkBufferUsageFlagBits2KHR`
- Physical-device-level functions can now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.
- Clarification that copies between images of any type are allowed, treating 1D images as 2D

images with a height of 1.

## New Commands

- [vkCmdBindIndexBuffer2KHR](#)
- [vkGetDeviceImageSubresourceLayoutKHR](#)
- [vkGetImageSubresourceLayout2KHR](#)
- [vkGetRenderingAreaGranularityKHR](#)

## New Structures

- [VkDeviceImageSubresourceInfoKHR](#)
- [VkImageSubresource2KHR](#)
- [VkRenderingAreaInfoKHR](#)
- [VkSubresourceLayout2KHR](#)
- Extending [VkBufferViewCreateInfo](#), [VkBufferCreateInfo](#), [VkPhysicalDeviceExternalBufferInfo](#), [VkDescriptorBufferBindingInfoEXT](#):
  - [VkBufferUsageFlags2CreateInfoKHR](#)
- Extending [VkComputePipelineCreateInfo](#), [VkGraphicsPipelineCreateInfo](#), [VkRayTracingPipelineCreateInfoKHR](#):
  - [VkPipelineCreateFlags2CreateInfoKHR](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceMaintenance5FeaturesKHR](#)
- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDeviceMaintenance5PropertiesKHR](#)

## New Enums

- [VkBufferUsageFlagBits2KHR](#)
- [VkPipelineCreateFlagBits2KHR](#)

## New Bitmasks

- [VkBufferUsageFlags2KHR](#)
- [VkPipelineCreateFlags2KHR](#)

## New Enum Constants

- [VK\\_KHR\\_MAINTENANCE\\_5\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_MAINTENANCE\\_5\\_SPEC\\_VERSION](#)
- Extending [VkBufferUsageFlagBits2](#):
  - [VK\\_BUFFER\\_USAGE\\_2\\_INDEX\\_BUFFER\\_BIT\\_KHR](#)

- VK\_BUFFER\_USAGE\_2\_INDIRECT\_BUFFER\_BIT\_KHR
- VK\_BUFFER\_USAGE\_2\_STORAGE\_BUFFER\_BIT\_KHR
- VK\_BUFFER\_USAGE\_2\_STORAGE\_TEXEL\_BUFFER\_BIT\_KHR
- VK\_BUFFER\_USAGE\_2\_TRANSFER\_DST\_BIT\_KHR
- VK\_BUFFER\_USAGE\_2\_TRANSFER\_SRC\_BIT\_KHR
- VK\_BUFFER\_USAGE\_2\_UNIFORM\_BUFFER\_BIT\_KHR
- VK\_BUFFER\_USAGE\_2\_UNIFORM\_TEXEL\_BUFFER\_BIT\_KHR
- VK\_BUFFER\_USAGE\_2\_VERTEX\_BUFFER\_BIT\_KHR
- Extending VkFormat:
  - VK\_FORMAT\_A1B5G5R5\_UNORM\_PACK16\_KHR
  - VK\_FORMAT\_A8\_UNORM\_KHR
- Extending VkPipelineCreateFlagBits2:
  - VK\_PIPELINE\_CREATE\_2\_ALLOW\_DERIVATIVES\_BIT\_KHR
  - VK\_PIPELINE\_CREATE\_2\_DERIVATIVE\_BIT\_KHR
  - VK\_PIPELINE\_CREATE\_2\_DISABLE\_OPTIMIZATION\_BIT\_KHR
  - VK\_PIPELINE\_CREATE\_2\_DISPATCH\_BASE\_BIT\_KHR
  - VK\_PIPELINE\_CREATE\_2\_VIEW\_INDEX\_FROM\_DEVICE\_INDEX\_BIT\_KHR
- Extending VkStructureType:
  - VK\_STRUCTURE\_TYPE\_BUFFER\_USAGE\_FLAGS\_2\_CREATE\_INFO\_KHR
  - VK\_STRUCTURE\_TYPE\_DEVICE\_IMAGE\_SUBRESOURCE\_INFO\_KHR
  - VK\_STRUCTURE\_TYPE\_IMAGE\_SUBRESOURCE\_2\_KHR
  - VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_MAINTENANCE\_5\_FEATURES\_KHR
  - VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_MAINTENANCE\_5\_PROPERTIES\_KHR
  - VK\_STRUCTURE\_TYPE\_PIPELINE\_CREATE\_FLAGS\_2\_CREATE\_INFO\_KHR
  - VK\_STRUCTURE\_TYPE\_RENDERING\_AREA\_INFO\_KHR
  - VK\_STRUCTURE\_TYPE\_SUBRESOURCE\_LAYOUT\_2\_KHR

If `VK_KHR_dynamic_rendering` or Vulkan Version 1.3 and `VK_EXT_fragment_density_map` is supported:

- Extending VkPipelineCreateFlagBits2:
  - VK\_PIPELINE\_CREATE\_2\_RENDERING\_FRAGMENT\_DENSITY\_MAP\_ATTACHMENT\_BIT\_EXT

If `VK_KHR_dynamic_rendering` or Vulkan Version 1.3 and `VK_KHR_fragment_shading_rate` is supported:

- Extending VkPipelineCreateFlagBits2:
  - VK\_PIPELINE\_CREATE\_2\_RENDERING\_FRAGMENT\_SHADING\_RATE\_ATTACHMENT\_BIT\_KHR

## R

If `VK_EXT_attachment_feedback_loop_layout` is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT`
  - `VK_PIPELINE_CREATE_2_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT`

If `VK_EXT_conditional_rendering` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_CONDITIONAL_RENDERING_BIT_EXT`

If `VK_EXT_descriptor_buffer` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT`
  - `VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`
  - `VK_BUFFER_USAGE_2_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`
- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_DESCRIPTOR_BUFFER_BIT_EXT`

If `VK_EXT_graphics_pipeline_library` is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_LINK_TIME_OPTIMIZATION_BIT_EXT`
  - `VK_PIPELINE_CREATE_2_RETAIN_LINK_TIME_OPTIMIZATION_INFO_BIT_EXT`

If `VK_EXT_transform_feedback` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`
  - `VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT`

If `VK_KHR_acceleration_structure` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR`
  - `VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR`

If `VK_KHR_pipeline_executable_properties` is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_CAPTURE_STATISTICS_BIT_KHR`

If `VK_KHR_pipeline_library` is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_LIBRARY_BIT_KHR`

If `VK_KHR_ray_tracing_pipeline` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_SHADER_BINDING_TABLE_BIT_KHR`
- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_AABBS_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`

If `VK_KHR_video_decode_queue` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_VIDEO_DECODE_DST_BIT_KHR`
  - `VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR`

If `VK_KHR_video_encode_queue` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR`
  - `VK_BUFFER_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR`

If `Vulkan Version 1.2` or `VK_KHR_buffer_device_address` or `VK_EXT_buffer_device_address` is supported:

- Extending `VkBufferUsageFlagBits2`:
  - `VK_BUFFER_USAGE_2_SHADER_DEVICE_ADDRESS_BIT_KHR`

If `Vulkan Version 1.3` or `VK_EXT_pipeline_creation_cache_control` is supported:

- Extending `VkPipelineCreateFlagBits2`:
  - `VK_PIPELINE_CREATE_2_EARLY_RETURN_ON_FAILURE_BIT_KHR`
  - `VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_KHR`

If `Vulkan Version 1.4` or `VK_EXT_pipeline_protected_access` is supported:

- Extending [VkPipelineCreateFlagBits2](#):
  - [VK\\_PIPELINE\\_CREATE\\_2\\_NO\\_PROTECTED\\_ACCESS\\_BIT\\_EXT](#)
  - [VK\\_PIPELINE\\_CREATE\\_2\\_PROTECTED\\_ACCESS\\_ONLY\\_BIT\\_EXT](#)

### **Promotion to Vulkan 1.4**

Functionality in this extension is included in core Vulkan 1.4 with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

[VK\\_KHR\\_maintenance6](#) adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

- [VkBindMemoryStatusKHR](#) may be included in the [pNext](#) chain of [VkBindBufferMemoryInfo](#) and [VkBindImageMemoryInfo](#), allowing applications to identify individual resources for which memory binding failed during calls to [vkBindBufferMemory2](#) and [vkBindImageMemory2](#).
- A new property [fragmentShadingRateClampCombinerInputs](#) to indicate if an implementation clamps the inputs to fragment shading rate combiner operations.
- [VK\\_NULL\\_HANDLE](#) is allowed to be used when binding an index buffer, instead of a valid [VkBuffer](#) handle. When the [nullDescriptor](#) feature is enabled, every index fetched results in a value of zero.
- A new property [maxCombinedImageSamplerDescriptorCount](#) to indicate the maximum number of descriptors needed for sampled images with [Y'C<sub>B</sub>C<sub>R</sub> conversion](#).
- A new property [blockTexelViewCompatibleMultipleLayers](#) indicating whether [VK\\_IMAGE\\_CREATE\\_BLOCK\\_TEXEL\\_VIEW\\_COMPATIBLE\\_BIT](#) is allowed to be used with [layerCount](#) > 1
- [pNext](#) extensible \*2 versions of all descriptor binding commands.

## New Commands

- [vkCmdBindDescriptorSets2KHR](#)
- [vkCmdPushConstants2KHR](#)

If [VK\\_EXT\\_descriptor\\_buffer](#) is supported:

- [vkCmdBindDescriptorBufferEmbeddedSamplers2EXT](#)
- [vkCmdSetDescriptorBufferOffsets2EXT](#)

If [VK\\_KHR\\_push\\_descriptor](#) is supported:

- [vkCmdPushDescriptorSet2KHR](#)
- [vkCmdPushDescriptorSetWithTemplate2KHR](#)

## New Structures

- [VkBindDescriptorSetsInfoKHR](#)
- [VkPushConstantsInfoKHR](#)

## Interactions and External Dependencies

- This extension provides API support for [GL\\_EXT\\_multiview](#)

## Contributors

- Jeff Bolz, NVIDIA

## Description

This extension has the same goal as the OpenGL ES [GL\\_OVR\\_multiview](#) extension. Multiview is a rendering technique originally designed for VR where it is more efficient to record a single set of commands to be executed with slightly different behavior for each “view”.

It includes a concise way to declare a render pass with multiple views, and gives implementations freedom to render the views in the most efficient way possible. This is done with a multiview configuration specified during `render pass` creation with the `VkRenderPassMultiviewCreateInfo` passed into `VkRenderPassCreateInfo::pNext`.

This extension enables the use of the `SPV_KHR_multiview` shader extension, which adds a new `ViewIndex` built-in type that allows shaders to control what to do for each view. If using GLSL there is also the `GL_EXT_multiview` extension that introduces a `highp int gl_ViewIndex;` built-in variable for vertex, tessellation, geometry, and fragment shaders.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceMultiviewFeaturesKHR`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceMultiviewPropertiesKHR`
- Extending `VkRenderPassCreateInfo`:
  - `VkRenderPassMultiviewCreateInfoKHR`

## New Enum Constants

- `VK_KHR_MULTIVIEW_EXTENSION_NAME`
- `VK_KHR_MULTIVIEW_SPEC_VERSION`
- Extending `VkDependencyFlagBits`:
  - `VK_DEPENDENCY_VIEW_LOCAL_BIT_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PROPERTIES_KHR`
  - `VK_STRUCTURE_TYPE_RENDER_PASS_MULTIVIEW_CREATE_INFO_KHR`

## New Built-In Variables

- `ViewIndex`

## New SPIR-V Capabilities

- `MultiView`

## Description

This extension allows descriptors to be written into the command buffer, while the implementation is responsible for managing their memory. Push descriptors may enable easier porting from older APIs and in some cases can be more efficient than writing descriptors into descriptor sets.

## New Commands

- [vkCmdPushDescriptorSetKHR](#)

If [Vulkan Version 1.1](#) or [VK\\_KHR\\_descriptor\\_update\\_template](#) is supported:

- [vkCmdPushDescriptorSetWithTemplateKHR](#)

## New Structures

- Extending [VkPhysicalDeviceProperties2](#):
  - [VkPhysicalDevicePushDescriptorPropertiesKHR](#)

## New Enum Constants

- [VK\\_KHR\\_PUSH\\_DESCRIPTOR\\_EXTENSION\\_NAME](#)

## Description

The `VK_KHR_relaxed_block_layout` extension allows implementations to indicate they can support more variation in block `Offset` decorations. For example, placing a vector of three floats at an offset of  $16 \times N + 4$ .

See [Offset and Stride Assignment](#) for details.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Enum Constants

- `VK_KHR_RELAXED_BLOCK_LAYOUT_EXTENSION_NAME`
- `VK_KHR_RELAXED_BLOCK_LAYOUT_SPEC_VERSION`

## Version History

- Revision 1, 2017-03-26 (JohnK)

# VK\_KHR\_sampler\_mirror\_clamp\_to\_edge

## Name String

VK\_KHR\_sampler\_mirror\_clamp\_to\_edge

## Extension Type

Device extension

## Registered Extension Number

15

## Revision

3

- Jon Leech, Khronos

## Description

VK\_KHR\_sampler\_mirror\_clamp\_to\_edge extends the set of sampler address modes to include an additional mode (VK\_SAMPLER\_ADDRESS\_MODE\_MIRROR\_CLAMP\_TO\_EDGE) that effectively uses a texture map twice as large as the original image in which the additional half of the new image is a mirror image of the original image.

This new mode relaxes the need to generate images whose opposite edges match by using the original image to generate a matching “mirror image”. This mode allows the texture to be mirrored only once in the negative s, t, and r directions.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2. However, if Vulkan 1.2 is

supported and this extension is not, the [VkSamplerAddressMode VK\\_SAMPLER\\_ADDRESS\\_MODE\\_MIRROR\\_CLAMP\\_TO\\_EDGE](#) is optional. Since the original extension did not use an author suffix on the enum [VK\\_SAMPLER\\_ADDRESS\\_MODE\\_MIRROR\\_CLAMP\\_TO\\_EDGE](#), it is used by both core and extension implementations.

## New Enum Constants

- [VK\\_KHR\\_SAMPLER\\_MIRROR\\_CLAMP\\_TO\\_EDGE\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_SAMPLER\\_MIRROR\\_CLAMP\\_TO\\_EDGE\\_SPEC\\_VERSION](#)
- Extending [VkSamplerAddressMode](#):
  - [VK\\_SAMPLER\\_ADDRESS\\_MODE\\_MIRROR\\_CLAMP\\_TO\\_EDGE](#)
  - [VK\\_SAMPLER\\_ADDRESS\\_MODE\\_MIRROR\\_CLAMP\\_TO\\_EDGE\\_KHR](#)

## Example

Creating a sampler with the new address mode in each dimension

```
VkSamplerCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_SAMPLER_CREATE_INFO,
    // Other members set to application-desired values
};

createInfo.addressModeU = VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE;
createInfo.addressModeV = VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE;
createInfo.addressModeW = VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE;

VkSampler sampler;
VkResult result = vkCreateSampler(
    device,
    &createInfo,
    &sampler);
```

## Issues

1) Why are both KHR and core versions of the [VK\\_SAMPLER\\_ADDRESS\\_MODE\\_MIRROR\\_CLAMP\\_TO\\_EDGE](#) token present?

**RESOLVED:** This functionality was intended to be required in Vulkan 1.0. We realized shortly before public release that not all implementations could support it, and moved the functionality into an optional extension, but did not apply the KHR extension suffix. Adding a KHR-suffixed alias of the non-suffixed enum has been done to comply with our own naming rules.

In a related change, before spec revision 1.1.121 this extension was hardwired into the spec Makefile so it was always included with the Specification, even in the core-only versions. This has now been reverted, and it is treated as any other extension.

## Version History

- Revision 1, 2016-02-16 (Tobias Hector)
  - Initial draft
- Revision 2, 2019-08-14 (Jon Leech)
  - Add KHR-suffixed alias of non-suffixed enum.
- Revision 3, 2019-08-17 (Jon Leech)
  - Add an issue explaining the reason for the extension API not being suffixed with KHR.

## Description

The use of  $Y'C_B C_R$  sampler conversion is an area in 3D graphics not used by most Vulkan developers. It is mainly used for processing inputs from video decoders and cameras. The use of the extension assumes basic knowledge of  $Y'C_B C_R$  concepts.

This extension provides the ability to perform specified color space conversions during texture sampling operations for the  $Y'C_B C_R$  color space natively. It also adds a selection of multi-planar formats, image aspect plane, and the ability to bind memory to the planes of an image collectively or separately.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. However, if Vulkan 1.1 is supported and this extension is not, the `samplerYcbcrConversion` capability is optional. The original type, enum, and command names are still available as aliases of the core functionality.

## Promotion to Vulkan 1.4

If Vulkan 1.4 is supported, support for the `samplerYcbcrConversion` capability is required.

- Tobias Hector, AMD

## Description

This extension allows image memory barriers for depth/stencil images to have just one of the [VK\\_IMAGE\\_ASPECT\\_DEPTH\\_BIT](#) or [VK\\_IMAGE\\_ASPECT\\_STENCIL\\_BIT](#) aspect bits set, rather than require both. This allows their layouts to be set independently. To support depth/stencil images with

different layouts for the depth and stencil aspects, the depth/stencil attachment interface has been updated to support a separate layout for stencil.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

This extension advertises the SPIR-V **Int64Atomics** capability for Vulkan, which allows a shader to contain 64-bit atomic operations on signed and unsigned integers. The supported operations include OpAtomicMin, OpAtomicMax, OpAtomicAnd, OpAtomicOr, OpAtomicXor, OpAtomicAdd,

OpAtomicExchange, and OpAtomicCompareExchange.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the `shaderBufferInt64Atomics` capability is optional. The original type, enum, and command names are still available as aliases of the core functionality.

## New Structures

## Interactions and External Dependencies

- This extension provides API support for [GL\\_ARB\\_shader\\_draw\\_parameters](#)

## Contributors

- Daniel Koch, NVIDIA Corporation
- Jeff Bolz, NVIDIA
- Daniel Rakos, AMD
- Jan-Harald Fredriksen, ARM
- John Kessenich, Google
- Stuart Smith, IMG

## Description

This extension adds support for the following SPIR-V extension in Vulkan:

- `SPV_KHR_shader_draw_parameters`

The extension provides access to three additional built-in shader variables in Vulkan:

- `BaseInstance`, containing the `firstInstance` parameter passed to drawing commands,
- `BaseVertex`, containing the `firstVertex` or `vertexOffset` parameter passed to drawing commands, and
- `DrawIndex`, containing the index of the draw call currently being processed from an indirect drawing call.

When using GLSL source-based shader languages, the following variables from `GL_ARB_shader_draw_parameters` can map to these SPIR-V built-in decorations:

- `in int gl_BaseInstanceARB;` → `BaseInstance`,
- `in int gl_BaseVertexARB;` → `BaseVertex`, and
- `in int gl_DrawIDARB;` → `DrawIndex`.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1. However, the `shaderDrawParameters` feature bit was added to distinguish whether it is actually available or not.

## New Enum Constants

- `VK_KHR_SHADER_DRAW_PARAMETERS_EXTENSION_NAME`
- `VK_KHR_SHADER_DRAW_PARAMETERS_SPEC_VERSION`

## New Built-In Variables

- `BaseInstance`
- `BaseVertex`
- `DrawIndex`

## New SPIR-V Capabilities

- `DrawParameters`

## Issues

1) Is this the same functionality as `GL_ARB_shader_draw_parameters`?

**RESOLVED:** It is actually a superset, as it also adds in support for arrayed drawing commands.

In GL for `GL_ARB_shader_draw_parameters`, `gl_BaseVertexARB` holds the integer value passed to the parameter to the command that resulted in the current shader invocation. In the case where the

command has no `baseVertex` parameter, the value of `gl_BaseVertexARB` is zero. This means that `gl_BaseVertexARB = baseVertex` (for `glDrawElements` commands with `baseVertex`) or 0. In particular there are no `glDrawArrays` commands that take a `baseVertex` parameter.

Now in Vulkan, we have `BaseVertex = vertexOffset` (for indexed drawing commands) or `firstVertex` (for arrayed drawing commands), and so Vulkan's version is really a superset of GL functionality.

## Description

The `VK_KHR_shader_float16_int8` extension allows use of 16-bit floating-point types and 8-bit integer types in shaders for arithmetic operations.

It introduces two new optional features `shaderFloat16` and `shaderInt8` which directly map to the `Float16` and the `Int8` SPIR-V capabilities. The `VK_KHR_shader_float16_int8` extension also specifies precision requirements for half-precision floating-point SPIR-V operations. This extension does not enable use of 8-bit integer types or 16-bit floating-point types in any [shader input and output interfaces](#) and therefore does not supersede the `VK_KHR_8bit_storage` or `VK_KHR_16bit_storage` extensions.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, both the `shaderFloat16` and `shaderInt8` capabilities are optional. The original type, enum, and command names are still available as aliases of the core functionality.

## Promotion to Vulkan 1.4

If Vulkan 1.4 is supported, support for the `shaderInt8` capability is required.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceFloat16Int8FeaturesKHR`
  - `VkPhysicalDeviceShaderFloat16Int8FeaturesKHR`

## New Enum Constants

- `VK_KHR_SHADER_FLOAT16_INT8_EXTENSION_NAME`
- `VK_KHR_SHADER_FLOAT16_INT8_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FLOAT16_INT8_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FLOAT16_INT8_FEATURES_KHR`

## Version History

## Description

The `VK_KHR_shader_float_controls` extension enables efficient use of floating-point computations through the ability to query and override the implementation's default behavior for rounding modes, denormals, signed zero, and infinity.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Structures

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceFloatControlsPropertiesKHR`

## New Enums

- `VkShaderFloatControlsIndependenceKHR`

## New Enum Constants

- `VK_KHR_SHADER_FLOAT_CONTROLS_EXTENSION_NAME`
- `VK_KHR_SHADER_FLOAT_CONTROLS_SPEC_VERSION`
- Extending `VkShaderFloatControlsIndependence`:
  - `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY_KHR`
  - `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL_KHR`
  - `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FLOAT_CONTROLS_PROPERTIES_KHR`

## New SPIR-V Capabilities

- `DenormPreserve`
- `DenormFlushToZero`
- `SignedZeroInfNanPreserve`
- `RoundingModeRTE`
- `RoundingModeRTZ`

## Issues

1) Which instructions must flush denorms?

**RESOLVED:** Only floating-point conversion, floating-point arithmetic, floating-point relational (except `OpIsNaN`, `OpIsInf`), and floating-point GLSL.std.450 extended instructions must flush denormals.

2) What is the denorm behavior for intermediate results?

**RESOLVED:** When a SPIR-V instruction is implemented as a sequence of other instructions:

- in the `DenormFlushToZero` execution mode, the intermediate instructions may flush denormals, the final result of the sequence **must** not be denormal.
- in the `DenormPreserve` execution mode, denormals must be preserved throughout the whole sequence.

3) Do denorm and rounding mode controls apply to `OpSpecConstantOp`?

**RESOLVED:** Yes, except when the opcode is `OpQuantizeToF16`.

4) The SPIR-V specification says that `OpConvertFToU` and `OpConvertFToS` unconditionally round towards zero. Do the rounding mode controls specified through the execution modes apply to them?

**RESOLVED:** No, these instructions unconditionally round towards zero.

5) Do any of the “Pack” GLSL.std.450 instructions count as conversion instructions and have the rounding mode applied?

**RESOLVED:** No, only instructions listed in “section 3.32.11. Conversion Instructions” of the SPIR-V specification count as conversion instructions.

6) When using inf/nan-ignore mode, what is expected of `OpIsNan` and `OpIsInf`?

**RESOLVED:** These instructions must always accurately detect inf/nan if it is passed to them.

### Version 4 API Incompatibility

The original versions of `VK_KHR_shader_float_controls` shipped with booleans named “`separateDenormSettings`” and “`separateRoundingModeSettings`”, which at first glance could have indicated “they can all be set independently, or not”. However the spec language as written indicated that the 32-bit value could always be set independently, and only the 16- and 64-bit controls needed to be the same if these values were `VK_FALSE`.

As a result of this slight disparity, and lack of test coverage for this facet of the extension, we ended up with two different behaviors in the wild, where some implementations worked as written, and others worked based on the naming. As these are hard limits in hardware with reasons for exposure as written, it was not possible to standardize on a single way to make this work within the existing API.

No known users of this part of the extension exist in the wild, and as such the Vulkan WG took the unusual step of retroactively changing the once boolean value into a tri-state enum, breaking source compatibility. This was however done in such a way as to retain ABI compatibility, in case any code using this did exist; with the numerical values 0 and 1 retaining their original specified meaning, and a new value signifying the additional “all need to be set together” state. If any applications exist today, compiled binaries will continue to work as written in most cases, but will need changes before the code can be recompiled.

## Description

This extension enables use of the more expressive fast floating-point math flags in the SPV\_KHR\_float\_controls2 extension. These flags give finer-grained control over which optimizations compilers may apply, potentially speeding up execution while retaining correct

results.

The extension also adds control over the fast-math modes to the GLSL extended instruction set, making these operations more consistent with SPIR-V and allowing their use in situations where floating-point conformance is important.

## Description

This extension adds Vulkan support for the [SPV\\_KHR\\_terminate\\_invocation](#) SPIR-V extension. That SPIR-V extension provides a new instruction, [OpTerminateInvocation](#), which causes a shader invocation to immediately terminate and sets the coverage of shaded samples to [0](#); only previously executed instructions will have observable effects. The [OpTerminateInvocation](#) instruction, along with the [OpDemoteToHelperInvocation](#) instruction from the [VK\\_EXT\\_shader\\_demote\\_to\\_helper\\_invocation](#) extension, together replace the [OpKill](#) instruction, which could behave like either of these instructions. [OpTerminateInvocation](#) provides the behavior required by the GLSL [discard](#) statement, and should be used when available by GLSL compilers and applications that need the GLSL [discard](#) behavior.

## New Structures

## Description

This extension allows the use of SPIR-V 1.4 shader modules. SPIR-V 1.4's new features primarily make it an easier target for compilers from high-level languages, rather than exposing new hardware functionality.

SPIR-V 1.4 incorporates features that are also available separately as extensions. SPIR-V 1.4 shader modules do not need to enable those extensions with the `OpExtension` opcode, since they are integral parts of SPIR-V 1.4.

SPIR-V 1.4 introduces new floating-point execution mode capabilities, also available via `SPV_KHR_float_controls`. Implementations are not required to support all of these new capabilities; support can be queried using `VkPhysicalDeviceFloatControlsPropertiesKHR` from the `VK_KHR_shader_float_controls` extension.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## New Enum Constants

- `VK_KHR_SPIRV_1_4_EXTENSION_NAME`
- `VK_KHR_SPIRV_1_4_SPEC_VERSION`

## Issues

1. Should we have an extension specific to this SPIR-V version, or add a version-generic query for SPIR-V version? SPIR-V 1.4 does not need any other API changes.

**RESOLVED:** Just expose SPIR-V 1.4.

Most new SPIR-V versions introduce optionally-required capabilities or have implementation-defined limits, and would need more API and specification changes specific to that version to make them available in Vulkan. For example, to support the subgroup capabilities added in SPIR-V 1.3 required introducing `VkPhysicalDeviceSubgroupProperties` to allow querying the supported group operation categories, maximum supported subgroup size, etc. While we could expose the parts of a new SPIR-V version that do not need accompanying changes generically, we will still end up writing extensions specific to each version for the remaining parts. Thus the generic mechanism will not reduce future spec-writing effort. In addition, making it clear which parts of a future version are supported by the generic mechanism and which cannot be used without specific support would be difficult to get right ahead of time.

2. Can different stages of the same pipeline use shaders with different SPIR-V versions?

**RESOLVED:** Yes.

Mixing SPIR-V versions 1.0-1.3 in the same pipeline has not been disallowed, so it would be inconsistent to disallow mixing 1.4 with previous versions. SPIR-V 1.4 does not introduce anything that should cause new difficulties here.

3. Must Vulkan extensions corresponding to SPIR-V extensions that were promoted to core in 1.4 be enabled in order to use that functionality in a SPIR-V 1.4 module?

**RESOLVED:** No, with caveats.

The SPIR-V 1.4 module does not need to declare the SPIR-V extensions, since the functionality is now part of core, so there is no need to enable the Vulkan extension that allows SPIR-V modules to declare the SPIR-V extension. However, when the functionality that is now core in SPIR-V 1.4 is optionally supported, the query for support is provided by a Vulkan extension, and that query can only be used if the extension is enabled.

This applies to any SPIR-V version; specifically for SPIR-V 1.4 this only applies to the functionality from `SPV_KHR_float_controls`, which was made available in Vulkan by `VK_KHR_shader_float_controls`. Even though the extension was promoted in SPIR-V 1.4, the capabilities are still optional in implementations that support `VK_KHR_spirv_1_4`.

A SPIR-V 1.4 module does not need to enable `SPV_KHR_float_controls` in order to use the capabilities, so if the application has *a priori* knowledge that the implementation supports the capabilities, it does not need to enable `VK_KHR_shader_float_controls`. However, if it does not have this knowledge and has to query for support at runtime, it must enable `VK_KHR_shader_float_controls` in order to use `VkPhysicalDeviceFloatControlsPropertiesKHR`.

- Interacts with [VK\\_KHR\\_create\\_renderpass2](#)

### Contributors

- Tobias Hector

### Description

This extension modifies the original core synchronization APIs to simplify the interface and improve usability of these APIs. It also adds new pipeline stage and access flag types that extend into the 64-bit range, as we have run out within the 32-bit range. The new flags are identical to the old values within the 32-bit range, with new stages and bits beyond that.

Pipeline stages and access flags are now specified together in memory barrier structures, making the connection between the two more obvious. Additionally, scoping the pipeline stages into the barrier structs allows the use of the `MEMORY_READ` and `MEMORY_WRITE` flags without sacrificing precision. The per-stage access flags should be used to disambiguate specific accesses in a given stage or set of stages - for instance, between uniform reads and sampling operations.

Layout transitions have been simplified as well; rather than requiring a different set of layouts for depth/stencil/color attachments, there are generic [VK\\_IMAGE\\_LAYOUT\\_ATTACHMENT\\_OPTIMAL\\_KHR](#) and [VK\\_IMAGE\\_LAYOUT\\_READ\\_ONLY\\_OPTIMAL\\_KHR](#) layouts which are contextually applied based on the image format. For example, for a depth format image, [VK\\_IMAGE\\_LAYOUT\\_READ\\_ONLY\\_OPTIMAL\\_KHR](#) is equivalent to [VK\\_IMAGE\\_LAYOUT\\_DEPTH\\_READ\\_ONLY\\_OPTIMAL\\_KHR](#). [VK\\_IMAGE\\_LAYOUT\\_READ\\_ONLY\\_OPTIMAL\\_KHR](#) also functionally replaces [VK\\_IMAGE\\_LAYOUT\\_SHADER\\_READ\\_ONLY\\_OPTIMAL](#).

Events are now more efficient, because they include memory dependency information when you set them on the device. Previously, this information was only known when waiting on an event, so the dependencies could not be satisfied until the wait occurred. That sometimes meant stalling the pipeline when the wait occurred. The new API provides enough information for implementations to satisfy these dependencies in parallel with other tasks.

Queue submission has been changed to wrap command buffers and semaphores in extensible structures, which incorporate changes from Vulkan 1.1, [VK\\_KHR\\_device\\_group](#), and [VK\\_KHR\\_timeline\\_semaphore](#). This also adds a pipeline stage to the semaphore signal operation, mirroring the existing pipeline stage specification for wait operations.

Other miscellaneous changes include:

- Events can now be specified as interacting only with the device, allowing more efficient access to the underlying object.
- Image memory barriers that do not perform an image layout transition can be specified by

setting `oldLayout` equal to `newLayout`.

- E.g. the old and new layout can both be set to `VK_IMAGE_LAYOUT_UNDEFINED`, without discarding data in the image.
- Queue family ownership transfer parameters are simplified in some cases.
- Extensions with commands or functions with a `VkPipelineStageFlags` or `VkPipelineStageFlagBits` parameter have had those APIs replaced with equivalents using `VkPipelineStageFlags2KHR`.
- The new event and barrier interfaces are now more extensible for future changes.
- Relevant pipeline stage masks can now be specified as empty with the new `VK_PIPELINE_STAGE_NONE_KHR` and `VK_PIPELINE_STAGE_2_NONE_KHR` values.
- `VkMemoryBarrier2KHR` can be chained to `VkSubpassDependency2`, overriding the original 32-bit stage and access masks.

## New Base Types

- `VkFlags64`

## New Commands

- `vkCmdPipelineBarrier2KHR`
- `vkCmdResetEvent2KHR`
- `vkCmdSetEvent2KHR`
- `vkCmdWaitEvents2KHR`
- `vkCmdWriteTimestamp2KHR`
- `vkQueueSubmit2KHR`

## New Structures

- `VkBufferMemoryBarrier2KHR`
- `VkCommandBufferSubmitInfoKHR`
- `VkDependencyInfoKHR`
- `VkImageMemoryBarrier2KHR`
- `VkSemaphoreSubmitInfoKHR`
- `VkSubmitInfo2KHR`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceSynchronization2FeaturesKHR`
- Extending `VkSubpassDependency2`:
  - `VkMemoryBarrier2KHR`

## New Enums

- `VkAccessFlagBits2KHR`

- [VkPipelineStageFlagBits2KHR](#)
- [VkSubmitFlagBitsKHR](#)

## New Bitmasks

- [VkAccessFlags2KHR](#)
- [VkPipelineStageFlags2KHR](#)
- [VkSubmitFlagsKHR](#)

## New Enum Constants

- [VK\\_KHR\\_SYNCHRONIZATION\\_2\\_EXTENSION\\_NAME](#)
- [VK\\_KHR\\_SYNCHRONIZATION\\_2\\_SPEC\\_VERSION](#)
- Extending [VkAccessFlagBits](#):
  - [VK\\_ACCESS\\_NONE\\_KHR](#)
- Extending [VkAccessFlagBits2](#):
  - [VK\\_ACCESS\\_2\\_COLOR\\_ATTACHMENT\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_COLOR\\_ATTACHMENT\\_WRITE\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_DEPTH\\_STENCIL\\_ATTACHMENT\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_DEPTH\\_STENCIL\\_ATTACHMENT\\_WRITE\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_HOST\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_HOST\\_WRITE\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_INDEX\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_INDIRECT\\_COMMAND\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_INPUT\\_ATTACHMENT\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_MEMORY\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_MEMORY\\_WRITE\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_NONE\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_SHADER\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_SHADER\\_SAMPLED\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_SHADER\\_STORAGE\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_SHADER\\_STORAGE\\_WRITE\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_SHADER\\_WRITE\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_TRANSFER\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_TRANSFER\\_WRITE\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_UNIFORM\\_READ\\_BIT\\_KHR](#)
  - [VK\\_ACCESS\\_2\\_VERTEX\\_ATTRIBUTE\\_READ\\_BIT\\_KHR](#)

- Extending `VkEventCreateFlagBits`:
  - `VK_EVENT_CREATE_DEVICE_ONLY_BIT_KHR`
- Extending `VkImageLayout`:
  - `VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL_KHR`
  - `VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR`
- Extending `VkPipelineStageFlagBits`:
  - `VK_PIPELINE_STAGE_NONE_KHR`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_ALL_COMMANDS_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_ALL_GRAPHICS_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_ALL_TRANSFER_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_BLIT_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_BOTTOM_OF_PIPE_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_CLEAR_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_COLOR_ATTACHMENT_OUTPUT_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_COPY_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_DRAW_INDIRECT_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_EARLY_FRAGMENT_TESTS_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_FRAGMENT_SHADER_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_GEOMETRY_SHADER_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_HOST_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_INDEX_INPUT_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_LATE_FRAGMENT_TESTS_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_NONE_KHR`
  - `VK_PIPELINE_STAGE_2_PRE_RASTERIZATION_SHADERS_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_RESOLVE_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_TESSELLATION_CONTROL_SHADER_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_TESSELLATION_EVALUATION_SHADER_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_TOP_OF_PIPE_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_TRANSFER_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_VERTEX_ATTRIBUTE_INPUT_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_VERTEX_INPUT_BIT_KHR`
  - `VK_PIPELINE_STAGE_2_VERTEX_SHADER_BIT_KHR`
- Extending `VkStructureType`:

- `VK_STRUCTURE_TYPE_BUFFER_MEMORY_BARRIER_2_KHR`
- `VK_STRUCTURE_TYPE_COMMAND_BUFFER_SUBMIT_INFO_KHR`
- `VK_STRUCTURE_TYPE_DEPENDENCY_INFO_KHR`
- `VK_STRUCTURE_TYPE_IMAGE_MEMORY_BARRIER_2_KHR`
- `VK_STRUCTURE_TYPE_MEMORY_BARRIER_2_KHR`
- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SYNCHRONIZATION_2_FEATURES_KHR`
- `VK_STRUCTURE_TYPE_SEMAPHORE_SUBMIT_INFO_KHR`
- `VK_STRUCTURE_TYPE_SUBMIT_INFO_2_KHR`
- Extending `VkSubmitFlagBits`:
  - `VK_SUBMIT_PROTECTED_BIT_KHR`

If `VK_EXT_blend_operation_advanced` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_COLOR_ATTACHMENT_READ_NONCOHERENT_BIT_EXT`

If `VK_EXT_conditional_rendering` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_CONDITIONAL_RENDERING_READ_BIT_EXT`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_CONDITIONAL_RENDERING_BIT_EXT`

If `VK_EXT_device_generated_commands` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_COMMAND_PREPROCESS_READ_BIT_EXT`
  - `VK_ACCESS_2_COMMAND_PREPROCESS_WRITE_BIT_EXT`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_COMMAND_PREPROCESS_BIT_EXT`

If `VK_EXT_fragment_density_map` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_FRAGMENT_DENSITY_MAP_READ_BIT_EXT`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_FRAGMENT_DENSITY_PROCESS_BIT_EXT`

If `VK_EXT_mesh_shader` is supported:

- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_EXT`

- `VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_EXT`

If `VK_EXT_transform_feedback` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_TRANSFORM_FEEDBACK_COUNTER_READ_BIT_EXT`
  - `VK_ACCESS_2_TRANSFORM_FEEDBACK_COUNTER_WRITE_BIT_EXT`
  - `VK_ACCESS_2_TRANSFORM_FEEDBACK_WRITE_BIT_EXT`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_TRANSFORM_FEEDBACK_BIT_EXT`

If `VK_KHR_acceleration_structure` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_ACCELERATION_STRUCTURE_READ_BIT_KHR`
  - `VK_ACCESS_2_ACCELERATION_STRUCTURE_WRITE_BIT_KHR`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_BUILD_BIT_KHR`

If `VK_KHR_fragment_shading_rate` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_FRAGMENT_SHADING_RATE_ATTACHMENT_READ_BIT_KHR`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

If `VK_KHR_ray_tracing_pipeline` is supported:

- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR`

### Promotion to Vulkan 1.3

Vulkan APIs in this extension are included in core Vulkan 1.3, with the KHR suffix omitted. External interactions defined by this extension, such as SPIR-V token names, retain their original names. The original Vulkan API names are still available as aliases of the core functionality.

### Examples

See <https://github.com/KhronosGroup/Vulkan-Docs/wiki/Synchronization-Examples>

## Description

This extension introduces a new type of semaphore that has an integer payload identifying a point in a timeline. Such timeline semaphores support the following operations:

- Host query - A host operation that allows querying the payload of the timeline semaphore.
- Host wait - A host operation that allows a blocking wait for a timeline semaphore to reach a specified value.
- Host signal - A host operation that allows advancing the timeline semaphore to a specified value.
- Device wait - A device operation that allows waiting for a timeline semaphore to reach a specified value.
- Device signal - A device operation that allows advancing the timeline semaphore to a specified value.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

  - [VK\\_STRUCTURE\\_TYPE\\_TIMELINE\\_SEMAPHORE\\_SUBMIT\\_INFO\\_KHR](#)

## Issues

1) Do we need a new object type for this?

**RESOLVED:** No, we just introduce a new type of semaphore object, as [VK\\_KHR\\_external\\_semaphore\\_win32](#) already uses semaphores as the destination for importing D3D12 fence objects, which are semantically close/identical to the proposed synchronization primitive.

2) What type of payload the new synchronization primitive has?

**RESOLVED:** A 64-bit unsigned integer that can only be set to strictly increasing values by signal operations and is not changed by wait operations.

3) Does the new synchronization primitive have the same signal-before-wait requirement as the existing semaphores do?

**RESOLVED:** No. Timeline semaphores support signaling and waiting entirely asynchronously. It is the responsibility of the application to avoid deadlock.

4) Does the new synchronization primitive allow resetting its payload?

**RESOLVED:** No, allowing the payload value to “go backwards” is problematic. Applications looking for reset behavior should create a new instance of the synchronization primitive instead.

5) How do we enable host waits on the synchronization primitive?

**RESOLVED:** Both a non-blocking query of the current payload value of the synchronization primitive, and a blocking wait operation are provided.

6) How do we enable device waits and signals on the synchronization primitive?

**RESOLVED:** Similar to `VK_KHR_external_semaphore_win32`, this extension introduces a new structure that can be chained to `VkSubmitInfo` to specify the values signaled semaphores should be set to, and the values waited semaphores need to reach.

7) Can the new synchronization primitive be used to synchronize presentation and swapchain image acquisition operations?

**RESOLVED:** Some implementations may have problems with supporting that directly, thus it is not allowed in this extension.

8) Do we want to support external sharing of the new synchronization primitive type?

**RESOLVED:** Yes. Timeline semaphore specific external sharing capabilities can be queried using `vkGetPhysicalDeviceExternalSemaphoreProperties` by chaining the new `VkSemaphoreTypeCreateInfoKHR` structure to its `pExternalSemaphoreInfo` structure. This allows having a different set of external semaphore handle types supported for timeline semaphores vs. binary semaphores.

9) Do we need to add a host signal operation for the new synchronization primitive type?

**RESOLVED:** Yes. This helps in situations where one host thread submits a workload but another host thread has the information on when the workload is ready to be executed.

10) How should the new synchronization primitive interact with the ordering requirements of the original `VkSemaphore`?

**RESOLVED:** Prior to calling any command which **may** cause a wait operation on a binary semaphore, the application **must** ensure that the semaphore signal operation that has been submitted for execution and any semaphore signal operations on which it depends (if any) **must** have also been submitted for execution.

11) Should we have separate feature bits for different sub-features of timeline semaphores?

**RESOLVED:** No. The only feature which cannot be supported universally is timeline semaphore import/export. For import/export, the application is already required to query available external handle types via `vkGetPhysicalDeviceExternalSemaphoreProperties` and provide the semaphore type by adding a `VkSemaphoreTypeCreateInfoKHR` structure to the `pNext` chain of `VkPhysicalDeviceExternalSemaphoreInfo` so no new feature bit is required.

## Version History

## Description

This extension enables tighter array and structure packing to be used with uniform buffers.

It modifies the alignment rules for uniform buffers, allowing for tighter packing of arrays and structures. This allows, for example, the std430 layout, as defined in [GLSL](#) to be supported in uniform buffers.

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

The `VK_KHR_variable_pointers` extension allows implementations to indicate their level of support for the `SPV_KHR_variable_pointers` SPIR-V extension. The SPIR-V extension allows shader modules to use invocation-private pointers into uniform and/or storage buffers, where the pointer values can be dynamic and non-uniform.

The `SPV_KHR_variable_pointers` extension introduces two capabilities. The first, `VariablePointersStorageBuffer`, **must** be supported by all implementations of this extension. The second, `VariablePointers`, is optional.

## Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted, however support for the `variablePointersStorageBuffer` feature is made optional. The original type, enum, and command names are still available as aliases of the core functionality.

## Promotion to Vulkan 1.4

If Vulkan 1.4 is supported, support for the `variablePointers` and `variablePointersStorageBuffer` features is required.

## New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceVariablePointerFeaturesKHR`
  - `VkPhysicalDeviceVariablePointersFeaturesKHR`

## New Enum Constants

- `VK_KHR_VARIABLE_POINTERS_EXTENSION_NAME`
- `VK_KHR_VARIABLE_POINTERS_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VARIABLE_POINTERS_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VARIABLE_POINTER_FEATURES_KHR`

## New SPIR-V Capabilities

- `VariablePointers`
- `VariablePointersStorageBuffer`

## Issues

1) Do we need an optional property for the SPIR-V `VariablePointersStorageBuffer` capability or should it be mandatory when this extension is advertised?

**RESOLVED:** Add it as a distinct feature, but make support mandatory. Adding it as a feature makes the extension easier to include in a future core API version. In the extension, the feature is mandatory, so that presence of the extension guarantees some functionality. When included in a core API version, the feature would be optional.

2) Can support for these capabilities vary between shader stages?

**RESOLVED:** No, if the capability is supported in any stage it must be supported in all stages.

3) Should the capabilities be features or limits?

**RESOLVED:** Features, primarily for consistency with other similar extensions.

## Description

The [VK\\_KHR\\_vulkan\\_memory\\_model](#) extension allows use of the features guarded by the [VulkanMemoryModel](#), [VulkanMemoryModelDeviceScope](#), and [VulkanMemoryModelAvailabilityVisibilityChains](#) capabilities in shader modules. The [Vulkan Memory Model](#) formally defines how to synchronize memory accesses to the same memory locations performed by multiple shader invocations.

|      |                                                                                                                                                                                                                          |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOTE | Version 3 of the spec added a member ( <a href="#">vulkanMemoryModelAvailabilityVisibilityChains</a> ) to <a href="#">VkPhysicalDeviceVulkanMemoryModelFeaturesKHR</a> , which is an incompatible change from version 2. |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the [vulkanMemoryModel](#) capability is optional. The original type, enum, and command names are still available as aliases of the core functionality.

## Promotion to Vulkan 1.3

If Vulkan 1.3 is supported, support for the [vulkanMemoryModel](#) and [vulkanMemoryModelDeviceScope](#) capabilities is required.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceVulkanMemoryModelFeaturesKHR](#)

## New Enum Constants

## Description

This extension allows the use of a null constant initializer on shader Workgroup memory variables, allowing implementations to expose any special hardware or instructions they may have. Zero initialization is commonly used by applications running untrusted content (e.g. web browsers) as way of defeating memory-scraping attacks.

## New Structures

## Interactions and External Dependencies

- This extension provides API support for [GL\\_EXT\\_nonuniform\\_qualifier](#)

## Contributors

- Jeff Bolz, NVIDIA
- Daniel Rakos, AMD
- Slawomir Grajewski, Intel
- Tobias Hector, Imagination Technologies

## Description

This extension adds several small features which together enable applications to create large descriptor sets containing substantially all of their resources, and selecting amongst those resources with dynamic (non-uniform) indexes in the shader. There are feature enables and SPIR-V capabilities for non-uniform descriptor indexing in the shader, and non-uniform indexing in the shader requires use of a new `NonUniformEXT` decoration defined in the `SPV_EXT_descriptor_indexing` SPIR-V extension. There are descriptor set layout binding creation flags enabling several features:

- Descriptors can be updated after they are bound to a command buffer, such that the execution of the command buffer reflects the most recent update to the descriptors.
- Descriptors that are not used by any pending command buffers can be updated, which enables writing new descriptors for frame N+1 while frame N is executing.
- Relax the requirement that all descriptors in a binding that is “statically used” must be valid, such that descriptors that are not accessed by a submission need not be valid and can be updated while that submission is executing.
- The final binding in a descriptor set layout can have a variable size (and unsized arrays of resources are allowed in the `GL_EXT_nonuniform_qualifier` and `SPV_EXT_descriptor_indexing` extensions).

Note that it is valid for multiple descriptor arrays in a shader to use the same set and binding number, as long as they are all compatible with the descriptor type in the pipeline layout. This means a single array binding in the descriptor set can serve multiple texture dimensionalities, or an array of buffer descriptors can be used with multiple different block layouts.

There are new descriptor set layout and descriptor pool creation flags that are required to opt in to the update-after-bind functionality, and there are separate `maxPerStage*` and `maxDescriptorSet*` limits that apply to these descriptor set layouts which **may** be much higher than the pre-existing limits. The old limits only count descriptors in non-updateAfterBind descriptor set layouts, and the new limits count descriptors in all descriptor set layouts in the pipeline layout.

## Promotion to Vulkan 1.2

Vulkan APIs in this extension are included in core Vulkan 1.2, with the EXT suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the `descriptorIndexing` capability is optional. External interactions defined by this extension, such as SPIR-V token names, retain their original names. The original Vulkan API names are still available as aliases of the core functionality.

## Promotion to Vulkan 1.4

If Vulkan 1.4 is supported, support for the `shaderUniformTexelBufferArrayDynamicIndexing` and `shaderStorageTexelBufferArrayDynamicIndexing` capabilities is required.

## New Structures

- Extending `VkDescriptorSetAllocateInfo`:
  - `VkDescriptorSetVariableDescriptorCountAllocateInfoEXT`
- Extending `VkDescriptorSetLayoutCreateInfo`:

- [VkDescriptorSetLayoutBindingFlagsCreateInfoEXT](#)
- Extending [VkDescriptorSetLayoutSupport](#):
  - [VkDescriptorSetVariableDescriptorCountLayoutSupportEXT](#)
- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDeviceDescriptorIndexingFeaturesEXT](#)

## Description

Device loss can be triggered by a variety of issues, including invalid API usage, implementation errors, or hardware failures.

This extension introduces a new command: [vkGetDeviceFaultInfoEXT](#), which may be called subsequent to a [VK\\_ERROR\\_DEVICE\\_LOST](#) error code having been returned by the implementation. This command allows developers to query for additional information on GPU faults which may have caused device loss, and to generate binary crash dumps, which may be loaded into external tools for further diagnosis.

## New Commands

- [vkGetDeviceFaultInfoEXT](#)

## New Structures

- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_EXTENDED\\_DYNAMIC\\_STATE\\_FEATURES\\_EXT](#)

## Promotion to Vulkan 1.3

All dynamic state enumerants and commands in this extension are included in core Vulkan 1.3, with the EXT suffix omitted. The feature structure is not promoted. Extension interfaces that were promoted remain available as aliases of the core functionality.

## Issues

1) Why are the values of [pStrides](#) in [vkCmdBindVertexBuffers2](#) limited to be between 0 and the maximum extent of the binding, when this restriction is not present for the same static state?

Implementing these edge cases adds overhead to some implementations that would require significant cost when calling this function, and the intention is that this state should be more or less free to change.

[VK\\_EXT\\_vertex\\_input\\_dynamic\\_state](#) allows the stride to be changed freely when supported via [vkCmdSetVertexInputEXT](#).

## Description

This extension allows applications to copy data between host memory and images on the host processor, without staging the data through a GPU-accessible buffer. This removes the need to allocate and manage the buffer and its associated memory. On some architectures it may also eliminate an extra copy operation. This extension additionally allows applications to copy data between images on the host.

To support initializing a new image in preparation for a host copy, it is now possible to transition a new image to [VK\\_IMAGE\\_LAYOUT\\_GENERAL](#) or other host-copyable layouts via [vkTransitionImageLayoutEXT](#). Additionally, it is possible to perform copies that preserve the swizzling layout of the image by using the [VK\\_HOST\\_IMAGE\\_COPY\\_MEMCPY\\_BIT\\_EXT](#) flag. In that case, the memory size needed for copies to or from a buffer can be retrieved by chaining [VkSubresourceHostMemcpySizeEXT](#) to [pLayout](#) in [vkGetImageSubresourceLayout2EXT](#).

## Promotion to Vulkan 1.4

Functionality in this extension is included in core Vulkan 1.4, with the EXT suffix omitted. However, the feature is made optional in Vulkan 1.4. The original type, enum, and command names are still available as aliases of the core functionality.

A Vulkan 1.4 implementation that has a [VK\\_QUEUE\\_GRAPHICS\\_BIT](#) queue must support either:

- the [hostImageCopy](#) feature; or
- an additional queue that supports [VK\\_QUEUE\\_TRANSFER\\_BIT](#).

Additionally, all queues supporting [VK\\_QUEUE\\_GRAPHICS\\_BIT](#) or [VK\\_QUEUE\\_COMPUTE\\_BIT](#) must also advertise [VK\\_QUEUE\\_TRANSFER\\_BIT](#).

## Issues

1) When uploading data to an image, the data is usually loaded from disk. Why not have the application load the data directly into a [VkDeviceMemory](#) bound to a buffer (instead of host memory), and use [vkCmdCopyBufferToImage](#)? The same could be done when downloading data from an image.

**RESOLVED:** This may not always be possible. Complicated Vulkan applications such as game engines often have decoupled subsystems for streaming data and rendering. It may be unreasonable to require the streaming subsystem to coordinate with the rendering subsystem to allocate memory on its behalf, especially as Vulkan may not be the only API supported by the engine. In emulation layers, the image data is necessarily provided by the application in host memory, so an optimization as suggested is not possible. Most importantly, the device memory may not be mappable by an application, but still accessible to the driver.

2) Are [optimalBufferCopyOffsetAlignment](#) and [optimalBufferCopyRowPitchAlignment](#) applicable to host memory as well with the functions introduced by this extension? Or should there be new limits?

**RESOLVED:** No alignment requirements for the host memory pointer.

3) Should there be granularity requirements for image offsets and extents?

**RESOLVED:** No granularity requirements, i.e. a granularity of 1 pixel (for non-compressed formats) and 1 texel block (for compressed formats) is assumed.

4) How should the application deal with layout transitions before or after copying to or from images?

**RESOLVED:** An existing issue with linear images is that when emulating other APIs, it is impossible to know when to transition them as they are written to by the host and then used bindlessly. The copy operations in this extension are affected by the same limitation. A new command is thus introduced by this extension to address this problem by allowing the host to perform an image layout transition between a handful of layouts.

## Description

This extension incorporates [VK\\_ATTACHMENT\\_STORE\\_OP\\_NONE\\_EXT](#) from [VK\\_QCOM\\_render\\_pass\\_store\\_ops](#), enabling applications to avoid unnecessary synchronization when an attachment is not written during a render pass.

Additionally, [VK\\_ATTACHMENT\\_LOAD\\_OP\\_NONE\\_EXT](#) is introduced to avoid unnecessary synchronization when an attachment is not used during a render pass at all. In combination with [VK\\_ATTACHMENT\\_STORE\\_OP\\_NONE\\_EXT](#), this is useful as an alternative to preserve attachments in applications that cannot decide if an attachment will be used in a render pass until after the necessary pipelines have been created.

## Promotion to [VK\\_KHR\\_load\\_store\\_op\\_none](#)

All functionality in this extension is included in [VK\\_KHR\\_load\\_store\\_op\\_none](#), with the suffix changed to KHR. The original enum names are still available as aliases of the KHR functionality.

### New Enum Constants

- [VK\\_EXT\\_LOAD\\_STORE\\_OP\\_NONE\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_LOAD\\_STORE\\_OP\\_NONE\\_SPEC\\_VERSION](#)

## Description

When adding transparency to a ray traced scene, an application can choose between further tessellating the geometry or using an any-hit shader to allow the ray through specific parts of the geometry. These options have the downside of either significantly increasing memory consumption or adding runtime overhead to run shader code in the middle of traversal, respectively.

This extension adds the ability to add an *opacity micromap* to geometry when building an acceleration structure. The opacity micromap compactly encodes opacity information which can be read by the implementation to mark parts of triangles as opaque or transparent. The format is externally visible to allow the application to compress its internal geometry and surface representations into the compressed format ahead of time. The compressed format subdivides each triangle into a set of subtriangles, each of which can be assigned either two or four opacity values. These opacity values can control if a ray hitting that subtriangle is treated as an opaque hit, complete miss, or possible hit, depending on the controls described in [Ray Opacity Micromap](#).

This extension provides:

- a [VkMicromapEXT](#) structure to store the micromap,
- functions similar to acceleration structure build functions to build the opacity micromap array, and
- a structure to extend [VkAccelerationStructureGeometryTrianglesDataKHR](#) to attach a micromap to the geometry of the acceleration structure.

  - [VK\\_BUFFER\\_USAGE\\_2\\_MICROMAP\\_STORAGE\\_BIT\\_EXT](#)
- Extending [VkPipelineCreateFlagBits2](#):
  - [VK\\_PIPELINE\\_CREATE\\_2\\_RAY\\_TRACING\\_OPACITY\\_MICROMAP\\_BIT\\_EXT](#)

### Promotion to [VK\\_KHR\\_opacity\\_micromap](#)

Functionality in this extension is included in [VK\\_KHR\\_opacity\\_micromap](#). The type, enum and command names are still aliases of the KHR functionality with some exceptions.

While most application-visible functionality is available through both extensions, two notable differences to be aware of are:

- The [hostMicromapCommands](#) feature and its associated host-side build, copy, and query commands are only exposed by [VK\\_EXT\\_opacity\\_micromap](#); those commands are [legacy](#) and are not included in [VK\\_KHR\\_opacity\\_micromap](#).
- The two extensions differ in how opacity micromap data is consumed by ray query traversal. With [VK\\_EXT\\_opacity\\_micromap](#) enabled, opacity micromap data present in the acceleration structure is always consumed. With only [VK\\_KHR\\_opacity\\_micromap](#) enabled and its [micromap](#) feature enabled, opacity micromap data is consumed only when the shader declares the [OpacityMicromapIdKHR](#) execution mode with its specialization-constant operand equal to [VK\\_TRUE](#). If both extensions are enabled, the [VK\\_EXT\\_opacity\\_micromap](#) behavior applies and the execution mode is not required. Traversal initiated by [pipeline trace ray](#) instructions is

unaffected by this difference; it requires [VK\\_PIPELINE\\_CREATE\\_RAY\\_TRACING\\_OPACITY\\_MICROMAP\\_BIT\\_KHR](#) under either extension.

See the [VK\\_KHR\\_opacity\\_micromap](#) proposal for details on the differences.

## Reference Code

```
uint32_t BarycentricsToSpaceFillingCurveIndex(float u, float v, uint32_t level)
{
    u = clamp(u, 0.0f, 1.0f);
    v = clamp(v, 0.0f, 1.0f);

    uint32_t iu, iv, iw;

    // Quantize barycentric coordinates
    float fu = u * (1u << level);
    float fv = v * (1u << level);

    iu = (uint32_t)fu;
    iv = (uint32_t)fv;

    float uf = fu - float(iu);
    float vf = fv - float(iv);

    if (iu >= (1u << level)) iu = (1u << level) - 1u;
    if (iv >= (1u << level)) iv = (1u << level) - 1u;

    uint32_t iuv = iu + iv;

    if (iuv >= (1u << level))
        iu -= iuv - (1u << level) + 1u;

    iw = ~(iu + iv);

    if (uf + vf >= 1.0f && iuv < (1u << level) - 1u) --iw;

    uint32_t b0 = ~(iu ^ iw);
    b0 &= ((1u << level) - 1u);
    uint32_t t = (iu ^ iv) & b0;

    uint32_t f = t;
    f ^= f >> 1u;
    f ^= f >> 2u;
    f ^= f >> 4u;
    f ^= f >> 8u;
    uint32_t b1 = ((f ^ iu) & ~b0) | t;

    // Interleave bits
    b0 = (b0 | (b0 << 8u)) & 0x00ff00ffu;
    b0 = (b0 | (b0 << 4u)) & 0xf0f0f0fu;
```

```

b0 = (b0 | (b0 << 2u)) & 0x33333333u;
b0 = (b0 | (b0 << 1u)) & 0x55555555u;
b1 = (b1 | (b1 << 8u)) & 0x00ff00ffu;
b1 = (b1 | (b1 << 4u)) & 0x0f0f0f0fu;
b1 = (b1 | (b1 << 2u)) & 0x33333333u;
b1 = (b1 | (b1 << 1u)) & 0x55555555u;

return b0 | (b1 << 1u);
}

```

## Issues

(1) Is the build actually similar to an acceleration structure build?

- Resolved: The build should be much lighter-weight than an acceleration structure build, but the infrastructure is similar enough that it makes sense to keep the concepts compatible.

(2) Why does `VkMicromapUsageEXT` not have `type/pNext`?

- Resolved: There can be a very large number of these structures, so doubling the size of these can be significant memory consumption. Also, an application may be loading these directly from a file which is more compatible with it being a flat structure. The including structures are extensible and are probably a more suitable place to add extensibility.

(3) Why is there a SPIR-V extension?

- Resolved: There is a ray flag. To be consistent with how the existing ray tracing extensions work that ray flag needs its own extension.

(4) Should there be indirect micromap build?

- Resolved: Not for now. There is more in-depth usage metadata required and it seems less likely that something like a GPU culling system would need to change the counts for a micromap.

(5) Should micromaps have a micromap device address?

- Resolved: There is no need right now (can just use the handle) but that is a bit different from acceleration structures, though the two are not completely parallel in their usage.

(6) Why are the alignment requirements defined as a mix of hardcoded values and caps?

- Resolved: This is most parallel with the definition of `VK_KHR_acceleration_structure` and maintaining commonality makes it easier for applications to share memory.

## Description

When using pipeline libraries in ray tracing pipelines, a library might get linked into different pipelines in an incremental way. An application can have a strategy where a ray tracing pipeline is comprised of N pipeline libraries and is later augmented by creating a new pipeline with N + 1 libraries. Without this extension, all group handles must be re-queried as the group handle is tied to the pipeline, not the library. This is problematic for applications which aim to decouple construction of record buffers and the linkage of ray tracing pipelines.

To aid in this, this extension enables support for querying group handles directly from pipeline libraries. Group handles obtained from a library **must** remain bitwise identical in any `VkPipeline` that links to the library.

With this feature, the extension also improves compatibility with DXR 1.1 `AddToStateObject()`, which guarantees that group handles returned remain bitwise identical between parent and child pipelines. In addition, querying group handles from `COLLECTION` objects is also supported with that API.

## Promotion to `VK_KHR_pipeline_library_group_handles`

All functionality in this extension is included in `VK_KHR_pipeline_library_group_handles`, with the suffix change to KHR. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

This extension allows protected memory access to be specified per pipeline as opposed to per device. Through the usage of this extension, any performance penalty paid due to access to protected memory will be limited to the specific pipelines that make such accesses.

## New Structures

- Extending [VkPhysicalDeviceFeatures2](#), [VkDeviceCreateInfo](#):
  - [VkPhysicalDevicePipelineProtectedAccessFeaturesEXT](#)

## New Enum Constants

- [VK\\_EXT\\_PIPELINE\\_PROTECTED\\_ACCESS\\_EXTENSION\\_NAME](#)
- [VK\\_EXT\\_PIPELINE\\_PROTECTED\\_ACCESS\\_SPEC\\_VERSION](#)
- Extending [VkPipelineCreateFlagBits](#):
  - [VK\\_PIPELINE\\_CREATE\\_NO\\_PROTECTED\\_ACCESS\\_BIT\\_EXT](#)
  - [VK\\_PIPELINE\\_CREATE\\_PROTECTED\\_ACCESS\\_ONLY\\_BIT\\_EXT](#)
- Extending [VkStructureType](#):
  - [VK\\_STRUCTURE\\_TYPE\\_PHYSICAL\\_DEVICE\\_PIPELINE\\_PROTECTED\\_ACCESS\\_FEATURES\\_EXT](#)

## Promotion to Vulkan 1.4

Functionality in this extension is included in core Vulkan 1.4 with the EXT suffix omitted. The original type, enum, and command names are still available as aliases of the core functionality.

## Description

This extension allows users to request robustness on a per-pipeline stage basis.

As `robustBufferAccess` and other robustness features may have an adverse effect on performance, this extension is designed to allow users to request robust behavior only where it may be needed.

## New Structures

- Extending `VkGraphicsPipelineCreateInfo`, `VkComputePipelineCreateInfo`, `VkPipelineShaderStageCreateInfo`, `VkRayTracingPipelineCreateInfoKHR`:
  - `VkPipelineRobustnessCreateInfoEXT`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDevicePipelineRobustnessFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDevicePipelineRobustnessPropertiesEXT`

## New Enums

- `VkPipelineRobustnessBufferBehaviorEXT`
- `VkPipelineRobustnessImageBehaviorEXT`

## New Enum Constants

- `VK_EXT_PIPELINE_ROBUSTNESS_EXTENSION_NAME`
- `VK_EXT_PIPELINE_ROBUSTNESS_SPEC_VERSION`
- Extending `VkPipelineRobustnessBufferBehavior`:
  - `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DEVICE_DEFAULT_EXT`
  - `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_DISABLED_EXT`
  - `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT`
  - `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT`
- Extending `VkPipelineRobustnessImageBehavior`:
  - `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DEVICE_DEFAULT_EXT`
  - `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_DISABLED_EXT`
  - `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_2_EXT`
  - `VK_PIPELINE_ROBUSTNESS_IMAGE_BEHAVIOR_ROBUST_IMAGE_ACCESS_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_PROPERTIES_EXT`

- [VK\\_STRUCTURE\\_TYPE\\_PIPELINE\\_ROBUSTNESS\\_CREATE\\_INFO\\_EXT](#)

### **Promotion to Vulkan 1.4**

## Description

This device extension adds a new present mode, [VK\\_PRESENT\\_MODE\\_FIFO\\_LATEST\\_READY\\_EXT](#).

This tear-free present mode behaves much like [VK\\_PRESENT\\_MODE\\_FIFO\\_KHR](#), except that each vertical blanking period dequeues consecutive present requests until the latest ready is found to update the current image.

While this seems similar in concept to [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#), the fundamental difference is that the processing of the present requests is done during vblank. From the application perspective, this means for example, that in a flip-based model, a single vblank **may** cause multiple swapchain images to be released at once, while [VK\\_PRESENT\\_MODE\\_MAILBOX\\_KHR](#) **may** continuously be releasing images as new requests become ready.

This additional present mode is useful when using a time-based present API.

### Promotion to [VK\\_KHR\\_present\\_mode\\_fifo\\_latest\\_ready](#)

All functionality in this extension is included in [VK\\_KHR\\_present\\_mode\\_fifo\\_latest\\_ready](#), with the suffix changed to KHR. The original type and enum names are still available as aliases of the KHR names.

## Description

This extension adds stricter requirements for how out of bounds reads and writes are handled. Most accesses **must** be tightly bounds-checked, out of bounds writes **must** be discarded, out of bound reads **must** return zero. Rather than allowing multiple possible (0,0,0,x) vectors, the out of bounds values are treated as zero, and then missing components are inserted based on the format as described in [Component Substitution](#) and [vertex input attribute extraction](#).

These additional requirements **may** be expensive on some implementations, and should only be

enabled when truly necessary.

This extension also adds support for “null descriptors”, where `VK_NULL_HANDLE` can be used instead of a valid handle. Accesses to null descriptors have well-defined behavior, and do not rely on robustness.

### Promotion to `VK_KHR_robustness2`

All functionality in this extension is included in `VK_KHR_robustness2`, with the suffix changed to KHR. The original type, enum, and command names are still available as aliases of the core functionality.

### New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceRobustness2FeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceRobustness2PropertiesEXT`

### New Enum Constants

- `VK_EXT_ROBUSTNESS_2_EXTENSION_NAME`
- `VK_EXT_ROBUSTNESS_2_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_PROPERTIES_EXT`

### Issues

1. Why do `VkPhysicalDeviceRobustness2PropertiesEXT::robustUniformBufferAccessSizeAlignment` and `VkPhysicalDeviceRobustness2PropertiesEXT::robustStorageBufferAccessSizeAlignment` exist?

**RESOLVED:** Some implementations cannot efficiently tightly bounds-check all buffer accesses. Rather, the size of the bound range is padded to some power of two multiple, up to 256 bytes for uniform buffers and up to 4 bytes for storage buffers, and that padded size is bounds-checked. This is sufficient to implement D3D-like behavior, because D3D only allows binding whole uniform buffers or ranges that are a multiple of 256 bytes, and D3D raw and structured buffers only support 32-bit accesses.

### Examples

None.

## Description

[VK\\_EXT\\_swapchain\\_maintenance1](#) adds a collection of window system integration features that were intentionally left out or overlooked in the original [VK\\_KHR\\_swapchain](#) extension.

The new features are as follows:

- Specify a fence that will be signaled when the resources associated with a present operation **can** be safely destroyed.
- Allow changing the present mode a swapchain is using at per-present granularity.
- Allow applications to define the behavior when presenting a swapchain image to a surface with different dimensions than the image. Using this feature **may** allow implementations to avoid returning [VK\\_ERROR\\_OUT\\_OF\\_DATE\\_KHR](#) in this situation.
- Allow applications to defer swapchain memory allocation for improved startup time and memory footprint.
- Allow applications to release previously acquired images without presenting them.

## Promotion to [VK\\_KHR\\_swapchain\\_maintenance1](#)

All functionality in this extension is included in [VK\\_KHR\\_swapchain\\_maintenance1](#), with the suffix changed to KHR. The original type, enum, and command names are still available as aliases of the KHR functionality.

## Description

This extension provides the [VkValidationFeaturesEXT](#) structure that can be included in the [pNext](#) chain of the [VkInstanceCreateInfo](#) structure passed as the [pCreateInfo](#) parameter of [vkCreateInstance](#). The structure contains an array of [VkValidationFeatureEnableEXT](#) enum values that enable specific validation features that are disabled by default. The structure also contains an array of [VkValidationFeatureDisableEXT](#) enum values that disable specific validation layer features that are enabled by default.

## Deprecation by [VK\\_EXT\\_layer\\_settings](#)

Functionality in this extension is subsumed into the [VK\\_EXT\\_layer\\_settings](#) extension.

## New Structures

- Extending [VkInstanceCreateInfo](#), [VkShaderModuleCreateInfo](#), [VkShaderCreateInfoEXT](#), [VkPipelineShaderStageCreateInfo](#), [VkGraphicsPipelineCreateInfo](#), [VkComputePipelineCreateInfo](#), [VkRayTracingPipelineCreateInfoKHR](#):

# Appendix F: Vulkan Roadmap Milestones

Roadmap milestones are intended to be supported by mid-to-high-end smartphones, tablets, laptops, consoles, and desktop devices.

Each milestone indicates support for a set of extensions, features, limits, and formats across these devices, and should be supported by all such new hardware shipping by the end of the target year or shortly thereafter.

## Roadmap 2022

The Roadmap 2022 milestone is intended to be supported by newer mid-to-high-end devices shipping in 2022 or shortly thereafter across mainstream smartphone, tablet, laptop, console, and desktop devices.

### Required API Versions

This milestone requires Vulkan 1.3.

### Required Features

The following core optional features are required to be supported:

- Vulkan 1.0 Optional Features
  - `fullDrawIndexUint32`
  - `imageCubeArray`
  - `independentBlend`
  - `sampleRateShading`
  - `drawIndirectFirstInstance`
  - `depthClamp`
  - `depthBiasClamp`
  - `samplerAnisotropy`
  - `occlusionQueryPrecise`
  - `fragmentStoresAndAtomics`
  - `shaderStorageImageExtendedFormats`
  - `shaderUniformBufferArrayDynamicIndexing`
  - `shaderSampledImageArrayDynamicIndexing`
  - `shaderStorageBufferArrayDynamicIndexing`
  - `shaderStorageImageArrayDynamicIndexing`
- Vulkan 1.1 Optional Features
  - `samplerYcbcrConversion`

- Vulkan 1.2 Optional Features
  - samplerMirrorClampToEdge
  - descriptorIndexing
  - shaderUniformTexelBufferArrayDynamicIndexing
  - shaderStorageTexelBufferArrayDynamicIndexing
  - shaderUniformBufferArrayNonUniformIndexing
  - shaderSampledImageArrayNonUniformIndexing
  - shaderStorageBufferArrayNonUniformIndexing
  - shaderStorageImageArrayNonUniformIndexing
  - shaderUniformTexelBufferArrayNonUniformIndexing
  - shaderStorageTexelBufferArrayNonUniformIndexing
  - descriptorBindingSampledImageUpdateAfterBind
  - descriptorBindingStorageImageUpdateAfterBind
  - descriptorBindingStorageBufferUpdateAfterBind
  - descriptorBindingUniformTexelBufferUpdateAfterBind
  - descriptorBindingStorageTexelBufferUpdateAfterBind
  - descriptorBindingUpdateUnusedWhilePending
  - descriptorBindingPartiallyBound
  - descriptorBindingVariableDescriptorCount
  - runtimeDescriptorArray
  - scalarBlockLayout

## Required Limits

The following core increased limits are **required**

Table 109. Vulkan 1.0 Limits

| Limit Name                    | Unsupported Limit | Core Limit | Milestone Limit | Limit Type <sup>1</sup> |
|-------------------------------|-------------------|------------|-----------------|-------------------------|
| maxImageDimension1D           | -                 | 4096       | 8192            | min                     |
| maxImageDimension2D           | -                 | 4096       | 8192            | min                     |
| maxImageDimensionCube         | -                 | 4096       | 8192            | min                     |
| maxImageArrayLayers           | -                 | 256        | 2048            | min                     |
| maxUniformBufferRange         | -                 | 16384      | 65536           | min                     |
| bufferImageGranularity        | -                 | 131072     | 4096            | max                     |
| maxPerStageDescriptorSamplers | -                 | 16         | 64              | min                     |

| Limit Name                          | Unsupported Limit | Core Limit   | Milestone Limit | Limit Type <sup>1</sup>    |
|-------------------------------------|-------------------|--------------|-----------------|----------------------------|
| maxPerStageDescriptorUniformBuffers | -                 | 12           | 15              | min                        |
| maxPerStageDescriptorStorageBuffers | -                 | 4            | 30              | min                        |
| maxPerStageDescriptorSampledImages  | -                 | 16           | 200             | min                        |
| maxPerStageDescriptorStorageImages  | -                 | 4            | 16              | min                        |

## Required Extensions

The following extensions are **required**

[VK\\_KHR\\_global\\_priority](#)

## Roadmap 2024

The Roadmap 2024 milestone is intended to be supported by newer mid-to-high-end devices shipping in 2024 or shortly thereafter across mainstream smartphone, tablet, laptop, console, and desktop devices.

Two of the core aims of this roadmap profile are to enable developers to rely on a number of important rasterization and shader features have been available for a long time, but until now have not enjoyed wide support.

Shader features required include smaller types ([8/16-bit integers](#) and [16-bit floats](#)), reconvergence guarantees for subgroup ops ([VK\\_KHR\\_shader\\_maximal\\_reconvergence](#) and [VK\\_KHR\\_shader\\_quad\\_control](#)), and more consistent floating-point handling ([VK\\_KHR\\_shader\\_float\\_controls2](#) and [round-to-nearest-even for 32-/16-bit floats](#)). Rasterization features include requiring support for multi-draw indirect, shader draw parameters, 8-bit indices, better line rasterization definitions, and local reads when using dynamic rendering. A few other features have been added opportunistically, in lieu of shipping a Vulkan 1.4 in the same time frame, such as [push descriptors](#) and the various minor improvements included in [VK\\_KHR\\_maintenance5](#).

## Required Milestones

This milestone requires the Roadmap 2022 profile.

## Required Features

The following core optional features are required to be supported:

- Vulkan 1.0 Optional Features
  - `multiDrawIndirect`

- [shaderImageGatherExtended](#)
- [shaderInt16](#)
- Vulkan 1.1 Optional Features
  - [shaderDrawParameters](#)
  - [storageBuffer16BitAccess](#)
- Vulkan 1.2 Optional Features
  - [shaderInt8](#)
  - [shaderFloat16](#)
  - [storageBuffer8BitAccess](#)

## Required Limits

The following core increased limits are **required**

Table 113. Vulkan 1.0 Limits

| Limit Name                                  | Unsupported Limit | Core Limit | Profile Limit | Limit Type <sup>1</sup> |
|---------------------------------------------|-------------------|------------|---------------|-------------------------|
| <a href="#">maxBoundDescriptorSets</a>      | -                 | 4          | 7             | min                     |
| <a href="#">maxColorAttachments</a>         | -                 | 4          | 8             | min                     |
| <a href="#">timestampComputeAndGraphics</a> | -                 | FALSE      | TRUE          | Boolean                 |

Table 114. Vulkan 1.2 Limits

| Limit Name                                   | Unsupported Limit | Core Limit | Profile Limit | Limit Type <sup>1</sup> |
|----------------------------------------------|-------------------|------------|---------------|-------------------------|
| <a href="#">shaderRoundingModeRTEFloat16</a> | -                 | FALSE      | TRUE          | Boolean                 |
| <a href="#">shaderRoundingModeRTEFloat32</a> | -                 | FALSE      | TRUE          | Boolean                 |

## Required Extensions

The following extensions are **required**

- [VK\\_KHR\\_dynamic\\_rendering\\_local\\_read](#)
- [VK\\_KHR\\_load\\_store\\_op\\_none](#)
- [VK\\_KHR\\_shader\\_quad\\_control](#)
- [VK\\_KHR\\_shader\\_maximal\\_reconvergence](#)
- [VK\\_KHR\\_shader\\_subgroup\\_uniform\\_control\\_flow](#)
- [VK\\_KHR\\_shader\\_subgroup\\_rotate](#)
- [VK\\_KHR\\_shader\\_float\\_controls2](#)

- [VK\\_KHR\\_shader\\_expect\\_assume](#)
- [VK\\_KHR\\_line\\_rasterization](#)
- [VK\\_KHR\\_vertex\\_attribute\\_divisor](#)
- [VK\\_KHR\\_index\\_type\\_uint8](#)
- [VK\\_KHR\\_map\\_memory2](#)
- [VK\\_KHR\\_maintenance5](#)
- [VK\\_KHR\\_push\\_descriptor](#)

## Roadmap 2026

The Roadmap 2026 milestone is intended to be supported by newer mid-to-high-end devices shipping in 2026 or shortly thereafter across mainstream smartphone, tablet, laptop, console, and desktop devices.

This milestone raises the baseline feature support of Vulkan implementations as with prior milestones. In addition, this milestone makes guarantees about swapchain and presentation support for implementations.

Highlights of this roadmap include support for the following extensions:

- [VK\\_KHR\\_fragment\\_shading\\_rate](#)
- [VK\\_KHR\\_shader\\_clock](#)
- [VK\\_KHR\\_compute\\_shader\\_derivatives](#)
- [VK\\_KHR\\_cooperative\\_matrix](#)
- [VK\\_KHR\\_surface](#) and [VK\\_KHR\\_swapchain](#)
- [VK\\_KHR\\_present\\_mode\\_fifo\\_latest\\_ready](#)
- [VK\\_KHR\\_present\\_id2](#) and [VK\\_KHR\\_present\\_wait2](#)

Several other extensions and limits are also required by this milestone as indicated below.

### Required Milestones

This requires the Roadmap 2024 milestone.

### Required Versions

Vulkan 1.4 is required by this milestone.

### Required Features

The following core optional features are required to be supported:

- Vulkan 1.4 Optional Features
  - [hostImageCopy](#)

- [VK\\_KHR\\_robustness2](#) Features
  - [robustBufferAccess2](#)
  - [robustImageAccess2](#)
  - [nullDescriptor](#)

## Required Limits

The following core increased limits are **required**

*Table 115. Vulkan 1.0 Limits*

| Limit Name                                                      | Core  | 2026  | Limit Type <sup>1</sup> |
|-----------------------------------------------------------------|-------|-------|-------------------------|
| <a href="#">maxPerStageDescriptorUniformBuffers</a>             | 15    | 200   | min                     |

| <a href="#">maxTessellationEvaluationOutputComponents</a>       | 64    | 128   | min                     |
| <a href="#">maxGeometryOutputComponents</a>                     | 64    | 128   | min                     |
| <a href="#">maxFragmentInputComponents</a>                      | 64    | 112   | min                     |
| <a href="#">maxFragmentOutputAttachments</a>                    | 4     | 8     | min                     |
| <a href="#">maxComputeSharedMemorySize</a>                      | 16384 | 32768 | min                     |
| <a href="#">subPixelPrecisionBits</a>                           | 4     | 8     | min                     |
| <a href="#">maxViewportDimensions.width</a>                     | 7680  | 8192  | min                     |
| <a href="#">maxViewportDimensions.height</a>                    | 7680  | 8192  | min                     |
| <a href="#">maxFramebufferWidth</a>                             | 7680  | 8192  | min                     |
| <a href="#">maxFramebufferHeight</a>                            | 7680  | 8192  | min                     |

## Required Extensions

The following extensions are **required**

- [VK\\_KHR\\_robustness2](#)
- [VK\\_KHR\\_pipeline\\_binary](#)
- [VK\\_KHR\\_fragment\\_shading\\_rate](#)
- [VK\\_KHR\\_shader\\_clock](#)
- [VK\\_KHR\\_workgroup\\_memory\\_explicit\\_layout](#)
- [VK\\_KHR\\_compute\\_shader\\_derivatives](#)
- [VK\\_KHR\\_maintenance7](#)
- [VK\\_KHR\\_maintenance8](#)
- [VK\\_KHR\\_maintenance9](#)
- [VK\\_KHR\\_depth\\_clamp\\_zero\\_one](#)
- [VK\\_KHR\\_copy\\_memory\\_indirect](#)
- [VK\\_KHR\\_shader\\_untyped\\_pointers](#)
- [VK\\_KHR\\_surface](#)
- [VK\\_KHR\\_swapchain](#)
- [VK\\_KHR\\_present\\_mode\\_fifo\\_latest\\_ready](#)
- [VK\\_KHR\\_present\\_id2](#)
- [VK\\_KHR\\_present\\_wait2](#)
- [VK\\_KHR\\_surface\\_maintenance1](#)
- [VK\\_KHR\\_swapchain\\_maintenance1](#)
- [VK\\_KHR\\_cooperative\\_matrix](#)

# Appendix G: Legacy and Superseded Functionality

Functionality in the specification such as commands and structures **may** be marked as *legacy*. This label indicates that either functionality that supersedes it is available, or that the functionality has simply fallen out of favor for other reasons. Forward-looking applications **should** avoid using functionality marked as legacy where possible.

All legacy functionality is tagged in the XML registry, with information about what supersedes it. Any extension or version can tag functionality in any extension or version as legacy in the XML, however this is not always reflected in the specification. Functionality is only tagged as legacy in the specification if the superseding solution is added by a core version or extension at the same level or higher in the following hierarchy:

1. Core Version
2. KHR extension
3. EXT extension
4. Vendor extension

An explanatory section is provided in all cases to explain why functionality was marked as legacy, what functionality supersedes it (if any), and what applications **should** do instead.

## NOTE

Legacy and superseded functionality is tagged in the xml registry via a deprecation tag, for both core versions and extensions. It is expected that tooling such as the validation layers will be able to warn users when they are making use of any functionality that is either legacy or superseded by the version and extensions the application has enabled.

Legacy functionality remains available for use in the specification, but it **may** be less capable than newer functionality. Interactions with legacy functionality will often be omitted when new extensions or features are developed, so legacy functionality **may** not work with the latest features.

## NOTE

Another mechanism exists to indicate that an entire extension is considered legacy, using different terminology. See [the Deprecation section of the Extensions chapter](#) for more information.

In very rare instances, some functionality will be tagged as unused; this indicates when functionality was introduced and later discovered to be fundamentally flawed in some fashion. Application input in these cases **must** be well formed to handle implementations which tried to make use of this functionality, newer applications **must** not use the functionality, and newer implementations **must** do nothing with any input they receive. Unused parameters **must** be zeroed out, unused functions **must** not be called, unused enums **must** not be passed to APIs, and unused structure types **must** not be passed in **pNext** chains.

# List of Legacy Functionality

When functionality is marked as legacy or if an extension supersedes it, an explanation will be added to the following sections.

## NOTE

This list is a work in progress - we intend to add other items to this section over time. Examples include shader modules (superseded by [VK\\_KHR\\_maintenance5](#)) and anything superseded by a new version of the same functionality (e.g. [VK\\_KHR\\_synchronization2](#)).

## Physical Device Queries: Superseded via version 2

[VK\\_KHR\\_get\\_physical\\_device\\_properties2](#) was incorporated into Vulkan 1.1, which introduced new versions of several physical device query functions. These provide the same functionality as the Vulkan 1.0 functionality but with greater extensibility.

When querying device features, [vkGetPhysicalDeviceFeatures2](#) **should** be used instead of [vkGetPhysicalDeviceFeatures](#). When enabling device features, [VkPhysicalDeviceFeatures2](#) **should** be provided in the `pNext` chain of [VkDeviceCreateInfo](#) instead of using [VkDeviceCreateInfo::pEnabledFeatures](#).

## Physical Device Surface Queries: Superseded via version 2

Some parts of [VK\\_KHR\\_surface](#) were superseded by [VK\\_KHR\\_get\\_surface\\_capabilities2](#), which introduced new versions of some physical device surface query functions. These provide the same functionality as the [VK\\_KHR\\_surface](#) functionality but with greater extensibility.

When querying surface capabilities, [vkGetPhysicalDeviceSurfaceCapabilities2KHR](#) **should** be used instead of [vkGetPhysicalDeviceSurfaceCapabilitiesKHR](#).

When querying surface formats, [vkGetPhysicalDeviceSurfaceFormats2KHR](#) **should** be used instead of [vkGetPhysicalDeviceSurfaceFormatsKHR](#).

## Version Macros: Superseded via replacements including API variant

The version macros that do not take the API variant into account, such as [VK\\_MAKE\\_VERSION](#) or [VK\\_VERSION\\_MAJOR](#), are superseded by those that do, such as [VK\\_MAKE\\_API\\_VERSION](#) or [VK\\_API\\_VERSION\\_MAJOR](#).

Instead of [VK\\_API\\_VERSION](#), specific version defines (e.g. [VK\\_API\\_VERSION\\_1\\_0](#)) or the [VK\\_MAKE\\_API\\_VERSION](#) macro should be used instead.

## Device Layers: Superseded via instance layers

Previous versions of this specification distinguished between instance and device layers. Instance layers were only able to intercept commands that operate on [VkInstance](#) and [VkPhysicalDevice](#), except they were not able to intercept [vkCreateDevice](#). Device layers were enabled for individual devices when they were created, and could only intercept commands operating on that device or its child objects.

Device-only layers are now marked as legacy, and this specification no longer distinguishes between instance and device layers. Layers are enabled during instance creation, and are able to intercept all commands operating on that instance or any of its child objects. At the time this was marked as legacy, there were no known device-only layers and no compelling reason to create one.

The `enabledLayerCount` parameter of `VkDeviceCreateInfo` must be zero.

## Render Pass Functions: Superseded via version 2

`VK_KHR_create_renderpass2` and Vulkan 1.2 introduced new versions of several render pass functions. These provide the same functionality as the Vulkan 1.0 functionality but with greater extensibility.

### NOTE

Render pass objects and all related commands are further superseded by dynamic rendering.

## Render Pass Objects: Superseded via dynamic rendering

`VK_KHR_dynamic_rendering` and Vulkan 1.3 added a new way to specify render passes without needing to create `VkFramebuffer` and `VkRenderPass` objects. However, subpass functionality had no equivalent, meaning dynamic rendering was only suitable as a substitute for content not using subpasses.

`VK_KHR_dynamic_rendering_local_read` and Vulkan 1.4 later allowed the expression of most subpass functionality in core or extensions. Any subpass functionality which was not replicated is still expressible but requires applications to split work over multiple dynamic render pass instances. Functionality not covered with local reads would result in most or all vendors splitting the subpass internally.

Outside of vendor extensions, applications are advised to make use of `vkCmdBeginRendering` and `vkCmdEndRendering` to manage render passes from this API version onward.

## Sampler and Buffer View Objects: Unnecessary with Descriptor Heaps

When using `descriptor heaps`, the creation of sampler and buffer view objects are wholly unnecessary. Instead, these objects are directly converted to descriptors via `vkWriteSamplerDescriptorsEXT` and `vkWriteResourceDescriptorsEXT`, skipping the need to create objects altogether. In the case of samplers, samplers can also be embedded directly into a shader via `shader bindings`, which only requires the `VkSamplerCreateInfo`, rather than a created object.

The creation of image views can also be skipped similarly for images used as descriptors, but image views themselves are still used elsewhere in the spec, such as for `render passes`.

## Descriptor Management: Replaced by descriptor Heaps

`Descriptor heaps` provide a complete alternative for managing shader resources, and can be used where present instead of the resource management provided by Vulkan 1.0. `Descriptor heaps` can similarly be used instead of `VK_EXT_descriptor_buffer`.

While it is possible to use a mix of these in the same application, they cannot be used at the same time, and there are potential performance penalties for switching on some implementations.

## Synchronization Commands: Deprecation via version 2

[VK\\_KHR\\_synchronization2](#) was incorporated into Vulkan 1.3, which introduced new versions of synchronization functions. These provide the same functionality as the Vulkan 1.0 functionality but with greater extensibility.

Synchronization 2 commands **should** be used instead of synchronization 1 commands.

There is one piece of functionality in the original synchronization commands that cannot be mapped easily however. [vkCmdSetEvent](#) did not include an access scope; instead the access scope for an event dependency was fully specified by [vkCmdWaitEvents](#). This allowed execution only dependencies to be expressed with cache access management handled at the end of the command. While the same dependencies can be expressed in [VK\\_KHR\\_synchronization2](#), it is not a 1:1 mapping, requiring additional commands to be recorded, and so may not be as efficient.

[VK\\_KHR\\_maintenance9](#) added the [VK\\_DEPENDENCY\\_ASYMMETRIC\\_EVENT\\_BIT\\_KHR](#) dependency flag, which enables this use case with [vkCmdSetEvent2](#) and [vkCmdWaitEvents2](#), making it efficient to express the same dependencies.

New flag values added by this extension are additionally [extended to 64-bits](#).

## 32-bit Flags: Extended by 64-bit Flags

Initially Vulkan used 32-bit types to representing sets of flags ([Vk\\*Flags](#)) and individual flag bits ([Vk\\*FlagBits](#)). New functionality added many new flag bits. When the 32-bit types run out of available bits, new 64-bit flags ([Vk\\*Flags2](#)) and flag bits ([Vk\\*FlagBits2](#)) types are introduced.

These new types include all of the flag bits defined by the 32-bit types they correspond to, while allowing up to 32 additional bits. The new types are contained by corresponding extending structures. Such structures are used to specify or query flags by adding them to a [pNext](#) chain. When specifying 64-bit flags, those flags are used instead of the 32-bit flags in the base structure being extended. When querying 64-bit flags, both the 64-bit flags in the [pNext](#) chain and the 32-bit flags in the in the base structure being extended are returned.

64-bit flag and flag bit types are named the same as the 32-bit types they supersede, but with the addition of a “2” ahead of any vendor suffix. For example, [VkPipelineCreateFlagBits](#) and [VkPipelineCreateFlags](#) are superseded by [VkPipelineCreateFlagBits2](#) and [VkPipelineCreateFlags2](#), respectively.

## Buffer Commands: Superseded by device address commands

Most commands that previously took buffer objects, including all command buffer commands, have now been superseded by equivalent commands or structures that use [VkDeviceAddressRangeKHR](#) structures to specify the address range directly. Some of these need a little additional information from the application in the form of [VkAddressCommandFlagBitsKHR](#), which previously would have been retrieved from the buffer object itself.

## Host-Side Build Commands: Superseded by Device Commands

[VK\\_KHR\\_acceleration\\_structure](#) and [VK\\_EXT\\_opacity\\_micromap](#) originally provided parallel host-side and device-side build, copy, and query commands for micromaps and acceleration structures. These host commands are enabled by the [micromapHostCommands](#) feature and the [accelerationStructureHostCommands](#) feature.

The following host commands are superseded by their command buffer equivalents:

- [vkBuildAccelerationStructuresKHR](#) is superseded by [vkCmdBuildAccelerationStructuresKHR](#).
- [vkCopyAccelerationStructureKHR](#) is superseded by [vkCmdCopyAccelerationStructureKHR](#).
- [vkCopyAccelerationStructureToMemoryKHR](#) is superseded by [vkCmdCopyAccelerationStructureToMemoryKHR](#).
- [vkCopyMemoryToAccelerationStructureKHR](#) is superseded by [vkCmdCopyMemoryToAccelerationStructureKHR](#).
- [vkWriteAccelerationStructuresPropertiesKHR](#) is superseded by [vkCmdWriteAccelerationStructuresPropertiesKHR](#) (used together with a query pool, and read back via [vkGetQueryPoolResults](#) or copied with [vkCmdCopyQueryPoolResults](#)).

The corresponding micromap host commands in [VK\\_EXT\\_opacity\\_micromap](#) are superseded similarly:

- [vkBuildMicromapsEXT](#) is superseded by [vkCmdBuildMicromapsEXT](#).
- [vkCopyMicromapEXT](#) is superseded by [vkCmdCopyMicromapEXT](#).
- [vkCopyMicromapToMemoryEXT](#) is superseded by [vkCmdCopyMicromapToMemoryEXT](#).
- [vkCopyMemoryToMicromapEXT](#) is superseded by [vkCmdCopyMemoryToMicromapEXT](#).
- [vkWriteMicromapsPropertiesEXT](#) is superseded by [vkCmdWriteMicromapsPropertiesEXT](#).

# Appendix H: API Boilerplate

This appendix defines Vulkan API features that are infrastructure required for a complete functional description of Vulkan, but do not logically belong elsewhere in the Specification.

## Vulkan Header Files

Vulkan is defined as an API in the C99 language. Khronos provides a corresponding set of header files for applications using the API, which may be used in either C or C++ code. The interface descriptions in the specification are the same as the interfaces defined in these header files, and both are derived from the `vk.xml` XML API Registry, which is the canonical machine-readable description of the Vulkan API. The Registry, scripts used for processing it into various forms, and documentation of the registry schema are available as described at <https://registry.khronos.org/vulkan/#apiregistry>.

Language bindings for other languages can be defined using the information in the Specification and the Registry. Khronos does not provide any such bindings, but third-party developers have created some additional bindings.

### Vulkan Combined API Header `vulkan.h` (Informative)

Applications normally will include the header `vulkan.h`. In turn, `vulkan.h` always includes the following headers:

- `vk_platform.h`, defining platform-specific macros and headers.
- `vulkan_core.h`, defining APIs for the Vulkan core and all registered extensions *other* than `window system-specific` and `provisional` extensions, which are included in separate header files.

In addition, specific preprocessor macros defined at the time `vulkan.h` is included cause header files for the corresponding window system-specific and provisional interfaces to be included, as described below.

### Vulkan Platform-Specific Header `vk_platform.h` (Informative)

Platform-specific macros and interfaces are defined in `vk_platform.h`. These macros are used to control platform-dependent behavior, and their exact definitions are under the control of specific platforms and Vulkan implementations.

#### Platform-Specific Calling Conventions

On many platforms the following macros are empty strings, causing platform- and compiler-specific default calling conventions to be used.

`VKAPI_ATTR` is a macro placed before the return type in Vulkan API function declarations. This macro controls calling conventions for C++11 and GCC/Clang-style compilers.

`VKAPI_CALL` is a macro placed after the return type in Vulkan API function declarations. This macro controls calling conventions for MSVC-style compilers.

**VKAPI\_PTR** is a macro placed between the '(' and '\*' in Vulkan API function pointer declarations. This macro also controls calling conventions, and typically has the same definition as **VKAPI\_ATTR** or **VKAPI\_CALL**, depending on the compiler.

With these macros, a Vulkan function declaration takes the form of:

```
VKAPI_ATTR <return_type> VKAPI_CALL <command_name>(<command_parameters>);
```

Additionally, a Vulkan function pointer type declaration takes the form of:

```
typedef <return_type> (VKAPI_PTR *PFN_<command_name>)(<command_parameters>);
```

## Platform-Specific Header Control

If the **VK\_NO\_STDINT\_H** macro is defined by the application at compile time, extended integer types used by the Vulkan API, such as **uint8\_t**, **must** also be defined by the application. Otherwise, the Vulkan headers will not compile. If **VK\_NO\_STDINT\_H** is not defined, the system **<stdint.h>** is used to define these types. There is a fallback path when Microsoft Visual Studio version 2008 and earlier versions are detected at compile time.

If the **VK\_NO\_STDDEF\_H** macro is defined by the application at compile time, **size\_t**, **must** also be defined by the application. Otherwise, the Vulkan headers will not compile. If **VK\_NO\_STDDEF\_H** is not defined, the system **<stddef.h>** is used to define this type.

## Vulkan Core API Header **vulkan\_core.h**

Applications that do not make use of window system-specific extensions may simply include **vulkan\_core.h** instead of **vulkan.h**, although there is usually no reason to do so. In addition to the Vulkan API, **vulkan\_core.h** also defines and / or uses a small number of C preprocessor macros that are described below.

### Vulkan Header File Compile Time Controls

If the **VK\_NO\_PROTOTYPES** macro is defined by an application at compile time, prototypes for Vulkan APIs will not be included. Only typedefs for API function pointers will be defined.

This is intended for applications using their own function loader and dispatch mechanism.

If the macro is not defined by the application, prototypes for Vulkan APIs will be included.

If the **VK\_ONLY\_EXPORTED\_PROTOTYPES** macro is defined by an application at compile time, only prototypes for Vulkan APIs tagged as `"exported"` in the API XML will be included. For non-tagged APIs, only typedefs for API function pointers will be defined.

This is intended to match APIs which are statically exported by the Vulkan loader. At present, the exported APIs are only those defined by Vulkan core versions.

If the macro is not defined by the application, prototypes for all Vulkan APIs will be included.

## Vulkan Header File Version Number

`VK_HEADER_VERSION` is the version number of the `vulkan_core.h` header. This value is kept synchronized with the patch version of the released Specification.

```
// Provided by VK_VERSION_1_0
// Version of this file
#define VK_HEADER_VERSION 364
```

`VK_HEADER_VERSION_COMPLETE` is the complete version number of the `vulkan_core.h` header, comprising the major, minor, and patch versions. The major/minor values are kept synchronized with the complete version of the released Specification. This value is intended for use by automated tools to identify exactly which version of the header was used during their generation.

Applications should not use this value as their `VkApplicationInfo::apiVersion`. Instead applications should explicitly select a specific fixed major/minor API version using, for example, one of the `VK_API_VERSION_*_*` values.

```
// Provided by VK_VERSION_1_0
// Complete version of this file
#define VK_HEADER_VERSION_COMPLETE VK_MAKE_API_VERSION(0, 1, 4, VK_HEADER_VERSION)
```

`VK_API_VERSION` is now commented out of `vulkan_core.h` and **cannot** be used.

### WARNING

This functionality is superseded by [Vulkan Version 1.0](#). See [Legacy Functionality](#) for more information.

```
// Provided by VK_VERSION_1_0
// #define VK_API_VERSION VK_MAKE_API_VERSION(0, 1, 0, 0) // Patch version should
// always be set to 0
```

## Vulkan Handle Macros

`VK_DEFINE_HANDLE` defines a [dispatchable handle](#) type.

```
// Provided by VK_VERSION_1_0
#define VK_DEFINE_HANDLE(object) typedef struct object##_T* object;
```

- `object` is the name of the resulting C type.

The only dispatchable handle types are those related to device and instance management, such as [VkDevice](#).

`VK_DEFINE_NON_DISPATCHABLE_HANDLE` defines a [non-dispatchable handle](#) type.

```
// Provided by VK_VERSION_1_0
#ifndef VK_DEFINE_NON_DISPATCHABLE_HANDLE
    #if (VK_USE_64_BIT_PTR_DEFINES==1)
        #define VK_DEFINE_NON_DISPATCHABLE_HANDLE(object) typedef struct object##_T
    *object;
    #else
        #define VK_DEFINE_NON_DISPATCHABLE_HANDLE(object) typedef uint64_t object;
    #endif
#endif
```

- **object** is the name of the resulting C type.

Most Vulkan handle types, such as [VkBuffer](#), are non-dispatchable.

#### NOTE

The `vulkan_core.h` header allows the `VK_DEFINE_NON_DISPATCHABLE_HANDLE` and `VK_NULL_HANDLE` definitions to be overridden by the application. If `VK_DEFINE_NON_DISPATCHABLE_HANDLE` is already defined when `vulkan_core.h` is compiled, the default definitions for `VK_DEFINE_NON_DISPATCHABLE_HANDLE` and `VK_NULL_HANDLE` are skipped. This allows the application to define a binary-compatible custom handle which **may** provide more type-safety or other features needed by the application. Applications **must** not define handles in a way that is not binary compatible - where binary compatibility is platform dependent.

`VK_NULL_HANDLE` is a reserved value representing a non-valid object handle. It may be passed to and returned from Vulkan commands only when [specifically allowed](#).

```
// Provided by VK_VERSION_1_0
#ifndef VK_DEFINE_NON_DISPATCHABLE_HANDLE
    #if (VK_USE_64_BIT_PTR_DEFINES==1)
        #if (defined(__cplusplus) && (__cplusplus >= 201103L)) || (defined(_MSVC_LANG)
&& (_MSVC_LANG >= 201103L))
            #define VK_NULL_HANDLE nullptr
        #else
            #define VK_NULL_HANDLE ((void*)0)
        #endif
    #else
        #define VK_NULL_HANDLE 0ULL
    #endif
#endif
#ifndef VK_NULL_HANDLE
    #define VK_NULL_HANDLE 0
#endif
```

`VK_USE_64_BIT_PTR_DEFINES` defines whether the default non-dispatchable handles are declared using either a 64-bit pointer type or a 64-bit unsigned integer type.

`VK_USE_64_BIT_PTR_DEFINES` is set to '1' to use a 64-bit pointer type or any other value to use a 64-bit unsigned integer type.

```
// Provided by VK_VERSION_1_0
#ifndef VK_USE_64_BIT_PTR_DEFINES
    #if defined(__LP64__) || defined(_WIN64) || (defined(__x86_64__) &&
!defined(__ILP32__) ) || defined(_M_X64) || defined(__ia64) || defined (_M_IA64) ||
defined(__aarch64__) || defined(__powerpc64__) || (defined(__riscv) && __riscv_xlen ==
64)
        #define VK_USE_64_BIT_PTR_DEFINES 1
    #else
        #define VK_USE_64_BIT_PTR_DEFINES 0
    #endif
#endif
```

**NOTE** The `vulkan_core.h` header allows the `VK_USE_64_BIT_PTR_DEFINES` definition to be overridden by the application. This allows the application to select either a 64-bit pointer type or a 64-bit unsigned integer type for non-dispatchable handles in the case where the predefined preprocessor check does not identify the desired configuration.

**NOTE** This macro was introduced starting with the Vulkan 1.2.174 headers, and its availability can be checked at compile time by requiring `VK_HEADER_VERSION >= 174`. It is not available if you are using older headers, such as may be shipped with an older Vulkan SDK. Developers requiring this functionality may wish to include a copy of the current Vulkan headers with their project in this case.

## Window System-Specific Header Control (Informative)

To use a Vulkan extension supporting a platform-specific window system, header files for that window system **must** be included at compile time, or platform-specific types **must** be forward-declared. The Vulkan header files are unable to determine whether or not an external header is available at compile time, so platform-specific extensions are provided in separate headers from the core API and platform-independent extensions, allowing applications to decide which ones they need to be defined and how the external headers are included.

Extensions dependent on particular sets of platform headers, or that forward-declare platform-specific types, are declared in a header named for that platform. Before including these platform-specific Vulkan headers, applications **must** include both `vulkan_core.h` and any external native headers the platform extensions depend on.

As a convenience for applications that do not need the flexibility of separate platform-specific Vulkan headers, `vulkan.h` includes `vulkan_core.h`, and then conditionally includes platform-specific Vulkan headers and the external headers they depend on. Applications control which platform-specific headers are included by #defining macros before including `vulkan.h`.

The correspondence between platform-specific extensions, external headers they require, the platform-specific header which declares them, and the preprocessor macros which enable inclusion by `vulkan.h` are shown in the [following table](#).

Table 116. Window System Extensions and Headers

| Extension Name                                                                                                                                                                                                                                                                                                                           | Window System Name     | Platform-specific Header             | Required External Headers                                                         | Controlling <code>vulkan.h</code> Macro      |

## NOTE

This section describes the purpose of the headers independently of the specific underlying functionality of the window system extensions themselves. Each extension name will only link to a description of that extension when viewing a specification built with that extension included.

# Provisional Extension Header Control (Informative)

*Provisional* extensions **should** not be used in production applications. The functionality defined by such extensions **may** change in ways that break backwards compatibility between revisions, and before final release of a non-provisional version of that extension.

Provisional extensions are defined in a separate *provisional header*, `vulkan_beta.h`, allowing applications to decide whether or not to include them. The mechanism is similar to [window system-specific headers](#): before including `vulkan_beta.h`, applications **must** include `vulkan_core.h`.

## NOTE

Sometimes a provisional extension will include a subset of its interfaces in `vulkan_core.h`. This may occur if the provisional extension is promoted from an existing vendor or EXT extension and some of the existing interfaces are defined as aliases of the provisional extension interfaces. All other interfaces of that provisional extension which are not aliased will be included in `vulkan_beta.h`.

As a convenience for applications, `vulkan.h` conditionally includes `vulkan_beta.h`. Applications **can** control inclusion of `vulkan_beta.h` by #defining the macro `VK_ENABLE_BETA_EXTENSIONS` before including `vulkan.h`.

## NOTE

Starting in version 1.2.171 of the Specification, all provisional enumerants are protected by the macro `VK_ENABLE_BETA_EXTENSIONS`. Applications needing to use provisional extensions must always define this macro, even if they are explicitly including `vulkan_beta.h`. This is a minor change to behavior, affecting only provisional extensions.

## NOTE

This section describes the purpose of the provisional header independently of the specific provisional extensions which are contained in that header at any given time. The extension appendices for provisional extensions note their provisional status, and link back to this section for more information. Provisional extensions are intended to provide early access for bleeding-edge developers, with the understanding that extension interfaces may change in response to developer feedback. Provisional extensions are very likely to eventually be updated and released as non-provisional extensions, but there is no guarantee this will happen, or how long it will take if it does happen.

# Video Std Headers

Performing video coding operations usually involves the application having to provide various parameters, data structures, or other syntax elements specific to the particular video compression standard used, and the associated semantics are covered by the specification of those.

The interface descriptions of these are available in the header files derived from the `video.xml` XML file, which is the canonical machine-readable description of data structures and enumerations that are associated with the externally-provided video compression standards.

Table 117. Video Std Headers

| Video Std Header Name                          | Description                             | Header File                                                       | Related Extensions                                                               |

# Appendix I: Invariance

The Vulkan specification is not pixel exact. It therefore does not guarantee an exact match between images produced by different Vulkan implementations. However, the specification does specify exact matches, in some cases, for images produced by the same implementation. The purpose of this appendix is to identify and provide justification for those cases that require exact matches.

## Repeatability

The obvious and most fundamental case is repeated issuance of a series of Vulkan commands. For any given Vulkan and framebuffer state vector, and for any Vulkan command, the resulting Vulkan and framebuffer state **must** be identical whenever the command is executed on that initial Vulkan and framebuffer state. This repeatability requirement does not apply when using shaders containing side effects (image and buffer variable stores and atomic operations), because these memory operations are not guaranteed to be processed in a defined order.

One purpose of repeatability is avoidance of visual artifacts when a double-buffered scene is redrawn. If rendering is not repeatable, swapping between two buffers rendered with the same command sequence **may** result in visible changes in the image. Such false motion is distracting to the viewer. Another reason for repeatability is testability.

Repeatability, while important, is a weak requirement. Given only repeatability as a requirement, two scenes rendered with one (small) polygon changed in position might differ at every pixel. Such a difference, while within the law of repeatability, is certainly not within its spirit. Additional invariance rules are desirable to ensure useful operation.

## Multi-Pass Algorithms

Invariance is necessary for a whole set of useful multi-pass algorithms. Such algorithms render multiple times, each time with a different Vulkan mode vector, to eventually produce a result in the framebuffer. Examples of these algorithms include:

- “Erasing” a primitive from the framebuffer by redrawing it, either in a different color or using the XOR logical operation.
- Using stencil operations to compute capping planes.

## Invariance Rules

For a given Vulkan device:

**Rule 1** *For any given Vulkan and framebuffer state vector, and for any given Vulkan command, the resulting Vulkan and framebuffer state **must** be identical each time the command is executed on that initial Vulkan and framebuffer state.*

**Rule 2** *Changes to the following state values have no side effects (the use of any other state value is not affected by the change):*

**Required:**

- *Color and depth/stencil attachment contents*
- *Scissor parameters (other than enable)*
- *Write masks (color, depth, stencil)*
- *Clear values (color, depth, stencil)*

**Strongly suggested:**

- *Stencil parameters (other than enable)*
- *Depth test parameters (other than enable)*
- *Blend parameters (other than enable)*
- *Logical operation parameters (other than enable)*

**Corollary 1** *Fragment generation is invariant with respect to the state values listed in Rule 2.*

**Rule 3** *The arithmetic of each per-fragment operation is invariant except with respect to parameters that directly control it.*

**Corollary 2** *Images rendered into different color attachments of the same framebuffer, either simultaneously or separately using the same command sequence, are pixel identical.*

**Rule 4** *Identical pipelines will produce the same result when run multiple times with the same input. The wording “Identical pipelines” means [VkPipeline](#) objects that have been created with identical SPIR-V binaries and identical state, which are then used by commands executed using the same Vulkan state vector. Invariance is relaxed for shaders with side effects, such as performing stores or atomics.*

**Rule 5** *All fragment shaders that either conditionally or unconditionally assign [FragCoord.z](#) to [FragDepth](#) are depth-invariant with respect to each other, for those fragments where the assignment to [FragDepth](#) actually is done.*

If a sequence of Vulkan commands specifies primitives to be rendered with shaders containing side effects (image and buffer variable stores and atomic operations), invariance rules are relaxed. In particular, rule 1, corollary 2, and rule 4 do not apply in the presence of shader side effects.

The following weaker versions of rules 1 and 4 apply to Vulkan commands involving shader side effects:

**Rule 6** *For any given Vulkan and framebuffer state vector, and for any given Vulkan command, the contents of any framebuffer state not directly or indirectly affected by results of shader image or buffer variable stores or atomic operations **must** be identical each time the command is executed on that initial Vulkan and framebuffer state.*

**Rule 7** *Identical pipelines will produce the same result when run multiple times with the same input as long as:*

- *shader invocations do not use image atomic operations;*

- *no framebuffer memory is written to more than once by image stores, unless all such stores write the same value; and*
- *no shader invocation, or other operation performed to process the sequence of commands, reads memory written to by an image store.*

#### NOTE

The OpenGL specification has the following invariance rule: Consider a primitive  $p'$  obtained by translating a primitive  $p$  through an offset  $(x, y)$  in window coordinates, where  $x$  and  $y$  are integers. As long as neither  $p'$  nor  $p$  is clipped, it **must** be the case that each fragment  $f'$  produced from  $p'$  is identical to a corresponding fragment  $f$  from  $p$  except that the center of  $f'$  is offset by  $(x, y)$  from the center of  $f$ .

This rule does not apply to Vulkan and is an intentional difference from OpenGL.

When any sequence of Vulkan commands triggers shader invocations that perform image stores or atomic operations, and subsequent Vulkan commands read the memory written by those shader invocations, these operations **must** be explicitly synchronized.

## Tessellation Invariance

When using a pipeline containing tessellation evaluation shaders, the fixed-function tessellation primitive generator consumes the input patch specified by an application and emits a new set of primitives. The following invariance rules are intended to provide repeatability guarantees. Additionally, they are intended to allow an application with a carefully crafted tessellation evaluation shader to ensure that the sets of triangles generated for two adjacent patches have identical vertices along shared patch edges, avoiding “cracks” caused by minor differences in the positions of vertices along shared edges.

**Rule 1** *When processing two patches with identical outer and inner tessellation levels, the tessellation primitive generator will emit an identical set of point, line, or triangle primitives as long as the pipeline used to process the patch primitives has tessellation evaluation shaders specifying the same tessellation mode, spacing, vertex order, and point mode decorations. Two sets of primitives are considered identical if and only if they contain the same number and type of primitives and the generated tessellation coordinates for the vertex numbered  $m$  of the primitive numbered  $n$  are identical for all values of  $m$  and  $n$ .*

**Rule 2** *The set of vertices generated along the outer edge of the subdivided primitive in triangle and quad tessellation, and the tessellation coordinates of each, depend only on the corresponding outer tessellation level and the spacing decorations in the tessellation shaders of the pipeline.*

**Rule 3** *The set of vertices generated when subdividing any outer primitive edge is always symmetric. For triangle tessellation, if the subdivision generates a vertex with tessellation coordinates of the form  $(0, x, 1-x)$ ,  $(x, 0, 1-x)$ , or  $(x, 1-x, 0)$ , it will also generate a vertex with coordinates of exactly  $(0, 1-x, x)$ ,  $(1-x, 0, x)$ , or  $(1-x, x, 0)$ , respectively. For quad tessellation, if the subdivision generates a vertex with coordinates of  $(x, 0)$  or  $(0, x)$ , it will also generate a vertex with coordinates of exactly  $(1-x, 0)$  or  $(0, 1-x)$ , respectively. For isoline tessellation, if it generates vertices at  $(0, x)$  and  $(1, x)$  where  $x$  is not zero, it will also generate vertices at exactly  $(0, 1-x)$  and  $(1, 1-x)$ , respectively.*

**Rule 4** *The set of vertices generated when subdividing outer edges in triangular and quad tessellation*

**must** be independent of the specific edge subdivided, given identical outer tessellation levels and spacing. For example, if vertices at  $(x, 1 - x, 0)$  and  $(1 - x, x, 0)$  are generated when subdividing the  $w = 0$  edge in triangular tessellation, vertices **must** be generated at  $(x, 0, 1 - x)$  and  $(1 - x, 0, x)$  when subdividing an otherwise identical  $v = 0$  edge. For quad tessellation, if vertices at  $(x, 0)$  and  $(1 - x, 0)$  are generated when subdividing the  $v = 0$  edge, vertices **must** be generated at  $(0, x)$  and  $(0, 1 - x)$  when subdividing an otherwise identical  $u = 0$  edge.

**Rule 5** When processing two patches that are identical in all respects enumerated in rule 1 except for vertex order, the set of triangles generated for triangle and quad tessellation **must** be identical except for vertex and triangle order. For each triangle  $n1$  produced by processing the first patch, there **must** be a triangle  $n2$  produced when processing the second patch each of whose vertices has the same tessellation coordinates as one of the vertices in  $n1$ .

**Rule 6** When processing two patches that are identical in all respects enumerated in rule 1 other than matching outer tessellation levels and/or vertex order, the set of interior triangles generated for triangle and quad tessellation **must** be identical in all respects except for vertex and triangle order. For each interior triangle  $n1$  produced by processing the first patch, there **must** be a triangle  $n2$  produced when processing the second patch each of whose vertices has the same tessellation coordinates as one of the vertices in  $n1$ . A triangle produced by the tessellator is considered an interior triangle if none of its vertices lie on an outer edge of the subdivided primitive.

**Rule 7** For quad and triangle tessellation, the set of triangles connecting an inner and outer edge depends only on the inner and outer tessellation levels corresponding to that edge and the spacing decorations.

**Rule 8** The value of all defined components of **TessCoord** will be in the range  $[0, 1]$ . Additionally, for any defined component  $x$  of **TessCoord**, the results of computing  $1.0 - x$  in a tessellation evaluation shader will be exact. If any floating-point values in the range  $[0, 1]$  fail to satisfy this property, such values **must** not be used as tessellation coordinate components.

# Appendix J: Lexicon

This appendix defines terms, abbreviations, and API prefixes used in the Specification.

## Glossary

The terms defined in this section are used consistently throughout the Specification and may be used with or without capitalization.

### Accessible (Descriptor Binding)

A descriptor binding is accessible to a shader stage if that stage is included in the `stageFlags` of the descriptor binding. Descriptors using that binding **can** only be used by stages in which they are accessible.

### Acquire Operation (Resource)

An operation that acquires ownership of an image subresource or buffer range.

### Active (Descriptor Type)

When a descriptor with *mutable* type is updated with `vkUpdateDescriptorSets`, the active descriptor type changes. When the descriptor is consumed by shaders, it is the active descriptor type which determines validity, i.e. `VkDescriptorSetLayoutBinding::descriptorType` is replaced with the active descriptor type. A mismatch in active descriptor type and consumption by shader is considered an undefined descriptor.

### Active (Transform Feedback)

Transform feedback is made active after `vkCmdBeginTransformFeedbackEXT` executes and remains active until `vkCmdEndTransformFeedbackEXT` executes. While transform feedback is active, data written to variables in the output interface of the last *pre-rasterization shader stage* of the graphics pipeline are captured to the bound transform feedback buffers if those variables are decorated for transform feedback.

### Adjacent Vertex

A vertex in an adjacency primitive topology that is not part of a given primitive, but is accessible in geometry shaders.

### Active Object (Ray Tracing)

A primitive or instance in a ray tracing acceleration structure which has a corresponding ID, and is not *inactive* (meaning that it is visible to rays).

### Advanced Blend Operation

Blending performed using one of the blend operation enums introduced by the `VK_EXT_blend_operation_advanced` extension. See [Advanced Blending Operations](#).

### Alias (API type/command)

An identical definition of another API type/command with the same behavior but a different name.

## **Aliased Range (Memory)**

A range of a device memory allocation that is bound to multiple resources simultaneously.

## **Allocation Scope**

An association of a host memory allocation to a parent object or command, where the allocation's lifetime ends before or at the same time as the parent object is freed or destroyed, or during the parent command.

## **API command**

Any command defined in the Vulkan specification. These entry points all have a vk prefix.

## **Aspect (Image)**

Some image types contain multiple kinds (called “aspects”) of data for each pixel, where each aspect is used in a particular way by the pipeline and **may** be stored differently or separately from other aspects. For example, the color components of an image format make up the color aspect of the image, and **can** be used as a framebuffer color attachment. Some operations, like depth testing, operate only on specific aspects of an image.

## **Attachment (Render Pass)**

A zero-based integer index name used in render pass creation to refer to a framebuffer attachment that is accessed by one or more subpasses. The index also refers to an attachment description which includes information about the properties of the image view that will later be attached.

## **Availability Operation**

An operation that causes the values generated by specified memory write accesses to become available for future access.

## **Available**

A state of values written to memory that allows them to be made visible.

## **Axis-aligned Bounding Box**

A box bounding a region in space defined by extents along each axis and thus representing a box where each edge is aligned to one of the major axes.

## **Back-Facing**

See Facingness.

## **Backward Prediction**

Sample prediction performed during video decode and encode operations based on reference pictures that occur temporally (in display order) after the current picture.

## **Backward Reference**

A reference picture that occurs temporally (in display order) after the current picture.

## **Batch**

A single structure submitted to a queue as part of a [queue submission command](#), describing a set of queue operations to execute.

## Backwards Compatibility

A given version of the API is backwards compatible with an earlier version if an application, relying only on valid behavior and functionality defined by the earlier specification, is able to correctly run against each version without any modification. This assumes no active attempt by that application to not run when it detects a different version.

## Binary Semaphore

A semaphore with a boolean payload indicating whether the semaphore is signaled or unsignaled. Represented by a [VkSemaphore](#) object created with a semaphore type of [VK\\_SEMAPHORE\\_TYPE\\_BINARY](#).

## Binding (Memory)

An association established between a range of a resource object and a range of a memory object. These associations determine the memory locations affected by operations performed on elements of a resource object. Memory bindings are established using the [vkBindBufferMemory](#) command for non-sparse buffer objects, using the [vkBindImageMemory](#) command for non-sparse image objects, and using the [vkQueueBindSparse](#) command for sparse resources.

## Blend Constant

Four floating-point (RGBA) values used as an input to blending.

## Blending

Arithmetic operations between a fragment color value and a value in a color attachment that produce a final color value to be written to the attachment.

## Buffer

A resource that represents a linear array of data in device memory. Represented by a [VkBuffer](#) object.

## Buffer Device Address

A 64-bit value used in a shader to access buffer memory through the [PhysicalStorageBuffer](#) storage class.

## Buffer View

An object that represents a range of a specific buffer, and state controlling how the contents are interpreted. Represented by a [VkBufferView](#) object.

## Built-In Variable

A variable decorated in a shader, where the decoration makes the variable take values provided by the execution environment or values that are generated by fixed-function pipeline stages.

## Built-In Interface Block

A block defined in a shader containing only variables decorated with built-in decorations, and is used to match against other shader stages.

## Clip Coordinates

The homogeneous coordinate space in which vertex positions ([Position](#) decoration) are written by [pre-rasterization shader stages](#).

### Clip Distance

A built-in output from [pre-rasterization shader stages](#) defining a clip half-space against which the primitive is clipped.

### Clip Volume

The intersection of the view volume with all clip half-spaces.

### Coding Block (Video)

An element of a video picture, comprising a rectangular block of texel values that are coded as a single unit in video coding. Video coding blocks have a corresponding coding block size (width and height) defining the dimensions of these elements in units of texels. These dimensions are usually codec-specific and a single video compression standard **may** support more than one coding block type and size. Video compression standards **may** use multiple coding block types to organize coding blocks of different kinds and sizes into hierarchies.

### Color Attachment

A subpass attachment point, or image view, that is the target of fragment color outputs and blending.

### Color Renderable Format

A [VkFormat](#) where [VK\\_FORMAT\\_FEATURE\\_COLOR\\_ATTACHMENT\\_BIT](#) is set in one of the following, depending on the image's tiling:

- [VkFormatProperties::linearTilingFeatures](#)
- [VkFormatProperties::optimalTilingFeatures](#)
- [VkDrmFormatModifierPropertiesEXT::drmFormatModifierTilingFeatures](#)

### Combined Image Sampler

A descriptor type that includes both a sampled image and a sampler.

### Command Buffer

An object that records commands to be submitted to a queue. Represented by a [VkCommandBuffer](#) object.

### Command Buffer Nesting Level

The Command Buffer Nesting Level of a secondary command buffer is equal to the maximum nesting level of all secondary command buffers executed by that command buffer plus one, where a secondary command buffer that executes no other secondary command buffers has a nesting level of zero.

### Command Pool

An object that command buffer memory is allocated from, and that owns that memory. Command pools aid multithreaded performance by enabling different threads to use different allocators, without internal synchronization on each use. Represented by a [VkCommandPool](#) object.

### Compatible Allocator

When allocators are compatible, allocations from each allocator **can** be freed by the other

allocator.

## Compatible Image Formats

When formats are compatible, images created with one of the formats **can** have image views created from it using any of the compatible formats. Also see *Size-Compatible Image Formats*.

## Compatible Queues

Queues within a queue family. Compatible queues have identical properties.

## Complete Mipmap Chain

The entire set of mip levels that can be provided for an image, from the largest application-specified mip level size down to the *minimum mip level size*. See [Image Mip Level Sizing](#).

## Completed Operation

A deferred operation whose corresponding command has been executed to completion. See [Deferred Host Operations](#)

## Component (Format)

A distinct part of a format. Color components are represented with **R**, **G**, **B**, and **A**. Depth and stencil components are represented with **D** and **S**. Formats **can** have multiple instances of the same component. Some formats have other notations such as **E** or **X** which are not considered a component of the format.

## Compressed Texel Block

An element of an image having a block-compressed format, comprising a rectangular block of texel values that are encoded as a single value in memory. Compressed texel blocks of a particular block-compressed format have a corresponding width, height, and depth defining the dimensions of these elements in units of texels, and a size in bytes of the encoding in memory.

## Constant Integral Expressions

A SPIR-V constant instruction whose type is **OpTypeInt**. See *Constant Instruction* in section 2.2.1 “Instructions” of the [Khronos SPIR-V Specification](#).

## Cooperative Matrix

A SPIR-V type where the storage for and computations performed on the matrix are spread across a set of invocations such as a subgroup.

## Coverage Index

The index of a sample in the coverage mask.

## Coverage Mask

A bitfield associated with a fragment representing the samples that were determined to be covered based on the result of rasterization, and then subsequently modified by fragment operations or the fragment shader.

## Cull Distance

A built-in output from [pre-rasterization shader stages](#) defining a cull half-space where the primitive is rejected if all vertices have a negative value for the same cull distance.

## Cull Volume

The intersection of the view volume with all cull half-spaces.

## Decode Output Picture

A video picture resource used to store the result of a video decode operation.

## Decoded Picture Buffer

An indexed set of reference pictures used by a video session. Abbreviated as DPB.

## Decoded Picture Buffer Slot

An entry within a DPB that **can** be associated with a particular reference picture.

## Decoded Picture Buffer Slot Index

The index of a DPB slot within its encompassing DPB.

## Decoration (SPIR-V)

Auxiliary information such as built-in variables, stream numbers, invariance, interpolation type, relaxed precision, etc., added to variables or structure-type members through decorations.

## Deferrable Command

A command which allows deferred execution of host-side work. See [Deferred Host Operations](#).

## Deferrable Operation

A single logical item of host-side work which can be deferred. Represented by the [VkDeferredOperationKHR](#) object. See [Deferred Host Operations](#).

## Depth/Stencil Attachment

A subpass attachment point, or image view, that is the target of depth and/or stencil test operations and writes.

## Depth/Stencil Format

A [VkFormat](#) that includes depth and/or stencil components.

## Depth/Stencil Image (or ImageView)

A [VkImage](#) (or [VkImageView](#)) with a depth/stencil format.

## Depth/Stencil Resolve Attachment

A subpass attachment point, or image view, that is the target of a multisample resolve operation from the corresponding depth/stencil attachment at the end of the subpass.

## Derivative Group

A set of compute, mesh, task, or fragment shader invocations that cooperate to compute derivatives, including implicit derivatives for sampled image operations.

## Descriptor

Information about a resource or resource view written into a descriptor set that is used to access the resource or view from a shader.

## Descriptor Binding

An entry in a descriptor set layout corresponding to zero or more descriptors of a single descriptor type in a set. Defined by a [VkDescriptorSetLayoutBinding](#) structure.

## Descriptor Pool

An object that descriptor sets are allocated from, and that owns the storage of those descriptor sets. Descriptor pools aid multithreaded performance by enabling different threads to use different allocators, without internal synchronization on each use. Represented by a [VkDescriptorPool](#) object.

## Descriptor Set

An object that resource descriptors are written into via the API, and that **can** be bound to a command buffer such that the descriptors contained within it **can** be accessed from shaders. Represented by a [VkDescriptorSet](#) object.

## Descriptor Set Layout

An object defining the set of resources (types and counts) and their relative arrangement (in the binding namespace) within a descriptor set. Used when allocating descriptor sets and when creating pipeline layouts. Represented by a [VkDescriptorSetLayout](#) object.

## Device

The processor(s) and execution environment that perform tasks requested by the application via the Vulkan API.

## Device Group

A set of physical devices that support accessing each other's memory and recording a single command buffer that **can** be executed on all the physical devices.

## Device Index

A zero-based integer that identifies one physical device from a logical device. A device index is valid if it is less than the number of physical devices in the logical device.

## Device Mask

A bitmask where each bit represents one device index. A device mask value is valid if every bit that is set in the mask is at a bit position that is less than the number of physical devices in the logical device.

## Device Memory

Memory accessible to the device. Represented by a [VkDeviceMemory](#) object.

## Device-Level Command

Any command that is dispatched from a logical device, or from a child object of a logical device.

## Device-Level Functionality

All device-level commands and objects, and their structures, enumerated types, and enumerants. Additionally, physical-device-level functionality defined by a [device extension](#) is also considered device-level functionality.

## Device-Level Object

Logical device objects and their child objects. For example, [VkDevice](#), [VkQueue](#), and [VkCommandBuffer](#) objects are device-level objects.

## Device-Local Memory

Memory that is connected to the device, and **may** be more performant for device access than host-local memory.

## Direct Drawing Commands

*Drawing commands* that take all their parameters as direct arguments to the command (and not sourced via structures in buffer memory as the *indirect drawing commands*). Includes [vkCmdDrawMultiIndexedEXT](#), [vkCmdDrawMultiEXT](#), [vkCmdDrawMeshTasksEXT](#), [vkCmdDraw](#), and [vkCmdDrawIndexed](#).

## Disjoint

*Disjoint planes* are *image planes* to which memory is bound independently.

A *disjoint image* consists of multiple *disjoint planes*, and is created with the [VK\\_IMAGE\\_CREATE\\_DISJOINT\\_BIT](#) bit set.

## Dispatchable Command

A non-global command. The first argument to each dispatchable command is a dispatchable handle type.

## Dispatchable Handle

A handle of a pointer handle type which **may** be used by layers as part of intercepting API commands.

## Dispatching Commands

Commands that provoke work using a compute pipeline, such as [vkCmdDispatch](#). See [Dispatching Commands](#).

## Drawing Commands

Commands that provoke work using a graphics pipeline. Includes [vkCmdDraw](#), [vkCmdDrawIndexed](#), [vkCmdDrawIndirectCount](#), [vkCmdDrawIndexedIndirectCount](#), [vkCmdDrawIndirectCountKHR](#), [vkCmdDrawIndexedIndirectCountKHR](#), [vkCmdDrawMultiIndexedEXT](#), [vkCmdDrawMultiEXT](#), [vkCmdDrawMeshTasksEXT](#), [vkCmdDrawMeshTasksIndirectEXT](#), [vkCmdDrawMeshTasksIndirectCountEXT](#), [vkCmdDrawIndirect](#), and [vkCmdDrawIndexedIndirect](#).

## Duration (Command)

The *duration* of a Vulkan command refers to the interval between calling the command and its return to the caller.

## Dynamic Storage Buffer

A storage buffer whose offset is specified each time the storage buffer is bound to a command buffer via a descriptor set.

## Dynamic Uniform Buffer

A uniform buffer whose offset is specified each time the uniform buffer is bound to a command buffer via a descriptor set.

## Dynamically Uniform

See *Dynamically Uniform* in section 2.2 “Terms” of the [Khronos SPIR-V Specification](#).

## Encode Input Picture

A video picture resource used as the input of a video encode operation.

## Element

Arrays are composed of multiple elements, where each element exists at a unique index within that array. Used primarily to describe data passed to or returned from the Vulkan API.

## Explicitly-Enabled Layer

A layer enabled by the application by adding it to the enabled layer list in [vkCreateInstance](#) or [vkCreateDevice](#).

## Event

A synchronization primitive that is signaled when execution of previous commands completes through a specified set of pipeline stages. Events can be waited on by the device and polled by the host. Represented by a [VkEvent](#) object.

## Executable State (Command Buffer)

A command buffer that has ended recording commands and **can** be executed. See also Initial State and Recording State.

## Execution Dependency

A dependency that guarantees that certain pipeline stages’ work for a first set of commands has completed execution before certain pipeline stages’ work for a second set of commands begins execution. This is accomplished via pipeline barriers, subpass dependencies, events, or implicit ordering operations.

## Execution Dependency Chain

A sequence of execution dependencies that transitively act as a single execution dependency.

## Explicit chroma reconstruction

An implementation of sampler  $Y'C_B C_R$  conversion which reconstructs reduced-resolution chroma samples to luma resolution and then separately performs texture sample interpolation. This is distinct from an implicit implementation, which incorporates chroma sample reconstruction into texture sample interpolation.

## Extension Scope

The set of objects and commands that **can** be affected by an extension. Extensions are either device scope or instance scope.

## Extending Structure

A structure type which may appear in the [pNext chain](#) of another structure, extending the

functionality of the other structure. Extending structures may be defined by either core API versions or extensions.

### External Handle

A resource handle which has meaning outside of a specific Vulkan device or its parent instance. External handles **may** be used to share resources between multiple Vulkan devices in different instances, or between Vulkan and other APIs. Some external handle types correspond to platform-defined handles, in which case the resource **may** outlive any particular Vulkan device or instance and **may** be transferred between processes, or otherwise manipulated via functionality defined by the platform for that handle type.

### External synchronization

A type of synchronization **required** of the application, where parameters defined to be externally synchronized **must** not be used simultaneously in multiple threads.

### Facingness (Polygon)

A classification of a polygon as either front-facing or back-facing, depending on the orientation (winding order) of its vertices.

### Facingness (Fragment)

A fragment is either front-facing or back-facing, depending on the primitive it was generated from. If the primitive was a polygon (regardless of polygon mode), the fragment inherits the facingness of the polygon. All other fragments are front-facing.

### Fence

A synchronization primitive that is signaled when a set of batches or sparse binding operations complete execution on a queue. Fences **can** be waited on by the host. Represented by a [VkFence](#) object.

### Field (Video)

Possibly discontinuous subregions of a frame. Frames **may** consist of two fields, a top field and a bottom field.

### Flat Shading

A property of a vertex attribute that causes the value from a single vertex (the provoking vertex) to be used for all vertices in a primitive, and for interpolation of that attribute to return that single value unaltered.

### Format Features

A set of features from [VkFormatFeatureFlagBits](#) that a [VkFormat](#) is capable of using for various commands. The list is determined by factors such as [VkImageTiling](#).

### Forward Prediction

Sample prediction performed during video decode and encode operations based on reference pictures that occur temporally (in display order) before the current picture.

### Forward Reference

A reference picture that occurs temporally (in display order) before the current picture.

## Fragment

A rectangular framebuffer region with associated data produced by [rasterization](#) and processed by [fragment operations](#) including the fragment shader.

## Fragment Area

The width and height, in pixels, of a fragment.

## Fragment Density

The ratio of fragments per framebuffer area in the x and y direction.

## Fragment Density Texel Size

The (w,h) framebuffer region in pixels that each texel in a fragment density map applies to.

## Fragment Input Attachment Interface

Variables with [UniformConstant](#) storage class and a decoration of [InputAttachmentIndex](#) that are statically used by a fragment shader's entry point, which receive values from input attachments.

## Fragment Output Interface

A fragment shader entry point's variables with [Output](#) storage class, which output to color and/or depth/stencil attachments.

## Frame (Video)

A multi-dimensional array of luma samples and an optional multi-dimensional array of chroma samples.

## Fragment Tile Image Interface

A fragment shader entry point's variables with [TileImageEXT](#) storage class and a decoration of [Location](#), which are used to read values from color attachments.

## Framebuffer

A collection of image views and a set of dimensions that, in conjunction with a render pass, define the inputs and outputs used by drawing commands. Represented by a [VkFramebuffer](#) object.

## Framebuffer Attachment

One of the image views used in a framebuffer.

## Framebuffer Coordinates

A coordinate system in which adjacent pixels' coordinates differ by 1 in x and/or y, with (0,0) in the upper left corner and pixel centers at half-integers.

## Framebuffer-Space

Operating with respect to framebuffer coordinates.

## Framebuffer-Local

A framebuffer-local dependency guarantees that only for a single framebuffer region, the first set of operations happens-before the second set of operations.

## **Framebuffer-Global**

A framebuffer-global dependency guarantees that for all framebuffer regions, the first set of operations happens-before the second set of operations.

## **Framebuffer Region**

A framebuffer region is a set of sample (x, y, layer, view, sample) coordinates that is a subset of the entire framebuffer.

## **Frame Rate**

A non-Vulkan term for Image Present Rate (IPR).

## **Front-Facing**

See Facingness.

## **Full Compatibility**

A given version of the API is fully compatible with another version if an application, relying only on valid behavior and functionality defined by either of those specifications, is able to correctly run against each version without any modification. This assumes no active attempt by that application to not run when it detects a different version.

## **Global Command**

A Vulkan command for which the first argument is not a dispatchable handle type.

## **Global Workgroup**

A collection of local workgroups dispatched by a single dispatching or single mesh task drawing command.

## **Handle**

An opaque integer or pointer value used to refer to a Vulkan object. Each object type has a unique handle type.

## **Happen-after, happens-after**

A transitive, irreflexive, and antisymmetric ordering relation between operations. An execution dependency with a source of **A** and a destination of **B** enforces that **B** happens-after **A**. The inverse relation of happens-before.

## **Happen-before, happens-before**

A transitive, irreflexive, and antisymmetric ordering relation between operations. An execution dependency with a source of **A** and a destination of **B** enforces that **A** happens-before **B**. The inverse relation of happens-after.

## **Helper Invocation**

A fragment shader invocation that is created solely for the purposes of evaluating derivatives for use in non-helper fragment shader invocations, and which does not have side effects.

## **Host**

The processor(s) and execution environment that the application runs on, and that the Vulkan API is exposed on.

## Host Mapped Device Memory

Device memory that is mapped for host access using [vkMapMemory](#).

## Host Mapped Foreign Memory

Memory owned by a foreign device that is mapped for host access.

## Host Memory

Memory not accessible to the device, used to store implementation data structures.

## Host-Accessible Subresource

A buffer, or a linear image subresource in either the [VK\\_IMAGE\\_LAYOUT\\_PREINITIALIZED](#) or [VK\\_IMAGE\\_LAYOUT\\_GENERAL](#) layout. Host-accessible subresources have a well-defined addressing scheme which can be used by the host.

## Host-Local Memory

Memory that is not local to the device, and **may** be less performant for device access than device-local memory.

## Host-Visible Memory

Device memory that **can** be mapped on the host and **can** be read and written by the host.

## ICD

Installable Client Driver. An ICD is represented as a [VkPhysicalDevice](#).

## Identically Defined Objects

Objects of the same type where all arguments to their creation or allocation functions, with the exception of [pAllocator](#), are

1. Vulkan handles which refer to the same object or
2. identical scalar or enumeration values or
3. Host pointers which point to an array of values or structures which also satisfy these three constraints.

## Image

A resource that represents a multi-dimensional formatted interpretation of device memory. Represented by a [VkImage](#) object.

## Image Present Duration

The amount of time the application intends for each newly-presented image to be visible to the user. This value **should** be a multiple of the refresh cycle duration.

## Image Present Rate

The number of newly-presented images the application intends to present each second (a.k.a. frame rate). On fixed refresh rate displays, this value **should** be a multiple of the refresh rate.

## Image Subresource

A specific mipmap level, layer, and set of aspects of an image.

## Image Subresource Range

A set of image subresources that are contiguous mipmap levels and layers.

## Image View

An object that represents an image subresource range of a specific image, and state controlling how the contents are interpreted. Represented by a [VkImageView](#) object.

## Immutable Sampler

A sampler descriptor provided at descriptor set layout creation time for a specific binding. This sampler is then used for that binding in all descriptor sets allocated with the layout, and it **cannot** be changed.

## Implicit chroma reconstruction

An implementation of sampler  $Y'C_B C_R$  conversion which reconstructs the reduced-resolution chroma samples directly at the sample point, as part of the normal texture sampling operation. This is distinct from an *explicit chroma reconstruction* implementation, which reconstructs the reduced-resolution chroma samples to the resolution of the luma samples, then filters the result as part of texture sample interpolation.

## Implicitly-Enabled Layer

A layer enabled by a loader-defined mechanism outside the Vulkan API, rather than explicitly by the application during instance or device creation.

## Inactive Object (Ray Tracing)

A primitive or instance in a ray tracing acceleration structure which has a corresponding ID, but which will never report an intersection with any ray.

## Index Buffer

A buffer bound via [vkCmdBindIndexBuffer](#) which is the source of index values used to fetch vertex attributes for a [vkCmdDrawIndexed](#) or [vkCmdDrawIndexedIndirect](#) command.

## Indexed Drawing Commands

*Drawing commands* which use an *index buffer* as the source of index values used to fetch vertex attributes for a drawing command. Includes [vkCmdDrawIndexed](#), [vkCmdDrawIndexedIndirectCount](#), [vkCmdDrawIndexedIndirectCountKHR](#), [vkCmdDrawMultiIndexedEXT](#), and [vkCmdDrawIndexedIndirect](#).

## Indirect Commands

Drawing or dispatching commands that source some of their parameters from structures in buffer memory. Includes [vkCmdDrawIndirect](#), [vkCmdDrawIndexedIndirect](#), [vkCmdDrawIndirectCount](#), [vkCmdDrawIndexedIndirectCount](#), [vkCmdDrawIndirectCountKHR](#), [vkCmdDrawIndexedIndirectCountKHR](#), [vkCmdDrawMeshTasksIndirectEXT](#), [vkCmdDrawMeshTasksIndirectCountEXT](#), and [vkCmdDispatchIndirect](#).

## Indirect Drawing Commands

*Drawing commands* that source some of their parameters from structures in buffer memory. Includes [vkCmdDrawIndirect](#), [vkCmdDrawIndirectCount](#), [vkCmdDrawIndexedIndirectCount](#), [vkCmdDrawIndirectCountKHR](#), [vkCmdDrawIndexedIndirectCountKHR](#),

[vkCmdDrawMeshTasksIndirectEXT](#),  
[vkCmdDrawIndexedIndirect](#).

[vkCmdDrawMeshTasksIndirectCountEXT](#),

and

### Initial State (Command Buffer)

A command buffer that has not begun recording commands. See also Recording State and Executable State.

### Inline Uniform Block

A descriptor type that represents uniform data stored directly in descriptor sets, and supports read-only access in a shader.

### Input Attachment

A descriptor type that represents an image view, and supports unfiltered read-only access in a shader, only at the fragment's location in the view.

### Instance

The top-level Vulkan object, which represents the application's connection to the implementation. Represented by a [VkInstance](#) object.

### Instance-Level Command

Any command that is dispatched from an instance, or from a child object of an instance, except for physical devices and their children.

### Instance-Level Functionality

All instance-level commands and objects, and their structures, enumerated types, and enumerants.

### Instance-Level Object

High-level Vulkan objects, which are not physical devices, nor children of physical devices. For example, [VkInstance](#) is an instance-level object.

### Instance (Memory)

In a logical device representing more than one physical device, some device memory allocations have the requested amount of memory allocated multiple times, once for each physical device in a device mask. Each such replicated allocation is an instance of the device memory.

### Instance (Resource)

In a logical device representing more than one physical device, buffer and image resources exist on all physical devices but **can** be bound to memory differently on each. Each such replicated resource is an instance of the resource.

### Inter Block (Video)

A video coding block that uses inter prediction.

### Inter Prediction (Video)

Sample prediction derived from reference picture samples or metadata.

## Internal Synchronization

A type of synchronization **required** of the implementation, where parameters not defined to be externally synchronized **may** require internal mutexing to avoid multithreaded race conditions.

## Intra Block (Video)

A video coding block that only uses intra prediction.

## Intra Prediction (Video)

Sample prediction that is not derived from reference picture samples or metadata.

## Invocation (Shader)

A single execution of an entry point in a SPIR-V module. For example, a single vertex's execution of a vertex shader or a single fragment's execution of a fragment shader.

## Invocation Group

A set of shader invocations that are executed in parallel and that **must** execute the same control flow path in order for control flow to be considered dynamically uniform.

## Invocation Repack Instruction

A ray tracing [instruction](#) where the implementation **may** change the set of invocations that are executing.

## IPD

Image Present Duration.

## Join (Deferred Host Operations)

The act of instructing a thread to participate in the execution of a deferred operation. See [Deferred Host Operations](#).

## Legacy (feature)

A feature which is no longer recommended as the correct or best way to achieve its intended purpose. Legacy features are typically superseded by new features which are the currently recommended way to achieve that purpose.

## Linear Resource

A resource is *linear* if it is one of the following:

- a [VkBuffer](#)
- a [VkImage](#) created with [VK\\_IMAGE\\_TILING\\_LINEAR](#)
- a [VkImage](#) created with [VK\\_IMAGE\\_TILING\\_DRM\\_FORMAT\\_MODIFIER\\_EXT](#) and whose [Linux DRM format modifier](#) is [DRM\\_FORMAT\\_MOD\\_LINEAR](#) Because a [VkAccelerationStructureKHR](#) resource does not have memory bound to it directly, it is considered neither linear nor non-linear. However, the [VkBuffer](#) on which a [VkAccelerationStructureKHR](#) resource is placed is a linear resource.

A resource is *non-linear* if it is one of the following:

- a [VkImage](#) created with [VK\\_IMAGE\\_TILING\\_OPTIMAL](#)

- a [VkImage](#) created with [VK\\_IMAGE\\_TILING\\_DRM\\_FORMAT\\_MODIFIER\\_EXT](#) and whose [Linux DRM format modifier](#) is not [DRM\\_FORMAT\\_MOD\\_LINEAR](#)

## Linux DRM Format Modifier

A 64-bit, vendor-prefixed, semi-opaque unsigned integer describing vendor-specific details of an image's memory layout. In Linux graphics APIs, *modifiers* are commonly used to specify the memory layout of externally shared images. An image has a *modifier* if and only if it is created with *tiling* equal to [VK\\_IMAGE\\_TILING\\_DRM\\_FORMAT\\_MODIFIER\\_EXT](#). For more details, refer to the appendix for extension [VK\\_EXT\\_image\\_drm\\_format\\_modifier](#).

## Local Workgroup

A collection of compute shader invocations invoked by a single dispatching command, which share data via [WorkgroupLocal](#) variables and can synchronize with each other.

## Logical Device

An object that represents the application's interface to the physical device. The logical device is the parent of most Vulkan objects. Represented by a [VkDevice](#) object.

## Logical Operation

Bitwise operations between a fragment color value and a value in a color attachment, that produce a final color value to be written to the attachment.

## Lost Device

A state that a logical device **may** be in as a result of unrecoverable implementation errors, or other exceptional conditions.

## Mappable

See Host-Visible Memory.

## Memory Dependency

A memory dependency is an execution dependency which includes availability and visibility operations such that:

- The first set of operations happens-before the availability operation
- The availability operation happens-before the visibility operation
- The visibility operation happens-before the second set of operations

## Memory Domain

A memory domain is an abstract place to which memory writes are made available by availability operations and memory domain operations. The memory domains correspond to the set of agents that the write **can** then be made visible to. The memory domains are *host*, *device*, *shader*, *workgroup instance* (for workgroup instance there is a unique domain for each compute workgroup) and *subgroup instance* (for subgroup instance there is a unique domain for each subgroup).

## Memory Domain Operation

An operation that makes the writes that are available to one memory domain available to another memory domain.

## Memory Heap

A region of memory from which device memory allocations **can** be made.

## Memory Type

An index used to select a set of memory properties (e.g. mappable, cached) for a device memory allocation.

## Mesh Shading Pipeline

A graphics pipeline where the primitives are assembled explicitly in the shader stages. In contrast to the primitive shading pipeline where input primitives are assembled by fixed function processing.

## Mesh Tasks Drawing Commands

*Drawing commands* which create shader invocations organized in workgroups for drawing mesh tasks. Includes [vkCmdDrawMeshTasksEXT](#), [vkCmdDrawMeshTasksIndirectEXT](#), and [vkCmdDrawMeshTasksIndirectCountEXT](#).

## Minimum Mip Level Size

The smallest size that is permitted for a mip level. For conventional images this is 1x1x1. See [Image Mip Level Sizing](#).

## Mip Tail Region

The set of mipmap levels of a sparse residency texture that are too small to fill a sparse block, and that **must** all be bound to memory collectively and opaquely.

## Multi-planar

A *multi-planar format* (or “planar format”) is an image format consisting of more than one *plane*, identifiable with a [\\_2PLANE](#) or [\\_3PLANE](#) component to the format name and listed in [Formats Requiring Sampler Y'C<sub>B</sub>C<sub>R</sub> Conversion for VK\\_IMAGE\\_ASPECT\\_COLOR\\_BIT Image Views](#). A *multi-planar image* (or “planar image”) is an image of a multi-planar format.

## Nested Command Buffers

A nested command buffer is a secondary command buffer that is executed by another secondary command buffer, which may itself execute other secondary command buffers.

## Non-Dispatchable Handle

A handle of an integer handle type. Handle values **may** not be unique, even for two objects of the same type.

## Non-Indexed Drawing Commands

*Drawing commands* for which the vertex attributes are sourced in linear order from the vertex input attributes for a drawing command (i.e. they do not use an *index buffer*). Includes [vkCmdDraw](#), [vkCmdDrawIndirectCount](#), [vkCmdDrawIndirectCountKHR](#), [vkCmdDrawMultiEXT](#), and [vkCmdDrawIndirect](#).

## Normalized

A value that is interpreted as being in the range [0,1] as a result of being implicitly divided by some other value.

## Normalized Device Coordinates

A coordinate space after perspective division is applied to clip coordinates, and before the viewport transformation converts them to framebuffer coordinates.

## Obsoleted (feature)

A feature is obsolete if it can no longer be used.

## Opaque Capture Address

A 64-bit value representing the device address of a buffer or memory object that is expected to be used by trace capture/replay tools in combination with the [bufferDeviceAddress](#) feature.

## Overdraw

Happens when more than one fragment invocation writes to the same (x, y, layer, view, sample) coordinate during a render pass instance. Usually refers to the performance impact of either rendering too much transparent geometry or redundantly rendering opaque geometry which is replaced by future fragments.

## Overlapped Range (Aliased Range)

The aliased range of a device memory allocation that intersects a given image subresource of an image or range of a buffer.

## Ownership (Resource)

If an entity (e.g. a queue family) has ownership of a resource, access to that resource is well-defined for access by that entity.

## Packed Format

A format whose components are stored as a single texel block in memory, with their relative locations defined within that element.

## Payload

Importable or exportable reference to the internal data of an object in Vulkan.

## Peer Memory

An instance of memory corresponding to a different physical device than the physical device performing the memory access, in a logical device that represents multiple physical devices.

## Physical Device

An object that represents a single device in the system. Represented by a [VkPhysicalDevice](#) object.

## Physical-Device-Level Command

Any command that is dispatched from a physical device.

## Physical-Device-Level Functionality

All physical-device-level commands and objects, and their structures, enumerated types, and enumerants.

## Physical-Device-Level Object

Physical device objects. For example, [VkPhysicalDevice](#) is a physical-device-level object.

## Picture Partition (Video)

Collective term that refers to a subregion of a video picture resource that **may** be decoded or encoded independently according to the partitioning scheme defined in the corresponding video compression standard. Picture partitions **may** be non-rectangular.

## Pipeline

An object controlling how graphics or compute work is executed on the device. A pipeline includes one or more shaders, as well as state controlling any non-programmable stages of the pipeline. Represented by a [VkPipeline](#) object.

## Pipeline Barrier

An execution and/or memory dependency recorded as an explicit command in a command buffer, that forms a dependency between the previous and subsequent commands.

## Pipeline Cache

An object that **can** be used to collect and retrieve information from pipelines as they are created, and **can** be populated with previously retrieved information in order to accelerate pipeline creation. Represented by a [VkPipelineCache](#) object.

## Pipeline Layout

An object defining the set of resources (via a collection of descriptor set layouts) and push constants used by pipelines that are created using the layout. Used when creating a pipeline and when binding descriptor sets and setting push constant values. Represented by a [VkPipelineLayout](#) object.

## Pipeline Library

A pipeline that cannot be directly used, instead defining a set of shaders and shader groups which will be [linked into other pipelines](#).

## Pipeline Stage

A logically independent execution unit that performs some of the operations defined by an action command.

## Pipeline Trace Ray Instruction

A ray tracing instruction which traces a ray into an acceleration structure when using ray tracing pipelines. One of:

- [OpTraceRayKHR](#)
- [OpHitObjectTraceRayEXT](#)
- [OpHitObjectTraceReorderExecuteEXT](#)

## [pNext](#) Chain

A set of structures [chained together](#) through their [pNext](#) members.

## Planar

See *multi-planar*.

## Plane

An *image plane* is part of the representation of an image, containing a subset of the color components necessary to represent the texels in the image and with a contiguous mapping of coordinates to bound memory. Most images consist only of a single plane, but some formats spread the components across multiple image planes. The host-accessible properties of each image plane are accessible for a linear layout using [vkGetImageSubresourceLayout](#). If a multi-planar image is created with the [VK\\_IMAGE\\_CREATE\\_DISJOINT\\_BIT](#) bit set, the image is described as *disjoint*, and its planes are therefore bound to memory independently.

## Point Sampling (Rasterization)

A rule that determines whether a fragment sample location is covered by a polygon primitive by testing whether the sample location is in the interior of the polygon in framebuffer-space, or on the boundary of the polygon according to the tie-breaking rules.

## Poison

Equivalent to poison in the [SPIR-V specification](#). Can only be generated by shader operations. Poison values made available to the host or read by device operations outside of a SPIR-V instruction behave as undefined values for all such accesses.

## Potential Format Features

The union of all [VkFormatFeatureFlagBits](#) that the implementation supports for a specified [VkFormat](#), over all supported image tilings.

## Pre-rasterization

Operations that execute before [rasterization](#), and any state associated with those operations.

## Presentable image

A [VkImage](#) object obtained from a [VkSwapchainKHR](#) used to present to a [VkSurfaceKHR](#) object.

## Preserve Attachment

One of a list of attachments in a subpass description that is not read or written by the subpass, but that is read or written on earlier and later subpasses and whose contents **must** be preserved through this subpass.

## Primary Command Buffer

A command buffer that **can** execute secondary command buffers, and **can** be submitted directly to a queue.

## Primitive Shading Pipeline

A graphics pipeline where input primitives are assembled by fixed function processing. It is the counterpart to mesh shading.

## Primitive Topology

State controlling how vertices are assembled into primitives, e.g. as lists of triangles, strips of lines, etc.

## Promoted (feature)

A feature from an older extension is considered promoted if it is made available as part of a new core version or newer extension with wider support.

## Protected Buffer

A buffer to which protected device memory **can** be bound.

## Protected-capable Device Queue

A device queue to which protected command buffers **can** be submitted.

## Protected Command Buffer

A command buffer which **can** be submitted to a protected-capable device queue.

## Protected Device Memory

Device memory which **can** be visible to the device but **must** not be visible to the host.

## Protected Image

An image to which protected device memory **can** be bound.

## Provisional

A feature is released provisionally in order to get wider feedback on the functionality before it is finalized. Provisional features may change in ways that break backwards compatibility, and thus are not recommended for use in production applications.

## Provoking Vertex

The vertex in a primitive from which flat shaded attribute values are taken. This is generally the “first” vertex in the primitive, and depends on the primitive topology.

## PTLAS

[Partitioned Top Level Acceleration Structures](#)

## Push Constants

A small bank of values writable via the API and accessible in shaders. Push constants allow the application to set values used in shaders without creating buffers or modifying and binding descriptor sets for each update.

## Push Constant Interface

The set of variables with `PushConstant` storage class that are statically used by a shader entry point, and which receive values from push constant commands.

## Push Descriptors

Descriptors that are written directly into a command buffer rather than into a descriptor set. Push descriptors allow the application to set descriptors used in shaders without allocating or modifying descriptor sets for each update.

## Descriptor Update Template

An object specifying a mapping from descriptor update information in host memory to elements in a descriptor set, which helps enable more efficient descriptor set updates.

## Query Pool

An object containing a number of query entries and their associated state and results. Represented by a [VkQueryPool](#) object.

## Queue

An object that executes command buffers and sparse binding operations on a device. Represented by a [VkQueue](#) object.

## Queue Family

A set of queues that have common properties and support the same functionality, as advertised in [VkQueueFamilyProperties](#).

## Queue Operation

A unit of work to be executed by a specific queue on a device, submitted via a [queue submission command](#). Each queue submission command details the specific queue operations that occur as a result of calling that command. Queue operations typically include work that is specific to each command, and synchronization tasks.

## Queue Submission

Zero or more batches and an optional fence to be signaled, passed to a command for execution on a queue. See the [Devices and Queues chapter](#) for more information.

## Ray Tracing Command

Commands that provoke work using a ray tracing pipeline. Includes [vkCmdTraceRaysKHR](#), and [vkCmdTraceRaysIndirectKHR](#).

## RC

Refresh Cycle.

## Reconstructed Picture

A video picture resource reconstructed from a compressed bitstream using video decode or encode operations that **can** be used as a reference picture by future video decode or encode operations with the same video session.

## Recording State (Command Buffer)

A command buffer that is ready to record commands. See also Initial State and Executable State.

## Reference Picture

A video picture resource used by video decode and encode operations to provide predictions of the values of samples in the subsequently decoded or encoded pictures.

## Reference Picture Metadata

Opaque state associated with a DPB slot, maintained by a video session.

## Refresh Cycle

The periodic process for updating the contents of the Presentation Engine's display.

## Refresh Cycle Duration

The amount of time from the start of one refresh cycle to the next.

## Refresh Rate

The number of refresh cycles per second.

## Release Operation (Resource)

An operation that releases ownership of an image subresource or buffer range.

## Render Pass

An object that represents a set of framebuffer attachments and phases of rendering using those attachments. Represented by a [VkRenderPass](#) object.

## Render Pass Instance

A use of a render pass in a command buffer.

## Required Extensions

Extensions that **must** be enabled alongside extensions dependent on them (see [Extension Dependencies](#)).

## Reset (Command Buffer)

Resetting a command buffer discards any previously recorded commands and puts a command buffer in the initial state.

## Residency Code

An integer value returned by sparse image instructions, indicating whether any sparse unbound texels were accessed.

## Resolve Attachment

A subpass attachment point, or image view, that is the target of a multisample resolve operation from the corresponding color attachment at the end of the subpass.

## Retired Swapchain

A swapchain that has been used as the **oldSwapchain** parameter to [vkCreateSwapchainKHR](#). Images cannot be acquired from a retired swapchain, however images that were acquired (but not presented) before the swapchain was retired **can** be presented.

## Sample Index

The index of a sample within a [single set of samples](#).

## Sample Shading

Invoking the fragment shader multiple times per fragment, with the covered samples partitioned among the invocations.

## Sampled Image

A descriptor type that represents an image view, and supports filtered (sampled) and unfiltered read-only access in a shader.

## Sampler

An object containing state controlling how sampled image data is sampled (or filtered) when accessed in a shader. Also a descriptor type describing the object. Represented by a [VkSampler](#) object.

## Secondary Command Buffer

A command buffer that **can** be executed by a primary command buffer, and **must** not be submitted directly to a queue.

## Self-Dependency

A subpass dependency from a subpass to itself, i.e. with [srcSubpass](#) equal to [dstSubpass](#). A self-dependency is not automatically performed during a render pass instance, rather a subset of it **can** be performed via [vkCmdPipelineBarrier](#) during the subpass.

## Semaphore

A synchronization primitive that supports signal and wait operations, and **can** be used to synchronize operations within a queue or across queues. Represented by a [VkSemaphore](#) object.

## Shader

Instructions selected (via an entry point) from a shader module, which are executed in a shader stage.

## Shader Call

An [instruction](#) which **may** cause execution to continue in a different shader stage.

## Shader Code

A stream of instructions used to describe the operation of a shader.

## Shader Group

A set of Shader Stages that are part of a [VkPipeline](#) containing multiple of such sets. This allows the device to make use of all the shader groups from the bound pipeline independently.

## Shader Module

A collection of shader code, potentially including several functions and entry points, that is used to create shaders in pipelines. Represented by a [VkShaderModule](#) object.

## Shader Stage

A stage of the graphics or compute pipeline that executes shader code.

## Shading Rate

The ratio of the number of fragment shader invocations generated in a fully covered framebuffer region to the size (in pixels) of that region.

## Shared presentable image

A presentable image created from a swapchain with [VkPresentModeKHR](#) set to either [VK\\_PRESENT\\_MODE\\_SHARED\\_DEMAND\\_REFRESH\\_KHR](#) or [VK\\_PRESENT\\_MODE\\_SHARED\\_CONTINUOUS\\_REFRESH\\_KHR](#).

## Side Effect

A store to memory or atomic operation on memory from a shader invocation.

## Single-plane format

A format that is not *multi-planar*.

## Size-Compatible Image Formats

When a compressed image format and an uncompressed image format are size-compatible, it means that the texel block size of the uncompressed format **must** equal the texel block size of the compressed format.

## Sparse Block

An element of a sparse resource that can be independently bound to memory. Sparse blocks of a particular sparse resource have a corresponding size in bytes that they use in the bound memory.

## Sparse Image Block

A sparse block in a sparse partially-resident image. In addition to the sparse block size in bytes, sparse image blocks have a corresponding width, height, and depth defining the dimensions of these elements in units of texels or compressed texel blocks, the latter being used in case of sparse images having a block-compressed format.

## Sparse Unbound Texel

A texel read from a region of a sparse texture that does not have memory bound to it.

## Static Use

An object in a shader is statically used by a shader entry point if any function in the entry point's call tree contains an instruction using the object. A reference in the entry point's interface list does not constitute a static use. Static use is used to constrain the set of descriptors used by a shader entry point.

## Storage Buffer

A descriptor type that represents a buffer, and supports reads, writes, and atomics in a shader.

## Storage Image

A descriptor type that represents an image view, and supports unfiltered loads, stores, and atomics in a shader.

## Storage Texel Buffer

A descriptor type that represents a buffer view, and supports unfiltered, formatted reads, writes, and atomics in a shader.

## Subgroup

A set of shader invocations that **can** synchronize and share data with each other efficiently. In compute shaders, the *local workgroup* is a superset of the subgroup.

## Subgroup Mask

A bitmask for all invocations in the current subgroup with one bit per invocation, starting with

the least significant bit in the first vector component, continuing to the last bit (less than [SubgroupSize](#)) in the last required vector component.

## Subpass

A phase of rendering within a render pass, that reads and writes a subset of the attachments.

## Subpass Dependency

An execution and/or memory dependency between two subpasses described as part of render pass creation, and automatically performed between subpasses in a render pass instance. A subpass dependency limits the overlap of execution of the pair of subpasses, and **can** provide guarantees of memory coherence between accesses in the subpasses.

## Subpass Description

Lists of attachment indices for input attachments, color attachments, depth/stencil attachment, resolve attachments, depth/stencil resolve, and preserve attachments used by the subpass in a render pass.

## Subset (Self-Dependency)

A subset of a self-dependency is a pipeline barrier performed during the subpass of the self-dependency, and whose stage masks and access masks each contain a subset of the bits set in the identically named mask in the self-dependency.

## Superseded (feature)

A legacy feature can be superseded by newer functionality that achieves the same goals through a newer style of API, being more efficient, or otherwise following current recommendations for use of Vulkan.

## Texel Block

A single addressable element of an image with an uncompressed [VkFormat](#), or a single compressed block of an image with a compressed [VkFormat](#).

## Texel Block Size

The size (in bytes) used to store a texel block of a compressed or uncompressed image.

## Texel Coordinate System

One of three coordinate systems (normalized, unnormalized, integer) defining how texel coordinates are interpreted in an image or a specific mipmap level of an image.

## Tile Image

A per-tile view of a framebuffer attachment. If the [VK\\_EXT\\_shader\\_tile\\_image](#) extension is enabled, the framebuffer is considered to be divided into tiles.

## Timeline Semaphore

A semaphore with a strictly increasing 64-bit unsigned integer payload indicating whether the semaphore is signaled with respect to a particular reference value. Represented by a [VkSemaphore](#) object created with a semaphore type of [VK\\_SEMAPHORE\\_TYPE\\_TIMELINE](#).

## Undefined Value

A value that does not have a specific defined bit pattern. Undefined values are not [invariant](#). When read by a shader operation, undefined values are read as *poison*.

## Uniform Control Flow

See *Uniform Control Flow* in section 2.2 “Terms” of the [Khronos SPIR-V Specification](#).

## Uniform Texel Buffer

A descriptor type that represents a buffer view, and supports unfiltered, formatted, read-only access in a shader.

## Uniform Buffer

A descriptor type that represents a buffer, and supports read-only access in a shader.

## Units in the Last Place (ULP)

A measure of floating-point error loosely defined as the smallest representable step in a floating-point format near a given value. For the precise definition see [Precision and Operation of SPIR-V instructions](#) or Jean-Michel Muller, “On the definition of ulp(x)”, RR-5504, INRIA. Other sources may also use the term “unit of least precision”.

## Unnormalized

A value that is interpreted according to its conventional interpretation, and is not normalized.

## Unprotected Buffer

A buffer to which unprotected device memory **can** be bound.

## Unprotected Command Buffer

A command buffer which **can** be submitted to an unprotected device queue or a protected-capable device queue.

## Unprotected Device Memory

Device memory which **can** be visible to the device and **can** be visible to the host.

## Unprotected Image

An image to which unprotected device memory **can** be bound.

## User-Defined Variable Interface

A shader entry point’s variables with **Input** or **Output** storage class that are not built-in variables.

## Vector Type

A SPIR-V **OpTypeVector** or **OpTypeVectorIdEXT**.

## Vertex Input Attribute

A graphics pipeline resource that produces input values for the vertex shader by reading data from a vertex input binding and converting it to the attribute’s format.

## Vertex Stream

A vertex stream is where the last [pre-rasterization shader stages](#) outputs vertex data, which then

goes to the rasterizer, is captured to a transform feedback buffer, or both. Geometry shaders **can** emit primitives to multiple independent vertex streams. Each vertex emitted by the geometry shader is directed at one of the vertex streams.

### Validation Cache

An object that **can** be used to collect and retrieve validation results from the validation layers, and **can** be populated with previously retrieved results in order to accelerate the validation process. Represented by a [VkValidationCacheEXT](#) object.

### Variable-Sized Descriptor Binding

A descriptor binding whose size will be specified when a descriptor set is allocated using this layout.

### Vertex Input Binding

A graphics pipeline resource that is bound to a buffer and includes state that affects addressing calculations within that buffer.

### Vertex Input Interface

A vertex shader entry point's variables with **Input** storage class, which receive values from vertex input attributes.

### Video Bitstream Buffer

A resource that represents a linear array of data in device memory storing encoded video data. Represented by a [VkBuffer](#) object.

### Video Coding Scope

A series of subsequent commands recorded into a command buffer starting with a [vkCmdBeginVideoCodingKHR](#) command and ending with a [vkCmdEndVideoCodingKHR](#) command that encompasses a set of video decode or encode operations.

### Video Coding Operations

Any operations recorded into a command buffer within a video coding scope, including video decode and encode operations.

### Video Decode Operation

An operation consuming data from a video bitstream buffer and zero or more reference pictures, and producing data to a decode output picture and an optional reconstructed picture.

### Video Encode Operation

An operation consuming data from an encode input picture and zero or more reference pictures, and producing data to a video bitstream buffer and an optional reconstructed picture.

### Video Picture Resource

A resource that represents a multi-dimensional formatted interpretation of device memory to be used with a video session as a decode output picture, encode input picture, reconstructed picture, and/or reference picture. It **may** contain metadata associated with a particular video session it is used with. Represented by a [VkImage](#) object and referred to using [VkImageView](#) objects created from it.

## Video Session

A resource that represents and maintains the state needed to perform video decode or encode operations. Represented by a [VkVideoSessionKHR](#) object.

## Video Session Parameters

A resource that stores preprocessed codec-specific parameters used with a compatible video session in video codec operations. Represented by a [VkVideoSessionParametersKHR](#) object.

## Video Transcoding

The process of using the outputs of video decoding operations as inputs in video encoding operations.

## View Mask

When multiview is enabled, a view mask is a property of a subpass controlling which views the rendering commands are broadcast to.

## View Volume

A subspace in homogeneous coordinates, corresponding to post-projection x and y values between -1 and +1, and z values between 0 and +1.

## Viewport Transformation

A transformation from normalized device coordinates to framebuffer coordinates, based on a viewport rectangle and depth range.

## Visibility Operation

An operation that causes available values to become visible to specified memory accesses.

## Visible

A state of values written to memory that allows them to be accessed by a set of operations.

# Common Abbreviations

The abbreviations and acronyms defined in this section are sometimes used in the Specification and the API where they are considered clear and commonplace.

## Src

Source

## Dst

Destination

## Min

Minimum

## Max

Maximum

**Rect**

Rectangle

**Info**

Information

**LOD**

Level of Detail

**Log**

Logarithm

**ID**

Identifier

**UUID**

Universally Unique Identifier

**Op**

Operation

**R**

Red color component

**G**

Green color component

**B**

Blue color component

**A**

Alpha color component

**RTZ**

Round towards zero

**RTE**

Round to nearest even

## Video-Specific Abbreviations

The following abbreviations and acronyms are used in the context of video decode and encode operations to refer to commonly used video compression terms in their usual abbreviated form:

**AVC**

Advanced Video Coding

**Bipred**

Bidirectional Prediction

**CABAC**

Context-Adaptive Binary Arithmetic Coding

**CAVLC**

Context-Adaptive Variable-Length Coding

**CBR**

Constant Bit Rate

**CTB**

Coding Tree Block

**Diff**

Difference

**DPB**

Decoded Picture Buffer

**GOP**

Group Of Pictures

**HDR**

High Dynamic Range

**HEVC**

High Efficiency Video Coding

**HRD**

Hypothetical Reference Decoder

**IDC**

Indicator

**IDR**

Instantaneous Decoder Refresh

**MB**

Macroblock

**MV**

Motion Vector

**NALU**

Network Abstraction Layer Unit

**OBU**

Open Bitstream Unit

**PCM**

Pulse-Code Modulation

**Pic**

Picture

**Pred**

Prediction

**PPS**

Picture Parameter Set

**QP**

Quantization Parameter

**RC**

Rate Control

**SPS**

Sequence Parameter Set

**Std**

Standard

**VBR**

Variable Bit Rate

**VCL**

Video Coding Layer

**VPS**

Video Parameter Set

## Prefixes

Prefixes are used in the API to denote specific semantic meaning of Vulkan names, or as a label to avoid name clashes, and are explained here:

**VK/Vk/vk**

Vulkan namespace

All types, commands, enumerants, and defines in this specification are prefixed with these two characters.

**PFN/pfn**

Function Pointer

Denotes that a type is a function pointer, or that a variable is of a pointer type.

## **p**

Pointer

Variable is a pointer.

## **vkCmd**

Commands that record commands in command buffers

These API commands do not result in immediate processing on the device. Instead, they record the requested action in a command buffer for execution when the command buffer is submitted to a queue.

## **s**

Structure

Used to denote the `VK_STRUCTURE_TYPE*` member of each structure in `sType`

# Appendix K: Credits (Informative)

Vulkan 1.4 is the result of contributions from many people and companies participating in the Khronos Vulkan Working Group, as well as input from the Vulkan Advisory Panel.

Members of the Working Group, including the company that they represented at the time of their most recent contribution, are listed in the following section. Some specific contributions made by individuals are listed together with their name.

## Working Group Contributors to Vulkan

- Aaron Greig, Codeplay Software Ltd. (versions 1.1, 1.4)
- Aaron Hagan, AMD (versions 1.1)
- Abhishek Sashi Nair, Huawei Technologies Co., Ltd. (version 1.4)
- Adam Jackson, Red Hat (versions 1.0, 1.1)
- Adam Śmigielski, Mobica (version 1.0)
- Aditi Verma, Qualcomm Technologies, Inc. (version 1.3)
- Ahmed Abdelkhalek, AMD (versions 1.3, 1.4) (video subgroup chair)
- Aidan Fabius, Lynx (version 1.2)
- Aitor Camacho, LunarG (version 1.4)
- Alan Baker, Google (versions 1.1, 1.2, 1.3, 1.4)
- Alan Vines, Imagination Technologies (version 1.4)
- Alan Ward, Google (versions 1.1, 1.2)
- Alastair Murray, Codeplay (version 1.4)
- Alejandro Piñeiro, Igalia (version 1.1)
- Aleks Todorov, Google (version 1.4)
- Aleksander Netzel, Epic Games (version 1.4)
- Alex Bourd, Qualcomm Technologies, Inc. (versions 1.0, 1.1, 1.4)
- Alex Crabb, Caster Communications (versions 1.2, 1.3, 1.4)
- Alex Dai, Oppo (version 1.4)
- Alex Krstic, Qualcomm Technologies, Inc. (version 1.4)
- Alex Todorov, Google (version 1.4)
- Alex Walters, Imagination Technologies (versions 1.2, 1.3, 1.4)
- Alexander Galazin, Imagination Technologies (versions 1.0, 1.1, 1.2, 1.3, 1.4) (conformance test subgroup chair)
- Alexey Knyazev, Independent, Khronos (version 1.4)
- Alexey Sachkov, Intel (version 1.3)

- Ali Asif, Huawei Technologies Co., Ltd. (version 1.4)

- Žiga Markuš, LunarG (version 1.4)

## Other Credits

The Vulkan Advisory Panel members provided important real-world usage information and advice that helped guide design decisions.

The wider Vulkan community have provided useful feedback, questions, and specification changes that have helped improve the quality of the Specification via [GitHub](#).

Administrative support to the Working Group for Vulkan 1.1 and beyond was provided by Khronos staff including Ann Thorsnes, Blaine Kohl, Dennis Fu, Dominic Agoro-Ombaka, Emily Stearns, Jeff Phillips, Kendra Casper, Lisie Aartsen, Liz Maitral, Marty Johnson, Tim Lewis, and Xiao-Yu CHENG; and by Alex Crabb, Laura Shubel, and Rachel Bradshaw of Caster Communications.

Administrative support for Vulkan 1.0 was provided by Andrew Riegel, Elizabeth Riegel, Glenn Fredericks, Kathleen Mattson and Michelle Clark of Gold Standard Group.

Technical support was provided by James Riordon, site administration of Khronos.org and OpenGL.org.
